Sec. 3. The President shall state the object of the special meeting in the call therefor, and no business shall be transacted, except such as appertains to the business specified.

Sec. 4. Adjourned meetings may be held at any time by authority of a majority vote of a quorum at a regular meeting, notice being given of such meeting as provided in the By-Laws, stating the business for which the meeting is to be held, and no other business shall be transacted thereat, except such as is stated in the notice.

ARTICLE IV.

Section 1. Nine members shall constitute a quorum for the transaction of business at all meetings.

ARTICLE V.

Section 1. Each individual member shall pay an admission fee of not less than twenty-five dollars, which fee shall accompany the application for membership.

Sec. 2. The dues to be paid by each member shall not be less than one dollar and fifty cents per month, payable in advance.

ARTICLE VI.

Section 1. The elective officers shall be a President, a Vice-President, a Recording Secretary, a Financial Secretary, a Treasurer, and an Executive Committee of seven members.

Sec. 2. The appointed officers shall be such as are prescribed in the By-Laws.

Sec. 3. Four members of the Executive Committee shall at all times be residents of the City and County of San Francisco. Four members of said committee shall constitute a quorum thereof.

Sec. 4. The President shall preside at the meetings, preserve order, see that the rules and laws are enforced, sign all drafts for money voted by the Association, appoint all committees unless otherwise ordered or provided for, and have the care and custody of all bonds which may be required of the other officers.

He shall see that all other officers and committees perform their respective duties, and shall report any neglect or delinquency forthwith to the Association. He shall not speak upon any question except one of order without calling the Vice-President, or in his absence some other member, to the chair.

He shall vote only upon applications for membership or upon questions requiring a two-thirds vote, except to give the casting vote when the members are equally divided. He shall at the commencement of his term appoint a Finance Committee consisting of three members not having charge of the Association Funds, and perform such other and further duties as may be imposed by the By-Laws.

Sec. 5. The Vice-President shall, during the absence or inability of the President to act, perform all the duties of that officer. He shall preside when called upon by the President, and perform such other duties as may be imposed upon him by the laws or rules.

Sec. 6. The Recording Secretary shall keep correct minutes of the proceedings of the Association, file and preserve all papers and documents belonging thereto, conduct the correspondence, draw and attest all drafts for monies voted and perform all other duties usually devolving upon a secretary, or which may hereafter be imposed by law or rule.

Sec. 7. The Financial Secretary shall keep correctly the accounts between the Association and its members and others, in proper books to be provided for that purpose. He shall collect and receipt for all money due from any source, and pay the same to the Treasurer at each meeting, when practicable, but at least once each month, taking his receipt for the same. He shall report at the first stated meeting in each month the amount of all moneys received during the preceding month, and the source from which received, together with the amounts paid out and for what paid. His books and accounts shall be kept in such a manner that the financial condition of the Association and the state of each account can be determined at any time. He shall render the Finance Committee all the facility required in the examination of his accounts, and upon retiring from office, deliver to his successor, or other person designated by the Association, all money, books, papers, or other property belonging thereto.

Sec. 8. The Treasurer shall receive and receipt for all money received by him as such and deposit the same, or all amounts in his hands exceeding fifty dollars, in some bank designated by the Association or the Executive Committee, in his name as Treasurer of the Builders' Association, with the distinct understanding that the said account shall be transferred to his successor in office, upon notice from the Association, through the President and Secretary thereof, stating the person who has been elected to succeed him.

The money, when so deposited, shall be paid out by said bank, only upon drafts or checks signed by the President, attested by the Secretary, and countersigned by the Treasurer.

The Treasurer shall keep a correct account of all moneys received, deposited and paid out, and render a correct report thereof, at the first stated meeting in each month.

Upon retiring from office he shall deliver to his successor or such person as the Association shall designate, all money, books, papers, and property in his hands belonging thereto.

Sec. 9. The Executive Committee shall have and exercise a general supervisory care over the affairs of the Association. They shall designate the bank in which the funds of the Association shall be deposited, unless the same shall have been done by a vote of the Association, and require the officers to change the same, when in their judgment the safety thereof requires it. They shall hear, examine into, and, if possible, settle all disputes between members, when they can do so to the satisfaction of all parties concerned; otherwise report the facts, testimony, and their conclusions thereon, to the Association for their action.

All amendments to the Constitution and By-Laws or Rules, and all agreements to be entered into by and between the members affecting the building business, shall be referred to them to examine and report thereon before action.

ARTICLE VII.

Section 1. The regular elections for officers of the Association shall be held semi-annually at the second meetings in January and July in each year, and they shall be installed at the first regular meetings in February and August following their election.

Sec. 2. The elections shall be by ballot and the majority of all the votes cast shall be necessary to elect, except where there is only one nominee for an office, when the election may be by acclamation.

Sec. 3. The time and manner of making nominations and matters pertaining to the qualifications, etc., of officers may be provided for by the By-Laws.

ARTICLE VIII.

Section 1. The money of the Association shall be kept in one General Fund.

Sec. 2. Rent, salaries, and other necessary current expenses may be paid by a majority vote of a quorum at any regular meeting. But no money shall be otherwise appropriated or paid out in amounts exceeding twenty-five dollars for any one purpose, except by resolution signed and introduced by a member, which shall be laid over at least one week and then passed by a two-thirds vote of the members present.

ARTICLE IX.

Section 1. Any amendments to this Constitution must be proposed by a member at a regular meeting, each section proposed to be amended written out in full as it will read when amended. Such proposition shall then be laid over for two weeks, and when acted on must receive the affirmative vote of two-thirds of the members present, *except* as provided in section 2 of this Article.

Sec. 2. By-Laws not in conflict herewith may be adopted from time to time as the Association shall determine, and may be repealed or amended as provided in said By-Laws. But no By-Laws or Rules shall be passed abridging the right of any member to carry on or transact his business in such manner as he shall deem just and proper, unless such law or rule shall have received the affirmative consent of at least three-fourths of all the members of this Association. Due notice of the passage of any such By-Law or Rule shall be given to each member in writing at least two weeks before the same shall take effect and be in force.

This Section shall not be repealed except by a three-fourths vote of all the members of the Association.

BY-LAWS.

Section 1. The regular business meetings of this Association shall be held on the second and fourth Wednesdays of each month in the City and County of San Francisco, at 8 o'clock P.M.

Sec. 2. Notice of all special or adjourned meetings shall be given either by postal card or by advertisement in two or more daily papers of the City and County of San Francisco. The notice must state the nature of the business to be transacted thereat.

Sec. 3. The fee for admission to membership shall be twenty-five dollars. The dues shall be one dollar and fifty cents per month, payable in advance.

Sec. 4. Any member who shall be in arrears for three months dues shall be notified by the Financial Secretary, and if he fails to pay the same, or such part thereof as shall bring him less than two months in arrears, during the space of two mo ths thereafter, he shall be suspended from the rights and privileges of membership, and so notified.

Sec. 5. Any member guilty of a violation of his agreement entered into and signed by him with the other members, or of a violation of the Constitution, By-Laws or Rules of the Association, first having been duly tried by the Executive Committee (or by a Special Committee duly appointed in case the Executive Committee or any member thereof are disqualified from acting), and duly convicted by their report and a vote of the Association, shall be fined, suspended or expelled, as shall be adjudged by a two-thirds vote of the members present.

Sec. 6. Any member desiring to bring charges against another shall reduce the same to writing, specifying clearly and explicitly the nature of the same, with time, place and circumstance connected therewith and signed by him and delivered to the Association or Executive Committee.

Sec. 7. A copy of the charges shall be immediately served upon the member against whom they are made by the Recording Secretary or some person selected by him or by the Executive Committee, and at least five days' notice given him of the time and place of trial.

Sec. 8. The testimony shall be taken in writing by the committee and signed by the witness. The committee may adjourn from time to time and a quorum may proceed at any meeting.

Sec. 9. When the testimony is all in on both sides they shall consider the same and see if they can settle the matter to the satisfaction of all parties. If they fail to do this they shall report the testimony, together with their conclusions thereon, to the Association for their action and decision.

Sec. 10. The Association shall then proceed to take action thereon and may have the testimony read if desired by either party. During the reading and discussion of the testimony both parties shall be entitled to be present and to be heard. But when the Association proceeds to act thereon all parties interested shall be excluded from the room.

Sec. 11. If the Association finds the accused guilty, it shall forthwith proceed to fix the penalty, first voting upon expulsion. If two-thirds of the members vote in favor of that penalty, the member shall stand expelled. If not, the next vote shall be upon suspension. If two-thirds of the members vote in favor of suspension that shall be the penalty, and the Association shall proceed to fix the time or duration thereof by vote, which time shall not exceed six months. If two-thirds of the members do not vote in favor of suspension, the penalty shall be a fine, and the Association shall then proceed to fix the amount of the fine (unless the same shall have been previously fixed in the By-Laws for like offenses), which may be done by a majority vote, but shall in no case exceed the sum of two hundred dollars.

Sec. 12. The President, in his discretion or when directed by the Association, shall appoint a Sergeant-at-Arms to serve during his pleasure, who shall have charge of the room, furniture, etc. He shall serve papers when required by the Association or by the Executive Committee, assist in preserving order at the meetings, and perform such other duties as may be required of him by the Association or the presiding officer thereof.

Sec. 13. The Finance Committee shall examine and audit all demands against the Association; examine and report upon the books of the officers at the end of each term, and at such other times as the Association may require.

Sec. 14. The President may appoint a special committee of investigation at any time he may deem the same necessary or when required by vote of the Association; said committee shall consist of one or more members who shall examine and report upon the matter referred to them.

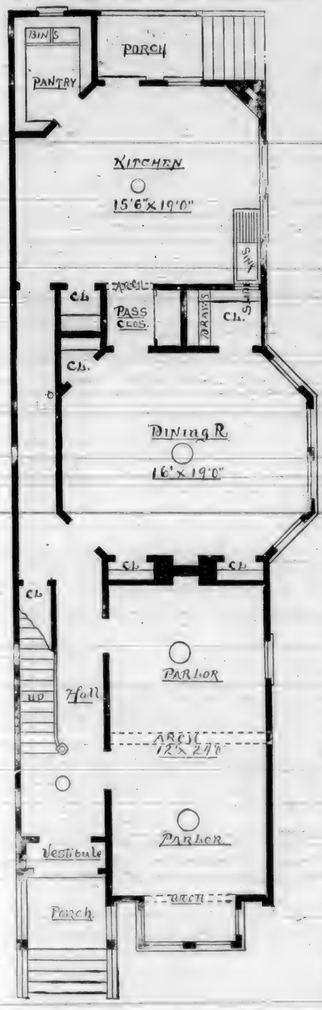
Sec. 15. The Association may at any time require its officers who have the charge or collection of its funds to give bond for the faithful discharge of their duties, which bonds (when required) shall be made payable to the President, in trust for and for the benefit of the Association.

Sec. 16. The Association may employ a clerk to take charge of its rooms, who may also act as Secretary, or it may assign either of its Secretaries to that duty.

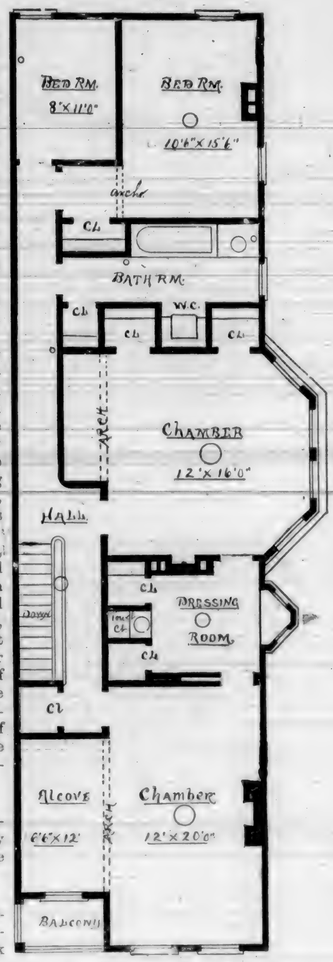
It may pay any of its officers or employes for their services such sums as it may from time to time determine by By-Law or Rule.

Sec. 17. Nominations for officers shall be made at the first regular meetings in January and July of each year, but nominations may be made on the night of election, if the nominees all decline or if ordered by a two-thirds vote of the members present.

Sec. 18. These By-Laws may be repealed or amended in any manner not in conflict with Section 2 of Article VIII of the Constitution, by designating the Section proposed to be repealed or by writing out in full the Section proposed to be amended as it will read when amended, such proposition being signed by the member offering the same, the proposition being first laid over for one meeting and adopted by a two-thirds vote of the members present.



First Floor Plan of $5,500 Dwelling.



Second Floor Plan of $5,500 Dwelling.

Carved Signs.

Carving is practically an art as well as a craft, not merely in interior woodwork but in sign work. Carving well executed in these gives an enriching effect. Soft wood is generally selected for ease of working, this being stained, painted, or gilded. Many fanciful contours are produced, and much taste is frequently displayed in these productions which have laid hold of popular taste. Good carving in the undulations it exhibits will afford not only contrast of form to the general surface but an attractive play of light and shade. The forms at the same time should be well defined, for a mere medley of protuberances and depressions is confusing and unattractive. Right proportion and disposition of parts will impart an aspect of completeness to the design that will not fail to please.

As regards the technique of carving it may be classified in four divisions: 1. The ornamentation of a plane or curved surface with designs in slight relief. 2. The ornamentation of a plane or curved surface in high relief, the *alto relievo* of the Italians. 3. Work entirely curved or wholly in relief. 4. Figures in the round. The first division includes all carving which follows the contour of the sign-board, or forms the contour itself. Undercutting, as a rule, should be sparingly used.

The wood selected for carving, that is to say, the portion to be operated on, should be rubbed over with chalk and the design outlined in strong, dark lines. The depth of the ground of the relief work having been determined, care must be taken that the tools do not cut beneath this. The amount of detachment or absolute relief will depend on the degree of skill required to be exercised in securing due proportions, proper spaces to clusters of ornament if introduced, and the proper degree of prominence and depression to the figure. There must be an observance of right proportions.—*Painters' Magazine.*

It is estimated by a leading Chicago commission house that 8,000,000 cross-ties, mainly cedar, were cut in territory contiguous to the great lakes the past winter.

Owing to the increased growth of the fruit-growing industry on the Pacific Coast, box making in California and Oregon has been very brisk this season.

Valuable Hints.

If varnish or oil does not flow easily, add powdered camphor.

Shellac and borax boiled in water produces a good stain for floors.

Don't inclose the sink—no place in a kitchen is so much neglected.

Porch floors should be of narrow stuff and the joints laid in white lead.

Lime-water is fire-proof protection for shingles or any light wood-work.

Common brick absorb a pint of water each, and make a very damp house.

The lowest-priced builder is not always the cheapest, as poor work will testify.

A closet finished with red cedar shelves and drawers is death to moths and insects.

Do not locate a furnace register next to a mantel, that is, if you wish to utilize the heat.

Terra-cotta flue linings are a great improvement over the old roughly-plastered chimney.

For basement flooring, oak is preferred to maple because it will stand dampness better.

To properly select the colors applicable to the proper place, consult an educated painter.

A ventilating flue from the kitchen into the chimney often does away with atmospheric meals.

Stops to doors and windows should be fastened with round-head screws, so as to be easily moved.

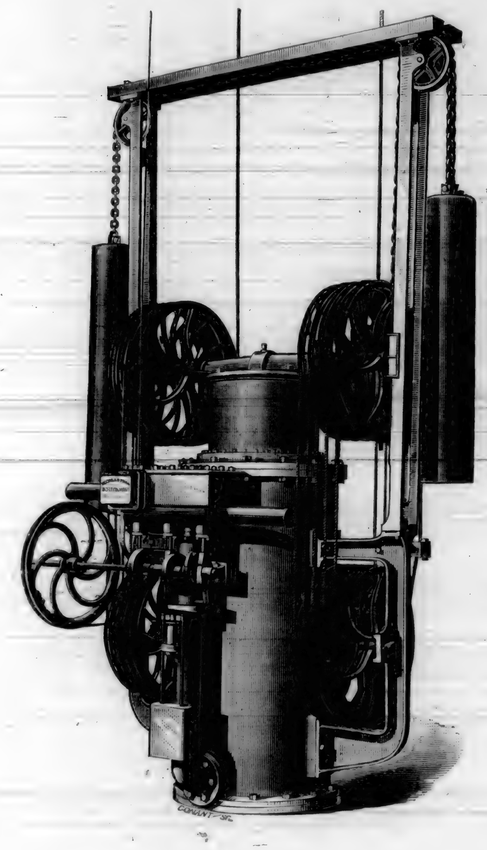
It is better to oil floors than to paint them—a monthly rubbing will make them as good as new.

Do not use one chimney flue for two stove-pipes—the draught of one will counteract that of the other.

Do not finish windows to the floor—the circulation across the floor is one of the causes of cold houses.

Ash-pits in cellars under fire-places and mantels save taking up ashes, for they may be raked down through a hopper.

Do not construct solid doors of two kinds of hard wood—the action of the atmosphere on one or the other will cause the door to warp.



Elevators.

IN considering the many new patents for elevators, and the appliances connected with the same, two essential requisites are necessary. The first one is in regard to the absolute safety of the devices; the second relates to the cost of running expenses. It is a fact that many are more interested in the last proposition than the first, taking it for granted that an elevator is safe as long as it is well built and supplied with any of the modern safety appliances to guard against accidents.

An elevator that thoroughly combines the above two essentials, should receive the consideration of all those who require, either in public, mercantile, or private buildings, an elevator that is simple in all its details, easily understood, and the running expenses of which are considerably less than those of any other machine now in use.

Our attention has recently been called to a new double capacity patent hydraulic elevator, which certainly seems to embody these desired qualities.

The object of this double capacity hydraulic elevator is economy in the use of water. It can be operated by water-pressure from the city main, or from a tank in upper story of building; is always ready for use, night or day, and costs nothing when not in operation. No engineer, steam boiler, or tanks required when city pressure can be obtained.

This machine has one capacity for light loads, and another which, combined with the first, will lift heavier loads. The loads to be lifted may be varied to suit.

A double-capacity hydraulic elevator divides the water into two parts, and uses water in proportion to the loads lifted. Consequently if the lighter load is lifted a less quantity of water is used than though the maximum load is lifted. A single capacity elevator requires as much water to lift the empty car as to lift the maximum load.

In practice it has been found that the loads are constantly varying, and in an ordinary day's use, they will average about one-half the maximum. It is therefore desirable to have an auxiliary power instantly available for any increased load which may be put upon the car, especially if this auxiliary power costs nothing when not in use. The double-capacity machine fills this requisite, and is practically two elevators combined in one, either of which can be used when required. It stops automatically at each end of its stroke, and may be called from one floor to another by pulling the hand-rope at the floor where wanted.

A very important feature, and one not possessed by other machines, is the patent automatic lock or regulator, which avoids a waste of water by preventing the use of the larger capacity when the smaller capacity is competent for the load. Its action is entirely automatic, and dependent upon the load in the car; and it is impossible for a careless or unskilled operator to use more water than is required. The ordinary method of operating double-capacity elevators heretofore has been for the conductor to pull on the valve-rope until, in his judgment, he has opened the valve; but should he pull too far, the full quantity of water, though not needed, is admitted, and the desired economy is not obtained. A double-capacity machine without an automatic lock is little better than a single-capacity machine, and when it is known that elevators are often operated by those who know little or nothing of their construction, and that at each trip there may be a saving or loss of from fifty to seventy-five gallons of water, dependent upon the variation in pulling of the hand-rope, the object of this invention will be apparent.

This machine is guaranteed to be safe, economical, and durable, all parts being strongly and substantially built and made of the best material; when repairs are needed, the arrangement is such that each and every portion is accessible.

The Bancroft History building has been supplied with these elevators, and it is worth the time and attention of those about to build, to thoroughly examine the workings and cost of running these in actual use, before adopting any other style.

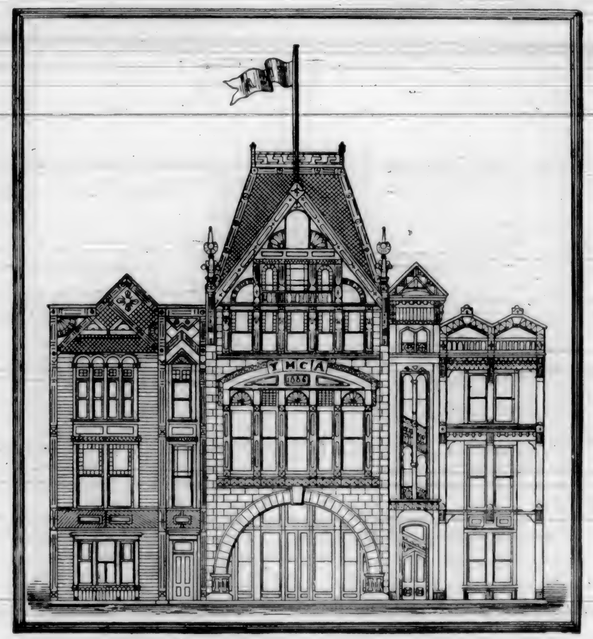
Information in regard to the above will be furnished upon application—either in person or by letter—to the San Francisco Tool Co., corner of First and Stevenson Streets, they being prepared to construct freight or passenger elevators of this style to lift any required load.

In towns and cities having electric plants furnishing light and power the economy of these elevators is still further increased by using pumping apparatus accessory to the elevator, consisting of a tank on top and one at the base of the building, with a pump connecting the two and run by an electric motor actuated by electric power. The pressure and quantity of water are obtained from the upper tank. The elevator discharges into the lower tank, from whence the water is pumped to the upper. The water is thus used over continually without waste.

The San Francisco Tool Co. make such electric motors, under the Keith system, pumps, tanks, etc. The Company is now outfitting the Pacific Power Co., of San Francisco, with a complete large electric plant for distributing power by electricity for elevator and other purposes. It is now running a small plant furnishing power for manufacturing purposes. All interested in this matter are invited to call and inspect the apparatus.

The Y. M. C A. Block.

IN this number of the ARCHITECT we give a cut of the new Young Men's Christian Association building now being erected by Messrs. Gilbert & Sons, contractors and builders, of Woodland, Yolo County. The foundations of the structure, for in reality there are three buildings in one, are laid firmly in brick, each building having its own foundation and own separate studding, so that each structure is independent, although in the block, and can be sold separately or as a whole. The total frontage is 70 feet, depth 108 feet, height to the top of the mansard tower 75 feet 6 inches. The three buildings contain three floors. The one on the right is rented to a doctor for a residence, the first floor of which is arranged especially for Turkish and Russian baths, after the famous Hammam, of San Francisco. This enterprise will give Woodland what few towns of its size East or West can boast of—first-class scientifically arranged and managed steam baths. The building on the left is arranged for a private residence and has been rented to one of Woodland's enterprising merchants. The architecture of the three buildings, as seen in the front elevation, is distinct in each, yet not so striking



THE Y. M. C. A. BLOCK.

as to destroy the effect of a harmonious whole. The building on the right will take after the Eastlake style in finish, the center one, the Young Men's Christian Association building, which projects and is surmounted by the mansard tower, will be finished nicely after the Queen Anne style. The building on the left is rather quaint, being a modification of the Eastlake and suggestive of the Italian. The first floor of the Young Men's Christian Association building will be introduced by a spacious recess under an arch, at the left of which is the ticket office, and directly opposite is the Association bulletin board and directory. From this corridor you enter a private office to the left and the large store in the center, which will be sub-let by the Association. At the right you enter the hall-way leading to the stairs and rooms above, also to the gymnasium in the rear, with its bowling alley, walking track, gallery, tub and shower baths, and with all the improved gymnasium apparatus. It will be one of the finest equipped gymnasiums on the coast. The reading-room and library, the reception parlors and main hall, also the secretary's office, are located on the second floor and are models of convenience, and will be fitted up in a most attractive manner. The third floor is divided up into class-rooms, ladies' central committee kitchen, rooms for boys' branch, and quite a number of lodging-rooms for young men. These apartments will be airy and commodious and will afford the Society delightful quarters. These three buildings are each provided with front and back stairways. They will have all modern improvements and lack no really essential feature to make them complete for their purposes. The probable cost of the block will be $25,000 when finished, and will be a credit to the enterprising builders. The Association is fortunate in getting the second Association building erected on this coast, and no doubt its usefulness will be increased a hundred-fold when it gets into the new building. Surely the business men cannot invest their money in anything where it will do as much good and bring larger returns than in the Young Men's Christian Association.

Sobriety in the Saw-Mill.

A GREAT deal is said about total abstinence in different directions of labor, as to the lack of it, or the necessity for it, and the railroads, especially, have been widely commended for their increasing efforts toward its establishment among their employes, who not only have their own lives in their hands, but those of countless others, as well as the safety of all kinds of property. The importance of a level head, under such circumstances, cannot be overestimated, and it is more or less a requisite in any vocation.

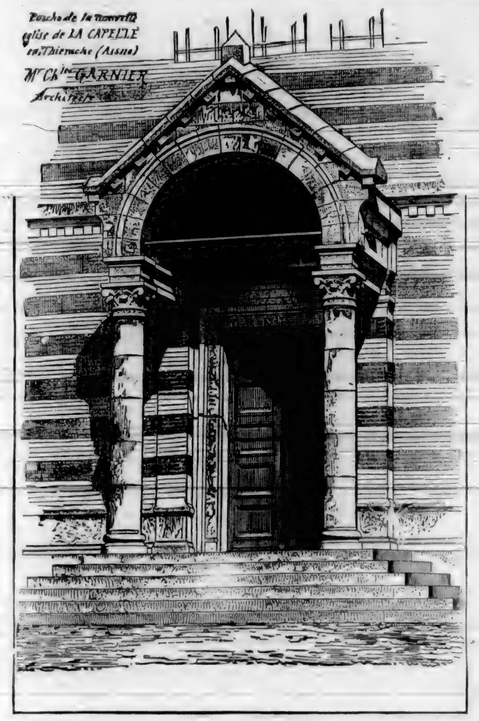
But if there is any place more than another where drunkenness has no business whatever, it is in a saw-mill; and what is more, it is a very notable and undeniable fact that an intoxicated man at work in a saw-mill is a rarity. It is a place where everything goes with precision; where an error may mean limbs or lives, and where bad judgment might in a second wreck a piece of complicated machinery and occasion great damage. With sobriety and the best of care the accidents that occur in saw-mills are of shocking character and alarming frequency. The injury that might be done in a mill or factory of any kind if a man's functions were upset by drink is, of course, apparent, but a saw-mill seems to present the greater details of danger, and to involve unusual exactness. Give a drunken man full swing of the lever, clear the mill of other workmen, and there is no limit to the havoc he would probably create. If the inebriated sawyer did no other damage, what would be the character of the lumber he sawed? If one log looked like three to him, and he could see a double saw, with no ability to tell an inch from a foot, the product he turned out from a log would be a sight to behold.

It would not do to say that an intoxicated man, or one partially under the influence of strong drink, never could or never did run a saw-mill. It would be incredible to suppose there had not been several such cases, but it is the rule that the men who operate saw-mill machinery are sober. Some men have an ability to drink a certain amount of whisky and still control their functions, we reflect, and a man who was a little shot, and a devil-may-care fellow, might pull through a good many tough places.

But the saw-mill owner and the men who labor in it appreciate the situation. They know it means business; they know the danger, and the nicety with which everything must be handled. If they get careless they may pay dearly for it. As a result intemperate men largely keep away from saw-mill labor, either from choice or as a matter of compulsion. It is the exception when it is told that an accident in a saw-mill was caused by intoxication. That the rule of sobriety so generally prevails among saw-mills, while largely a question of direct necessity, is a fact for which lumber manufacturers deserve to be commended, for it takes determination to enforce it, and demands a recognition of merit, which, to a considerable extent, has been granted. The best engineers, filers, and sawyers are men whose industry, exemplary habits, and consequent skill entitle them to good wages, which they receive, and nobody ought to begrudge them what they get.—*Northwestern Lumberman.*

SLIDING-DOORS into small apartments are to be preferred in place of folding.

IN building frame houses, fill the studding one foot high above the sill with brick—this discounts the use of rat-traps.



Recipe for a Cement for Repairing Worn Places in Stone Steps.

LA SEMAINE DES CONSTRUCTEURS, in reply to a correspondent who asked for the recipe of a cement for repairing the worn places in stone steps, gives the composition of the famous "*ciment Sorel*," which has for many years been used by a few contractors, who make a great secret of their process, for filling cavities and restoring abrasions in stone or marble. The first person to use the cement, Sorel, was the inventor of the so-called process of "galvanizing" iron, by covering it with a protecting film of zinc. In the course of his experiments he found that the oxide of zinc, mixed with a solution of the chloride of the same metal, gave a substance which soon became in air as hard as marble; and with slight variations, this mixture is the one employed by all his successors. Sorel, in practice, either used the washed residues from the manufactories of zinc white, which are perhaps heavier and less pure than the white pigment, or heated the ordinary zinc white of commerce to redness to increase its density, upon which the hardness of the cement depends. This, when intended for use, he mixed with a rather concentrated solution of chloride of zinc, having a density of fifty to sixty degrees by Beaume's hydrometer, usually adding about three per cent of borax or sal-ammoniac to lessen the rapidity of setting. So prepared, the "*ciment Sorel*," after setting, soon becomes as hard as marble. It adheres very strongly to stone, and resists heat, cold, moisture, and even the action of acids, and may be colored. To reduce the cost, and assimilate it to stone, powdered granite, marble, or hard limestone may be mixed with it, but soft, earthy substances should not be used. As at present manufactured in Paris, various additions are made to the powdered zinc oxide, to give certain colors or textures, and the chloride solution is sent separately in bottles, the price of the whole, ready for mixing, being about seven cents a pound. The basis of the cement is in all cases the same, some trifling differences in the mode of preparation, such as washing the zinc white with water containing borax before calcining it, or using protochloride of iron, or chlorohydric acid, in the solution, in place of zinc chloride, serving mainly to support the claims of particular manufacturers to a special method of fabrication. In general, the heavier the zinc oxide, and the more concentrated the chloride, the stronger is the cement. To repair stone, either in the shape of statues or steps, the portion to be operated upon should first be scraped to a fresh, clean surface, and then moistened with the liquid chloride. A sufficient quantity of the dry cement is mixed with enough liquid to form a stiff paste, and placed in position, and after being allowed to set a few days, is trimmed off, and smoothed by rubbing with a piece of stone. In summer it will become hard enough to rub down in two days; in winter five or six days are necessary. While setting it must be protected from rain, and two weeks should elapse before a staircase repaired with it is opened to general use. Some of our readers, whose recollections of their experiences in the dentist's chair are fresh, will probably be struck by the similarity of the operations described to those which the dentist goes through in repairing a large cavity with cement filling, and in fact the cement used by dentists is nothing else than the "*ciment Sorel*," prepared with care for their purposes.

Strength the Great Factor.

THE architect or builder who can look back upon a long and honorable career with no element of failure to blot its history can boast of either great prudence and care, or an extreme amount of that commodity called "luck." But few extensive builders have passed through life without recalling some piece of construction where the element of failure was paramount to that of safety. We believe in the truism that it is better to be on the safe side in all our structures. The want of size in timber, the simple absence of a bolt, a few inches in the thickness of a wall, have often brought about elements of danger in buildings that call for the strongest condemnation. There are two reasons for this state of affairs: one is an imperfect knowledge of the strength and capacity of building materials, and the other is a self-confident conviction of a belief born of a hasty and careless consideration of the subject.

The failure of roof trusses, of girders, and joists, the cracking of walls, the settlement of buildings, all may be indirectly traced to the above causes.

In all constructive architecture the first and important factor to be carefully considered is strength. Where doubt exists, well-known authorities should be consulted and living examples examined. The experience of any architect or builder of extended practice is worthy of consideration.

Especially to the young architect and builder is this a serious matter, and although he may, in self-confidence, assume that he has mastered his profession, he will soon learn that after years of practice he has just begun to learn, and it is at this stage he begins to practice carefulness and give some study—perhaps when it is too late—to the factor of safety. Especially is this applicable to the construction of masonry. That great common product of every locality, bricks, used in all our great structures, have in them not only the element of safety, but danger to an extensive degree, if not properly and carefully used.

A brick of medium quality will withstand a great pressure to crush it, if properly laid. From 400 to 1,000 pounds per square inch will crush ordinary brick-work, if laid carelessly. Of course we understand that the figures vary according to the quality of the brick, but the manner of laying has more to do with the safety of brick-work than the strength of the material itself. Not only the manner of laying and bonding, but the mortar goes far to render the work free from failure. The liability to crush and grind, communicated from one brick to another, is much reduced by a bed of good mortar, for the mass, upon becoming compact and homogeneous, is as a solid body upon which movement and crushing effect cannot act; and although the weight of a high wall would seem to bear more upon the bottom courses, yet if we consider the fact that by good mortar and workmanship we cement the work into one common mass, we bring it to the condition of a post or column, bearing the weight of a superstructure equally the same at the bottom as at the top. The fact that much of the brick manufactured by hand in small districts is soft and unburned, renders their use dangerous unless extra care is taken in laying them. Very seldom should brick work be used in isolated or high piers, for the support of great loads; but if used at all, they should be of the best quality, hard-burned, and laid in cement divided by good bond-stone. High piers are liable to buckle or spring out of plumb before crushing, and should in all cases be avoided if we have any regard for the great factor of all good construction—STRENGTH.—*Hill's National Builder.*

IN KANSAS and NEBRASKA, where something neat yet cheap is demanded, whitewood has the call over pine for house finish.

Southern California Sandstone.

A FINE specimen of sandstone from quarries near Los Angeles has been left at the office of this journal, than which in texture and color we have seen nothing finer in this State. The deposit is within a mile or two of Los Angeles City, and the ledge is found in stratas of from six to sixty inches in thickness. Even the heavier stratas are said to be entirely free from seams and fractures, with marked uniformity in color. It appears not to be affected by exposure to the atmosphere, except to improve it in hardness. The proprietors of the quarry propose its introduction for building purposes in San Francisco as soon as transportation facilities are completed.

It is certainly gratifying to notice the unearthing of these natural finer products of our State in building materials. With the sandstone of Santa Clara County, and the more recently discovered Los Angeles stone, an ample supply of beautiful building stone of the kind is at hand, serving all present purposes, with the great probability that other counties of the State will in turn unbosom deposits of sand and other fine stones for building purposes, which will reduce the propensity of a certain class of owners who feel disposed to "send East" for the brown sandstone of Connecticut, to a simple exhibition of folly.

The American Glossary of Architectural Terms.

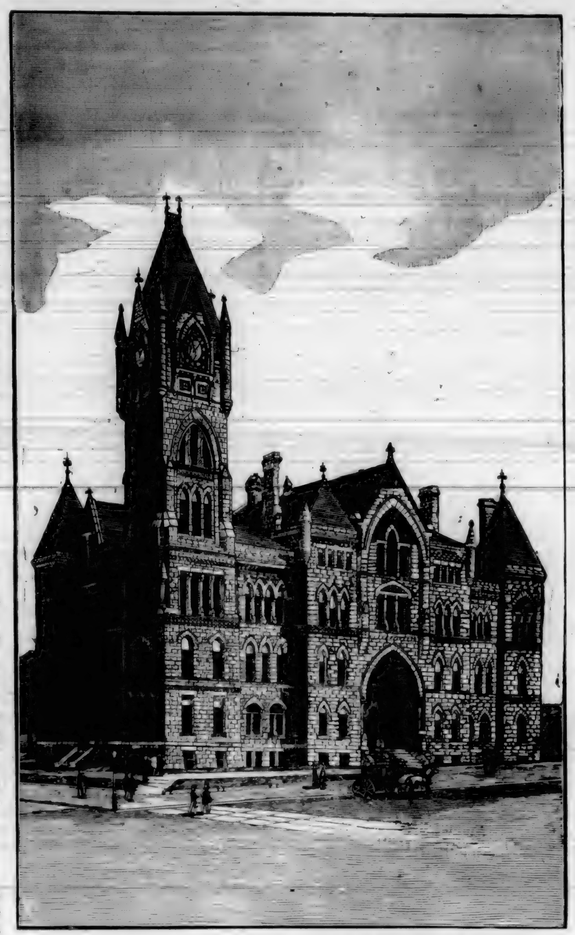
THE object of this new work has been to prepare a concise dictionary of all proper terms used in America and England, but not to treat of words whose etymology is uncertain. It is the only work of the kind ever issued adapted to the wants of the American architect and builder, arranged from a professional and practical standpoint. The illustrations are the most perfect and complete ever presented in any work of a similar standing, and the method used to exemplify on one page the meaning of the terms on the opposite page certainly recommends itself to all. Architectural students of all degrees should order a copy of this work. It is beautifully bound and printed, and will be sent to any address upon receipt of $2.50.

Steam and Water Radiators.

IT will be news to some to know that three-fourths of all the radiators in use in the East are those manufactured by the A. Griffin Iron Co. Not content with supplying over one-half of America, they are making great efforts to secure the entire control of the Pacific Coast, and to this end are shipping weekly car-load lots, so as to fully meet all requirements of the trade. Their very best goods are shipped to this city, and in quantities to suit any demand, no matter how large they may be. C. D. Harvey is the agent on this coast, and may be found at 30 New Montgomery, corner Stevenson Street.

THE curious fact that the usual heat produced by friction is absent when the articles are magnetized, is just now being discussed by scientists who are seeking an explanation. Very striking examples are described in a late number of a scientific periodical. A workman fastened a couple of powerful magnets to his lathe to hold more securely a piece of metal which he wished to drill and turn. The presence of the magnets kept the metal so cold that no water was needed to keep the drill moist and cool. This unusual circumstance may lead to important mechanical advantages. It is such circumstances as the one noted above that lead to valuable discoveries. The scientists, who are looking for a reason why the heat should be absent, may not hit upon any valuable idea, but some practical mechanic probably will.

IN arranging the openings of a room, do not forget the wall space. It is sometimes advisable to build a house to suit the furniture.



DESIGN FOR A PUBLIC BUILDING TO BE BUILT OF STONE.

New Inventions and Improvements.

MESSRS. E. C. STEARNS & Co., of Syracuse, N. Y., manufacturers of hardware specialties, ever responding to the demand for labor-saving tools and improvements generally, have recently produced and added to their constantly increasing line, several new articles, three of which are now ready for the trade. These consist of an improved "Silent Saw Vice," entirely new in design; an excellent door clamp, also entirely new in design, being a departure from the old style iron clamp, and a register and ventilator added to "The McGuire Star Thimble."

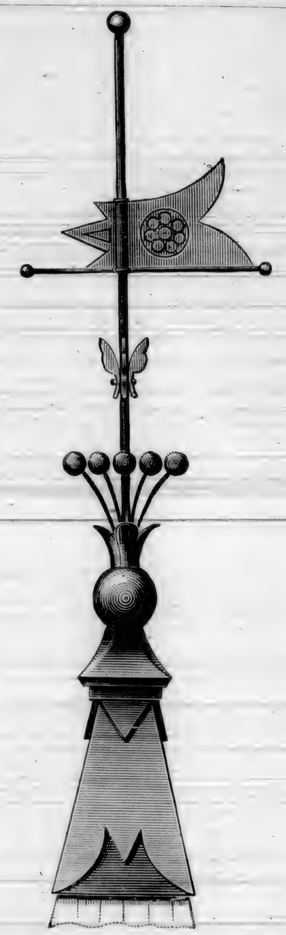
These three articles are soon to be handsomely illustrated in our columns.

Garland Trap.

WE are pleased to note that the "Garland Trap" is being used in all our *boom* towns and cities. It is superseding, in this city, all other patents, from the fact that its wonderful efficiency as a preventive of sewer gas obtaining access to buildings, has been over and over again thoroughly proven. See that your architect calls for the "Garland Trap."

MODERN ARCHITECTURAL DESIGNS AND DETAILS. A few copies remain of this really good work. Price, $10.00.

DETAIL COTTAGE AND CONSTRUCTIVE ARCHITECTURE. Similar to the above in general design.



Finials in Sheet Metal.

THE vagaries in designs with which architects are wont to trim public and private buildings at the present time are almost without parallel. There is no portion of a building perhaps where odd conceits are oftener shown than in the finials surmounting towers. Two pieces of work of this kind are shown in the accompanying engravings. One is a very neat design of a finial carrying a vane, and may be asserted to belong to the conventional order of work of this nature. The other, in addition to the orthodox architectural features of the lower part, has a nondescript beast with wings and forked tongue, hanging to the rock. Whatever may be the designs of finials, the question of the material out of which they are to be constructed is a matter of considerable importance to the builder. Sheet metal work is gradually being recognized as the most appropriate article and there are comparatively few pieces of work of this kind at the present time in which this material does not figure as an important element. The designs here shown are selections from a new catalogue recently issued by Bakewell & Mullins, of Salem, Ohio. The work is a volume of 200 pages and contains a thousand or more engravings representing architectural trimmings of almost every conceivable kind ranging on the one side from ambitious allegorical groups and statuary, heroic size, to leaves, rosettes, scrolls, etc. on the other. While the book is only a trade catalogue and intended primarily for the use of the customers of the establishment named, it is more of interest to architects, builders, and sheet metal workers in general on account of the number of designs it contains, more particularly because it shows work that has actually been executed and in many cases indicates the buildings upon which it has been employed. The work is one which will doubtless have a wide circulation.

New Books.

We have on hand the following books, which will be sent to any address upon receipt of the price.

Essentials of Perspective	$ 1 50

CIVIL ARCHITECTURE,
A SPLENDID WORK,
PRICE, $10.00.

COUNTRY
BUILDING INTELLIGENCE

In this and succeeding issues we intend to devote considerable space to information in connection with buildings, from every portion of the coast.

Only reliable news will be found in this column. Our custom has been for the past eight years, to furnish only data which could be relied upon. We will not publish rumors of "THIS AND THAT IS GOING ON" unless we are reasonably assured that such is truly the case. In all cases we will file our authority for any statements made in this column. No doubt mistakes will sometimes occur, but these we intend to be a rare exception to our rule of reliable news.

We desire the co-operation of country editors and mechanics to this department of this journal. By spreading the news of building engagement in your part of the country, you enhance the value of your section by proclaiming it a go-ahead community.

Architects should also notify us of "plans to figure on;" we do not charge anything for the insertion of such notices. Remember this journal is in the EIGHTH YEAR of its existence, and is the only journal published this side of the Rocky Mountains in the interest of Architects, Contractors, and Material Men.

Alameda.

H. K. Starkweather is having built a $2,000 house on Pearl Street.

Science of Carpentry, for $4.00.
Universal Assistant, for $2.50.

Alhambra.

Completion of school-house frame. Architect, B. J. Reeve; cost, $2,000.

Cutting Tools, for $1.50.
Home Hand-Book, for $10.00.

Covina.

M. E. Church, frame. Owner, M. E. Church; architect, Reynolds; contractor, day work. Cost, $7,000.

Cutting Tools, for $1.50.
Cummings' Details, for $5.00.

Coronado Beach.

The foundation for a new house, the property of Architect Falkenar, has been laid.

Grimshaw on Saws, for $4.00.
Mechanics' Geometry, for $4.00.

The laying of the brick foundation for the new building to be erected by the Methodist Society, on the corner of D and Fourth Streets, is commenced. A very handsome three-story brick is projected. The ultimate cost will reach $60,000.

Coronado will have a fine school-house, on a lot 300x500 feet, bounded by E and F Avenues, and Sixth and Seventh Streets, being the second block west of the plaza.

Shavings and Sawdust, for $1.50.
People's Cyclopedia (three large volumes), for $20.00.

Earlham.

A Friends College, to cost $50,000, is projected.

Ruskin's Works (four volumes), for $6.00.
Industrial Drawing for Carpenters, for $2.00.

East Oakland.

Highland Park. Owner, Highland Park College; architect, S. & J. Newsom; contractor, Knowles & Wetmore. Cost, $5,500.

Drawing for Bricklayers, for $1.50.
Drawing for Cabinet Makers, for $1.50.

Garvanzo.

A planing-mill is now erected here.

Woodward's Farm Homes, for $1.00
Woodward's Graperies, for $1.00.

A brick-yard is already at work.

Building Superintendence, for $3.00.
American Cottage Homes, for $3.00.

The town boasts a new telegraph office.

Painter, Gilder, and Varnisher, for $1.50.
Architects' Companion, for $2.50.

A large number of houses are under contract and building in Garvanzo.

Limes, Cements, and Mortars, for $4.00.
Wonders of Art, for $1.25.

Judge Hatch is building a $7,000 house.

Woodward's Farm Homes, for $1.00.
Woodward's Graperies, for $1.00.

A large addition will be built to the Garvanzo Park Hotel.

Building Superintendence, for $3.00.
American Cottage Homes, for $3.00.

Los Angeles.

Three-story and basement brick. Owner, J. Mullally; architect, B. J. Reeve. Cost, $25,000.

Album of Mantels, for $8.00.
Architects' Companion, for $2.50.

Two-story and basement brick. Owner, P. Gaimer, architect, B. J. Reeve. Cost, $11,500.

Manual for Furniture Men, for $1.00.
Common-Sense Church Architecture, for $1.00.

Three-story frame. Owner, Gamable; architect, B. J. Reeve. Cost, $14,000.

Artistic Homes, for $3.50.
Modern House Painting, for $5.00.

Two-story frame residence. Owner, W. S. Hutton; architect, John Hall. Cost, $200.

Pavilion frame, brick. Owner, D. R. Waldon; architect, H. R. Leonard; contractor, R. W. McIntosh. Cost, $3,500.

Every Man His Own Mechanic, for $3.50.
Tredgold's Carpentry, for $7.50.

Three-story and basement brick. Owner, L Phillips; architect, B. J. Reeve. Cost. $500,000.

Architecture and Building, for $3.50.
American Cottage Building, for $3.50.

One-story frame and brick. Owner, Mr. S. Callaghan; architect, John Hall; contractor, J. M. Tibbets. Cost, $500.

Plaster, How to Make It, for $1.00.
Shavings and Sawdust, for $1.50.

Four-story and basement brick. Owner, L. Phillips; architect, B. J. Reeve. Cost, $100,000.

Every Man His Own Mechanic, for $3.50.
Tredgold's Carpentry, for $7.50.

Two-story frame residence. Owner, M. E. Church; architect, Reynolds; contractors, Monroe & Co. Cost, $2,000.

Woodwards' Country Homes, for $1.50.
Practical Perspective, for $5.00.

Four-story and basement brick. Owner, L. Phillips; architect, B. J. Reeve; contractor, Grant. Cost, $160,000.

Woodward's Country Homes, for $1.50.
Science of Carpentry, for $4.00.

One-story frame cottage, brick. Owner, N. J. Rowan; architect, John Hall. Cost, $2,500.

Monrovia.

There are between thirty and forty buildings being erected in Monrovia at the present time.

Lumberman's Hand-Book, for $2.00.
Practical Geometry, for $1.00.

Several more contracts are now being let, some of them for very fine residences.

Steel Square Problems, for $1.00.
Workshop Companion, for 35c.

One-story frame cottage. Owner, Mrs. Hutchinson; architect, E. A. Coxhead; contractor, Leitch. Cost, $2,500.

National City.

Griffith & Heat are building a large brick block on Eighth Avenue. The contract is for $9,000.

Practical Perspective, for $5.00.
Builders' Companion, for $1.50.

L. E. Brown has prepared plans for another $15,000 house.

Ontario.

Two two-story brick blocks. Owner, C. P. Lyndal; architect, Geo. Fyfe; contractor, John Geary. Cost, $3,400.

Two-story brick block. Owner, H. O. Bryan; architect, Geo. Fyfe; contractors, McIntyre & Newman. Cost, $2,900.

Grimshaw on Saws, for $4.00.
Mechanics' Geometry, for $4.00.

Pomona.

The demand for building material is so great that a number of carpenters are compelled to suspend operations, awaiting the arrival of some kinds of lumber.

Hand Railing and Stair Casing, for $1.50.
Drawing for Carpenters, for $1.75.

W. H. Sailor is building a house in the Garthside tract.

Builders' Companion, for $1.50.
Builders' Work, for $5.00.

J. W. Heckman is building for L. W. Carpenter a $1,600 house on Holt Avenue.

American House Carpenter, for $5.00.
Cutting Tools, for $2.00.

Henry Warren is building a $1,500 house on Centre Street.

Plaster, How to Make It, for $1.00.
Shavings and Sawdust, for $1.50.

Completing Catholic Church. Architect, B. J. Reeve; cost, $1,500.

Builders' Work, for $5.00.
Building Superintendence, for $3.00.

Redlands.

Jas. F. Drake is having a two-story house built.

Builders' Companion, for $1.50.
Builders' Work, for $5.00.

Rialto.

W. H. Wickersham, of Los Angeles, has been given the contract for building the large hotel at Rialto. George B. Robinson, from El Paso, Texas, has taken the contract for doing the brick work. Work on the building will begin at once. The house will cost in the neighborhood of $125,000.

Artisan, for $5.00.
Builders' Guide, for $2.00.

Riverside.

H. A. Westbrook is building a residence on Brockton Square. The edifice will cost $10,000.

Lumberman's Hand-Book, for $2.00.
Practical Geometry, for $1.00.

A new chapel is being erected on Sixth Street for the United Brethren.

Science of Carpentry, for $4.00.
Universal Assistant, for $2.50.

T. J. Wood has matured his plans for the erection of a large brick block on Orange Street. It is to be 26x80 feet, two, and perhaps three stories high.

American House Carpenter, $5.00.
Cutting Tools, for $2.00.

Rosecrans.

A large hotel is to be built at once.

San Bernardino.

Architect C. H. Jones has made plans for a one-story building for E. Katz.

Builders' Companion, for $1.50.
Builders' Work, for $5.00.

The corner-stone of the new $20,000 M. E. Church was laid with appropriate exercises.

Album of Mantels, for $8.00.
History of Architecture, for $15.00.

The Anderson building, opposite the St. Charles Hotel, will be the largest in the city. It will cost $52,870.

Builders' Companion, for $1.50.
Builders' Work, for $5.00.

The laundry building for the Southern California Road, at this place, will soon be ready for occupancy.

Ruskin's Works (four volumes), for $6.00.
Industrial Drawing for Carpenters, for $2.00.

One-story brick for Katz, $5,000.

Artistic Homes, for $3.50.
Modern House Painting, for $5.00.

Two-story frame for R. H. Skelly, $2,300.

American Cottage Homes, for $3.00.
Builders' Work, for $5.00.

Two-story frame for J. E. Drake, $2,500.

Album of Mantels, for $8.00.
History of Architecture, for $15.

One-story brick for S. Haile, $6,000.

American House Carpenter, for $5.00.
Cutting Tools, for $2.00.

Two-story office for Russ Lumber Co., $3,000.

Six cottages for S. Weil, $3,000.

San Diego.

An Agricultural Hall is about to be built.

Science of Carpentry, for $4.00.
Universal Assistant, for $2.50.

An opera house to cost $300,000 is to be built in the near future.

Building Superintendence, for $3.00.
American Cottage Homes, for $3.00.

The bricklayers are at work upon the foundation of the new railroad depot at the foot of D Street.

Lumberman's Hand-Book, for $2.00.
Practical Geometry, for $1.00.

The masons have commenced work upon the foundation of the Methodist Church, corner Fourth and D Streets.

Practical Perspective, for $5.00.
Drawing for Carpenters, for $1.75.

Two million dollars' worth of buildings have been lately contracted for, of which half are in the way of construction.

Drawing for Stone Masons, for $1.50.
Building Construction, for $1.25.

Work on the railroad depot at the foot of D Street is being pushed rapidly. A portion of the frame is already in place. The building is to be 40x100 feet.

San Pedro.

Two-story frame. Owner, Mr. Bloomfield; architect, John Hall. Cost, $3,000.

Santa Ana.

Two-story brick. Owner, Dr. Medlock; architect, B. J. Reeve. Cost, $12,000.

Santa Monica.

Episcopal Church, brick. Architect, E. A. Coxhead; contractors, Davidson & Johnston. Cost, $3,000.

San Luis Obispo.

A $200,000 hotel is shortly to be erected, some three miles south of this town, by a company, and ground for the enterprise has already been broken, water pipes are laid, and erection is to be commenced at once.

Mural Painting (new), for $3.00.
Home Hand-Book, for $10.00.

Santa Paula.

Three brick buildings are soon to be erected at Santa Paula, one of which will be occupied by a banking firm.

Album of Mantels, for $8.00.
History of Architecture, for $15.00.

The Alvarado Bridge.

The contract of the county of Alameda with the California Bridge Company to construct an iron bridge at Alvarado, was approved recently by the Board of Supervisors. The contract price is $7,440. The contract for the construction of the new Receiving Hospital was awarded to C. L. Crissman. The contract price is $3,878.

Shavings and Sawdust, for $1.50.
American Cottage Building, for $3.50.

Miscellaneous.

Captain Flavel, of Astoria, will build two fine brick buildings in that city this season. Each will be three stories high; one on the corner of Chenamus and Main, the other on the corner of Chenamus and Cass Streets. The cost of both will be $60,000.

Architecture and Building, $3.50.
American Cottage Building, for $3.50.

A $10,000 flouring mill is to be built in Heppner, Or., this summer.

Woodward's Country Homes, for $1.50.
Plaster, How to Make it, for $1.00.

J. P. Allen will build a large family residence for Will Shoemake, on the northwest corner of Twelfth and K Streets, Modesto. The building will cost, when completed, between $4,000 and $5,000.

American House Carpenter, for $5.00.
Cutting Tools, for $2.00.

Contract has been let for construction of the Despain Block in Pendleton, Or. It will be of brick, and cost nearly $18,000.

Practical Perspective, for $5.00.
Woodward's Country Homes, for $1.50.

Hoffman & Bates, of Portland, Or., have been awarded the contract for building snow-sheds on the Northern Pacific road west of the Cascades, and Hugh Glenn & Co., of The Dalles, for those on the east side. Both contracts will consume about 11,000,000 feet of lumber.

Artisan, for $5.00.
Builders' Guide, for $2.00.

Mr. H. F. Larrabee is drawing plans for a two-story brick hotel, 48x86 feet, to be erected by Mrs. Kornmeyer, on the east side of Railroad Avenue, Oakdale, Cal.

Steel Square Problems, for $1.00.
Workshop Companion, for 35c.

M. J. Mertens has purchased, and will soon erect a fine residence thereon, the lot on the northwest corner of Alameda Avenue and Union Street.

Builders' Companion, for $1.50.
Artistic Homes, for $3.50.

SAN FRANCISCO, CAL., SEPT. 15, 1887.

Weekly Building Edition

OF THE

California Architect & Building News.

For some time past, we have been making careful arrangements by which we could present to our subscribers a **WEEKLY SUMMARY OF BUILDING ACTIVITIES.** Our plans are almost perfected, and in a short time we will supply, **WEEKLY,** a list of all buildings in progress in the city, and also in every portion of the coast. Various agencies have been established in different parts of the State, through which building news will be sent direct to this office.

In this weekly edition, there will **POSITIVELY BE NO ADVERTISEMENTS INSERTED.** Its columns will be strictly given to the furnishing of city and country building news, and for absolutely no other purpose.

Architects from every portion of the coast can have notices of contemplated building improvements, upon which they desire bids from city contractors, published **FREE** in this Weekly Edition. There also will be no charge for county notices of proposed public improvements. In fact, this **WEEKLY** is intended to cover the whole subject as a reliable gazetteer of public and private building information. Of course it must be expected that it will take a little time to make this weekly perfect in every particular, but it will have the same energy and perseverance to back it up as has been shown in building the "California Architect" from almost nothing to its present high standard.

TERMS.

This **WEEKLY** edition will be furnished **FREE** to all yearly subscribers to the "California Architect and Building News." Material men will at once recognize the great value of a weekly building list that can be relied upon as being as near correct as it is possible to obtain information.

NINE YEARS ago this Journal was started by the present Proprietor, and its appearance to-day, with crowded advertising columns, and entertaining reading matter, is a sufficient endorsement of its merits as the leading Journal of its class on the Pacific slope. Without being egotistical, we can safely say that the circulation of the "California Architect" is larger than that of all the rest of similar journals put together, published this side of the Rocky Mountains.

Remember, this Weekly Edition is furnished free to all subscribers to the "California Architect." We will also give the remaining numbers of this year free to all new subscribers for 1888.

The Boom.

THAT there has been a large amount of booming done in California within the last past few months, is beyond question; and although the fever is not so high now as it has been, it is still sufficiently active for all practical purposes. The larger proportion of the booming has been intrinsically legitimate, while much has been fictitious, strained, and overwrought, to an extent that numerous silly transactions have been consummated by which excited men and women have paid for single building lots, a mile or miles away from business centers, as much, and in cases ten times more, than a whole acre of the same land could have been bought for six months prior.

Every county and section of the State has participated in the boom sentiment, and more or less inflation indulged in, notwithstanding the entire absence of any new development in scores of localities to justify or sustain advance in values over those which have existed, other than the fact that the population of the State is being greatly increased by large immigration, which should have the effect of strengthening and confirming land values, but not of exciting them ten or a hundred-fold, except where the increase of population has concentrated in great force, as at Los Angeles, San Diego, and some other places in the southern counties.

But as matters have gone, owners of land in every county of the State have assumed, whistled their courage up to believe, and have used means and measures as each deemed wisest and best, to persuade others that the only thing necessary to a realization of ten to a thousand per cent advance on moneys invested was to "buy right here."

Transactions stimulated and sustained by solid, intrinsically good and well-assured backings, will in the future compensate fully for all present seeming chances taken, for all signs and facts are pregnant with greatness for the future developments and advancement of the Golden State in all that is calculated to make it one of the very grandest and greatest in the sisterhood of the American Union. But, unfortunately, not all who have plunged into the booming tide have done so wisely or well; and the limit of inflation having been reached, and the shadows of reaction being plainly discernible, and the fact becoming transparent that many of those rampant natures who have been misled by the gaudy butterfly offerings have began to realize that as long as there were simple-minded men and women to buy anything in the shape of lands and lots that were well and sufficiently mapped and boomed, there were individuals and syndicates to bond or buy parcels and tracts, and subdivide the same to suit and accommodate eager buyers at prices yielding to the sellers from one to three hundred per cent profit, and leaving the buyers to wish they had not been so hasty in pur-

chasing, and wondering when or how long ere the amount paid could be again realized.

THE EFFECT UPON BUILDING IN SAN FRANCISCO.

The tens of thousands of building lots, and the miles in acres of agricultural lands sold and purchased, has necessarily diverted many hundreds of thousands of dollars in that channel, which, under the prior usual order of things, would have been spent in building improvements in San Francisco. Hence building operations have considerably quieted down, and much of the drawn-off moneys being tied up in purchases which will not soon advance beyond the prices paid, nor at present return the purchase money, the effect of the boom is likely to be felt for some time to come, except so far as those who have reaped the golden harvest from the lands sold may feel inclined to invest their gains in property improvements.

SOME OF ITS FRUITS.

1. As a consequence of the "Southern California boom," a majority of the horde of impecunious, defaulting, unreliable building contractors, who used to infest this city, have gone to that inviting section, either to ply and repeat their unwise methods, or seek in pastures new to make for themselves an honorable reputation and a fair fortune.

2. Some of our best contractors have also gone South. For these there need be no fear. Judgment and integrity having marked their San Francisco career, it is safe to say that nothing less, with good fortune added, will follow them.

3. The demand for draughtsmen has been such that the draughtsman's bureau of this journal has been overtaxed to supply the demand. Orders are on file for still more draughtsmen.

4. Journeymen carpenters and brick-layers have been, and still are, in demand, both in San Francisco and Southern California, at advanced wages, $3.50 to 4.00 for carpenters, and $6.00 for brick-layers.

The lumber market, and more or less other materials, have been affected by the lively demand in Southern California for building materials. Many classes of lumber in San Francisco are, and have been, scarce, and prices strong. Still, the San Francisco building outlook is beautiful. There is not one drop of discouragement to a whole ocean of fine prospects and promises for the queen city of the Pacific.

California Architecture—Typical Nothingness.

A CORRESPONDENT in the *Carpentry and Building*, styling himself "C. K., Long Beach, Cal.," forwards to the journal referred to the "elevation and ground plan of a typical California house." A more *typical* representation of nothingness was never forwarded to a journal to print, and how it ever came to be inserted in the one mentioned, claiming, as it does, to only insert ideas and illustrations that may be relied upon, is more than we can conceive.

There is not a chimney nor wash-basin shown in the house. Not a single bedroom has a closet connected with it, and the 10x14 kitchen is without a pantry, closet, chimney, or any other convenience. The dining-room as arranged is so deficient in the method of being lighted by windows that on a dark day a lamp would needs be kept lighted continually. The shape of the parlor would disgrace an old backwoods cabin. With the exterior appearance, the less said the better. The rail and balustrade as they appear in the engraving, are simply the design of a school-boy who is hardly old enough to spell the word *proportions*, let alone the ability to interpret the meaning of the word.

There is absolutely no wonder why "C. K." adds to his description, "I have thought that perhaps some of your readers might not only be interested in the plan and view that I send, but that they also may be able to suggest some variations," etc. Truly a nice way to get a plan that is architecturally correct, for the small sum required for a year's subscription.

We are always pleased to see illustrations of architecture on this coast, represented in the Eastern journals. But we must protest against such incongruous specimens as the one referred to as a sample of *typical* California architecture.

Summary for September.

UNTIL the commencement of the real estate boom, building activities were very brisk. The past month has witnessed quite a falling off in the *number* of improvements, although *values* are considerably larger than those of last year. Our record for the month is as follows:—

69 frame buildings, value	$402,850
32 alterations, value	161,100
4 brick buildings, value	44,000
95	$607,950

During the first nine months of 1886 the record shows
947 buildings, value $4,876,922
During the first nine months of 1887, 839 buildings, value 5,211,914
Showing a decrease in *number* of 108, and a gain in *value* of 334,992

Prospects ahead for the winter months are very favorable and much of the disparity shown in *numbers* between the two years quoted will be overcome before our yearly report in December.

Building Activity in Los Angeles.

MANY HOUSES AND BUSINESS BLOCKS IN PROCESS OF ERECTION.

AT the present time there is a remarkable activity going on in building, and especially is this true of the heart of the city.

A glance down the principal thoroughfares discloses the fact that there is scarcely a block between the Plaza and Fifth Street in which one or more buildings are not being erected or additions being built on those already standing. This activity in building will create a great change in the appearance of the city before the winter sets in, for instead of the streets being lined with one and two-story buildings, most of them will have been transformed into four-story houses, and the gaps or vacant lots which have been in existence will be filled up. Thus parties who were here last winter, and who are coming again this fall, will hardly recognize the city as the same that they left less than a year ago. With all the activity in building there is a demand for rooms which cannot be supplied, and unless the completion of the buildings in course of erection is hastened, the rush is likely to find the city unprepared. On every side the brick buildings are in such a stage of erection that it will not be possible to have them ready for occupancy before November or December, and at that time the rush will be here. One cause for the delay is said to be the scarcity of brick. One building has been delayed considerably by the scarcity of pressed brick, and no doubt others are in the same category. Outside of this class of buildings there are a large number of houses in course of erection further out, but at the present time there are at least ten people looking for houses where one is to be found. There are families waiting to come to Los Angeles, but they cannot come because they cannot rent houses. In San Francisco, and in other cities, there are enterprising men who erect houses especially for rent, and in those cities there is not as much demand as here. It seems strange that something of the kind has not been done here. A close search in Los Angeles has failed to reveal the existence of a single house composed of flats, and in what other city of a like population is this the case? It is true that until recently there has been no necessity for apartment houses or flats, but at the present time fully two hundred would be rented before completed, especially if erected near to the heart of the city.—*Herald.*

MR. C. MERCHANT, of Merchant & Co., Philadelphia, U. S. agents and manufacturers of the celebrated "GILBERTSON'S OLD METHOD," and "CAMARET" brands of tin-dipped roofing plates, has just returned from England, where he accomplished two important things in connection with the business of roofing plates. As is generally known, this firm was the first to bring out guaranteed roofing plates, which had before been unknown in this country, their guaranty covering all the different points which enter into the value of roofing plate, thickness, coating, weight, squareness, etc. In order to prevent the use of inferior materials where requisition had been made for their brands, they were obliged to adopt the plan of stamping the sheets with the brand and thickness. Others followed by stamping the brand, but not the thickness, thus making it possible to use thinner and cheaper plates instead of the ones specified. This action on the part of unreliable firms has led Merchant & Co. to take another important step, that of stamping each box with its weight. There are two sizes and two thicknesses of every brand of roofing plate, and the importance of using every precaution to insure the use of just what is specified is therefore evident. Another important step in this connection is an arrangement which Merchant & Co. have made with the makers of the two brands which they represent, that the "seconds" or imperfect sheets (which come out with the majority of brands) shall not be sent to the United States nor sold to anyone in England. There will be, therefore, only one kind of goods sold, and the quality of goods bearing these brands is then positively insured.

ELEVATION, PLAN, DETAILS, AND SPECIFICATIONS OF AN "ALAMEDA" COUNTRY HOME.

CALIFORNIA can justly boast of a larger number of pretty places and picturesque localities in which to erect residences of moderate cost, than can be found in any other State in the Union. The beautiful town of Alameda, covering, as it does, a large extent of ground, embracing several square miles, may be regarded as a paradise for those who wish a quiet retreat, away from the din and confusion of the city, and yet be in close connection with the great mart. Nearly every portion of the town is covered with a natural growth of oak trees. Nor does this growth stop at this point; for a long distance to the north the ground is covered by the beautiful trees from which the neighboring city of Oakland derives its name.

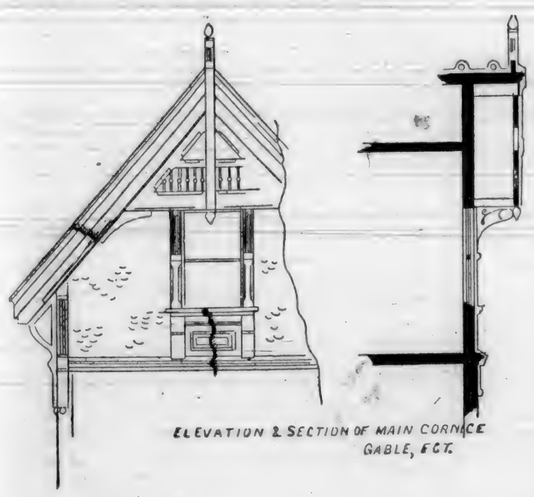
PERSPECTIVE VIEW OF $2,500 ALAMEDA COUNTRY HOME.

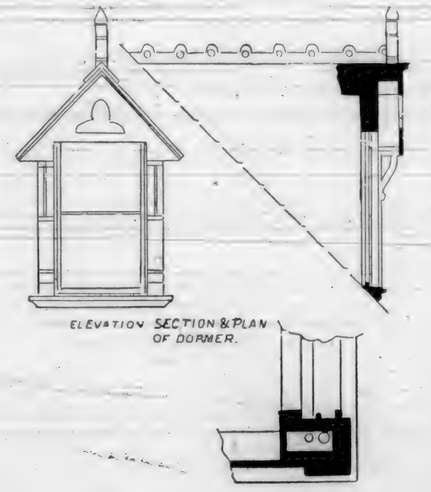
Extremes meet in architecture as well as other matters. Some esthetic persons have sought to copy the humble abode of the laborer in the external view of a dwelling, while the internal arrangements and fittings rival those of Aladdin's palace. Others seek to have the outside present to the eye a conglomeration of whimsical ideas, while they have not deigned to cover the floors with a carpet, nor have a door between any of the rooms or halls, excepting those connecting with the outer world.

Much benefit has been derived from these whimsical erections, and it is only by much study and close application to the fancies of their clients, that architects have been enabled to prepare the beautiful Bijou plans, a good representation of which is given in this issue. In justice to the architectural profession, we must say that no portion of their practice has been so usefully bestowed as that which has been bestowed upon the production of plans for such homes, a full plan of which accompanies this article.

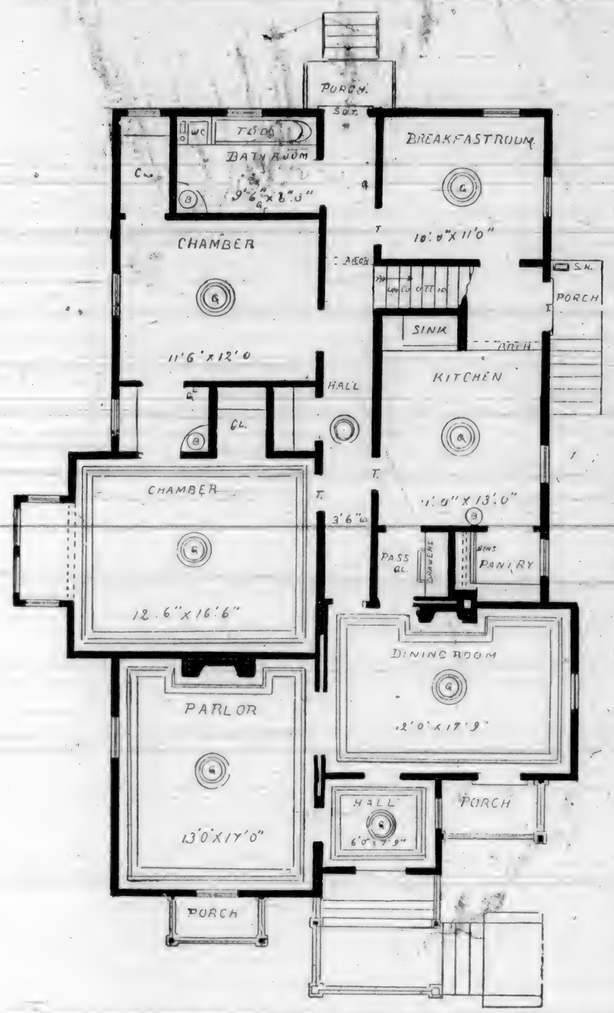
The elevation, as shown, is a model of neatness and economy. At once attractive in appearance and substantial in all its surroundings, it does away with all those horrible idiosyncrasies and bugbears of the Elizabethan and Queen Anne styles. There are no small windows to cause the one who cleans them to utter a whole vocabulary of cuss words at the architect who made so many corners to dig out. There is no part of California but what needs all the sunshine that was intended to enter a room, and the large windows shown allow the heat and light to make glad the hearts of the dwellers therein. Even with the thermometer at 100 degrees and over in the shade at noontime, still when evening comes, the cool winds that invariably bless the sleep of those who are tired from their daily toil, has easy ingress from these same large windows. And in winter, from the absence of snow in all of our beautiful valleys, the same windows are a source of joy and comfort for the occupants to observe the driving rains, or admit the blessed sunshine as it pierces through the wintry clouds.

Great care should be exercised in painting the exterior. The colors selected should be a happy blending of light and dark shades. They should be graded from rich, heavy grades at the bottom, to the lighter tones of the gable peaks, preserving, through the intermediate section, a consistent harmony. The roof may be of dark slate color. The trimmings may be colored with a combination of blue, black, and Indian red. The body of the house may be varied to suit the above. It must be distinctly





SAMPLE COPY.



Plan of $2,500 Alameda Country Home.

borne in mind that all buildings of the same class cannot be treated alike. Trees have a wonderful effect on colors used, and the main study of the painter and owner should be that the salient points of form and detail be enhanced by the proper selection of the various colors. By all means, if you are building a home for yourself, take the good wife into your confidence, and let her judgment be given on the various colors to be used.

The arrangement of the rooms, as shown by the plan, is very desirable for anyone with a small family. A feature is made of the entrance-way. From the hall, one can pass either to the parlor or dining-room, the latter being the general sitting-room. The parlor is large, 13x17 feet in size. It has a fire-place as shown; a cornice is also designated. Sliding doors connect this room with the dining-room, the size of the latter being 12x17¾ feet. A cornice and fire-place are also shown. In case of company or family gathering, the two rooms will be practically one. The porch shown in front will be very handy for the gentlemen who smoke, or, on warm days, the ladies can use the same for sewing purposes, sheltered, as the plans show, by the roof overhead.

You pass from this room into a hall, from which you can enter all the rest of the rooms. The main chamber is 12 feet 6 inches by 16 feet 6 inches, besides a large bay-window, having four windows for light and air. There is also a cornice in this room, and a place for a stove to connect with parlor chimney. There is a very large closet, and also wash-room, which is well-lighted and ventilated. Passing along the hall, we next come to a large linen closet. This will be found very serviceable for the storage of the linen in daily use.

Then comes a large chamber, 11 feet 6 inches by 12 feet. No cornice is shown. Should a fire be needed in this room, a patent flue could be placed therein, starting from near the ceiling. A large closet is also connected with this room. At the end of the hall is the bath-room, 6 feet 3 inches by 9 feet 6 inches. A wash-bowl and water-closet are shown. The window, being directly over the tub, assures perfect ventilation.

On opposite side of hall from bath-room is a room designated as breakfast-room, in size 10x11 feet, with two windows. This can be used as a bedroom, should the dining-room suffice for the needs of the occupants of the house. This room is very convenient, as it can be reached by three different ways. The next room is the kitchen, in size 10x13 feet, with plenty of light and ample means of ventilation. The place for the stove-pipe is indicated by the dotted lines leading to the dining-room chimney. Should it be found more desirable to have the stove in a different position from that indicated, a patent flue can be put in, starting near the ceiling. A large pass-closet, amply fitted with drawers and shelves, connects with the dining-room. There is also a large pantry fitted up with bins, etc.

A stairway is shown, near breakfast-room, leading to the attic. No plan is given of the latter, as the space can be divided according to the individual tastes of the parties building. The rear hall is 3 feet 6 inches wide.

The whole plan is very compact, and will bear careful study. The detail drawings as shown will give an adequate idea of the various finishes. Each one is distinctly marked.

We append a general set of specifications to aid those who may see fit to adopt the design. Should anyone want a complete set, we can forward them a printed copy.

SPECIFICATIONS.

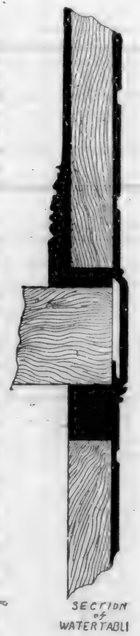
Excavations.—All rock, dirt, etc, to be cleared away from site of the building; trenches for walls and piers to be extended down to firm and solid ground; the bank to be dug well away from the walls, and the same to be left open until the walls are well set and dry.

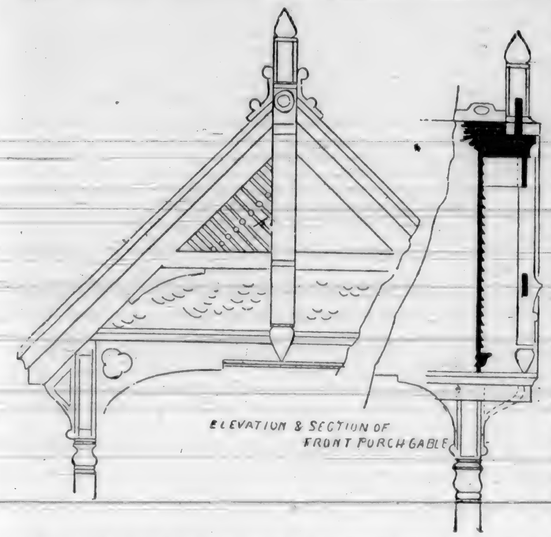
Drains.—To be of iron-stone pipe, with cemented joints. The fall to be not less than one-fourth inch to one foot; no drains to be less than sixteen inches from surface of ground.

Brick Work.—Hard, well-burned brick to be used throughout. All brick walls to be made level and straight to the proper and exact height, and to a true line from one end to the other, even to the splitting of a brick where necessary. Piers 12x12 inches. Turn trimmer arches for the support of all hearths at the time chimneys are built. All sills to be set in mortar after walls are proper height.

Size of Timbers, etc.—Main sills, 6x8 inches; plates, 2x4; studs, 2x4; underpinning, 4x6; joists, 2x10; ceiling joists, 2x4; rafters, 2x4; bridging, 2x3 and 2x4. Studs and joists spaced 16 inches from center; rafters, 2 feet 8 inches from center; underpinning, 2 feet 8 inches from center. All timber below main sills to be of redwood.

Roof to be sheathed with 1x6 Oregon pine, well nailed to every rafter. Gutters arranged so as to carry off water wherever directed.





Rustic.—All laps and butt joints, to be painted before being nailed in position. Butt joints to have a 3x11-inch piece of tin to keep out water.

Outside Steps to be built upon strong stringers, inch risers of redwood, and two-inch treads of Oregon pine, with nosing and scotia. The recess to front hall will be floored six inches below main floor, with three-inch Oregon pine, put together with white lead.

Floors.—Oregon pine, tongued and grooved, 4 inches wide, to be used throughout the house. One tongue nail and one through nail to be driven in each piece at each nailing.

Grounds to be of ⅞-inch Oregon pine to all openings.

☞ *No inside finish to be put on until the last coat of plastering is on.*

Face casings to be 6 inches wide and 1¼ inches thick, with suitable plinths.

Sash beads to be fastened on with raised-head screws.

All interior work to be hand smoothed and sand-papered.

All carved or planted-on work to be primed before putting up.

Base in all rooms to be 10 inches wide with 2-inch moulding.

Wainscoting.—Rear hall, kitchen, and breakfast-room to be wainscoted 3 feet high, and capped with nosing and scotia. Bath-room, 6 feet high all around.

Pantry and Pass Closet to be fitted up with shelves and hooks complete, and bins and drawers as shown.

Lathing.—Good sound lath to be used, laid on not less than ⅜ of an inch apart. Joints broken over 8 laths. No lath to be put on vertically, to finish out to corners or angles; neither must there be any lath run through angles and behind studding from one room to another. All angles to be formed and nailed solid by carpenter before laths are put on.

Plastering.—All walls, partitions, and ceilings to be plastered one coat of well-haired mortar, made of best lime and clean, sharp sand, free from loam and salt, using best cattle hair. To be made at least eight days before using.

Brown coat to be covered with a good coat of best white hard finish. All plastering to extend to the floor. Center-pieces where designated on plans.

Painting.—All interior woodwork to have three coats of best white lead, in such tints as may be approved by the owner. Kitchen floor to be oiled two coats.

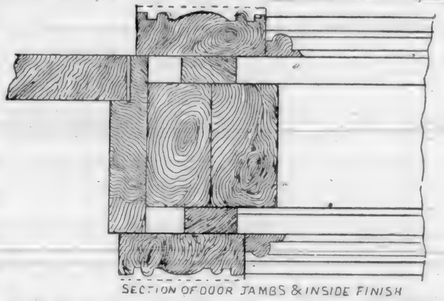
Gas Pipes to be introduced so as to give the number of lights shown on plan.

Plumbing.—Water-pipes to be of galvanized iron ¾ inch in diameter. No ½-inch pipe to be used. A 40-gallon galvanized iron boiler, with necessary connections, to be placed in the kitchen. Sink to be of size shown by drawing, to have 2-inch iron water-pipe and a Garland trap; 3½-inch brass strainer; back of sink to be lined with zinc. Slop-hoppers to be placed as shown. Wash-basins to be located as per plan, and to have all necessary hot and cold water connections. Water from all basins to discharge into an open slop-hopper outside. Bath-tub to be lined with No. 12 zinc, to have a 1¼-inch waste, with Garland trap. All necessary fixtures for bath-tub to be placed in proper position. The water-closet to be Budde's patent. Place safe trays under all sinks, bath-tub, wash-basins, water-closets, etc, with 2-inch turned-up edges, well nailed to woodwork. Three-fourths inch wastes. All waste or soil pipes to be connected with the sewer, and extend the same above basins, sinks, bath-tub, water-closets, etc., out through the roof.

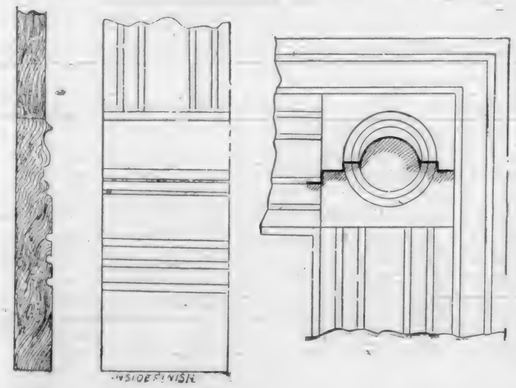
Generally.—Drawings and specifications are intended to correspond, and to be illustrative the one of the other All drawings to be furnished by the architect, details to be given from time to time as the work progresses. Should the necessity arise that any change or changes be made from the original design, the owner shall have the right so to do without invalidating the contract, adding to or deducting from the contract price the agreed sum of any change made.

COST.

The above specifications are given as a general index



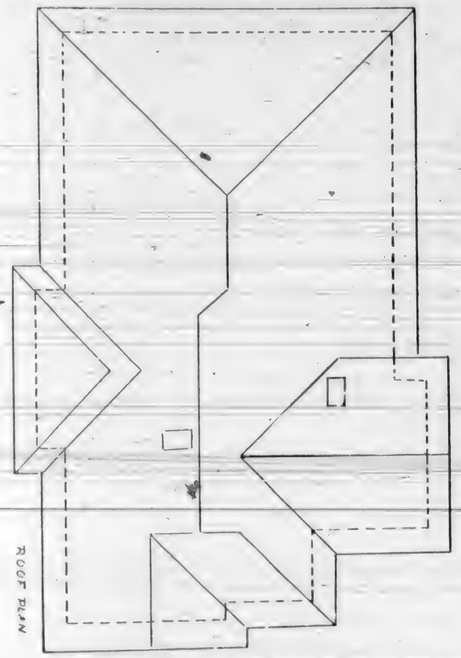
of the work. No accurate estimate can be given from them of the cost of the house. Quality and price of hardware, etc., have been omitted, leaving same to the pocket-books of intending builders. As shown, with finishes indicated by the details given, the house can be erected at a cost of about $2,500. Of course this figure can be changed considerable. Using best of materials, etc., the price should be given at $3,000, at which sum a truly cozy home can be obtained by those seeking a permanent dwelling-place.



Outside Painting.

Architecture having inclined to a greater degree of decoration, mainly owing to the development of the renaissance style, which aims at picturesqueness, affords far more opportunities than formerly for attractive and varied color effects. No reason convincing to ourselves has yet been advanced why bright and even gay colors should not be more extensively used in the outside painting of houses, care being taken that the application shall be judicious. They would particularly serve to emphasize what we may term the ornamentally constructive portions, which need to be specially brought out. A very

SAMPLE COPY.



Roof Plan of Alameda Country Home.

little bright color, such as a band of red on olive, will often have a brilliant effect. In an instance which we have in view—a country house—the body of the house is in pea-green, and the olive and red are applied to the cornice and window frames. these colors also appearing in the stoop and piazza. We have seen a business building painted blue, whilst the cornice was of yellow, and the effect was excellent; for a building is not to be considered in the light of a design painted on a wall, or ceiling, or on canvas. It is sufficient that good contrasts are presented, instead of possessing a monotonous appearance. The architect aims at varied combinations of forms, including projections and recesses, and it is for the painter and decorator to give these their best effect in color. We are not recommending mere meretricious gaudiness, than which it is better that a whole house should be painted, exteriorly, one uniform, subdued hue. Too strong a protrusion of color is always a viclation of all the rules of harmony and contrast. A house, according to its style and situation, allows of a treatment in colors that in another case it would be manifestly unwise to follow. Let a house be surrounded by umbrageous trees, and red will establish a fine contrast, looking particularly well should the structure be furnished with a tower. There are many country residences in which positive colors have been employed with excellent results; but there remain many more which admit of great improvement by more variety in the way of coloring.—*Painters' Magazine.*

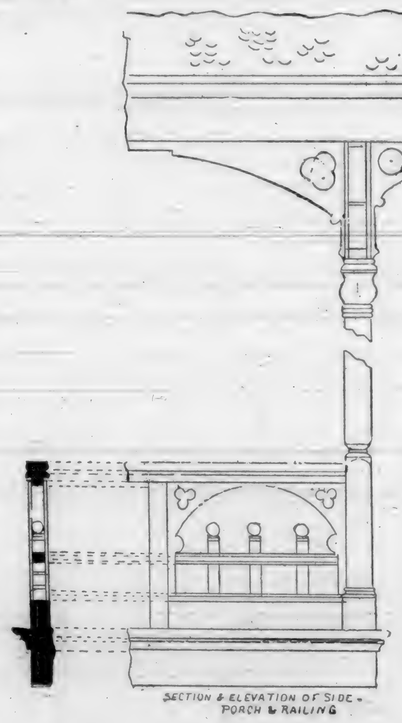
Make two rooms in a house as nearly as possible of the same size and form, for the convenience of turning carpets, and also so as not to require a waste of lumber.

What Is an "Architect"?

Is the question asked by the *Record and Guide.* As they state, in the present condition of affairs, "anyone possessing the knowledge of a poor carpenter, the skill of an indifferent draughtsman, a little audacity, and a ten-dollar bill, can appoint himself an architect, and, alluring the public by cheap rates, fill our streets with buildings that are both dangerous and hideous." It is for this reason that we have advocated the licensing of architects. If it is impossible to achieve this result, real estate papers can help to some extent by urging upon their subscribers the enhanced value of buildings designed by architects of reputation in matters of design, construction, and sanitation, and that the fact of a building being constructed under the direction of a reputable architect is, in so far, a guarantee of its being well built.

In regard to the nominal compensation allowed to the "grinders out of plans by the yard," it should be considered by builders, as well as by owners, a suspicious circumstance to find anyone ready to accept a fee less than that prescribed by the American Institute of Architects. We have frequently called attention to the fact that where a so-called architect accepts a nominal sum for superintendence the full commissions are more than made up by taxes on the contractors and sub-contractors, which money eventually comes out of the owner's pocket. Our definition of an architect would be one who has studied the profession of architecture from youth, who has spent not less than five years in the office of a recognized member of the profession, both working at the boards and as superintendent of construction, and one who occupies a portion of his time throughout his life in studying the progress of his profession. A man who says he has no time to read architectural works, or to attend conventions, must be behind the times and only fit for the second rank.

Constant study is as necessary for an architect as for the members of other professions, and one would hardly be likely to intrust his health to the care of a physician who knew nothing of the discoveries constantly occurring in the medical world. With the facilities now afforded to youth, it would be perfectly fair to expect the coming generation of architects to be graduates of architectural departments of colleges, and then to hold certificates of study for a term of years in the office of an architect belonging to some generally recognized architectural associat on. —*Building.*



ARCHITECTS AND BUILDER'S POCKET-BOOK.

BY F. E. KIDDER. PRICE, $3.50.

The new edition of this valuable work has been issued, and we can now supply all orders. It is the most complete, and contains more valuable information for the architect and builder, than any other work of its kind printed. It is of convenient size for the pocket. The print is beautifu ly clear. Price, $3.50.

Remaining numbers of this year sent free to all new subscribers for 1888.

DESCRIPTION OF THE NEW BROOKLYN PRESBYTERIAN CHURCH.

We invite the attention of our readers to the engravings of the plans and elevation of our new and beautiful house of worship, now being erected on the corner of Twelfth Avenue and Fifteenth Street, East Oakland. The building occupies a lot having a frontage of 140 feet on the street and 150 feet on the avenue. The dimensions of the building are 70x143 feet. There is about six feet of yard upon the street frontage, and 25 feet upon the avenue frontage. As the lot is two feet above the walk, this space can easily be made most charmingly beautiful. Upon the western side of the church there is a vacant portion of the lot with a frontage of 45 feet on the street, and 150 feet in depth. Upon the rear portion of this space there will be erected sheds for horses and carriages, while the front portion will be appropriated to drive-ways, walks, and lawn. The auditorium fronts upon the street, from which is its main entrance. The rear portion of the building is for Sunday-school and social meetings, with an entrance from the avenue, and also upon the opposite side of the building from the vacant lot.

Brooklyn Presbyterian Church, Twelfth Avenue and Fifteenth Street, East Oakland, Cal.

(see plans on next two pages.)

The dimensions of the several parts of the building are given upon the engravings of the plans. The roof of the auditorium is supported by strong trusses, the heavy, varnished timbers of which are exposed to view from within the room. Several feet above these timbers is a plastered, dome-shaped ceiling, formed into panels about four feet square by varnished beams and cross timbers. The ceiling in the lowest place is about thirty feet from the floor, and at the highest point about fifty feet. There are four stained-glass windows near the top of the dome, and three large windows in the front and two sides of the auditorium. These three windows will b made very beautiful and consecrated to the memory of three former pastors,—Pierson, the first pastor, Dean and Patterson, both passed to their reward.

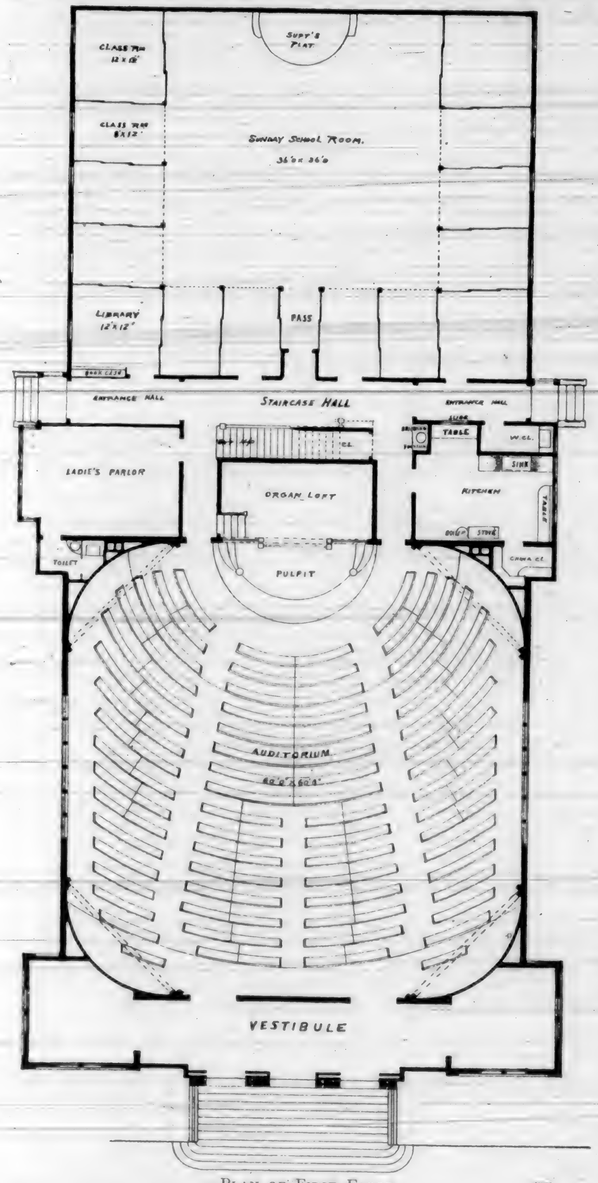
The auditorium is estimated to seat from five to six hundred, without the gallery, which will be added when required. The floor is well inclined, and the seats will be arranged in a semi-circular form. In addition to the main entrance, there are two other entrances, one upon either side of the organ loft, and leading from the main hall of the Sunday-school department. These, being upon the level of the lowest portion of the auditorium floor, will be convenient for those who wish to avoid ascending steps. They will also connect the auditorium with the other portions of the church, and afford facilities for rapid egress.

The Sunday-school portion of the church is constructed upon a unique but very simple plan, with a view to securing, as fully as possible, the massing of all the scholars into one assembly for general exercises, and their separation into rooms for class recitations. To accomplish this there are employed sliding doors and "slat partitions." This portion of the church is 48x60 feet, with a gallery 12 feet deep upon three sides. Beneath this gallery there are triple sliding doors, coming out from the outer walls to the pillars supporting the gallery. These doors, when drawn back to the wall, are entirely out of the way, and do not interfere with the oneness of the room or school, and when drawn out to the pillars, they form, under the gallery, four rooms 12 feet square, and ten alcoves 8 feet wide and 12 feet deep. These alcoves are then shut off from the main room and converted into class-rooms by means of "slat partitions," drawn down from the ceiling, which is under the gallery, and between the pillars supporting the gallery.

These "slat partitions" are made of white ash slats eight feet in length, three-fourths of an inch thick, and one and one-fourth inches wide. These slats are formed to slightly overlap each other, and are fastened closely together by means of a thin but strong brass ribbon, and all glued firmly to heavy canvas. They thus form a strong curtain, which can be folded or rolled at pleasure. The ends of these slats run in grooves in the pillars

and they are drawn up into the ceiling by weights, which are suspended in the outer walls. When thus drawn up, these partitions lie horizontally between the gallery floor and and the ceiling below.

Thus, upon three sides of this main room, and beneath the gallery, there are formed fourteen nice class-rooms, which as speedily all dissolve into one general room. The front of the rooms, and can be separated into rooms for classes, if desired, by means of cloth curtains. When the "slat partitions" are all up, and the sliding doors are all drawn back to the wall, there is nothing to obstruct the view in any part of the room or gallery, save the small pillars five inches in diameter. There are then five doors from the entrance hall into the main room, and two from the hall above into the gallery. The sliding doors are shown upon the plan; the "slat partitions" are indicated by dotted lines between the pillars.



Plan of First Floor.

It will be seen that the primary department is so far removed from the other portions of the school that the exercises of one will not disturb the other, and yet the little ones, by taking seats in the gallery, can participate in the general exercises of the school if desired.

Including the pastor's study and the ladies' parlor, there are twenty class-rooms for the Sunday-school, besides the gallery. In several of these rooms there are electric bells, connected by wire with the Superintendent's desk, by means of which the order of exercises is readily communicated to all the school.

The kitchen is located near the main room, with sink, and tables, and china closets, and a "pass window" which opens into the main hall. This will be found very convenient for socials and other kindred gatherings of the church.

By observing the plan it will be seen how fully all the room has been utilized, and how numerous and wisely distributed are toilet and other rooms and closets. The entire cost of the building will not exceed $25,000, at which price it will be one of the best buildings for the cost in all our lovely city.

Ingerson & Gore are the contractors. Geo. A. Bordwell is the architect. A goodly portion of the credit for the interior arrangement, however, must be given to the pastor, Rev. E. S. Chapman.

gallery is closed by "slat partitions" the same as the rooms below. When these partitions are all drawn down, the central room is 36 feet square, with octagonal, dome shaped, plastered and paneled ceiling, 35 feet high. It is lighted from four windows in the dome, and one large window in the rear wall, over the Superintendent's platform. This will also be a charming room for prayer and other social meetings, so cozily shut away from the outer world, and capable of being enlarged at pleasure. The gallery floor is sufficiently inclined to afford a good view of the lower

Low Ceilings.

THERE was a time—and it was not many years ago—when it seemed that a ceiling could not possibly be too high. Ordinary rooms in an ordinary house—rooms with a width of thirteen or fourteen feet—were made with their height equal to their width, and people rejoiced to think how airy their habitations were. But the openings into these lofty rooms were not always of height proportionate to the apartment, and three or four feet of warm vitiated air at the top of a room is of no benefit to its inmates. A few years ago it became the fashion to study the roadside hostelries, old farm-houses, and country dwellings built here and in England in the century preceding the declaration of independence. These models had low ceilings, often so low that a tall man might bump his head against a beam, doors so low that the same unfortunate individual was compelled to stoop on entering, and windows, for these were the days of dear glass, so low that their width exceeded their height. These windows were filled with small panes, which in older examples were set in lead and formed part of a casement—and in other cases were puttied into wooden sash-bars that kept out half the light. It became the fashion to copy these inconveniences, which builders of the time would have gladly dispensed with had they known how, and thus it comes to pass that a modern "cottage," as it is now the fashion to call what a few years since would have been styled a "villa" or a "mansion," must have disproportionately low ceilings, and either leaded lights in awkward casements, or tiny square panes in tavern-looking sashes.

Shade of common sense—is humanity crazy, that it thus jumps from one extreme to the other? Must we live in rooms eight feet or eight-and-a-half feet in height, with windows the top of which is scarcely level with our heads, just because our worthy great-great-grandfathers did so? Because an unventilated lofty parlor is a waste of money and space, must I reside in a parlor so low that it cannot be ventilated quickly enough to be healthy? It gives a sort of cemetery sensation to enter a modern room, 20 feet by 14 feet by eight feet high, and oh, it's such a stuffy death!

It is strange that almost everyone, when making a comparison, forgets the first condition of a comparison, viz., other things being equal. It is undeniable that a ceiling may be too high. There is such a thing as proportion, and too great a height is money and space wasted in the production of disproportion. The heights of rooms in an ordinary house must oscillate between numbers the largest of which is not twice the smallest, and must, moreover, as a rule be the same throughout a story, whether the room be large or small. The problem is to get the best average height, the height which best combines the requirements of proportion, fresh air, and economy. It is evident that this height ought, so far as proportion goes, to be greater in a house having large rooms than in one in which the length and breadth of the rooms is smaller, but considerations of economy check the increase of height in the former case, while the necessity of head room and cubic air space limit it in the opposite direction.

The only way to arrive at a sensible compromise between mere fashion and economy on the one hand, and the claims of proportion, light, air, and liberty on the other, is to ask the question, For a room of a given length and width, what is the best height?

For example, what is the best height for a rectangular room 20 feet by 14 feet? The writer places it at 11 feet. If the room were a square of 14 feet, 10 feet would be sufficient height.

It would be interesting to hear opinions upon these matters, provided always that admiration of a low ceiling because it is the fashion were not allowed as an opinion.

The matter greatly concerns the health and comfort of everyone. Landlords and speculating builders are taking greedy advantage of the fashion which enables them to charge for houses containing about three-fourths of the cubic contents once thought a necessity, prices in excess of those formerly charged for the larger cube. The clinching argument in favor of low ceilings is usually economy in heating. Still greater economy in heating could be gained by living in an air-tight box of six feet cube. We approach this condition of things too nearly as it is, with our furnace flues pouring in hot, dry air, and our windows filled with rubber strips.—*W. N. Lockington, in Builder and Decorator.*

Shingles in Modern Architecture.

THOSE who have watched the tendency, or, we may say, the evolution, of style in wooden suburban and country houses, must have noticed the gradual disappearance of the monotonous and uninteresting clapboard, with its uncompromising horizontal lines.

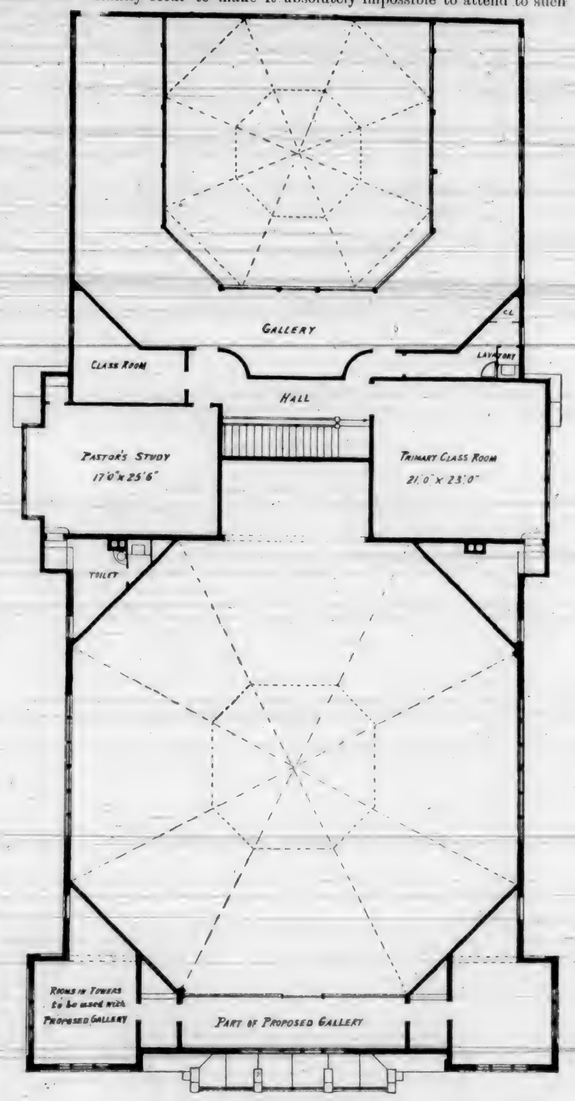
The cry is, "The clapboard must go," and it is going. But what is replacing it? The answer is instantaneous—the shingle. With the many ingenious methods of laying shingles, the greatest variety of effect can be obtained without cutting them at all.

But now comes the important question of coloring. At first paint was used, but the dull monotony of masses of color covering the grain of the wood has now almost universally given way before the modern creosote stains. Many attempts have been made to imitate the effect of stains without using creosote, but they have been sad failures, as other oils do not penetrate the wood and bring out the grain in relief. A test was recently made at the request of well-known architects of Boston, by a prominent chemist, of all the materials sold under the name of "stains." The result was that he pronounced "Cabot's Creosote Stains" among the best of them all.

These creosote stains have already been so long in use that the preserving properties of the creosote have begun to show their value on houses in all parts of the United States.

Planning of Rooms.

WHATEVER the length of a room may be, it will not be disagreeably proportioned if its height and breadth are the same: and if the length may be limited, once and a half the breadth is the most pleasing. Galleries, of course, will be much longer than that proportion, and the corridors will necessarily be narrower than they are high. Entrance halls should be cubical, regularly polygonal, or circular. Access should be given to a room by the end; it should be lighted on one side, and the fire-place may be at the other end, or on the other side; if the former, there should be two doors, or one and the appearance of another, that the fire-place may be immediately opposite a door. Many things, however, from localities and otherwise, constantly occur to make it absolutely impossible to attend to such suggestions as these. In halls and saloons not commanding a pleasing view, the windows may be advantageously placed above the usual level, for agreeable effect, for light, and for ventilation. In rooms lighted from above, as the Pantheon in Rome is, a columnar ordinance may be judiciously adapted, but otherwise columns and their accessories can seldom be well disposed internally.—*W. Hosking, in Carpentry and Building.*



Plan of Second Floor.

Remaining numbers of this year given free to all new subscribers for 1888.

Questions and Answers.

Enlarging Drawings.—John R. McC. writes: What is the quickest and most practical way to enlarge architectural and other drawings?

Answer—For accuracy and speed photography is to be recommended; but as this necessitates special apparatus and some amount of skill, you would probably find that the instrument known as the "pantagraph" would suit your purpose. These may be purchased at any store where artist's instruments are sold for from 25 cents to $20, and after a little practice are easily used, and prove very accurate. In the absence of this instrument, the enlargement may be executed by first drawing a number of parallel lines over the drawing at equal distances apart, and then other parallel lines at right angles. These are taken as the basis of measurements. Upon the plain sheet of paper lines at right angles to one another like those on the drawing are formed. Measuring with the two different scales of the original drawing and copy, an enlargement may soon be produced. Full details of the process will be found given in any of the manuals of drawing. The proportional compasses will be found to be a material assistance in the operation.

Burnt Clay for Concrete.—S. T. W. writes: In a recent number of your journal I see burnt clay is recommended as a good substitute, both for ballast to be used in forming concrete, and for sand to be used in making ordinary mortar. Will you please give me some further particulars as to the manner in which it should be prepared?

Ans.—The clay chosen for this purpose should be a stiff one. A suitable quantity having been dug, it is mixed with coal dust or small coal, and piled in a heap, previous to which a suitable fire is formed at the bottom consisting of wood, shavings, or straw, with small pieces of wood on top, then larger pieces, and finally some large coal. The fire is lighted through a touch-hole left for the purpose, and the bulk of the clay is added after it becomes well alight. In using burnt clay for ballast, it needs only breaking up; but used in lieu of sand, it will need grinding. Great care must be taken that the whole of the clay used is thoroughly well burnt.

Artificial Stone—Valuable Patent Right for Sale.

(SEE ALSO OUTSIDE BACK COVER.)

We would call attention to the description below of a new compound for artificial stone, samples of which may be seen at this office.

COMPOSITION FOR ARTIFICIAL STONE, ETC.

John Lorenz, of Muskegon, Michigan, has invented a new and useful composition forming an artificial stone, to be used in the construction of walls, paving, and all other purposes in which an artificial stone is applicable.

The nature of his invention consists in a proper combination of ashes and cinders, or clinkers, with ordinary cement to form a perfect and durable artificial stone, for the purpose above specified. A material has been used for these purposes, composed of clear ashes and cement, and also of clear cinders and cement, as well as these materials combined with lime or adhesive substances; but so far as our knowledge extends, no one but the inventor has yet used the compound formed of ashes and cinders with cement.

Experience has shown that artificial stone made of ashes and cement is susceptible to the action of the elements to such a degree as to cause it to soften, scale, crack, and easily wear out; and, further, artificial stone made from cinders and cement has been found to be too gritty for many of the purposes hereinbefore set forth, is liable to become rough by use, and requires a very large amount of cement in its formation, and consequently is more expensive than stone constructed by a combination of ashes with cinders and cement. By experiment I have demonstrated that this combination produces a stone which will not be injuriously affected by heat, water, or frost, and is, therefore, free from cracking, crumbling, scaling, or softening, and can be dressed and polished to such an extent as may be required.

The right to manufacture above on the Pacific Coast is offered for sale. Please notice adv. on outside back cover. Full particulers can be had at this office.

Material for One Hundred Yards of Three-Coat Plastering.

Eight bushels of good lime, one bushel of hair, one load of sand, one barrel of plaster of paris. Two of the eight bushels of the lime are required for the second coat; 1,440 lath, 10 pounds of nails, will do 100 yards of lathing.

HILL'S
Patent Inside Sliding Window Blinds,

Are Adapted to any Style of Window,

And Suitable for all Buildings, Dwellings, Stores, Office Buildings, and for Houses Built to Rent, Hotels, Boarding or Lodging Houses are Unexcelled.

They are entirely inside of the window casing, and while requiring no furring out or boxing, make it an impossibility to tear curtains, interfere with plants or window ornaments, or become broken by contact with chairs or other movable articles.

The light can be admitted and sunlight excluded from any part of the window; can be instantly removed and taken to any part of the house to clean and as easily replaced.

They can be opened or closed with the window raised, and without removing articles from the window-sill, and cannot blow open or rattle. The Blind is very light (one half inch in thickness) and strong, possessing more durable qualities than a hinged blind one inch in thickness.

There is no sagging, banging, or getting out of order.

They are made in three sections in height (each section sliding past the others), and any number of divisions in width corresponding to the folds in the old-fashioned folding blinds. They require no hinges—all trimmings furnished with blinds—are made of all woods, finished or unfinished.

The Blind manufactured throughout the United States and Canada by the members of the HILL SLIDING BLIND ASSOCIATION, is the only sliding Blind ever put into practical and general use, or that has been adopted and used by the leading architects and builders, both East and West.

It is rapidly displacing the objectionable folding blind, also shades, which since they have ceased to be considered the fashion, are used principally in cheap dwellings and t nements.

The Hill Blind is the only sliding blind made of white cedar, and where the grooved slide can be used as the window stop, or placed on the pulley stile, similar to the ordinary stop—"the slide is only 2⅜ inches wide"—plenty of room can be obtained by setting the casing flush with the pulley stile, in light studded buildings. NOTE.—Any other sliding blind using the slide as the stop f r the sash, is an infringement of our patents of February 26, 1884, and February 24, 1886, and anyone selling, using, of making such a blind will be prosecuted by the HILL SLIDING BLIND ASSOCIATION, as they are determined to stop the sale of several cheap and worthless imitations.

The Hill Sliding Screen, working the same as the blind, is the only screen covering one-half of the window, which will remain at any desired point, and which can be instantly removed, when not required, or to clean the windows.

Over eight thousand sets have been specified and put in, throughout the Pacific Coast, since April 1, 1885.

We refer to the following prominent architects of San Francisco, who have used or specified the Hill Blind and Screen, also hundreds of owners throughout the Pacific Coast:

Miller & Armitage, Pissis & Moore, H. D. Mitchell, John Marquis, John M. Curtis, Moore & Schultze, J. T. Kidd, J. H. Humphreys, T. J. Welsh, Jas. E. Wolfe, Townsend & Wyneken, Chas. J. Deyhn, Geo. E. Voelkel, Copeland & Banks, M. Balczynski, Edw. R. Swain, Chas. V. Pierce, S. & J. C. Newsom, Wm. Mooser, Chas. Geddes, Macy & Jordan, H. T. Bestor, A. A. Bennett, Salfield & Hohlberg, A. J. Barnett, John J. Clark, G. V. Capelletti, P. R. Schmidt, M. P. Schetzel, Clinton Day.

HINDES & MURRAY,

Main Office and Factory, 411 Mission Street, Corner of Fremont.

Sole owners of the right to SELL and MANUFACTURE for the Pacific Coast, except Counties of San Diego, Los Angeles, San Bernardino, Santa Barbara, Kern, San Luis Obispo, and Ventura in California.

COUNTRY
BUILDING INTELLIGENCE

In this and succeeding issues we intend to devote considerable space to information in connection with buildings, from every portion of the coast.

Only reliable news will be found in this column. Our custom has been for the past eight years, to furnish only data which could be relied upon. We will not publish rumors of "THIS AND THAT IS GOING ON" unless we are reasonably assured that such is truly the case. In all cases we will file our authority for any statements made in this column. No doubt mistakes will sometimes occur, but these we intend to be a rare exception to our rule of reliable news.

We desire the co-operation of country editors and mechanics to this department of this journal. By spreading the news of building engagement in your part of the country, you enhance the value of your section by proclaiming it a go-ahead community.

Architects should also notify us of "plans to figure on;" we do not charge anything for the insertion of such notices. Remember this journal is in the EIGHTH YEAR of its existence, and is the only journal published this side of the Rocky Mountains in the interest of Architects, Contractors, and Material Men.

Limes, Cements, and Mortars, for $4.00.
History of Architecture, for $15.00.

Transcontinental Hotel, additions. E. Newcomer, architect. Cost about $5,000.

Shavings and Sawdust, for $1.50.
American Cottage Building, for $3.50.

Methodist Church Society, frame church. Wm. Pierce, contractor. Cost, $2,650. E. Newcomer, superintendent.

Architecture and Building, $3.50.
American Cottage Building, for $3.50.

Florida, San Jacinto Co., Cal.

Kerr & Young's Hotel, frame. Amount, $10,000. E. Newcomer, architect.

Oakland.

St. Mary's College. Architect, J. J. Clark; contractor, Remillard & Co. Cost of brick work, $43,000.

Oregon.

At Salem, contracts have been let for the construction of the new wing to the Insane Asylum. It will cost $9,000.

Artisan, for $5.00.
Builders' Guide, for $2.00.

A. H. Johnson will build a warehouse on his dock at the foot of K Street.

Practical Perspective, for $5.00.
Woodward's Country Homes, for $1.50.

A two story frame dwelling is being built on the corner of Seventeenth and N Streets for John Myer.

American House Carpenter, for $5.00.
Cutting Tools, for $2.00.

R. P. Earhart, ex-Secretary of State, is having a handsome building built on Tenth Street, between Mill and Market, to cost $7,000.

Woodward's Country Homes, for $1.50.
Plaster, How to Make it, for $1.00.

A great shingle-making industry can be built up on the Sound, where there are unsurpassed facilities for the manufacture of cedar shingles. The *Oregonian*, in speaking of the growing demand for cedar shingles in the East, says: "This week a local house received a telegraphic order for fifty car loads of cedar shingles. Orders from Ohio, Missouri and other Eastern points have been and are being filled almost daily. A Pittsburg man desires a great quantity, which could not be supplied at this time."

Steel Square Problems, for $1.00.
Workshop Companion, for 35c.

J. A. Van Easton will erect a $2,000 residence.

Builders' Companion, for $1.50.
Artistic Homes, for $3.50.

The new temple of the A. O. U. W. will be erected on an available site not further back than Fourth Street, and between Salmon and Oak. The building will be of brick, and cost not less than $70,000.

Wonders of Art, for $1.25.
History of Architecture, for $15.00.

The four-story addition to the Portland Savings Bank building on Washington Street will be commenced at once. It will cost about $17,000. Contract has been let for the work this week.

Builders' Companion, for $1.50.
Builders' Work, for $5.00.

Three frame stores are being built by Charles Logus on Fourth Street between K and L, Portland, to cost $3,000.

Ruskin's Works (four volumes), for $6.00.
Industrial Drawing for Carpenters, for $2.00.

Redlands.

Stimmel & Lissenden, store and office. Brick building. Cost, $5,800.

Artistic Homes, for $3.50.
Modern House Painting, for $5.00.

Y. M. C. A. Brick building. Cost, $4,000. Brooks, contractor.

American Cottage Homes, for $3.00.
Builders' Work, for $5.00.

Mrs. C. Wells. Frame residence. Lancaster & Minor, contractors. Cost, $3,000. E. Newcomer, architect.

Practical Perspective, for $3.00.
History of Architecture, for $15.

Sloan's Hotel building, brick. Cost, $15,000. S. J. Logie, architect and contractor.

American House Carpenter, for $5.00.
Cutting Tools, for $2.00.

Washington Territory.

At Puyallup, a $12,000 hotel is being erected.

Science of Carpentry, for $4.00.
Universal Assistant, for $2.50.

Contract Let.—The Portland man, who put in the lowest bid for the construction of the Methodist Church in Seattle, raised his bid from $24,000 to $30,000, and finally backed out altogether and went home. The trustees immediately decided to build a brick basement, and construct the superstructure of wood. We are authorized by Rev. A. J. Hanson to state that the contract for the construction of the brick basement has been let to Mr. Parke for $2,950. He will begin work to-day, and his contract requires that the work be completed in 20 days. The basement will be of brick, 13 feet in the clear and be made ready for the superstructure, which will be let as soon as the foundation is completed.

Building Superintendence, for $3.00.
American Cottage Homes, for $3.00.

A four-story brick block 100x115 feet, is to be erected on the corner of Ninth Street and Pacific Avenue in Tacoma, for W. H. Fife. Cost nearly $80,000.

At Garfield a school building will be erected. Lawrence & Holbrook are the contractors.

Miscellaneous.

Bids for Proposed New School-houses in S. F.—Bids were opened for building, according to plans and specifications of the department architect, two school-houses, one on Union Street near Franklin, and the other on Page Street between Baker and Broderick. The bids were as follows:—

Bidders.	Union Street School.	Page Street School.
John Blake	$23,978	.....
A. McElroy	.....	$23,494
T. C. Riddell	24,350	23,990
Moore Bros.	25,453	25,493
S. P. Green	21,995	22,695
J. H. McKay	18,440	18,940
John J. Dunn	25,993	26,695
H. T. Bray & Co.	20,796	21,396
G. W. & J. W. Hansbrough	23,400	23,800

[Contract was awarded to J. H. McKay for Union Street school-house, at figures given.]

SAMPLE COPY

Ray White is building a two-story house on his Central Colony property in Fresno.

Practical Perspective, for $5.00.
Drawing for Carpenters, for $1.75.

Building is very brisk in East Oakland and a large number of buildings is going up in all portions of the eastern part of town. One of the reasons for this is the fact that a large number of good building lots is changing hands and as a natural consequence buildings are going up in many parts of town. There is a tendency here to erect houses with some attempt at ornament and the severe straight outline of the old-time building is a thing of the past. The new Williams Block on East Twelfth Street, the Fowler building on the corner of East Fourteenth Street and Thirteenth Avenue, and the Look & Leonard building opposite, testify to the new styles in vogue. In dwellings the tendency is the same way, and while the architecture is often very mixed, still the architect and the builder both show a desire to depart from the old style of cottage with the false second story, and make some improvements.

Drawing for Stone Masons, for $1.50.
Building Construction, for $1.25.

The sum of $2,300 has been subscribed by the Trustees of the University of the Pacific for the construction and completion of the fourth story to the East Hall building.

Builders' Companion, for $1.50.
Builders' Work, for $5.00.

The contract for the building of a quartz mill for the Centennial Mining Company at Genesse Valley, California, has been awarded to George Brandt, of Reno.

Hand Railing and Stair Casing, for $1.50.
Drawing for Carpenters, for $1.75.

The sale of between 40,000 and 45,000 acres of land in a body, lying south of Tulare Lake, to a syndicate of capitalists from Pasadena and Los Angeles, has been completed. Improvements will be commenced at once, including artesian wells, a new town, etc. The consideration is about $450,000.

Builders' Companion, for $1.50.
Builders' Work, for $5.00.

The railroad company are putting up their depot at South Riverside as fast as they can obtain labor and materials. The frame will be up this week.

American House Carpenter, for $5.00.
Cutting Tools, for $2.00.

At Riverside G. H. Brown will build a $5,000 residence.

Plaster, How to Make It, for $1.00.
Shavings and Sawdust, for $1.50.

It now appears that the building of the City Hall is attracting attention outside of San Jose. Several contractors from San Francisco, Stockton and other places are figuring on the work.

Grimshaw on Saws, for $4.00.
Mechanics' Geometry, for $4.00.

Burnam Bros. have enlarged their wine cellar in Bennett Valley.

Builders' Work, for $5.00.
Building Superintendence, for $3.00.

Aaron Hassett will build a new winery at Healdsburg. Capacity, 25,000 gallons.

Lumberman's Hand-Book, for $2.00.
Practical Geometry, for $1.00.

It will take nearly 300,000 feet of lumber to build the timber foundation of Hotel Rubidoux, the work on which will be commenced this week.

Cutting Tools, for $2.00.
Cumming's Details, for $5.00.

It is stated to-day that the Santa Fe, the Southern Pacific (Altadena Road probably) and the Long Beach and Pasadena Electric Railway are to immediately build a mammoth new depot of fine architectural design at Raymond Station.

Plaster, How to Make It, for $1.00.
Shavings and Sawdust, for $1.50.

At Brooklyn, Alameda Co., Mr Frank Moryer is building a $2,000 house, Martin & McGuire are contractors.

Universal Assistant, for $2.50.
Practical Perspective, for $5.00.

Swaine & Hudson, of Marysville, were the successful bidders for constructing the new Hesperian College at Woodland, their bid being $16,780.

WM. B. HOOPER, Manager. C. A. BARKER, WALTER DICKINS, Assistant Managers.

Notes.

THE cause of sewer gas in a house may often be traced to an uncleaned catch-basin.

FINISH pockets to slide doors air-tight, and thus avoid a common mistake made by builders.

HIGH doors are fast being relegated to the past; wide openings appropriately draped are much in vogue.

RUBBER stops for windows, instead of wood, do away with that nuisance termed weather strips.

IN designing your house, thoroughly study your plan before contracting, thus saving much annoyance and extras.

He who expects to build a three-thousand-dollar house for two, either believes a builder a supernatural being, or pays his attorney by the year.

LOOSE SCREWS.—It is a common thing when a screw or staple becomes loose, to draw it out, plug up the hole or holes with wood, and then re-insert it. But screws and staples so secured soon come out again. It has been found that a much better way is to fill up the holes tightly with cork. Screws and irons so secured will remain perfectly tight just as long as when put into new wood.

A Carpenter and His Shavings.

A prominent city landlord, who is putting up many of the wooden houses in a district which is being rapidly filled, when asked by an old resident for a few barrels of shavings the other day, replied: "We don't have any shavings in the houses now; they are all made at the mill, and you will have to go there for them." I don't believe that the carpenters nowadays make more than a barrel of shavings in building a house. Modern residences are put up pretty much as Solomon's temple was, the parts are brought together all prepared and fitted, and it is short and easy work to put them together.

The wooden house is turned out of a saw and planing mill much as if it were a toy block. Like ready-made clothes, the average mechanic can put up a ready-made house, while there is still the same opportunity for elaborate workmanship and outlay as in fine clothing.

WE have received the Prospectus of the Academy of Architecture and Building, located at 3066 South Ninth Street, St. Louis, Missouri, of which H. Maack is the principal. The institute is designed to be for the building trades what the commercial colleges are for business men. Instruction is to be given only during the winter, leaving young mechanics their time to devote to remunerative employment during the busier months of the year. By this means, it is argued, young men who could not otherwise afford the cost of instruction, will be enabled to avail themselves of the opportunities afforded. The circular contains the course of study through three terms, and also indicates the requirements for admission, as well as cost. This enterprise seems to be a commendable effort to afford technical education in a form to be of the greatest service to young mechanics in the building trades.

CARPENTRY MADE EASY.

By Wm. E. Bell, a practical mechanic, who fully appreciates, from personal experience, that there are many things perplexing to understand and difficult to do until they are fully explained and tested. It is designed to make the science and art of carpentry clear and comparatively easy to all who require information on the subject. Price, $5.00 by mail, prepaid.

Professional Partnership Desired.

I DESIRE to correspond with any young architect or draughtsman who has a thorough knowledge of construction and building, and who is desirous of going into business for himself, and who may be desirous of a partnership, to locate at Colton or vicinity. Can guarantee a good practice; have had five years' experience in architect's office. Address all correspondence to

WM. A. NETHERCOT,
Box 201, Colton, Cal.

AMERICAN GLOSSARY OF ARCHITECTURAL TERMS.

PRICE, FIVE DOLLARS.

IN our notice of this really excellent publication in our last issue, we inadvertently gave the price at $2.50. It should have been $5.00. A consignment is now on the way, and all orders can be promptly filled.

HILL'S PATENT INSIDE SLIDING BLINDS.

THAT advertising does pay is shown by the re-insertion of the advertisement of above blinds. The rushing city manager, Mr. Hindes, concluded that he would not be *blind* to his own interests any longer, and so is reaching out for the trade of the whole Pacific Coast. This journal was selected by him as the most proper medium to secure that end, and the result will soon be shown in the numerous orders that will pour in upon him.

POOR'S DIRECTORY OF RAILWAY OFFICIALS.

PRICE, TWO DOLLARS.

THIS publication for 1887 (the second annual number) has just been issued. It contains very complete and admirably arranged lists of steam and street railroad officials corrected up to the time of publication; also lists of car and locomotive builders, car axle, wheel and spring manufacturers, railroad contractors, bridge builders, and rail mills. In addition to the general list of railroads, which for convenience is made to conform to that of the "Manual," there are special lists of general managers, general superintendents, freight and passenger agents, master mechanics, master car builders, master car painters, purchasing agents, and chief engineers. The volume also contains an alphabetical list of the names of all the officials in the general list, by means of which the road with which each name is officially connected can be readily referred to. The railroad commissioners of the several States, officers of sleeping and parlor car companies, and a list of Mexican and Central and South American railroads, are also given. The "Directory" is intended to be supplemental to the "Manual," and contains a vast amount of information which cannot be given in the larger publication without increasing its size to unwieldly dimensions. It should be noted that in one respect the present number of the "Directory" is a great improvement upon that of last year; it opens sideways like an ordinary book, instead of endways.

Market Reports.

THE retail price list of the California Lumber Exchange for September 9, 1887, is as follows:

Pine, Rough, per M feet	$22 50
Pine, Rough, No. 2	18 50
Pine, Rough, 40 to 50 feet lengths	23 50
Pine, Rough, 50 to 60 feet lengths	24 50
Pine, Rough, 60 to 70 feet lengths	25 50

THE CALIFORNIA ARCHITECT AND BUILDING NEWS.

VOLUME VIII. ENTERED AT POST-OFFICE, SAN FRANCISCO, AS SECOND-CLASS MAIL MATTER. ESTABLISHED JANUARY, 1879. NUMBER 10.

THE

California Architect & Building News.

Established January, 1879.

The official organ of the San Francisco Chapter American Institute of Architects. Published by the SAN FRANCISCO ARCHITECTURAL PUBLISHING CO. No. 240 MONTGOMERY STREET, Rooms 11, 12, 13.

Terms per annum - - - - $2.00 in advance.

Published on the 15th of each Month.

When money is sent for subscriptions, the receipt of a copy of this Journal is an acknowledgment that it has been received. Unless requested we do not send receipts.

OUR ADVERTISING RATES.

SAN FRANCISCO, CAL., OCT. 15, 1887.

Weekly Building Edition

OF THE

California Architect & Building News.

FAVORABLE progress is being made towards establishing our WEEKLY EDITION. Extra pains are being taken to collect building information from every portion of the country. The WEEKLY EDITION will be 10x13 inches in size, and ENLARGED AS OCCASION MAY REQUIRE. It will only contain building news and will not, under any circumstances, be used for any other purposes. Positively no advertisements will be inserted. It will be delivered FREE to yearly subscribers of the CALIFORNIA ARCHITECT AND BUILDING NEWS. Thus, for the sum of TWO DOLLARS PER YEAR, you will obtain the WEEKLY BUILDING NEWS, giving you all the latest information, and the CALIFORNIA ARCHITECT, with its twenty-eight pages of interesting matter connected directly with all branches of the building trades, embellished with several pages of illustrations, showing plans for all kinds of city and country houses. Now is the time to subscribe. **Remaining numbers of this year given free to all new subscribers for 1888.**

THE attention of architects is called to the proposals for plans for the Provincial Royal Jubilee Hospital at Victoria, B. C. See page 140.

BALTIMORE, Sept. 27, 1887.

CALIFORNIA ARCHITECT AND BUILDING NEWS—*Dear Sirs:* Our advertisement in your September number is of no value to us, but a positive injury, as you have the cut of the pulley upside down. The screw end is the top of the pulley.

Yours respectfully,
C. SYDNEY NORRIS & CO.

While we sincerely dislike to do anything displeasing to our advertising patrons, and especially so when assuming the magnitude of "positive injury," yet we are almost glad that our printer did for once, not knowing nor pretending to know the bottom from the top, perpetrate the blunder of turning things upside down in this case, as it has called out the foregoing communication from the firm interested, and demands of us correction and reply. That a printer might innocently make a mistake of the kind is admissible, but when a competent mechanic, a mill man, who has handled thousands of pulleys, deliberately perpetrates a like error in the practical use and application of the pulley in question, it gives rise to the presumption that some of the gear in his mental mechanical department must be terribly deranged or fractured—very much upside down. For if the mechanical construction of the pulley suggests anything in reference to its proper position, it is that the beveled, dove-tailing end should be placed downward to carry the weight of sash, glass and weights, with the screw in the upper end, simply to hold the head in flush with the pulley stile, the bottom being insufficient for all other purposes.

Messrs. Norris Co. were doubtless provoked almost to madness when the mistake of the printer was noticed, and we can imagine them in a state of frenzy, ready to pull somebody's hair, if not their own; but if they had been called upon to witness what we personally met with during the present season they would have been vexed, *almost* as much as we were, and would have been provoked to say as many naughty words as we uttered, when the window frames containing nearly 200 of the Norris pulleys were delivered at the building with every pulley placed in the pulley stiles just as they appeared in the September issue, top end and screw at bottom, and the beveled bottom end at top.

Had this been the result of a set of "jackknife carpenters'" misconception there would have been the palliation of ignorance or stupidity, but occurring as it did in one of the largest and best equipped mills on this coast, where none but competent workmen are employed, it amounts to a sort of hallucination, in which the faculties became deranged and finally settled down with the wrong end up.

The excuse. When called to an account the reason given was that when the pulley is placed upside down, the letters of the word "patent" are upright, while when the pulley is rightly placed, "patent" is upside down. There is a small thread of argument and reason in this which Messrs Norris & Co. might correct, as to some extent misleading; but this should weigh nothing in the mind of practical mechanics as against the conclusively certain proper position of the pulley, as clearly shown by its construction.

Merits of the pulley. We have never used a pulley that works prettier, nor gives more complete satisfaction, being positively noiseless, which, in comparison with the distressing rattling noise of the ordinary patent pulley, makes them invaluable, and the smooth steel pins of the axles, and the large smooth grooves in the wheels, assure long wear and great service in both pulley and sash cord. They are safe to recommend any time.

San Francisco Chapter, A. I. A.

THE regular meeting of the Chapter was held on the 7th inst. and was largely attended. President Pissis presided; B. E. Henricksen, Secretary. After reading an approval of minutes, the reception and payment of bills, and the usual routine of business was transacted, the standing committees made report of progress. The Committee on Fire Ordinances also reported, reciting the facts of the interview with the Committee on the Board

of Supervisors, at which were present of Chapter members, Messrs. Pissis, Welsh, Henricksen, Gash, Wolfe, Bestor, Clark and others. The proposed amendments are elsewhere noticed. Gingero Harmada, having been duly proposed at previous meeting, was elected associate member of the Chapter. Several communications were received from the Secretaries of the A. I. A. and the Western Association of Architects, in reference to the annual sessions, inviting co-operation. But the time limiting the opportunity for action having passed, the matter of necessity went to file. The election of officers for the ensuing year was next taken up, and resulted as follows: President, George H. Sanders; Vice-president, E. Moore; Secretary, G. H. Wolfe; Trustees, John Wright, A. Laver, B. E. Henricksen, A. Pissis, James E. Wolfe. Congratulations and general discussion ensued, and the expression of hope and promise that the Chapter, under the efficient leadership of the newly-elected President, would be of the most satisfactory character.

It would be well for the architectural profession upon this coast, if the good and right intent, purpose and work of the Chapter organization could be appreciated and entered into with earnest zeal. Much might be done worthy of doing, and good accomplished without injury to anyone. Why not have it so that there would be an annual gathering of the architects upon this coast, of like character with the other semi-national associations which meet once a year, gathering their members from many States and sections of the country? The American Institute of Architects was the first to organize as a grand or parent organization, for the purpose of concentrating and developing the possibilities of the profession, preserving its grand record of facts and the history of the past as made by the army of worthy men, who, in past periods and ages, did so much to ennoble and magnify the science of architecture. This was followed by other conclaves, embracing one or several States, as the *Western Association of Architects*, and they have all to a greater or less extent accomplished desirable results, and a large degree of enthusiasm attends their annual sessions.

Then why not the architects of this coast enter into the Chapter work, and from thence evolve the *Pacific Coast Association of Architects*, holding its annual sessions, and inviting members of the profession from every section of the United States to visit us? Why not be alive to our professional interests beyond the mere mercenary features, and give a little in time and money to enjoy the rich repayment which would follow and flow through a sectional grand body?

Its Continued Prospects.

NOT boastfully, but in a spirit of appreciation and honest gratitude, we refer to the present healthful and substantial condition of this Journal. It has done well, is now doing well, and the prospects for its future are entirely satisfactory. Its eight years of growth, with their sunshines and storms, has matured it into a thrifty, sturdy and successful enterprise, notwithstanding the many sources of opposition which have aimed to cripple and injure its influence. We do not ask credit for anything brought about by its agency, but those who will follow the currents through from 1879 to the present time, noting the landmarks as they pass along, will scarcely be able to escape the conviction that this journal and its management has exerted an influence in numerous ways for good, and that it has *preceded* in many directions claimed by others as enterprise. No better proof can be asked or given as to its prosperity than reference to its advertising columns, while its subscription list of paying subscribers continues to increase.

Amending the Ordinances.

THE Committee from the Board of Supervisors, Messrs. McDonald, Hawkins and Knorp, with the committee from the Fire Wardens, Messrs. Kelly, Mahoney and Siebe, have for several weeks had before them certain amendments proposed by or from the Fire Warden and Underwriter standpoint, some of which relate especially to building construction, and, therefore, of interest to, and should elicit and receive the personal or delegated attention of, every member of the profession. There is no special duty resting upon any one or limited number of architects to interest themselves in the matter, and if they did, it is altogether likely that the charge of extra officious would be hurled at them by those who will neither do themselves, nor appreciate the doings of others. One of the proposed amendments increases the thickness of walls, and consequently the cost of brick buildings, in that it restricts thirteen-inch walls to the last or upper story only, instead, as heretofore, permitting thirteen-inch walls for the third and fourth, fourth and fifth, etc., stories.

Another proposes to limit the height of buildings to sixty feet from the level of the sidewalk, to the extreme height over all, including main cornice and the horizontal finishes above same. This is insufficient and inadequate as a maximum height, and surely discriminating and unfair as between lots level or on the low or declining grade sides, and those on the high or hill sides of streets—the latter certainly and reasonably requiring greater latitude as to height.

Another proposes relief, by increasing the limit of span between walls, which heretofore has been 85 feet. The amendment suggests 100 feet, but this is opposed by the chief engineer of the fire department, upon the grounds that he *thinks* and *considers* that 85 feet is enough. The architects present before the committee asked that the limit be extended to the full width of buildings erected on 50-vara lots. This was met by the suggestion from the chairman of the committee, that the limit be made equal to two water lots—two-thirds of a 50-vara lot.

Other amendments affecting theaters, halls, and places for public assemblages, elavator shafts, etc., are in the category of the proposed amendments, requiring a great deal of study and just discrimination to render them equitable. The problems involved should receive the earnest attention of several thoroughly practical, qualified minds, to arrive at the best and right conclusion.

The entire ordinance as a whole is a map of more or less crude ideas thrown together in a heap, and nothing short of raking the whole pile over, segregating the good and practical that may be found from the absurd and impractical, and the introduction whole cloth of an entire new construction, will be the successful means of producing a fairly complete fire and building ordinance.

The doubtful and possible of double-construction sections, the unnecessary and absurd requirements and restrictions, the empowering of incompetent men, wholly ignorant of mechanical principles as applied in construction works, to dictate and domineer over those who have applied all the years of their boyhood and manhood to qualify themselves as practical architects or builders, and many other wrong features, render the Ordinance under notice far from fair, just, right and equitable, and most unquestionably objectionable to those who suffer so many vexations and annoyances from an arbitrary, insufficient and imperfect law.

THE Abrahamson Ventilator, a California invention, has proven itself a most valuable and practical device, and is working its way into general use. In addition to the numerous other testimonials in its favor is the fact that it is being included among the indispensable good things in buildings recently erected or to be erected as soon as arrangements can be made—among them, H. Lebes' factory, the three new public schoolhouses, residence of Mr. Swabacher, Clay Street near Franklin, New City Hall, San Jose, Fresno Jail, Presbyterian Churches at Oakland and Alameda, Woodland Bank, United States Mint, and elsewhere.

Building Summary for October.

A summary of our reports shows a decided gain over the similar period of last year. During the month we report:—

63 frame buildings, value	$257,840
2 brick " "	37,200
19 alterations "	55,300
84	$350,340

During the first ten months of 1886 the record shows 1,001 buildings; value, $5,107,642.

During the first ten months of 1887, the record shows 923 buildings; value, $5,562,254.

Showing a decrease in *number* of 78, and a gain in *value* of $454,612.

This is a very fine showing. From present appearances the number of improvements made this year will about equal those of 1886, but the value of the same will largely exceed the same in the grand total.

INTERESTING correspondence may be anticipated in the next succeeding issue of this journal, of items gleaned by the wayside, by the editor of this journal, during a trip across the continent, and through nearly all the more prominent cities of the country.

PRESENTED BY THE CALIFORNIA ARCHITECT AND BUILDING NEWS.

PERSPECTIVE VIEW OF THE NEW ST. MARY'S CATHEDRAL.

Corner Van Ness Avenue and O'Farrell Street, San Francisco, California.

California Architect and Building News,

240 Montgomery Street, San Francisco, Cal.

Published Monthly by the San Francisco Architectural Publishing Co.

On the 15th Day of Each Month.

Established January, 1879.

Weekly Building News,

PUBLISHED EVERY SATURDAY.

The Weekly Building News will contain all the latest items in regard to buildings in every portion of the State. As far as possible we intend to make a specialty of obtaining news in advance of contracts, particularly in country work. Architects can greatly aid us in this regard by forwarding notices of intended improvements upon which they desire bids from City Contractors. There will be no charge for any such notices published in the Weekly.

The Monthly California Architect and Building News contains several pages of illustrations in each number, embracing every description of city and country business buildings, residences, farm and school-houses, churches, suburban homes, etc. Also 28 pages of reading and other matter prepared especially on matters pertaining to the building interests.

Price of the Two Publications, $2 per Annum.

Purchasing Agency.

Connected with this office is an agency for the purchase of everything pertaining to the building interests. We do not seek to make pecuniary profit from this branch of the business. As far as possible, consistent with business principles, we will purchase from those advertising in the California Architect, and endeavor to help those that help us. But we are not bound so to do. In all cases we will seek to obtain the lowest market prices, and patrons can depend upon being furnished the best goods of the kind ordered, in the shortest space of time, and at the lowest cost.

Front Elevation "Woodland" Home.

A "Woodland" Home.

THE plans and elevation of a "Woodland" home are well worth the attention of those desiring to build a home that will contain all the necessary requisites to make a country or suburban dwelling truly home-like and comfortable. Entering a spacious front hall, you are at once struck with its handsome appearance, a direct view being obtained of the stair hall with its winding stairs. You pass into the large parlors, arranged especially for comfort, and having superior advantages in the way of light and ventilation. Across the stair hall is shown a large sitting-room, in size 16x22, with five windows, giving ample light. Two bedrooms lead off on either side, and a passage to the dining-room. The kitchen is in close proximity to the laundry, wood-house, etc. On the second floor are seven bedrooms, all well supplied with cupboards. Messrs. Gilbert & Son, of Woodland, are the architects, and the plans shown are of only one of the numerous fine dwellings that have been built by this firm.

THE HOTEL VENDOME, SAN JOSE.

Plans and Specifications Adopted—Work to Be Begun at Once.

AT a meeting of the Hotel Vendome Directors, the plans and specifications prepared by Jacob Lenzen & Son, of 75 East Santa Clara Street, San Jose, were unanimously adopted, and by the coming week contractors will be figuring upon the work.

The Hotel Vendome will be one of the most commodious and elegant suburban hotels in the United States. It will be in the Queen Anne style, and no expense will be spared to make it in every way attractive, comfortable, and luxurious—a credit to San Jose and to the gentlemen who conceived the enterprise and are now, with commendable alacrity, carrying it into execution.

The new structure will be situated 250 feet from First Street, which it will face, and 25 feet from Vendome Avenue. It will stand somewhat back of the Maddox residence, as now situated. The latter building is to be removed to the corner of San Pedro Street and Vendome Avenue, and will be used as a club-house, after the necessary changes in both exterior and interior have been made.

The hotel will have a frontage of 254 feet. The central portion, or main body of the building, will have a depth of 210 feet, with which will be connected two wings, each 42 feet front by a depth of 120 feet. The foundation will be of brick, with pressed brick facing, and the building proper of wood. The floors will be all doubled, with mortar deafening.

The basement will be 9 feet clear, the first story 15 feet high, the second story 12 feet, third story 11 feet, attic 10 feet.

The basement will contain dining-rooms for servants, barber shop, fuel and store rooms, bakery, etc.

On the first floor will be the main entrance, 41x66 feet, in which will be located the office, grand stairway, elevator, private stairway, etc. Here, also, will be the dining-room, —x80 feet, with two wings, 30x40 feet, 30 chambers, ladies' parlor, billiard-room, reading-room, baggage-room, etc.

There will be fifty-three rooms on the second floor. Here suites can be extended to seven rooms, if desirable, and on the front nine rooms can be merged into a single suite. Here, also, will be toilets, bath-rooms, etc.

A nequal number of rooms will be on the third floor, with the same facility for suites and an equal number of toilet and bath-rooms.

In the attic there will be forty rooms.

Three towers will rise from the hotel, the central one to be 100 feet high and the others about 85 feet each.

Fire-places will be constructed in each of the principal rooms. Steam will be used to heat the corridors and for other purposes.

The grounds surrounding the hotel will be graded up to the basement, for which no digging will be required.

The stables, laundry buildings, etc., will be situated at some distance in the rear of the hotel.

Jacob Lenzen & Son will have the plans sufficiently completed in detail by Tuesday to permit contractors to make estimates upon the different portions of the work, which Mr. Lion states will be pushed forward as rapidly as possible.

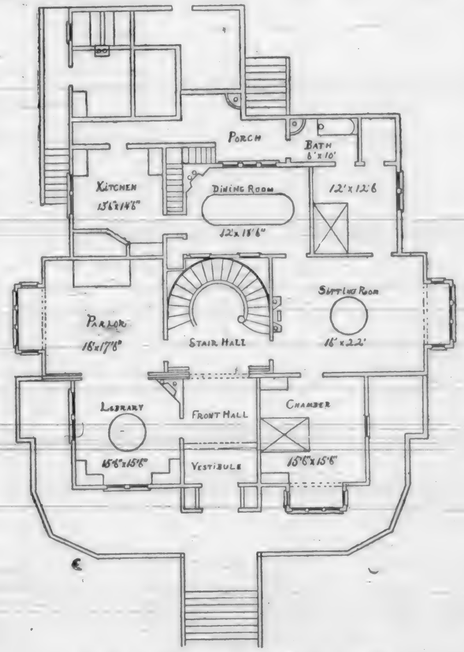
NEW WORKS JUST RECEIVED.

"MANTELS AND SIDE WALLS."

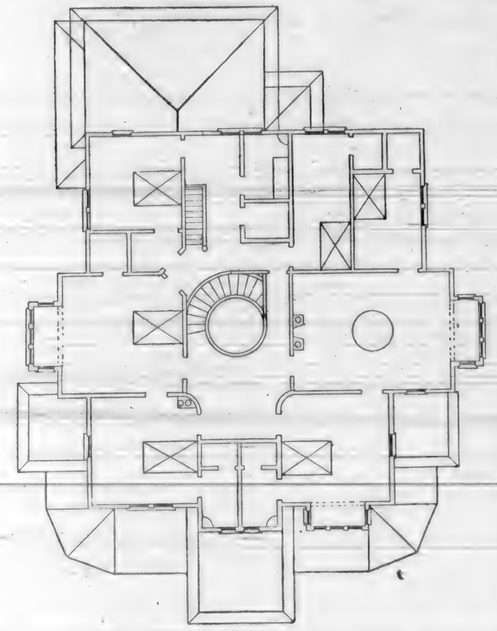
Thirty-two lithographic plates in a portfolio representing designs in the *Cheminee*, Louis XIII., and Louis XVI. styles. Also plates showing various accessories such as mirrors, decorative panels, wainscoting, clocks, etc. These plates are all by the celebrated designer, M. Prignot. Price for portfolio, $5.00.

"SHORT HISTORY OF ARCHITECTURE."

From Chas. Scribner's Sons we have received a copy of this new work by Arthur Lyman Tuckerman. The general design the author had in view was to trace the origin of each style, its characteristic points, and its connection with those which preceded and succeeded it, without introducing technical terms or any but the most important dates. All the great historical events are presented within a small compass. A fuller description will be given soon, as the book was received too late for an extended notice.



First Floor Plan "Woodland" Home.



SECOND FLOOR PLAN "WOODLAND" HOME.

Industries in Lumber.

AS San Francisco is the great maritime center of the woodlands of the Pacific Coast. it would seem to be a foregone conclusion that it should be the seat of great industries in lumber. Add to that the fact that most of the houses of the coast are of wood, and it should appear as if it ought to be overshadowing. As a matter of fact, however, some other special lines of industry surpass it in importance. The quantity of lumber consumed in California in the course of a year is about five hundred and sixty-four million feet, of which two hundred and sixty million feet come from Puget Sound. Thus very nearly two-fifths of the whole is imported. The value of the whole in the State is about eleven and a quarter millions of dollars. Of this San Francisco handles yearly three thousand million feet, worth six million dollars, all coming from the coast from Puget Sound to the Golden Gate, and employing quite a fleet of vessels in its transit. Thus far the raw material which the planing-mill, the manufacturer of doors and sashes, the producer of furniture, the manufacturer of boxes, converts into myriad forms of usefulness and many of beauty. The planing-mills of San Francisco and the manufactures of sashes, doors, and blinds, equal about six millions of dollars in value. Besides supplying lumber for house building to the city and suburbs around the bay, we export largely of doors, sashes and blinds to every port on the Pacific. The furniture industry will equal in value this year a million and a half of dollars, and what magnificent furniture we can turn out anyone may see for himself in the pavilion. Our box makers have a great field to supply. The value of the product this year will not be less than a million and a quarter dollars. There is a great increase, owing to the heavy packing of canned and dried fruit and of salmon. Cigar boxes of themselves equal in value say $250,000. We have not included cooperage stock in the value of lumber imports to San Francisco, but from the extension of our wine and beer industry the value of cooperage made in San Francisco cannot fall short of a million dollars. Carriages and wagons, of which there are some fine specimens in the fair, will equal a million dollars in value. We will make nearly a hundred thousand dollars in value of billiard goods. Our wooden-ware factories will add to the value of our industries in this line not less than two hundred thousand dollars. The totals of the leading industries noted will not be less than eleven and a half millions of dollars. The grand total of San Francisco's industries in this line will at least equal thirteen millions of dollars. The processes of manufacture, therefore, on the whole about double the value. The importance of this interest must steadily increase, and it must grow even more rapidly than the growth of the city.

California Veneers.

CALIFORNIA sycamore is a wood that is as little known as it is handsome. It has the appearance of quantities of fine vertical lines close together and generally wavy. It looks very much like the Eastern beechwood, and before its value for finishing and decorating was discovered it was used for cigar boxes. It is called buttonwood in New York. Sycamore is used principally for veneering, as it is very strong and can be cut easily. It is a very unostentatious wood, being rather fine in its markings and quiet in its shades.

For fancy decoration, panels of furniture, doors and other places where a highly marked wood is required, the redwood, laurel, sycamore and walnut are greatly used. They are usually found handsomely marked. The redwood is probably the most used, as it is not only cheap, but is very beautiful More variety can be found in this wood than in any other. The walnut is still used, but is gradually giving place to the fancier and more modern woods. The tendency nowadays is to make furniture from lighter and fancier material than formerly, and the somber, gloomy walnut, with its massive appearance, is gradually giving place to the lighter woods.

The finishing of a house is usually done by veneers, as it is cheaper and just as satisfactory as solid wood. The wood is cut into veneers of about one-eighth of an inch in thickness, and they are then planed and polished until reduced to the required dimension. In very hard woods such as the mahogany, the veneers are very thin indeed, being a thirty-second of an inch in thickness, and often thinner. The polishing is a somewhat slow and laborious job and is always performed by a skilled and special man. It is done by rubbing the wood with boiled linseed oil until it assumes a high polish. Only hard woods can be used, because others do not take a good polish, nor do they last for any length of time.

It is only during the last eight years that the finishing of houses in natural woods has come into prominence at all, and up to a very few years ago this style of interior decoration was used by few except the rich and esthetic, but of late it has sprung into a deserved prominence. When two or more woods are combined the effect is often very handsome, and the many who are using this method of finishing attest its popularity.

The wood must be cut so as to bring out the figure, or the markings of the wood, otherwise it is worthless. To do this requires great skill and knowledge of the natures of the various woods. Occasionally an apparently worthless piece of wood is found which will contain some very fine and striking markings, in which case somebody usually makes a small fortune, for the prettier the markings the more valuable the wood. The wood generally used comes from Santa Cruz. Occasionally a piece is found which will contain some perfect figure, as an animal, a head or some geometrical figure. This wood is, of course, very valuable and greatly prized.

The figuring in woods is generally attributed to the fact that the bark of a tree outgrows the interior, and then becomes wrinkled in the attempt to fit itself to the tree. The tree comes to its assistance and attempts to fill up the wrinkles, thus causing the markings. Woods that grow in well-watered soil are always most highly marked on this account.—*Wood Worker.*

"ARTISTIC HOMES."

GEO. W. MYERS has forwarded us a copy of "Artistic Homes." The price is $1.00. It contains thirty-two designs of various kinds of dwellings and is well worth the price asked.

"RECENT PRACTICE IN SANITARY DRAINAGE."

THIS is No. 93 of Van Nostrand's Science Series. The full title is, "Notes Embodying Recent Practice in the Sanitary Drainage of Buildings, with Memoranda on the Cost of Plumbing Work," by Wm. Paul Gerhard, C. E. For sale at this office. Price, 50 cents.

THE HANDSOME ILLUSTRATION OF THE NEW ST. MARY'S CATHEDRAL to be built on the corner of Van Ness Avenue and O'Farrell Street, is taken from the *Inland Architect and Builder*, of Chicago. The editors of that journal kindly furnished us with an electro of the cut, by which we are enabled to present to our readers a beautiful view of the "great cathedral" of San Francisco.

The New City Hall of San Jose.

HEREWITH is presented a view showing the front elevation of the new City Hall. This structure will be one of which San Jose may justly be proud. From the view here presented it may be seen what an imposing edifice it will be.

As seen from the engraving, which shows the north or main front, the structure will be two stories with a basement. In the center of the front will arise the clock tower, and chaste pavilions will ornament the four corners. The finish on the four sides will be similar. The windows are large, with semicircular tops, and they will give the building a light, airy appearance. The style of architecture is modern, with a blending of Grecian, presenting a solid but ornate appearance.

The edifice will be of brick. The basement, laid in the excavation already made, will be of solid masonry plastered on the outside to represent stone work. Above the basement the exterior will be pressed brick, the interlying mortar striped with black putty. The steps to the vestibule, the lower floor, and the coping will be of granite; the water tables, window sills, etc., will be of artificial stone; and the ashlars, cornice, and general trimmings will be of terra cotta. There will be appropriate projections and recesses in the sides so as to avoid sameness and give a symmetrical outline to the whole.

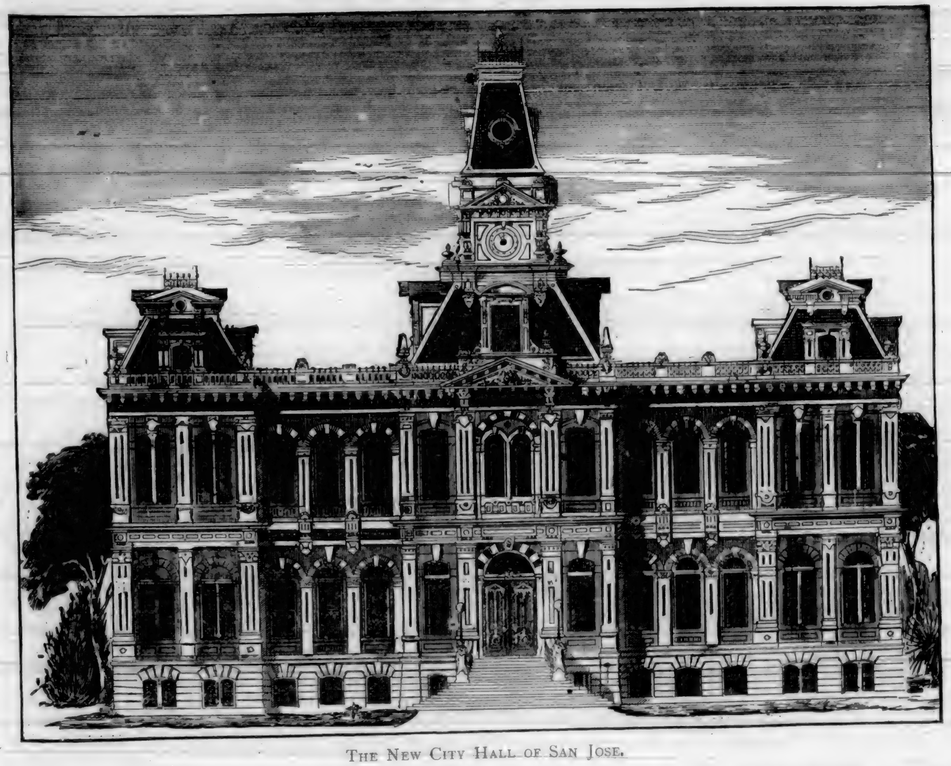
The inside finish is in keeping with the exterior. Care has been taken to secure the very best means of lighting, arrangements having been made for either gas or electricity; also for supplying water throughout the building, and for draining. The heating apparatus, likewise, has been carefully attended to, and will be either by steam or hot-water radiation.

The basement will be provided with a passage through the center for the accommodation of carts bringing coal and other supplies, and the police carriage. In the basement will be the offices for the police, the jail, and rooms for the storage of supplies, and the furnaces and engines for the use of the building. The rooms in the basement will all be ten feet six inches clear in height, and the walls will present a brick finish.

The first story presents a spacious vestibule and entrance facing Market Street, looking northward, and a side entrance facing San Antonio Street. The front entrance is 32x34 feet, opening into a lobby 18x44 feet, which connects with two stair halls, 20x50 feet. On the west side of the main entrance is the Mayor's office, and two rooms for the Treasurer. Back of these will be the witness room, connecting with the Police Court room, 40x40 feet. On the east side will be the office of the City Attorney, of the School Superintendent, and, connecting with the latter, the room 20x30 feet for the Board of Education; also a jury room. All the rooms in the first story are to be plastered and will be 21 feet 6 inches high.

Two large stairways conduct from the lower to the second story. In the front part of this story, under the main tower, will be the Council Chamber, 32x84 feet. On this floor will be the offices for the City Assessor and Clerk, the City Engineer, a reading-room, and a large hall, 30x40 feet, for the Free Public Library. The rooms in the second story are to be 24 feet clear.

Should there be a demand for the space the pavilions may each be fitted up with one or more comfortable rooms. Likewise in the tower several fine rooms might be arranged. The room under the belfry, and just over the clock, provided with four oriel windows, will make a fine lookout, commanding a view of the whole city and the surrounding country. A stairway is provided for the tower to ascend to the upper deck.



THE NEW CITY HALL OF SAN JOSE.

The main building will be 132 feet long, facing Market Street northward, and 93 feet deep. The height of the main building will be 60 feet, and that of the tower to the upper deck 112 feet.

The awards for the construction are as follows: F. Altman, cast-iron work, $1,887; F. Kuchenbeiser, wrought-iron, $5,890; Coombs, Blanchard & O'Neil, granite, $5,150; P. R. Wells, masonry, carpentry, painting, plastering, and plumbing, $117,000. Total contracts let, $129,927. Estimated costs of other works, vaults, safes, etc., $3,000; furnaces for heating, $2,000; extra plumbing for electric apparatus, $250; elevator, $250. To these figures add the allowances for the architect's services, 3 per cent, and the total cost of the building will be $139,489.

For the details of this description, as well as for the use of the engraving, the CALIFORNIA ARCHITECT returns due acknowledgment to the architect, Theodore Lenzen, of San Jose.

The Mechanics' Fair Exhibition.

THE fair lately held in this city is justly regarded as the most successful that the Mechanics' Institute has ever conducted. It is impossible to give a complete account of all the exhibits, but such of those more directly connected with the interests of this Journal are here noted.

CUT AND ORNAMENTAL GLASS.

John Mallon, of 17 and 19 Fremont Street, presented a beautiful variety of cut and ornamental glass. The designs of the latter were more than usually attractive, and many were the comments upon the push of business ability shown by Mr. Mallon in introducing the artistic designs presented.

BRASS BEDSTEADS.

E. H. Marwedel, of 541 Market Street, had a full assortment of brass bedsteads and cornice poles. Each time we passed remarks were overheard praising the general neatness and appearance of the old but new-fashioned bedsteads, with many wishes for the fashion to change again in their favor.

TOWNSEND'S "HOUSEHOLD TREASURE."

C. H. Townsend, of 440 Fifth Street, had samples of his improved kitchen table, yclept the household treasure. Convenient receptacles are found for all the various manipulating articles most in use by the thrifty housewife.

MAHONEY BROS.' RAILROAD CARS.

These gentlemen should be awarded a gold medal for the beautiful car exhibited, to be used on the Powell Street Railroad. For excellence of material, perfect character of the work employed, artistic arrangement of the various accessories needed, these cars stand the peer of any in use on any cable line in the United States. Mr. Thomas Downing, by his artistic skill as a painter, has done his share towards the achieved success of these cars. Mahoney Bros. deserve a fitting recognition at the hands of the workingmen of San Francisco, for endeavoring to build in our midst a factory that will give employment to scores of the wage workers of the city.

INTERIOR DECORATIONS.

A fine assortment of wall paper, linerusta—walton, etc., for interior decorations was shown by G. W. Clark & Co., of 645 Market Street. Some of the patterns were very beautiful, and owners will do well to examine the same.

KRELING & SONS.

One of the finest displays in the fair was made by this firm. The furniture and bric-a-brac ornaments commanded the attention of observers, while the richness of the designs of the mantels and the good work shown in every little detail, proclaimed that someone was at the head of the firm who made a study of turning out only designs and material of the very finest workmanship.

MAMMOTH STICK OF LUMBER.

Renton, Holmes & Co. had on exhibition the largest stick of timber ever sawed in a mill. It was 20 by 20 inches in size, 151 feet long, and contained 5,033⅓ feet. But very few knots could be seen throughout the whole length of the stick.

FIRE HOSE.

W. T. Y. Schenck exhibited all grades of rubber and cotton hose, and samples of all the paraphernalia incident to the complete equipment of a fire department.

ABRAHAMSON'S PATENT VENTILATOR.

Mr. Abrahamson personally attended to his own ventilators, and explained to the thousands who inquired the working of his patents. He had models of old and new windows, and showed how the ventilators could be adapted to each; also the method of placing them over doors. For full particulars of Mr. Abrahamson's inventions, our readers are referred to page vii of this issue.

STOVES, RANGES, ETC.

George H. Tay & Co. deserve more than ordinary mention for the excellent display of articles in their line. One stove should be particularly noticed. It combines all the features of a handsome parlor ornament with the utility of a cooking stove. Placed in a dining-room, it serves the purpose of heating, and can be used to boil tea, coffee, etc., without in the least affecting the beautiful design. Messrs. Tay & Co. also make a specialty of the hot-water system of heating houses. They should be consulted by owners who desire to have houses thoroughly heated at a minimum expense.

FINE BUTTS AND LOCKS.

Frank P. Latson had a beautiful exhibit of fine bronze hardware, such as locks, butts, etc. All the higher grades were represented, and called for much praise from those interested.

SCHUSTER BROS.

These gentlemen tried to outdo their competitors in having a large show of stoves, ranges, granite ware, etc. In the latter item the ladies seemed particularly interested.

SIMOND'S SAWS.

John Simonds, of 511 Mission Street, exhibited a very large and beautifully arranged assortment of saws of every conceivable design.

LUMBER.

Harris & Jones, 838 Bryant Street, showed the immense throng what California can do in the way of lumber. Their display of sugar pine, yellow pine, etc., attracted much attention.

LIGHTNING SAWS.

Union Saw Co., represented by J. F. Wyman, presented a very attractive arrangement of saws of every conceivable design. Their improved lightning cross-cut saws were the subject of much comment from those who go down in the woods to earn their daily bread.

SUGAR PINE.

Towles Bros., of Nevada County, had two sections of a tree, the first being cut 3 feet above ground, about 12 inches thick, and over five feet in diameter. Another section from the same tree, 161 feet from the ground, was 4 feet 6 inches in diameter. They were deservedly worthy of the attention bestowed upon them.

SONOMA'S LARGE TIMBER.

From the Big Bottom Mill, Sonoma County, a section of a tree was shown over seven feet in diameter.

SAN MATEO'S GRAND LUMBER.

Hanson & Co. take the palm on the exhibit of fine lumber from La Honda, San Mateo County. One plank shown was 13 feet long, 50½ inches wide and 3 inches thick. It was perfectly clear, not a knot in its whole length. Also another piece dressed on all sides and edges, 12 feet long, 50 inches wide, 1½ inches thick, absolutely free from cracks or knots.

CALIFORNIA WIRE WORKS.

"A magnificient exhibition of one of the industries of the coast." Such was the gist of the remarks made by thousands upon viewing the grand display by the above company. Their wire cables attracted unusual attention, from the great size and exquisite workmanship. Crestings, fences, finials were also in abundance.

HILLS' PATENT BLINDS.

It is but a short time since these blinds were manufactured in this city, yet by the persevering energy of Mr. Hindes this industry is growing of colossal proportions. The first factory was started "Los Angeles Way." That was entirely inadequate to do the work required. So branch after branch was established in various parts of the State, until Hill's Patent Blinds have become household words among builders. Mr. Hindes has associated with him Mr. Murray, a man of practical ideas, who insists that his workmen perform every little detail of the various parts of the work with the utmost exactness. These blinds have been indorsed by all the leading architects of the coast.

HUMBOLDT COUNTY.

Just a slice off a redwood tree, but oh how beautiful! Over four feet in diameter, with part of the bark left on for a border, and polished so one's face could be distinctly seen. The specimens of redwood shown were simply grand.

BUNDY RADIATORS.

"Whew, how hot! and where does all this heat come from? Surely not from that little furnace." Many were the remarks the substance of which is embodied in the above. The new furnaces now being introduced by Mr. Harvey are giving complete satisfaction and are a wonder in two particulars—economy of space and the small amount of fuel needed. The radiators are of a new pattern and are very handsome in appearance. Any inquiry in regard to heating apparatus will be answered by addressing C. D. Harvey, 30 New Montgomery Street.

REDWOOD.

What a Worker in all Kinds of Wood Has to Say about California's Great Production—An Experience of Fifty Years.

EDITOR *Wood and Iron:* In response to your question, of "What do you know about redwood?" I will state a few facts, which all acquainted with the wood, I am sure will certify to, viz.: That it stands *first* for general use of all woods known. None are perfect in all requirements, but the redwood certainly comes nearer to perfection than any other known in our day; this I, after fifty years' practical experience, can certify to. There are the Brazilian and Mexican rosewoods—they can never be depended upon for holding together with glue; they are full of oil—destroy the oil and you destroy the beauty of the wood. *Per contra*, no wood in the world holds better than our redwood when glued. There is the St. Domingo, the Cuban, the Mexican, and the Honduras mahogany, all beautiful woods, but for general use and for beauty they pale before our redwood. There is the Spanish cedar, I suppose a member of the mahogany family; it is full of gum; no matter how much polish may be put upon it, the gum forces its way through, and it is impossible to keep it smooth. No such trouble affects our redwood. I have pieces that were polished years ago, have been kicked about the shop, sometimes outside, sometimes in, but the polish is there—no gum exudes through that. There is our own beautiful walnut, a melancholy wood, carrying one back to the funeral of his grandfather; a room fitted up with it looks more like a morgue than a dwelling—nothing cheerful. But mark! I have an order for walnut doors, we will say; the order is imperative; they must neither warp, twist, nor shrink; they must keep their place in all weathers, at all stations of the mercury in Fahrenheit they must not move. Do I trust the walnut? No, no; I cut redwood into segments, make a redwood door, and put a thin coat of our walnut *on the outside*. The redwood is the only wood that will fill the bill required above.

In connection with this, I would say that I have tried white pine (Canadian), sugar pine, Port Orford cedars, and other woods; none come up to the mark like our redwood. There is the butternut, the chestnut, and other woods of the walnut family—they are used for their excellence in holding glue, hardly ever seen upon the outside. The walnut and the butternut produce a burl, but far inferior in quality, in size, or in beauty to the redwood burl. I have some in my possession ten feet long. Not even the far-famed burls of the Danube, which, when landed in America, bring almost their own weight in gold, exceed in beauty the burls of our beautiful redwoods. There is the pine, the whitewood, the basswood, and others of the whitewood family, which can be used for certain purposes only. Our redwood fills all their bills, and for beauty and the quality of keeping its place, it allows of not even a comparison, it is so far ahead.

Then come our oaks—the live oak of Florida, the white, the black, the red of the Eastern States and Canada—not one of them equals the redwoods for general utility or beauty. The white oak cracks by seasoning, and cannot be depended upon until stacked up for years; the red oak you can blow through a piece ten feet long. Our redwoods have none of those failings. Then there is the ash. After being for a few months in use, the grain will rise and sliver, especially if it is knocked about a little. It also produces a burl, but far, far inferior to our majestic redwood.

But if I do not tire your patience, I would like to contrast the treatment of those woods that are turned out as lumber in the East and in Canada with the treatment given our redwoods: In the first place, they are cut down in the forest when the *sap is down*, in cold weather. They are hauled to the water, in which they are allowed to swim for months, then carefully sawed, carefully piled; strips are nailed upon the ends of the better boards to preserve them from splitting; they are well and carefully treated; they are left in the water until the little sap left in them is thoroughly washed out. Well do they understand how to make the best of what they have.

Now for the contrast. The redwood is felled at any time, mostly when the sap is running and the tree full of life. It is hauled to the mill directly, where, if handy, a vessel lays; piece by piece, as fast as sawed, it is loaded close together in the hold—in the forest to-day, to-morrow at sea in the shape of lumber. Arrived in port, it is sold immediately, or perhaps ordered before it was cut; loaded upon wagons, and built into a house or barn almost instantly. Now it goes there full of sap or life; that dies, decays and rots in the lumber. It is brutalized, murdered, abused most shamefully—not through ignorance, for all mechanics should know that no well-made lumber is allowed to retain its sap when put to practical use.

Compare this murderous abuse of our redwood with the care bestowed upon the others, and you will wonder no longer that its beauties have been passed over; it being plenty, it was made to be abused; it being a *home product*, it was voted no good; it being cheap, and no import duties to pay, of course then it could not be of any value.

Now, gentlemen in the lumber business, treat it better; cut at the proper season; dry and season in the proper manner; give it a little care and attention, and it will well repay the trouble. Let some wholesome law be enacted for its protection, at least from vandals; and know that if we stand first in the production of the precious metals, first in cereals, and first in climate, we also stand first in the most beautiful woods on the face of mother earth—the largest, the highest, and the most beautiful. But even the most beautiful has been destroyed through ignorance.

Now a word to the finishers or varnishers that do not understand the treatment of redwood. Would you daub a piece of Danubian or, as it is called, French walnut, with oil? You know you would ruin it, destroy its grain and tints forever. Well, the redwood requires the same care as that, no more, and then you can preserve its beauties for many, many years. The following recipe is one at least that preserves its color and tints for years, for the truth of which I can show anyone interested. Use as near as may be the following proportions:—

Take one quart spirits of turpentine.
Add one pound corn starch.
Add one-fourth pound burnt sienna.
Add one tablespoonful *raw* linseed oil.
Add one tablespoonful brown japan.

Mix thoroughly, apply with a brush; let it stand say fifteen minutes; rub all off you can with fine shavings or a soft rag; then let it stand at least twenty-four hours, that it may sink into and *harden* the fibers of the wood; forty-eight hours is better. Afterward apply two coats of white shellac; rub down well with fine flint paper; then put on from two to five coats of best polishing varnish, as the openness of the grain requires; after it is well dried rub with water and pumice-stone ground very fine; stand a day to dry; after being washed and wiped clean with chamois leather then rub with water and rotten stone; wash as before; lay it one side to dry; clean and rub with olive oil until dry. If you have been careful to fill up all the pores perfectly you have a polished wood that surpasses all others; if you have not the pores or grains perfectly filled, of course you must apply more rubbing with pumice-stone and more varnishing until the object is attained; and, friend, you would have to do the same with any other wood. To add weight to what is told in these few lines, I would say that when such architects and artists as Percy & Hamilton, Wm. F. Smith, and others, have indorsed the redwood and its beauties for years, and have worked wonders in bringing it into notice, for mantels, wainscoting, doors, casings, and other inside decorations not necessary to detail, giants in their professions, they have used their beautiful art in connection with their refined taste to render our redwood where it now stands, "Excelsior." I have sent, some twenty months ago, by ship *Santa Clara*, to New York, thence by rail to Brattleboro, Vermont, to the order of Mr. Brooks, enough to finish two large rooms. This spring I have made and shipped to New York, per order of Mr. DeWitt, mantels, desk for library, door for library, library table, and all the casing for doors and windows and other mouldings required in library and bedroom. I have sold samples to every State in the Union, and feel confident that it is but a question of time when pianos, inside decorations of houses, banks, offices, etc., will be made of our glorious redwood.

Now, Mr. Editor, I have given you *jack-plane* facts and hints, I have no wish to be positive nor arbitrary; there are many others, if asked, will add their testimony to the many virtues of our glorious redwood; and if any should have a doubt or a fear upon the question, let him or her come to 213 Mission Street, and judge for themselves. I will also *give* the frugal, doubting tourist from the East, a piece at any time, that he may look upon and admire, free *gratis*, and [illegible] up that we here are the most blessed and fortunate people upon earth, and first in all—gold, silver, wheat, and lumber.

Some little time ago I was showing a gentleman and lady from the vicinity of Buffalo, New York, some specimens of the beautiful wood, when he said, "Really, friend, taking your climate, your minerals, your fruit, vegetables and cereals, and this really wonderful wood, I must own and regret that the Pilgrim Fathers landed upon the wrong side of the continent."—*Wood and Iron.*

A New California Industry—Inyo Dolomite Marble.

Mill and Quarries, 1887.

AMONG the many evidences of the great natural wealth of California, but few have attracted more attention than the splendid exhibition, in the late Mechanics' Fair, of the marble extracted from the quarries in Inyo County, Cal. And in introducing a new article of commerce, it may be expected, and it is but right and proper, that its claims to superiority should be made known, and wherein it differs from similar material in the market.

The great objection to marble is the tendency to change and decay when exposed to the atmosphere, losing every attraction, and in a few years well-nigh destroyed, which is the main cause, no doubt, of so much Scotch granite being imported into this country for our cemeteries.

In offering you our Inyo Dolomite Marble, we offer you a material that will stand the test of time—equal if not better than granite, which, geology says, "is the most durable stone of primary formation"—for this marble is less affected by the carbonic acid and other gases in the atmosphere than even granite. Italian and Vermont marble are composed of lime and carbonic acid, with some silica, and the gases in the atmosphere acting on the marble, set the carbonic acid free, which destroys the marble. The Inyo Dolomite Marble is composed of carbonate of lime and carbonate of magnesia, and, therefore, these gases have comparatively no injurious effect. The juice of the citrus fruits and the acid in wine will destroy the polish on ordinary marble, but will not damage our Dolomite Marble. This liability or certainty of ordinary marbles receiving injury from causes enumerated, and becoming an offense to people of nice taste, where a blemish or defect would destroy their value in an important sense, has changed marble for wood, as in case of mantels and grate surroundings, where wood cannot be said to be really appropriate or in good keeping, and robbed even fine furniture, to some considerable extent, of a most fit and ornamental covering, which, we believe, will begin to be re-instated in both cases, when it is known there is a marble called "The Inyo Dolomite," that will keep its deep and charming polish and rich luster without blemish, against all these well-known causes. And we believe, in view of all these tests, especially the effect our atmosphere has on imported marbles, as seen in our cemeteries, that the *native stone* should be altogether preferred. But so far as climatic influences may have to do with crystallization—though not an accepted scientific theory—we believe if Italian skies are anywhere surpassed in softness and beauty, and in perpetual clearness of atmosphere, it is around that wonderful sheet of water called Owen's Lake. And one thing we can say *and prove*, that no marble was ever found under Italian skies, or in Afric formation, having a more perfect, a finer and clearer crystallization, than this *to-be-famous* Inyo Dolomite Marble, now exposed in solid layers and in place at the base of the old Inyos, near the head of that body of mineral water. But they say it is harder to work. True, it is more solid and compact, but then you have something enduring which will not deteriorate. It is harder to make a knife of steel than of iron, but who wants an iron knife? The difference in labor is trifling, compared to the difference in real enduring worth. Another thing is important: Our marble is free from flint, which cannot be said of the Vermont and Italian; and it will be shown to dealers and consumers that the difference in cost of working, even though trifling, will not be figured to their disadvantage.

A comparative test of the pressure or weight required on fair samples (as believed) of the Vermont, Italian, and Inyo marbles, to crush or destroy the grains, was recently made by Mr. Emmet Rixford, a very intelligent student in the senior class of the University of California, under the supervision of Professor Hesse, with results as follows:—

Vermont	an inch cube crushed at	6,000	lbs.	pressure.
Italian	"	"	"	10,000 "
Inyo	"	"	"	26,900 "

This extraordinary solidity or compactness of the Inyo marble accounts for its not absorbing water to any appreciable extent in calculation; also accounts, in a great measure, for its resistance of atmospheric influences, and the action of even the powerful acids. Air and water are the great change workers. If this marble will not absorb water, and atmospheric agencies cannot enter it, or impinge upon it, actual use will undoubtedly confirm these positive scientific determinations, and, therefore, it will be conclusive to every thoughtful and logical mind that there is really *no experiment* in bringing this marble into immediate use.

If the ancient pride in fine marbles and its ideal and architectural uses should be revived, Inyo Marble Quarries can supply the demand. Dealers and consumers who are loyal to the best interests of the State, will at least examine our marble, and will not be deterred by prejudicial remarks from any quarter; that is all we ask, which we are fully confident will result in business, and if this State enterprise is encouraged on its *real merit*, it should, ere long, save a million a year to our commonwealth, that must otherwise go out of the State to pay for an imported article of no finer appearance, to say the least, and as to durability and permanent beauty, bearing no comparison to our own Inyo marble.

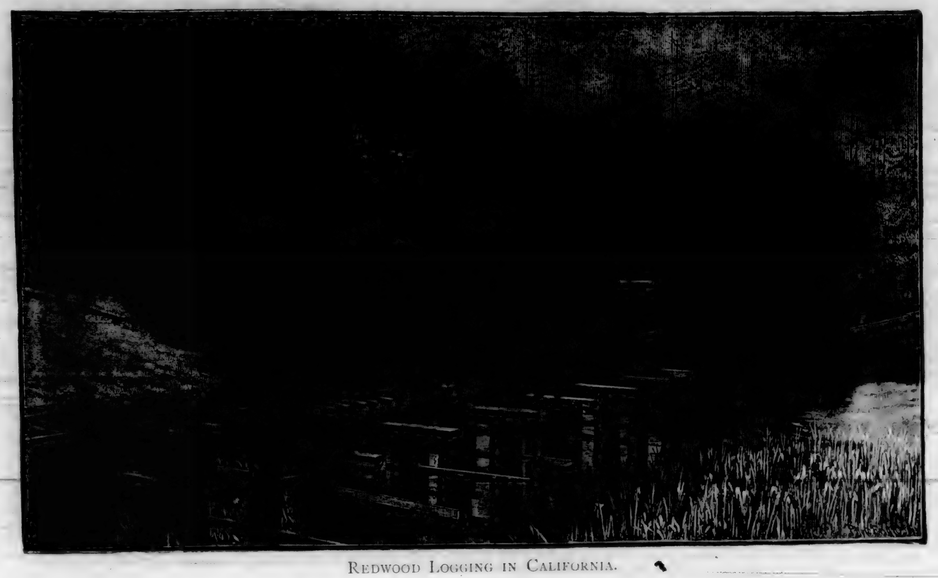
We do not enter the field to provoke competition; we come before the public with a valuable stone, taken from our own mountain-side. We ask no favor beyond its real merit, as compared with similar outside products. We simply ask your patronage, to enable us to open up a great treasure-house of our State, which has been too long locked up. And with your encouragement and patronage, *this California enterprise* can be made as great a public benefactor to the State, and secure as important results as have ever been secured to any State or people by the production of a similar material or article of commerce in any part of the world.

The Inyo Marble Company of California.

Outside Paints.

VARIOUS opinions are expressed by members of the trade as to the use of linseed oil and zinc in outside paints. Those who favor the mixture of zinc with lead claim that when zinc is thus blended, its characteristics of drying hard, lacking body and having a tendency to chip, are not apparent in such paint. Zinc has certainly the quality of being most free from acid, and acid, as all are aware, saponifies oil, on the presence of which depends the vitality of paint. A Mobile painter who mostly uses lead and oil for outside work makes it a point to get only the best lead and ripest oil, but it will not stand in that climate more than three years except when used for repainting, when it lasts somewhat longer. Some painters use equal parts of white lead and zinc. A painter who aims mainly at durability says that he primes with pure lead, and top-coats with two parts of lead and one part American zinc. Another painter makes a still more free use of zinc, using a mixture of two-thirds zinc and one part lead to heighten weather-proof qualities; this advantage, in his view, offsetting the lesser opacity, and less covering quality of zinc as compared with lead. A Southern painter writes in favor of a mixture of one-third zinc and two-thirds white lead. He has also used with satisfaction for outside work a paint made up of one-half zinc and one-half whiting. A long-experienced painter expresses a preference for pure white lead and oil, and deprecates the mixture of zinc and lead. He uses boiled oil, and submits the following formula, which he frequently carries out: First coat of pure lead and boiled oil; second coat of lead with half-boiled oil and turps; third coat lead and boiled oil. —*Sel.*

A fine stick of timber was brought down to Seattle, W. T., the other day to be made into a mast. The piece of timber is 86 feet long and will be 30 inches in diameter at the deck, which is 20 feet from the base; 17 inches will be the diameter at the smaller end. It is without a knot or blemish and contains 5,504 feet. The stock cost $15 a thousand at the camp and will be worth $175 when it is ready for the vessel.



Redwood Logging in California.

Redwood and Its Future.

THE operations of W. Cutten, who has gone East as a representative of the redwood lumber companies of Humboldt, Mendocino and Siskiyou, are, of course, of interest; but it may be questioned whether his object and the object of his constituents are well considered. He proposes to place on the Eastern market redwood in large quantities and at low prices, so as to tempt people to build houses of it instead of pine or hardwood. We do not believe California can spare redwood for any such purpose as that.

It must be remembered that the area occupied by the Sequoia sempervirens, or true redwood, is limited. It is found in groves of moderate extent in Santa Cruz and San Mateo Counties; it is fairly abundant in Mendocino and Humboldt Counties; there are groves of it in Siskiyou and Trinity, and it is found to some extent further north. But for commercial purposes, it may be said to be found exclusively in Mendocino and Humboldt. The redwood that goes to market from forests outside of these counties cuts no figure in the lumber market. Now, large as these counties look on the map, their five million acres are a very small tract indeed, if they are expected to furnish much of the building timber for the Eastern States. It would not take long to exhaust them, and, as is known, though young shoots do spring from the stumps of redwood trees which have been cut down, their growth is so slow that the tree may be practically said not to reproduce itself.

California cannot certainly afford to supply the Eastern States with redwood to build houses at anything like present prices. In a very little while our whole output will be needed for finishing work, decorations, furniture and other superior uses. Redwood is destined to take the place to a considerable extent of mahogany, black walnut, bird's-eye maple, cherry and oak. It is as handsome as any of these, takes a fine polish, is durable and shrinks less than any other soft wood. Ever since rosewood went out of use in consequence of the extinction of the supply, house decorators have been at their wit's end to find a substitute, and they have been driven to fall back on mahogany, which is growing scarcer year by year in consequence of the increased demand. Black walnut can never be made "dressy;" the cherry and the bird's-eye maple do not yield large planks; oak looks baronial, but is somber for any room except a dining-room. Redwood is suited for any kind of decoration. It makes fine furniture, and for mantels and wainscots it is equal to the handsomest woods of Australia, which are so scarce and so dear. It is a mere question of time when the East and Europe will realize its possibilities, and then it will sell not by the thousand feet, like pine, but by the ton, like mahogany.

In the old houses of the merchant princes of New York, built in the last century, you will still see dining-rooms of solid mahogany. The table is a solid slab of mahogany, with massive mahogany legs; the chairs are mahogany; the sideboard is the same, and even the massive folding-doors, which connect with the library, and the great door from the staircase, are of solid mahogany, worth almost its weight in silver. There was no veneer in those days. Furniture dealers are appalled when they witness such extravagance. But the furniture-maker of the future, when he comes here to pick up a few tons of redwood to complete the decorations of the drawing-room of some Eastern palace, will be far more amazed when he perceives that there was a time here when we built our houses and our stables of redwood, and even paved our sidewalks with the precious wood.

Grates, Mantelpieces, Tiling, etc., etc.

THE EXHIBIT OF W. W. MONTAGUE & CO.

THE house of W. W. Montague & Co., Market Street, had without doubt the finest exhibition at the fair. This was on the gallery over the entrance, and occupied quite a large space. It consisted of the latest and most beautiful designs in grates and mantelpieces, with the usual accessories in very handsomely wrought brass, etc. Of these there were a large number exhibited, all differing in design, but all strictly original, and so much the more attractive on this account. In tiling there was an equally good showing, the patterns in this being very unique. The whole exhibit was brilliantly lighted up, and gazing at it one at once realized the fact that it was an art exhibit. Of course to make such an exhibit the house of W. W. Montague & Co. possessed the best facilities. It can take what is required from its stock and never miss them. Each piece shown, however, was representative of a beautiful idea skillfully wrought, and it is therefore not to be wondered at that the display excited far more than ordinary attention. Notwithstanding the beauty of the articles, they are placed reasonably in price, and this is certainly an added merit. This house, in fact, can sell reasonably, it sells so largely, and its expenses are so moderate proportionately. It certainly to-day, in the above, as in its other lines, stoves, tinware, etc., is recognized as the leading house of San Francisco and the coast. In connection with it the following sketch will prove interesting:

This house was founded just seven years after the year of the Argonauts, 1849. The city differed widely then from to-day. Fourth and Market was about the limit one way, Stockton the other, while North Beach was the fashionable quarter to a certain extent, although Rincon Hill disputed the sway. There

were many vacant lots, too, between the center and Fourth Street. Oakland was certainly not then the Athens of the Pacific, but a straggling, illy-built village, with which communication was uncertain. Steamer day was an important fact, and was looked for anxiously by merchants, for beyond the fact of letters and intelligence from the outside world, the news and invoices received often raised or lowered market rates. The Vigilantes, too, were engaged in summary reforms. Mining, of course, was the main industry. Credit from steamer day to steamer day was accounted a great accommodation, and so it was when we remember the unstable character of things. Men were always on the move, and not having usually any family, they went where chance called. In these unsettled times it was a risk to start a house, expenses were so enormous and salaries so high. Of course good prices were obtained, but still the high pressure of everything required business men to be of rare ability to hold out long, money and everything else being taken into consideration. Messrs. Locke and Montague were the original founders.

Mr. S. M. Locke dying in 1876, the name was changed to the present style. The old firm occupied the building Nos. 406 and 408 Battery Street. Proving too small for an increased trade, in 1883 a removal was made to Nos. 110, 112, and 114 Battery Street, where subsequently an additional frontage of 145 feet was added to the already large stores. The necessities of greatly enhanced trade compelled still another removal, and the firm had the handsome building Nos. 309 to 317 Market Street, erected especially for it, into which it moved in December, 1883. The new building is 90x137½ feet, six stories high, with a water and damp-proof basement, giving over 70,000 feet of floor surface, every inch of which is required in the various details of business. This great space is crowded with an enormous stock of goods, conveniently arranged, and embracing every known article in the many different lines. The firm manufactures many articles, all of which are noticeable for finish, durability, quality, and workmanship. In 1883 Montague & Co. received the grand prize medal of the Mechanics' Institute for their artistic and superior exhibition of mantels, tiles, and grates, and this was followed in after years by other medals. The growth of this firm is only, in fact, paralleled by the growth of the city and State. Just as population increased so did its business. It made a point of meeting the demand for necessaries by furnishing these of superior make and at reasonable charge. It has always been the friend of home industry, and in stoves and ranges made a great endeavor for a home industry, but the time for that had not come. The demand out here was too limited, and the expense was too great. Eastern houses fill a demand ten times greater, so, of course, could undersell. In fact, out here the demand would scarce pay for the patterns for a first-class store. If a firm like this, with channels of trade all over the coast, found difficulty, we may be very sure the time was too early for such an experiment. It now has the agency for the best Eastern articles, but stoves and ranges, however, embrace only one department of its stock. This includes tiling of all kinds, tin plate, sheet iron, iron pipe, house furnishing hardware, plain, Japanned, and stamped tinware, etc. Its standing naturally commends it to Eastern manufacturers of prominence, and they are anxious for it to accept their agencies. We have not a doubt it refuses many agencies. What it offers we may certainly conclude are standard. Its immense business now enables it to sell reasonably, and this it certainly does. The fact that it has such a business shows that it satisfies customers. By its reasonable expense, too, in proportion, not much has to be added to first cost of goods.

A great house is that of W. W. Montague & Co., with a trade as wide as the means of communication to and from this city will admit, extending north and south, far to the east, and across the ocean to the Pacific Islands, and to China and Japan.

The house certainly has unequaled facilities to offer, and has made strenuous efforts to promote home industry, handling, where it possibly could, our own manufactures. Its present position has been built up solely by enterprise, and the offering of really suitable and serviceable articles of every-day requirements at such prices as placed them within the reach of all. We cordially commend it to our many readers.

DARKENING ROOMS.—People should avoid completely excluding light for any length of time from rooms that have been finished in oil color, as the paint will then be apt to take a yellowish tinge.

Remaining numbers of this year given free to all new subscribers for 1888.

HILL'S
Patent Inside Sliding Window Blinds,

Are Adapted to any Style of Window,

And Suitable for all Buildings, Dwellings, Stores, Office Buildings, and for Houses Built to Rent, Hotels, Boarding or Lodging Houses are Unexcelled.

They are entirely inside of the window casing, and while requiring no furring out or boxing, make it an impossibility to tear curtains, interfere with plants or window ornaments, or become broken by contact with chairs or other movable articles.

The light can be admitted and sunlight excluded from any part of the window; can be instantly removed and taken to any part of the house to clean and as easily replaced.

They can be opened or closed with the window raised, and without removing articles from the window-sill, and cannot blow open or rattle. The Blind is very light (one-half inch in thickness) and strong, possessing more durable qualities than a hinged blind one inch in thickness.

There is no sagging, banging, or getting out of order.

They are made in three sections in height (each section sliding past the others), and any number of divisions in width corresponding to the folds in the old-fashioned folding blinds. They require no hinges—all trimmings furnished with blinds are made of all woods, finished or unfinished.

The Blind manufactured throughout the United States and Canada by the members of the HILL SLIDING BLIND ASSOCIATION, is the only sliding Blind ever put into practical and general use, or that has been adopted and used by the leading architects and builders, both East and West.

It is rapidly displacing the objectionable folding blind, also shades, which since they have ceased to be considered the fashion, are used principally in cheap dwellings and tenements.

The Hill Blind is the only sliding blind made of white cedar, and where the grooved slide can be used as the window stop, or placed on the pulley stile, similar to the ordinary stop—"the slide is only 2⅜ inches wide"—plenty of room can be obtained by setting the casing flush with the pulley stile, in light studded buildings. NOTE.—Any other sliding blind using the slide as the stop for the sash, is an infringement of our patents of February 26, 1884, and February 24, 1886, and anyone selling, using, of making such a blind will be prosecuted by the HILL SLIDING BLIND ASSOCIATION, as they are determined to stop the sale of several cheap and worthless imitations.

The Hill Sliding Screen, working the same as the blind, is the only screen covering one-half of the window, which will remain at any desired point, and which can be instantly removed, when not required, or to clean the windows.

Over eight thousand sets have been specified and put in, throughout the Pacific Coast, since April 1, 1885.

We refer to the following prominent architects of San Francisco, who have used or specified the Hill Blind and Screen; also hundreds of owners throughout the Pacific Coast:

Miller & Armitage, Pissis & Moore, H. D. Mitcheli, John Marquis, John M. Curtis, Moore & Schultze, J. T. Kidd, J. B. Humphreys, T. J. Welsh, Jas. E. Wolfe, Townsend & Wyneken, Chas. J. Devlin, Geo. E. Voelkel, Copeland & Banks, M. Ralczynski, Edw. R. Swain, Chas. V. Pierce, S. & J. C. Newsom, Wm. Mooser, Chas. Geddes, Macy & Jordan, H. T. Bestor, A. A. Bennett, Salfield & Hohlberg, A. J. Barnett, John J. Clark, G. V. Capelletti, P. R. Schmidt, M. P. Schetzel, Clinton Day.

HINDES & MURRAY,

Main Office and Factory, 411 Mission Street, Corner of Fremont.

Sole owners of the right to SELL and MANUFACTURE for the Pacific Coast, except Counties of San Diego, Los Angeles, San Bernardino, Santa Barbara, Kern, San Luis Obispo, and Ventura in California.

COUNTRY
BUILDING INTELLIGENCE

We earnestly desire the co-operation of country editors and mechanics generally to this department of our Journal. Forward us all the building news connected with your different localities. Architects should also notify us of "plans to figure on." No charge is made for such notices. Direct letters to office of this Journal, 240 Montgomery St.

Bakersfield.

O. Mattison will build a two-story brick building at a cost of about $12,000.

A large hotel is contemplated. Address Hirschfeld Bros. It will cost about $40,000.

Chico.

A number of prominent citizens have been canvassing the city for contributions to build a new hotel. The citizens are to raise $20,000 and donate a site for the building, and a gentleman from San Francisco will furnish $80,000 and proceed with the building. Fifteen thousand dollars was raised yesterday. William Earll, F. W. Burnham, F. C. Lusk, and Mayor Barnard are the prime movers in the undertaking.

Los Angeles.

THE MAIN STREET HOTEL.—Proposals for the excavation of the lot on the corner of Tenth and Main Streets, where the mammoth hotel is to be built, will be opened and the contract will be let shortly afterward. Mr. Denker, of Hammel & Denker, is in the East studying the designs of the hotels there, and upon his return plans will be drawn for the hotel, and the construction will commence shortly after.

Lake Tahoe.

Architect M. J. Curtis and D. Kaiser, of Carson, are at Sugar Point, Lake Tahoe. Mr. Curtis has the contract to build the new hotel at that point for Captain Lapham, and Mr. Kaiser will be the landlord. The hotel will be 34x120 feet and three stories high; also there will be built this fall an annex, a saloon 24x36 and six five-room cottages. The whole to cost $35,000.

Oakland, Alameda, and Vicinity.

D. C. Scanlon is building three cottages on Hobart Street, to cost $2,000 each.

D. C. Scanlon is also building two cottages for Mrs. J. M. Jones, on Jones Street, to cost $1,800 each.

D. C. Scanlon is making $1,000 worth of improvements upon the place of J. T. Gardiner.

W. T. Veitch will shortly begin a $4,500 house for Mrs. Moore.

Scanlon & Gearn will shortly begin three cottages on Hobart Street, to cost $2,000 each.

J. C. Wilson, Councilman from the Second Ward, is building five cottages on Hobart Street, to cost $1,800 each.

The total cost of building in this quarter is $33,600.

THE SATHER BUILDING.

The contracts for the Sather building on Washington Street, adjoining the Wilson House, have been let. The Judson Manufacturing Company has received the contract for the iron work, at $725. Knight & Littlefield have the carpenter work, at $10,373. The Remillard Brick Company have the contract for the brick work, at $3,745. The total is $14,843. The Sather building is well under way.

OAKLAND BUILDINGS.

The Davis Block, on the corner of Washington and Eleventh Streets, is being pushed rapidly forward, and the walls of the first story are up. The framing of the first story has been put in and the cellar has been completed. The undressed stone facings are being put in on either side of the entrance to the upper stories, the whole making a very pretty combination.

It is understood that James de Fremery is having plans drawn for a four-story building on Washington Street.

Dr. J. M. Young is building two cottages on Park Avenue, near Hollis Street, to cost $1,000 each. Robert Jackson is the contractor.

Goodrich & Newlon, of Oakland, are drawing plans for a smelter, etc., for the Crittenden Smelting, Mining, and Milling Co., of Pima County, Arizona. Total cost, $69,000.

W. T. Veitch is refitting the stores 909 and 911 Broadway. George W. Henderson is doing the moving and the iron work. The cost will be $4,000.

EAST OAKLAND BUILDINGS.

A house is being built on Sixth Avenue, between East Fourteenth and East Fifteenth Streets.

F. A. Brown is building a cottage on Eighth Avenue, between East Fifteenth and East Sixteenth Streets, for W. C. Orcutt. The contract price is $2,060.

Charles J. Gaillard is building a cottage for W. G. Reese on East Twentieth Street, between Seventh and Eighth Avenues, to cost $1,550.

S. T. Higgins & Sons are building for Mrs. M. C. Littlejohns a cottage on Tenth Avenue between East Twenty-fourth and East Twenty-fifth Streets, to cost $1,671.

The East Oakland Methodists intend building a church on Eighth Avenue and Seventeenth Street soon.

OUTSIDE THE CITY.

P. S Glasford is having a $1,700 cottage built on the Hillegas Tract, Berkeley, by C. R. Lord.

J. S. Greenleaf is having a house built by Woodhouse & Sandy at Klinknerville, to cost $2,300.

Knowles & Wetmore will build for L. Georges a house at Fruit Vale, to cost $2,700. J. J. & T. D. Newsom are the architects.

J. B. Cogswell has agreed to erect a house for Mrs. H. Gross in Berkeley to cost $3,100. Percy & Hamilton are the architects.

Goodrich & Newlon have received orders from M. B. Strelinger to advertise for bids on his house to be erected in Berkeley.

A. H. Broad has agreed to do the carpenter work on a building for A. Carlisle, on the corner of Vine and Spring Streets, Berkeley. The contract price is $2,720.

Petaluma.

A planing mill is being erected on the corner of C and Second Streets.

Portland, Or.

A. J. Cooper, a Chicago capitalist, offers to build a $700,000 hotel if the citizens give him $250,000.

Permits have been granted for construction of a one-story frame dwelling on the corner of Sixteenth and M Streets, for J. Connor, to cost $2,200; two one-story frame dwellings on the corner of Lownsdale and Clay Streets for Mrs. Rice, to cost $2,200, and a three-story frame dwelling on the corner of Tenth and Mill Streets, for R. P. Earhart, to cost $8,500.

Work will be commenced in a few days on the building of the cyclorama of the Battle of Gettysburg. It will be located on the corner of Third and Pine Streets.

W. S. Ladd has started the subscription for the new hotel project with $25,000.

A three-story brick addition is to be made at once to the rear of the *Oregonian* office building, and another story added to the main structure. The cost will be about $10,000.

Charles H. Dodd has ordered the construction of a four-story brick block, 75x80 feet, on the southeast corner of Front and A Streets, to cost $60,000.

A two-story frame dwelling is to be built on D Street, between Twelfth and Thirteenth, for P. W. Gillette, to cost $2,000.

Chas. H. Dodd has been granted a permit to build a four-story brick block on the corner of Front and A Streets, to cost $75,000.

A Methodist Church is soon to be built at Burns, to cost about $1,200.

Baker City has voted to issue $30,000 in bonds to build a new school-house.

Riverside.

A. W. Boggs has secured the contract for the foundations of the Rubidoux Hotel. J.

C. Pelton was the successful competitor for preparing plans, etc.

Sacramento.

L Street, bet. Eighth and Ninth. Two-story and basement residence. Owner, John Sheeren; architect, N. D. Goodell; contractors, Bohn Brothers. Cost, $4,000.

G Street, bet. Ninth and Tenth, two-story and basement residence. Owner, Mrs. Ellen Manning; architect, N. D. Goodell; contractor, B. F. Bell. Cost, $3, 00.

Capital Hotel, cor. K and Seventeenth Streets, alterations and additions. Owners, Blessing & Guthrie; architect, N. D. Goodell; contractors, Carle & Croly. Cost, $9,000.

J Street, bet. Ninth and Tenth, alterations and improvements. Owner, L. Elkus; architect, N. D. Goodell; contractors, Bohn Brothers. Cost, $1,200.

J Street, cor. Seventh, improvements and additions. Owner, T. M. Lindley; architect, N. D. Goodell; contractor, W. M. Reese. Cost, $10,000.

San Jose.

There will doubtless be more building done this fall than at any previous period in the history of San Jose. Among those who propose to erect residence buildings at once, are the following: Eugene Rosenthal, a handsome residence on his lot on Julian Street, between Third and Fourth. G. R. Jones, of Montreal, Canada, residence on Union Avenue, at a cost of $8,000. H. A. Hughes, lately from the East, a neat cottage on North Sixth Street, at a cost of $4,000.

C. D. Smith, of the firm of Kaufman, Smith & Hensley, has recently purchased a very desirable lot on Sixth Street, and has contracted for the erection of a fine dwelling.

G. N. Hensley, of the same firm, residence on Sixth Street.

W. S. Kaufman, the third member of the firm, fine dwelling on Third Street.

Theodore Lenzen is supervising the construction of a new residence on the Quinn Ranch, one on the Parr Ranch, one in Alviso, and a three-story hotel and an Odd Fellows' hall at Salinas. P. E. Bussell is completing the plans for a cottage on Lenzen Avenue for X. E. Burns, and also a plan for a $30,000 residence for an Eastern gentleman who recently purchased in this city.

Three cottages will soon be erected on the Lendrum Tract, in East San Jose, by William Winter, a San Francisco capitalist. Other San Francisco men propose to build here soon.

F. Brassy and Henry Ahlers have let to A. Kelsey, the well-known builder, a contract for the construction of two handsome residence houses at the corner of McLaughlin and Lick Avenues, in the Brassy & Ahlers addition to East San Jose, the price being $7,000 each.

Messrs. Brassy & Ahlers will build also another house close to the others, to cost $4,500, and the contract for still another will be let in a few days, making four handsome houses in all. San José is to be congratulated upon having two such energetic and enterprising men.

CONTRACTS LET.—Contracts have been let by Architect G. W. Page for the completion of the fourth story of East Hall of the University of the Pacific. A. J. McIlvain has the contract for $737.

A contract by the same architect has been made with J. J. McDaniels, for changes and additions to the building of the Home for Feeble-minded Children, for $2,700.

A third contract has been let to W. J. Wolcott for excavating and laying the foundation for the Conservatory of Music Chapel of the University of the Pacific for $3,227.

The following bids for building the new City Hall were opened:—

J. D. Stewart, common bricks, $112,654; pressed, $117,350; sandstone trimming, extra.

P. R. Wells, common, $112,000; pressed, $117,000.

Thos. Livingstone, common, $112,000; pressed, $117,500.

A. J. McIlvain, common, $114,500; pressed, $117,000.

Chas. Turel, San Francisco Co., common, $115,999; pressed, $119,999.

Albert Washburn, San Francisco, common, $116,881; pressed, $121,881.

Thos. Flynn offered to do the sandstone work if called for, at $7,825.

The contract was awarded to P. R. Wells and his bonds fixed at 25 per cent of the amount of his bid.

The total cost of the New City Hall will be as follows:—

F. Altman, cast-iron work	$1,880 00
F. Kuchenbeiser, wrought-iron	5,890 00
Combs, Blanchard & O'Neil, granite	5,180 00
Contracts already let	$ 12,950 00
P. R. Wells, brick and lumber work	117,000 00
Vaults, etc	3,000 00
Heaters, four	2,000 00
Electric Wires	250 00
Elevator	250 00
Total	$135,450 00
Architect's services, 3 per cent	4,062 60
Sum total	$139,512 60

Mrs. Mabury will build a $10,000 dwelling. P. R. Wells, contractor; Theo. Lenzen, architect.

N. D'Oyly is building a $12,000 dwelling from plans prepared by his architect, Theo. Lenzen. Thomas Livingston is contractor.

Theo. Lenzen has prepared plans for twelve brick buildings for New Chinatown. E. Base is contractor; $6,000 will cover the cost.

Six miles from town E. N. Parr will build a $5,000 dwelling. Theo. Lenzen is his architect; F. Davis, contractor.

One mile from town R. Wiltz is building a $4,500 dwelling. Theo. Lenzen, architect; Nickelson, contractor.

C. Lefranc, seven miles from town, is making large additions to his wine cellar. Theo. Lenzen, architect; G. E. McDougall, contractor.

San Rafael.

San Rafael Hotel. Three-story frame. Owner, San Rafael Hotel Company; architects, Curlett & Cuthbertson; contractor, Plereighton. Cost, $80,000.

Turlock.

San Strauss, of Turlock, has just purchased a piece of property near that town, and will immediately commence the construction of a $4,000 residence. James E. Wolfe, of San Francisco, is his architect.

Winters.

E. J. Englehardt is erecting a two-story frame to cost about $6,000. A. Ritchie is the architect and builder.

Judge Wm. Sims is having a two-story residence built. Gilbert & Son, of Woodland, are architects; R. B. Nissen, of Capay, contractor. Cost, $4,000.

T. D. Ball is superintending repairs on Mrs. D. Hemenway's residence.

W. J. Pleasants (seven miles from town) is spending about $2,500 in improvements.

A large force of men are grading on the Winters and Ukiah Railroad.

Most of the business firms of the town are having artificial stone sidewalks laid.

Miscellaneous.

It is estimated that it will require 11,000,000 feet of lumber to erect the buildings already under contract at San Carlos City, Lower California.

The stone foundation for the new schoolhouse at Rutherford has been laid, and contracts for the carpenter work will soon be open.

The rock foundation for the new Catholic school in St. Helena is completed, and work begun on the frame work.

Bassett Brothers, contractors and builders, have commenced work on the frame work of the Catholic College.

J. E. Whitson, of Selma, will soon let the contract for the building of his $30,000 hotel in that town.

The new County Hospital in Fresno City will cost $12,000. J. W. Bones is preparing plans and specifications.

J. H. Hamilton, of Fresno, is building a cottage on I Street, north of El Dorado Street.

Contractor Morrison, of Tacoma, was recently awarded the contract for building the addition to the Court House. The bid was $971.

The contract of building the superstructure of the Methodist Church in Seattle, and finishing up the basement, was let recently to Moses Keezer for $15,000.

The S. P. R. R. Co. are making arrangements to build a large, commodious new depot at Sumner. The old one will be used exclusively for freight.

THE LOS GUILUCOS HOTEL.

Thomas J. Ludwig states that he has closed the contract for the erection of a $11,000 hotel at the town site of Los Guilucos, and that work will soon be commenced. Teams have commenced hauling brick and lumber for the foundations.

ANAHEIM'S HOTEL—CONTRACTOR SCHINDLER SOON TO BEGIN WORK.

The contract for the cement sidewalks on the tract has been awarded to the Los Angeles Paving Company, of which Mr. E. A. Saxton, formerly of Anaheim, is manager. They expect to put a number of men at work shortly. Mr. Charles Schindler, who has the contract for the brick work, has received the foundation plans, and will start his men at work very soon. Directors Goldthwaite and Kroeger have the superintendence of the work of caring for the tract, grading streets, etc., and they are getting ready to make some wonderful improvements in the property.

PLANS APPROVED.

A meeting was held recently of the State Board of Examiners, Governor Waterman presiding, and Trustees Gally and Cunningham being present. The plans and specifications for the erection of three new wards at the hospital, and for furnishing the building, were submitted to the Board of Examiners by Messrs. Cunningham and Gally, and unanimously approved by the Board.

WORK ON THE SAN JOSE NEW CITY HALL.

The work on the New City Hall will be commenced at once. Sunday a cargo of cement arrived in San Francisco, and the amount necessary for the building here has been obtained by Daunes & Van Doren. The sewers will be laid first and then the foundations will be pushed forward. The sub-contractors are as follows: W. J. Wolcott, brick work; L. C. W. Otto, artificial stone and cement work; W. W. Montague, tiling; M. Lenzen, painting; W. P. Dougherty, mill work; John Stock & Sons, plumbing and tinning.

The contracts for the erection of a depot at Carlsbad and Encinitas were let, recently, by the California Southern Railroad Company, to F. M. Johnson, the contractor of the Barstow depot.

Architect Pugh, of Salem, is now engaged in making preliminary drawings of the proposed new Court House of Benton County. The building will cost $55,000, and will be in the Ionic style of architecture, and be of brick and stone. It will be built in 1888.

Fred E. Saider is building a handsome residence on Eighth Street in Seattle, to cost $12,000.

The Donahue Road will erect a new station in Coleman's Magnolia Tract, near Grant Avenue, San Rafael.

Architect Theo. Lenzen is in Salinas superintending Jeffery's new hotel. It is a three-story brick building, and will cost $20,000.

The Odd Fellows are erecting a $12,000 hall in Salinas. Theo. Lenzen has prepared the plans.

Mrs. Tilden is having built a $7,000 dwelling in Alviso. W. S. Boyles is the contractor, Theo. Lenzen, architect.

Near Dixon, Solano County, Cal., two-story and basement residence. Owner, J. F. Brown; architect, N. D. Goodell; contractor, B. F. Bell. Cost, $8,000.

Provincial Royal Jubilee Hospital.

TO ARCHITECTS.

Designs, Plans and Specifications are invited for the above building in accordance with memorandum of particulars, copies of which, together with contour plans of the site, may be obtained on application to the undersigned. A premium of $800 will be paid for whichever designs and plans, if any, may be adopted. Such designs, plans and specifications to become the property of the Provincial Jubilee Royal Hospital Building Committee.

Plans for this building to be addressed, in sealed envelope, to the undersigned, and to be handed to him by or before noon of the 7th of December next.

WILLIAM CHUDLEY, Hon. Secretary,
Sept. 13, 1887. Wharf St., Victoria.

Weekly Building News.

Before the next issue of this journal, subscribers will have received the first number of the weekly supplemental issue of this journal. Please bear in mind that it will only contain building news, *and will be used for no other purpose. Positively no advertisements inserted. In size it will be 9½x 14, or same as one page of this journal. It will be printed on same quality of paper, and will be furnished* **FREE** *to all subscribers to the "California Architect."*

TERMS--Two Dollars per year for both publications.

Office, 240 Montgomery St., San Francisco.

The attention of architects is called to the proposals for plans for the Provincial Royal Jubilee Hospital at Victoria, B. C.

Twenty-first Annual Convention of the American Institute of Architects.

THE Convention (as above) met in Chicago, October 19–21. It was one of the most successful meetings of the association since it first began its existence. Rooms in the newly completed Art Institute building were engaged for the Convention. Twenty-three cities were represented, the members numbering about sixty. No representative from California appeared in the roll call.

Among the more important resolutions considered was the following:—

"*Resolved*, That a committee of five members be appointed, of which the chairman of this Convention shall be an *ex-officio* member, the other members to be selected by him, to act jointly with one of a similar number to be appointed by the Western Association of Architects at their next annual meeting, to report as to the best and speediest methods of consolidating all the architectural societies of America into one organization, the report to be full regarding the form and constitution for local societies, and also regarding the form and constitution and permanent place of meeting for the national or representative body; that the Western Association of Architects be, and are hereby invited, to unite with us in this work, and to appoint a committee as above."

After considerable discussion, it was adopted.

Another question of much importance to architects related to a uniform system of contracts. This was referred to a special committee.

Richard M. Hunt, of New York, was elected President; Henry J. Potter, of New York, Secretary; O. P. Hatfield, re-elected Treasurer.

One of the social features of the Convention was the omission of the usual official banquet, and in its place a series of "lunches" was inaugurated.

Owing to the illness of the President, Mr. Walter, the Convention was presided over by the Vice-President, Ed. H. Kendall. We print the address in full, giving thanks to the *Inland Architect*, of Chicago, for our ability so to do.

THE PRESIDENT'S ADDRESS.

"Having known for only two or three weeks that, owing to serious illness, our esteemed President, Mr. Walter, could not be with us to-day, I can do little more than call you to order, and formally endeavor to perform the duties of chairman.

"I shall ask you, however, to undertake the business of this, our Twenty-first Annual Convention, with that especial dignity of bearing and soberness of purpose which would seem to be called for upon the attainment of our corporate majority, and will remind you that we are called together, in this great and prosperous city, for the purpose of exchanging our annual greetings, of renewing our allegiance one to another, of giving evidence that we are competent to do the work required of us, of investigating the current developments in the science and art of our profession, and of increasing our usefulness to ourselves and to our clients in all possible ways.

"We shall listen to papers from representative men upon subjects of especial interest, and reports of important committees must be heard and acted upon.

"One of the greatest difficulties encountered by your Board of Trustees, now that our field is so much enlarged, is the frequent meagerness of information concerning candidates for membership, and, in order to reduce this difficulty to a minimum, must we not soon devise a better method than the present one of determining whether or not those who wish to join us are qualified by education, by business habits, and by personal characteristics so to influence public opinion that we may command the respect and confidence of the several communities in which we work?

"Whether the present method can be made sufficient by a keener sense of responsibility on the part of those who know the applicants for fellowship, or associateship, or whether we should create an office, in the nature of a traveling secretaryship, the duties of which would be to come in personal contact with all our members and would-be members, and by intercourse and

correspondence, to make the institute more surely a common ground where the best instincts and interests of our profession should center, is a subject which we ought soon carefully to consider.

"We must all feel gratified by the growing interest taken in our institute, which is clearly shown by the large number of applications for membership, and of requests for information as to the organization of additional chapters during the past year, and you will all bear me out when I say that we are especially glad to have admitted so many who are also members of the Western Association of Architects.

"It is our wish to have the active co-operation of all the best men in the profession, and the being a member of other associations or societies, instead of being a bar against, is in fact the very best reason for joining the institute, as it would then get the benefit of doubly organized work, and the general welfare would be correspondingly advanced.

"Then, again, we wish to see and personally know all those who are doing good work in this great country, and the day will soon come when these annual meetings will be eagerly looked forward to, and be largely attended, and when they will be considered not so much from the standpoint of duty as from that of pleasure and privilege; then, also, will the American Institute of Architects accomplish its highest degree of usefulness when it becomes the chief vehicle of professional pleasures as well as of professional duties; and when, to the formal requirements of routine and committee, are generously added the fraternal leaven of impulse and comity."

S. F. Chapter American Institute of Architects.

THE regular monthly meeting of the Chapter was held on Friday evening, November 4, A. Pissis, President, in the chair. The regular routine of business was first transacted, after which the new officers elect were installed in their various positions. Mr. A. Pissis in a happy speech introducing G. H. Sanders as his successor as President of the Chapter. Mr. Eisen gave way to W. P. Moore, as Vice-President. B. E. Henriksen resigned his portfolio and books connected with the position which he had so long and ably filled as Secretary, to the care of Secretary elect, George H. Wolfe. J. M. Curtis tendered all accounts, and the balance of cash remaining in his care, to date, to the custody of the Treasurer elect, J. J Clark. All the proceedings connected with the installation were conducted in a pleasant, genial manner, that served at once to make the new officers feel at home in their respective positions.

A proposition was introduced for new membership in the Chapter, but was laid over till next meeting.

The Secretary was instructed to notify every architect on the Pacific Coast whose address can be obtained, in regard to the meetings of the Chapter, and endeavor to interest them in the workings of the same.

The President delivered a few remarks, and presented the following suggestions on "WHAT WE CAN DO."

What we can do:

1. First to render the Chapter meeting useful, instructive, and in consequence, well attended.

2. To enlist the co-operation of the members of the Chapter to that end.

3. Also to enlist the assistance of kindred professional and the interest of the public.

1. That the Executive Committee at once proceed to obtain promises of papers for Chapter members, with subject and date. Also from members of the profession outside of the Chapter. Also from members of the different professions and trades, having bearing on building and architecture, or professional and practical subjects, and that special invitations be issued to those known to be engaged in building.

2. By each member of the Chapter being requested by the Secretary to communicate such matter of interests of a professional or scientific nature which may come under his notice by oral or written communication.

3. By inaugurating, first an exhibition of drawings and original designs by the members of the profession generally. Such prints and photographs as may be in the possession of professionals or their friends, of an architectural character, loaned for the occasion.

4. By an open competition to the younger members of the profession with money, prizes, and honorable mention.

A very interesting discussion followed on the subject, "HOBBIES OF ARCHITECTS." It was participated in by Messrs. Sanders, Pissis, Henriksen, Moore, Bestor, Clark, and others, for over an hour; general good feeling prevailed, as one or the other of the gentlemen named provoked smiles, and at times roars of laughter, on the distinctive hobby of some particular architect. A paper on the subject mentioned will be read before the Chapter at some future time.

It was decided that it would be advisable to ask scientific gentlemen, not members of the Chapter, to read papers on subjects of which they had made special study. Among those mentioned were E. L. Ransome, who has given the subject of "CEMENTS" particular study; Chas. Gladding, who gives his attention to "TERRA COTTA," and its adaptation to buildings; J. P. McMurray, who is one of our best informed men on the subject of "PLASTER ORNAMENTS." J. P. Jackson, P. Huerne, and many others were mentioned.

The President notified the members that he would be prepared at the next meeting with his annual address.

The meeting adjourned at a late hour, all feeling that a new era of prosperity was about to dawn, and that one and all would use their best endeavors to promote the interest of the S. F. Chapter of Architects.

Building Summary for November.

THE latter half of this year is showing a perceptible gain over the first six months. At present building is very brisk, and every indication points toward this state of affairs continuing through the winter. During the past month the summary of building news is as follows:—

68 frame buildings, value	$272,700
5 brick " "	210,500
23 alterations	50,000
96	$533,200

For the first eleven months of 1886:—

1,079 buildings, value $5,539,427

For the first eleven months of 1887:—

1,019 buildings, value $6,095,454

Showing a decrease in NUMBER of buildings of 60, and a gain in VALUE of $556,027.

Newspaper Laws

SUBSCRIBERS who do not give express notice to the contrary are considered as wishing to continue their subscriptions.

2. If subscribers order the discontinuance of their periodicals, the publishers may continue to send them until all arrears are paid.

3. If subscribers neglect to or refuse to take their periodicals from the office to which they have been directed, they are held responsible until they have settled their bill and ordered their paper discontinued.

4. If subscribers remove to other places without informing the publisher, and the papers are sent to the former direction, they are held responsible.

5. The courts have decided that refusing to take periodicals from the office or removing and leaving them uncalled for, is *prima facie* evidence of intentional fraud.

6. Any person who receives a newspaper and makes use of it, whether he has subscribed for it or not, is held in law a subscriber.

7. The postmaster who neglects to give the legal notice of the neglect of a person to take from the office the newspapers addressed to him, is liable to the publisher for the subscription price.

THE largest sheet of plate-glass ever brought to this country, so far as we can discover, was 120x210 inches. That is as large as the steamers' holds can accommodate. They are larger than that in England, where they are made 12x20 feet, and one-quarter to three-eighths of an inch thick. No plate-glass is manufactured in this country, though the business would be well protected under our present tariff. These plates come chiefly from England, though some are imported from France and Belgium. The import covers between three and four millions of feet yearly. The system of packing is so complete that little or no breakages occur. The business is rapidly increasing.—*Builder and Wood-Worker.*

Prosperous.

[From S. F. Bulletin, of September 23, 1887.]

IT is not often that a class journal, identified with a single profession or interest, makes much headway outside of the particular circle or clique that it represents. Of course there are exceptions, and among these can be named the CALIFORNIA ARCHITECT AND BUILDING NEWS. This publication was started more than eight years ago, and has won good reputation as authority on building and architectural matters. Increased activity in the improvement line has induced the owners to consider the propriety of issuing a weekly summary of transactions that would be of interest to the various trades associated with the house building industry. A sheet of the nature outlined would be an acceptable addition to the real-estate literature of the day.

Thanks, editors of *Bulletin*. The weekly will appear in a short time, and we will endeavor to merit your kind notice.

Our Weekly Edition.

FROM all quarters of the State we have received encouragement since the idea was first broached of a weekly building supplement to this journal. In the Oakland *Tribune* of November 5, the following will be found:—

"The CALIFORNIA ARCHITECT AND BUILDING NEWS has, heretofore, been issued monthly, and now the editors have decided to issue a weekly edition, 10x18 inches in size, to contain building news of all kinds from all parts of the State. This weekly edition will be devoted wholly to this variety of news, and no advertisements will be allowed. This paper is continually making improvements of all kinds."

We could fill a page with notices in a similar strain, but the above will suffice to show that the continued improvements in this journal are being noted by all our contemporaries.

Notes by the Wayside.

[EDITORIAL CORRESPONDENCE.]

CHICAGO, Ill., November 4, 1887.

AFTER a continuous residence of nearly thirty-seven years in California, we commenced our first trip across the continent, to the home of our boyhood, on the 26th ult.

At the end of seven days, less forty minutes, including stoppages of twenty-four hours each at Salt Lake City and Denver, we arrived at Chicago on the 2d inst., having enjoyed beautiful, warm weather all the way, except the run down Platte Valley from Denver, which approached a temperature almost oppressively hot; and the two days thus far spent in the city of the lakes, has been pleasant and comfortably warm. All this has been a matter of surprise, as accounts of cold weather, snow, and storms published prior to our departure from San Francisco, led to the anticipation that the reverse of the delightful weather enjoyed, would have been encountered. Up to the present writing, we have seen and know but little of this city and its environments, beyond the gleanings from general observations, and the conclusions enforced by the rushing, bustling, tumultuous business activities to be seen upon every hand. But more of Chicago in future correspondence. As soon as possible we found the office of Messrs. Edbrook & Burnham, and never was mortal man more surprised than Mr. Burnham when, without announcement, we stood face to face with him, enjoying both the hearty welcome extended, and the expressions of astonishment depicted upon his countenance at again meeting one with whom a decade of years ago he enjoyed copartnership relationships in the queen city of the Pacific Coast. We make this special mention of Mr. Burnham, because he is so well and favorably known to many in the architectural profession in San Francisco, who will be pleased to hear of him, and to further learn that he, with his partner, Mr. Edbrook, is in the enjoyment of a splendid practice, having at present employment for some ten or more assistants in his office.

It is no easy matter to swing around in a city like this—to learn the names of streets, find localities, addresses, etc. Consequently we have up to present moment been able to visit but one of our worthy contemporaries, the *Inland Architect*, where the cordial and hearty reception extended was such as to make even the wayfaring man feel that he was among friends. There was truly a whole-souled expression in the words of Mr. R. C. McLean, when he extended the hand of hearty welcome, and expressed gladness at meeting a representative of the architectural and journalistic profession from California. All this, too, under circumstances calculated to try the patience of the the most Job-like man: typos on a strike, and press men against their inclinations forced to abandon work, until concessions claimed by somebody else should be acceded to, or comprises made that would make it possible for the unwilling idlers to resume work. But one good brother in management seemed fully equal to the emergencies, and expressed full confidence that no material inconvenience would result to prevent the regular issue of the journal.

But as it is our purpose, after we shall have seen and learned more, to make Chicago the special subject of future special correspondence, we will go back from this queen city of the lakes, in Illinois, to the city which in time is destined to become the queen city of Utah, seated, as it is, in parts upon the level lands of the valley bordering upon the great Salt Lake, and the gentle inclines, slopes, and sides of hills lying at the base of the majestic range of mountains forming the picturesque background of the city, and following the valley southward in their uninterrupted grandeur for a long series of miles.

The lake is a mysterious sheet of water, spreading out to an average length of between ninety and one hundred miles, by a width approximately fifty to sixty miles. Its waters are so thoroughly impregnated with salt that a human body cannot be sunk beneath its surface, except by a head or feet foremost dive, and then only to be popped up like a cork to float or swim around. It is stated and claimed by the people of Salt Lake City, that even now the average number of visitors to the great bathing places on the lake fully equals five thousand for several months of each season. And if this be true, within the next decade it may be safely asserted that tens of thousands will be the number assembled at the present citadel of Mormonism, to enjoy the pleasures of the peculiar and healthful waters of the great mountain lake, which, while over four thousand feet above the level of the ocean, is in saline impregnations equal to any upon which the merchant and war fleets of the world float.

But we must leave the lake, with its numerous wonders and mysteries, and turn our attention briefly to the present of Salt Lake City and its reasonable probabilities and self-evident certainties. Its situation is among the best inhabited by human kind. The choice of the site is claimed by the devotees who first settled upon it, to have been pointed out to the leaders of the tribes of Mormonism, "by the Lord." Whatever part Providence may have taken in this particular, it is very evident that no one of fair intelligence and judgment in search for a dwelling-place for himself and people, having stood upon any of the commanding points within the limits of the present city of Salt Lake, would have passed in search of a more eligible and beautiful place of permanent abode. The facts of interest clustering around this city and its environments would require a thousand sheets of manuscript to present them fairly; consequently we must pass on to interests more specially pertaining to the building interests, simply adding that Salt Lake City was founded by a company of Mormons, July 24, 1847. The corner-stone of the temple—a massive granite structure—was laid April 6, 1853, and, up to date, is said to have cost $3,500,000. It is 100x200 feet, by 100 feet height of walls, and tower, when completed, 200 feet high. Three million dollars more is called for to complete, so that total cost will be between six and seven million dollars. If the same building was let by fair and righteous contract in any other city, or in Salt Lake, untrammeled by the influences which have swallowed up so large an amount of money, the total expenditure would not exceed $1,000,000, or at the most extravagant, $1,500,000. The tabernacle, 150x250 feet, is a peculiar construction, capable of seating from 12,000 to 15,000 people.

There are nearly 100 miles of streets in Salt Lake City, none of which are paved or sewered. They are generally 132 feet wide, and the blocks 660 feet square. But a multitude of interesting facts must be left untouched for the present.

The building improvements of the city are in a flourishing condition, and general activity and prosperity prevail. The much larger proportion—in fact nearly all the buildings in progress of erection—are brick constructions with stone trimmings, some few, however, being laid up of adobe brick, for economy's sake, and still fewer built of wood.

"Truckee pine," for framing purposes, $45 per M; Oregon

Perspective View of Woodland School-House.

pine, rough, $35 per M: redwood, $30; common brick, $7 50, delivered at site; press prick, $22.

Carpenters' wages, $3.25; masons', $3.75; stone-cutters', $3.50; painters', $3.00; plumbers', $3.00 to $4 00; hod carriers', $2.00.

But limitation in time will at present prevent more as engagement to be present at a debate by members of the profession. at 1 o'clock, to be followed by luncheon, and the necessity for early mailing, so that this may reach San Francisco in time for November issue. render it necessary to close for the present.

We have simply introduced Salt Lake and its interests, have not touched Denver, and have but named Chicago. The innumerable items of great interest remaining unnoticed, will provide subject matter for future correspondence.

NEW PUBLICATIONS.

"INTERIOR DECORATION."

By Arnold W. Brunner and Thomas Tryon, Architects.

The authors, in this new work, concede that the house is built to suit the tastes of the owner. The exterior features are all arranged in architectural array, so that the gables and chimneys make, with the walls and roofs, the harmonious composition which, until now, has existed on paper. Within, all is perfect. The halls, rooms, stairways, and cupboards are of ample size and properly located, so that every long-desired plan is at last realized.

But, alas! smooth-plastered walls, well-laid flooring, and white ceilings are not enough to constitute what we call a home. The house must be decorated. And it is with the broad purpose of illustrating how this can best be done, artistically, that the authors have placed before the people generally, the above-named book.

For sale at this office. Price, $3.00.

"MANTELS AND SIDE WALLS."

By E. Prignot and other architects and designers. 32 large plates.

The designs represented are in the Cheminee, Louis XIII., and Louis XVI. styles. The engravings are very fine, and artistically represent the various fine details.

Price, in portfolio form, $5.00. Send to this office.

School-Houses.

As people enter a town or city for the first time, they notice particularly the character of its public buildings. As architecture embraces to the elevation of national and individual character, and the increase of the physical comfort and well-being of mankind, it becomes the duty of the officers of every city to study carefully into every detail of the work of constructing buildings for public use. A celebrated German writer and thinker, F. Schlegel, has described architecture as "frozen music." If a building has for its primary object the education of the young in every branch, should we not pay some degree of attention to the building in which the minds of the youth are to be moulded? We have seen school-houses in the country where the wise and faithful teacher has been obliged to take the children and run around the room to keep warm, because of the wind blowing the cold air through the cracks in the siding upon the children, who were almost freezing. We hope that there are not many Boards of Directors in our State who allow their children to go to school in a building that is not as good as the barns they have for their animals. While this may seem to be an extreme case, yet there is large room for improvement, not only in our country districts, but in our cities. How many are to-day complaining of our school buildings because they may be illy contrived, poorly heated and ventilated.

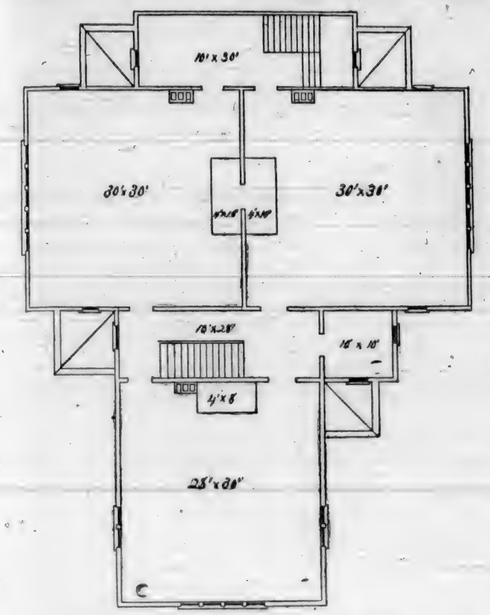
In this issue of the Architect we give a cut of the Walnut Street public school building, in Woodland, which is one of the three now being used, and under the management of an efficient Board of Trustees. The building sets well up from the ground, the rooms are well arranged, high, light, and airy, and the ventilation good. This is one of the buildings that has been specially arranged for the comfort and convenience of all who labor and study therein. Messrs. Gilbert & Sons are the architects, and superintended the work of building, in which they have succeeded in combining utility and beauty of architecture. Architecture bears a strict analogy to language. Both are an expression of thought, and in the one, and in the other, the richness, variety, and precision of the expression will be in proportion to the quantity of the thought to be expressed.

First Floor Plan Woodland School.

Mechanics' Liens.

AN INTERESTING DECISION BY JUDGE LEVY.

Some time ago Elizabeth Doherty had a building erected. A number of liens were filed against the same. These were all assigned to one C. A. Barker. The owner set up the claim that the action of those holding the liens assigning them to a third party, was illegal. In rendering a decision fully sustaining the plaintiffs, Judge Levy remarked: "It would require express words to prevent the assignment of a claim and the incidental lien. If every case in action is assignable, then a claim of a mechanic is one of them, and the assignment of the claim transfers the lien. In the cases at bar the liens themselves are transferred. It would be a gross injustice to the mechanic if he could not transfer his demand against an unwilling creditor, and thus perhaps be provided with the only means of a speedy return for his labor. To deprive the mechanic of this privilege to realize at an early date on his work, without the sanction of clear language in the statute, so clear that he who runs may read, would be to apply a rule of construction unworthy of the liberal spirit of our mechanics' lien law. Certainly, the bare right to sell his demand, without at the same time assigning his lien, would be holding the word of promise to the ear, and breaking it to the hope of the mechanic or laborer."



Second Floor Plan Woodland School.

How Are Paints Analyzed?

It is often a matter of prime importance to ascertain the constituents of a paint. The majority of master house painters, indeed, never trouble themselves with getting an analysis of a pigment. Should a paint prove unsatisfactory, they merely change the brand, and usually continue uninformed, however they may suspect adulteration, of the cause of disappointment in its working. Analysis, after all, is a somewhat expensive affair, and necessitates the labor of an expert. To manufacturers and large dealers, more particularly to the latter, the employment of chemical tests from time to time is a necessity. Danger, though not of a dynamitic order, may lurk in the raw material supplied to them commercially as pure; or an article in itself unadulterated may contain for the purpose wanted a disproportionate amount of a given constituent, rendering it unserviceable, or at least objectionable. There are clerks who closely watch over the interests of their customers, in becoming thoroughly acquainted with the qualities of what they sell, which is done partly by ascertaining the constituents, and again watching the effects of subsequent combinations where two or more pigments are mixed together for certain hues; further, by ascertaining from practical painters how they work. It will doubtless be of interest to our readers to learn something of the processes of resolving an article into its constituents.

At the New York Convention it was suggested that possibly it might be desirable for the body of master house painters and decorators to appoint officially a chemist to whom members might send samples of paint for examination, but the subject was not formally discussed. It is easy to perceive the advantages that would arise from such an arrangement on the part of State organization, which would encourage members to have samples made at the moderate price at which these could be obtained. Many occasions arise on which the purchaser wishes to discover exactly what he has got; and even the labeling of goods for what they are, even if enforced by law, would not wholly dispense with such occasions. There is abundant evidence to show that even laws which carry penalties, if violated, cannot make all manufacturers and dealers honest.

Among other objects of analysis is the discovering of the amount of coloring principle. For instance, a sample of plumbago should moisture 0.26 per cent; ash, 8.5; carbon, 91.19. Some of these coloring principles contain great colorific intensity, and will stand an admixture of white pulverulent substances, such as barytes and whitening, without assuming a gray appearance.

The sample to be analyzed may be in the dry state, ground in oil or in liquid form, ready for use. In the latter case, the fatty or resinous portions of the paint are extracted with benzine, alcohol, and ether, which leave the pigment in a form of powder suitable for analysis. In some cases the additions may be removed by simple ignition; however, as reductions are very apt to take place, that is to say, some of the elemental constituents of pigments thus destroyed, this process is followed only in a limited number of cases.

In analyzing dry colors, or those freed from oil by extraction, the main difficulty consists in the separation of the different lead salts, as, for instance, plumbic sulphate and carbonate from each other, and from baric sulphate and silicate (clay) a solution is first applied to separate the two. Sodic hydrosulphate proves an excellent solvent for the plumbic sulphate. In fact, all analysis is based on chemical reactions. It will surprise most persons that the most complicated process of analysis occurs with chrome green, blue, and yellow. It is so elaborate that space prevents an account of it. Then there are chemical tests to be applied to the various substances precipitated, or otherwise separated from their compounds. As a confirmation for the correctness of the result, the several residues of extraction are weighed, sometimes after being again dissolved and reprecipitated.

To ascertain the relative "strength" of two colors of similar shade, the following experiment is made: Half to one gram of each sample is mixed with five to ten times its weight of a pulverulent substance, which exerts no chemical action on the pigments, as, for instance, baric sulphate. After sufficient mixing, the shades are compared, and the darker one made equal to the light one by further addition of baric sulphate. On re-weighing the samples their weights will give the ratio of their relative "strength."

In the case of so-called liquid or ready-mixed paints, the vehicle, as well as the suspended coloring matter, is an object of analysis. The vehicle for paint is combined with the aim of obtaining approximately the same specific gravity as that of the pigments, so as to keep the latter suspended (most of them "settled," however, nevertheless). Among the most commonly occurring constituents of the vehicle may be mentioned benzine, oil of turpentine, resins, linseed oil, etc. Soap, water, glue, small quantities of soda, borax, or alum, besides all kinds of low-grade oils, are frequently met with. The nature of a vehicle may be approximately determined by fractional distillation.—*Painters' Magazine.*

Apt Names for Bad Workmen.

Strikes bring out the technical slang of the trades, and particularly the opprobrious epithets with which the different classes of workmen distinguish the unskilled operatives who labor at the same trades. In most cases it will be found that these slang terms originate in some technicality of the trade. Thus the telegraphers call a poor operator a "plug," after the little metal implement which divides the switches on the key-board, inasmuch as the plug or "key" is a comparatively unimportant part of the machinery. Printers designate an unskilled type-setter a "shoemaker" or a "blacksmith." The derivation of the former appellation is from the fact that a compositor who makes errors is obliged to correct them after the type is set up by taking out the misplaced letters and "pegging" the proper ones into

THE RUBIDOUX—Southern California Architecture.

their places. Tailors also use the word "shoemaker" to distinguish a poor hand, as an unskilled workman makes his stitches too far apart, and is therefore better adapted to sew leather, where he can punch the holes with an awl before putting the ne dle through. The appellation "blacksmith" is applied to a printer whose fingers are clumsy, and a jeweler also terms an unskilled worker at his trade a "blacksmith" for the same reason.

A term of opprobrium which was use l by old New York printers to designate an unskilled compositor was the word "boarder," from the fact that a poor hand was generally a drinking man and spent his time loafing or "boarding" in liquor saloons. All striking trades workers in common use the general word "scab" to distinguish workmen who take the place of strikers. The derivation is obviously from the fact that the scab is a morbid growth, and lives only at the expense of the well-being of the rest of the body. Shakespeare uses the word scab as a word of opprobrium, and Webster defines scab as "a mean, dirty, paltry fellow," which may have suggested the original application of the word to its present use. The printers and telegraphers, two of the most intelligent classes of workmen, are the only tradesmen who have invented names to particularize the scabs of their respective professions. Thus, compositors call a scab a "rat," in contemptuous allusion to the rodents who infest printing offices. The telegraphers have only recently invented a term for scab operators. They call them "contumists," though the application is not of technical derivation, but is probably an attempt to manufacture a word from the Latin *contumæ*, the root of contumacious, to describe a stubborn and obstinate person.

The various names actors give to the unskilled members of their profession are familiar to most of the reading world. A poor actor is termed variously a "stick," "fakir," "statue," or "dummy." A "stick" or "statue" is, naturally enough, an actor who is awkward and stiff on the stage. The term "dummy" is derived from the fact that when a traveling company has not enough members in the company to fill up a large stage, men and women are employed to stand in the back with choruses or supernumeraries, and take no other part. They are called "dummies." "Fakir" is a generic term, and comprises those actors who lack talent and depend upon other resources. For instance, a comedian who makes faces is called a "nugger," and a tragedian who bellows is a "ranter," and both are "fakirs." The professors of the manly art are also apt in this style of nomenclature. They call a cowardly fighter a "duffer," and a weak, unskilled boxer, a "sand bag" or "stuff," the latter terms being derived from the contrivance upon which the pugilist does his practice.—*Carpentry and Building.*

THE rapid increase of hotel building in the southern part of California, is a fact that is noted by most all metropolitan journals throughout the Eastern States. With the exception of the new hotel on Coronado Beach, opposite San Diego, probably no one has caused more comment than that represented above. The length of the building is 341 feet; length of the north side, 282 feet, and the south side, 199 feet, while the total area of the main floor comprises 19,473 square feet. The exterior will present a combination of the English, Gothic, and Swiss styles of architecture, and with a touch now and then of Old Holland timber work, presents a very beautiful and uniform appearance. The dining-room is 50x100 feet in size; ladies' parlor, 40x65; kitchen, 66x70. Billiard room is circular in form, having a diameter of 40 feet. Ball-room is 40x100, with ceiling 20 feet in height. A children's play-room is provided, same size and character as billiard-room. From the above measurements one can somewhat judge of the great size of the building. There are 250 guests' rooms. The hotel is thoroughly supplied with all the modern conveniences, and when in running order, no doubt will be one of the leading hotels in California. J. C. Pelton is the architect.

Safety Dumb Waiter Fixtures.

THE New York Safety Dumb Waiter Fixtures are the most complece, simple, and absolutely safe waiter made. They move with perfect ease, and are perfectly noiseless in their operation. They are provided with a safety rope, thus avoiding the chances of an accident. These fixtures are handsomely bronzed, and packed one set in a box. They can be adjusted by any carpenter or mechanic. Full directions accompany each box. Dunham, Carrigan & Co. have been appointed as agents for this city, and they will keep a full stock on hand. Manufactured by the Edward Storm Spring Co., of Poughkeepsie, New York.

Constitutionality of the Plumbing Act.

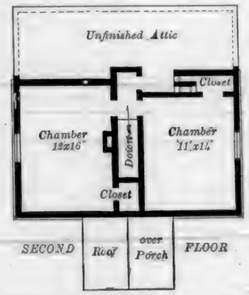
A PLUMBER, by the name of Chas. Friermuth, was lately arrested and convicted for a violation of the provisions of the Plumbing Act, passed March 3, 1885. The defense set up the plea that the Act was unconstitutional. In order to test the matter, after being found guilty, Mr. Friermuth quietly went to his free accommodations, but was immediately released on a writ of *habeas corpus*. Judge Wallace decided the Act constitutional, which leaves the matter open for Mr. Friermuth to take an appeal to the Supreme Court.

A Wage-Worker's Comfortable Home.

FRONT ELEVATION

IN the accompanying plans and elevations of a small but comfortable home, we had, primarily, in view the expenditure of but a small sum of money, and, in view of this fact, the rooms have been kept to a size convenient for the purposes marked on each. The outside finish, also, while presenting an attractive appearance, has but few, if any, embellishments that can be dispensed with. The addition of the front porch adds much to the beauty and utility of the design, and yet the expense of the same is but trifling. We present a few suggestions to those who are interested in the plans given.

A well-lighted and ventilated basement is always to be desired in a country home, as it prevents the articles kept therein from being affected by either heat or cold. (We are now writing in California, where very cold weather is never experienced.) A farmer or mechanic can construct his own

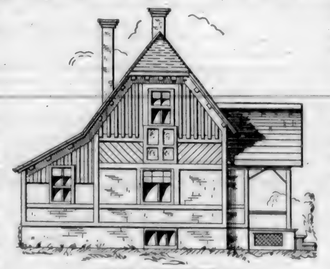


basement at but little expense. There are but few places where rock cannot be conveniently had. During the spare time, haul enough of this material to the building site. With the aid of one mason, you will soon have a basement that will bid defiance to the storms. Calculations can be made so that the dirt excavated can be placed on the four sides of the house, sloping gradually from the walls outwards, so as to insure proper drainage. If the cellar is to be used at times as a work-shop, it would be well to place more windows on the side for light; but those shown will be found sufficient for all ordinary purposes.

The walls of basement being finished, see that the wall plate is well bedded, and as near level as possible. This is important, as it saves much time hereafter. After the joists are placed in position, fill up the spaces between them with rock, so that rats and mice will not be able to get a foothold. This is also an important fact. Cut your flooring, and turn it upside down. Do not nail it until house is all inclosed. By this means the workmen have a substantial place to work on, and, better still, the lumber has a splendid chance to thoroughly dry and shrink. Do not rest your plates on the joist. Nail thoroughly a piece of flooring first on top of the joist, and let your plates rest on that. This prevents the unpleasantness, common to so many houses, of a draft from under the base-board. These suggestions may look simple, but they serve, if carried out, to make a home truly comfortable to live in.

Do not spare the braces; they cost but little. Have them well nailed. Then when the storms come, as you sit in your dainty parlor, what a pleasant sense of satisfaction you have to feel that no storm can shake your little abode, for it is well nailed together, well braced, and founded upon a rock.

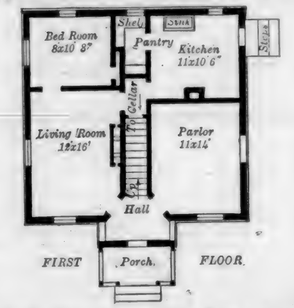
Two more essentials of the building must receive careful attention. See that your chimneys are well built. Do not let a single joint pass your observation. Have the in-



SIDE ELEVATION

side well and smoothly plastered. Take no chances on, "*That will do.*" It will not do to have your house catch fire from a defective flue simply because you wanted to save an hour's time and a bucket of mortar. Notice carefully the shingling of your roof. Do not let the workman fool you by saying one nail in two shingles is good enough; that is all nonsense. Shingles must be well nailed, as much so as the flooring. Look out for the flashing around the chimney. No leak is wanted there, and a little care will effectually prevent the same.

The plans are very legibly marked as to the size and character of the rooms. Any mechanic can erect the house shown by the designs given. We hesitate to give the cost of the house. Lumber in this city has increased from $15, a little over a year ago, to $25 at present time. Wages are higher. All necessary materials are higher. But for a general average, we may say that the build-



ing will cost anywhere from $1,200 to $1,600, depending altogether on the location.

The unfinished attic will be found a convenient receptacle for the storage of trunks, etc. By increasing the height of the stories a little, this part can be utilized for sleeping-room in case of necessity.

Mutual Destruction.

IT is a fact, but nevertheless one that has escaped the attention of many, that many substances and materials used in building are mutually destructive. Certain kinds of wood which, taken individually and separately, possess remarkable lasting and wearing properties, placed in positions of mutual contact rapidly deteriorate, and, may be, soon disintegrate and decay. In a farm fence two woods, cypress and walnut, each a timber justly celebrated for long wear and immunity from the destructive atmospheric influences, when placed together rotted very rapidly. The same was true with reference to cedar posts and cypress leaders and palings. At the point of contact decay set in at an early day and progressed very rapidly; and to prove that actual contact was the ultimate cause, the two were separated in a number of instances, in every one of which rotting ceased, and the wood remains perfectly sound save where they were in contact formerly.

With the growing scarcity of many valuable building woods, it becomes necessary to back and fill with varieties not formerly used. As a result there are many structures already tottering with decay that should have remained perfect and erect for many years yet, and that, too, when the timber is in out-of-the-way and isolated positions favorable to long life and usefulness.

Though the world of science is yet too young and weak to reconcile the two branches, architecture and chemistry, the time will come when the scarcity of building material in general, wood in particular, will necessitate chemical as well as architectural analyses before it will be deemed safe and expedient to place two untested woods, or other substances, together. All have seen the effects on timber exposed to gases emanating under certain processes of manufacture, and many have marveled at the permanency of some and fragility of others, when, as is often the case, conditions and surroundings being changed, the property of wood often changes correspondingly.

It is safe to state that no two varieties of wood possess the same essential chemical characteristics, and the instant one possessing much alkali is placed near another that may acid in its reaction, it will invite rapid dissolution and decay. What is true with reference to wood applies with all the force to other materials used in structures. Two uprights, the main-stay of a quite large country bridge, rotted off at the ends when bolted together with an iron bolt. New ones were placed in and fastened by wooden pins of the same variety, and ten years have elapsed, and still they stand. In the first instance beech, which is known to contain much acetate, was used, and the iron soon oxidized, transmitting the rot to the wood, and though the rest was perfectly sound, about the splice soon rotted off, while in the latter case the same wood, I believe from the same tree, was used, but the wooden pins did not rust, and the joint remains firm and sound at this writing, and it is now nearly ten years since the renewal was made. Now, if a wood like ash or oak, having less acetate in its composition, had been used, instead of rotting and oxidizing it would have tended to preserve the iron, hence would last longer than if fastened with pins made of its own species of wood, or any other, for that matter. —*J. Frederick Elsom, in Inland Architect.*

San Francisco's Wooden Houses.

THE captious and transient critic rarely visits us without having his fling at our wooden houses. A city of shanties, a wilderness of redwood, a big lumber yard and a collection of sheds, are some of the expressions which he throws at our devoted heads and into the pages of his correspondence. He contrasts San Francisco with the brick-and-mortar cities of the East, much to the discredit of the former city; he compares the flimsy character of our architectural materials with the brown-stone veneers of New York and the solid limestone walls of St. Louis, and he charges us with living in a flimsy place and in houses that must impress their owners' minds with feelings of instability and change.

Our critic has much reason in what he says, but at the same time there is a good deal to be urged in extenuation. The main point in the answer is that with us it has been very largely a question of supply and demand of material. The first missionaries have left their architecural imprint in the crumbling ruins of adobe walls. They built of adobe because the clay was at hand, the sun was nearly always shining warmly enough to bake their bricks and the work of kneading and cutting was an easy one that the Indians could learn in an hour. That was one reason; and another was that the padres were rabid on the subject of arboricide. They believed and carried out the belief that the man was blessed who made one blade of grass to grow where none had grown before, and instead of cutting down trees they planted them. To destroy a tree was a crime against nature, and they gave much loving care to the culture of "shade-making trees." The oliviers of the San Diego Mission, the lovely avenue along the Alameda of Santa Clara, the vines of the Mission San Jose and the gardens of Santa Barbara all prove how deep was the love of the padres for leaves and blossoms and how they strove to add to the scant beauty of their surroundings. When the use of timber was imperative, as, for instance, in the raftering of a church, they only used a few massive logs and scarcely squared them at that. Every other part of the building was made of clay. The roofs were covered with clay shaped into convoluted tiles and burned a deep red; the walls, as we have seen, were built of clay blocks burned in the sun, and the floors were lined with flat tiles made of a finer clay and brought from Spain.

Then came the early mining era, when men lived in tents, or in lean-tos of branches and calico. But the summer breeze blew the calico into rags and the winter's rains poured through the rents, and some other shelter was absolutely necessary. Of what material that shelter was to be built was a very serious question. The adobe was thought of, but the hunting for clay beds and the tedious waiting for the bricks to dry when once they had been made was a work and waiting not at all suited to the hurry-skurry miner. Of stone there was very little, and its use meant quarrying, and our argonauts decided that they would have all the pick-and-shovel work they wanted in the mines. There remained, then, lumber, and the first "house" that was built in San Francisco was of rough sawed lumber. The planks were brought up in a schooner from Monterey, where a mill had been established, and soon other mills were started and the lumber-carrying trade became one of sufficient importance to keep a small fleet of coasting schooners busily employed. That was an era of experiments. Some man pressed the Mission people into service and built an adobe hotel on the southwest corner of Clay and Kearny in 1847, but he had no imitators. Then some enterprising spirit brought out a ship load of bricks from the East, in the fifties, but they were worth almost as much as though they had been made of bullion. Granite was brought from China, sheet-iron from France and more bricks from Philadelphia; but all were found too expensive or too troublesome to work in those easy-going days, and the handy plank, upright and a nail or two grew steadily in public favor.

So the building of wooden houses was due to a question of material and the expense of securing it, and so it has largely been ever since. We have grown accustomed to our houses of planks, and, being accustomed to it, we are led to discover excuses for its short comings and to find good points where strangers can only see faults. It will be curious to look into some of these claims for the next minute or two.

We are in the habit of saying, for instance, that our frame houses are warmer than those made of brick, for San Francisco is not entirely without residences built in the Philadelphia fashion. This proposition, we think, is scarcely tenable. It may be true that the sun will heat a box more quickly than it will a pile of bricks, but it is equally true that the pile of bricks will retain that warmth long after the box has grown cold. Stone retains the warmth still longer than brick, and this is susceptible of very easy proof. Let the reader walk for an evening beside a brick wall, a stone wall, and a wooden fence that have been all day long in the eye of the sun, and he will find that the stone wall gives out a heat that is perfectly perceptible at two feet of distance, that the bricks are warm to the touch and that the fence is cold. Then, too, if the wooden wall, allows the warmth to penetrate easily it must also allow of easy entrance to the cold and the wind. About this latter proposition there can be no doubt, and the proof is to be found in every wooden house parlor in San Francisco. Let the southwest wind blow up smartly in January or February, and every room in the house with that exposure is so cold and damp that fire is needed all day long. The fact of the matter is that the old brick houses were built with too much wall and too little window. We want all the sun we can get, and in the wooden houses, there being less support wanted, there is generally as much window-glass space as of plank.

It has been said, too, that the wooden houses of San Francisco are its salvation from extensive fires, because the redwood lumber does not burn easily, because it scorches rather than blazes. There may be something in this, but we would much rather believe that our immunity from large conflagrations is more owing to the efficiency of the fire department than to the incombustibility of redwood. When once a big fire has got full headway we are afraid that the wonderful sequoia will not check its progress.

The wooden house has done good service, but unless we are very much mistaken it has seen the prime of its days. It has enabled us to build up a great city quickly and cheaply; it has resulted in a pleasing if not very classic form of architecture, but we do not depend upon it as exclusively as we did. The brick fields of the State are spreading, the quarries are being opened, good building-stone is found in every county in quantities sufficient to build a metropolis, and lumber is becoming yearly more expensive.

Besides this, the necessity and inclination to build hurriedly are both past. We no longer look upon ourselves as flitting sojourners, we know that we shall spend our years in this same city of San Francisco; we want to erect substantial monuments to the spirit of domesticity; we are running to the brown stone blocks and cyclopean walls; we are "going in" for solidity; we have new ideas of style, and we believe that the time is not far distant when the man who spends his money in a redwood mansion will be looked upon as being behind his times.

FOR ELEVATORS.

Automatic shutters or doors that completely close the well openings at each floor of a building. A California invention.

Probably no one subject has been more generally studied by inventors than *elevators and the safety appliances connected therewith*. Hundreds of patents have been obtained for the purpose of guarding those who are obliged to go up and down to the various stories of our large buildings, from receiving injury, should any portion of the machinery break. The large fires that have occurred in this city in brick buildings, turned the attention of many of our deep thinkers to providing a simple remedy against the spread of fire through a building, by means of the elevator shaft. Device after device was experimented with. Difficulties beset the inventor's path, until the object sought to be obtained seemed farther away than when the thoughts first run in the direction referred to.

Mr. A. G. Page studied and experimented after the Bancroft fire in this city, to overcome the various defects noted by fire marshals and the insurance men generally; and in the Page Automatic Fire Shutter we have the successful result of his inventive genius. The device is a very simple one. Two wooden shutters or doors are thoroughly covered with sheet iron. These are hung on a level with the floor, and fit closely the opening through which the elevator passes. A set of doors are placed at the level of each floor, be there two or six stories. As the elevator rises, the doors below the floor of the cage close automatically, while at the same time the doors of the floor above open. The same operation is repeated at each floor ascending or descending.

One of the chief merits of this device is that the doors, after the elevator has passed, can be used the same as the floor. Hand trucks loaded with goods can be freely rolled across the doors. They are securely held in position by an ingenious automatic lock, and cannot be moved except by the running of the elevator. On the main floor, especially, this will be found of great benefit, for, after the elevator has passed upwards, truck loads of goods can be moved across the elevator way, on a level with the floor, without any obstruction.

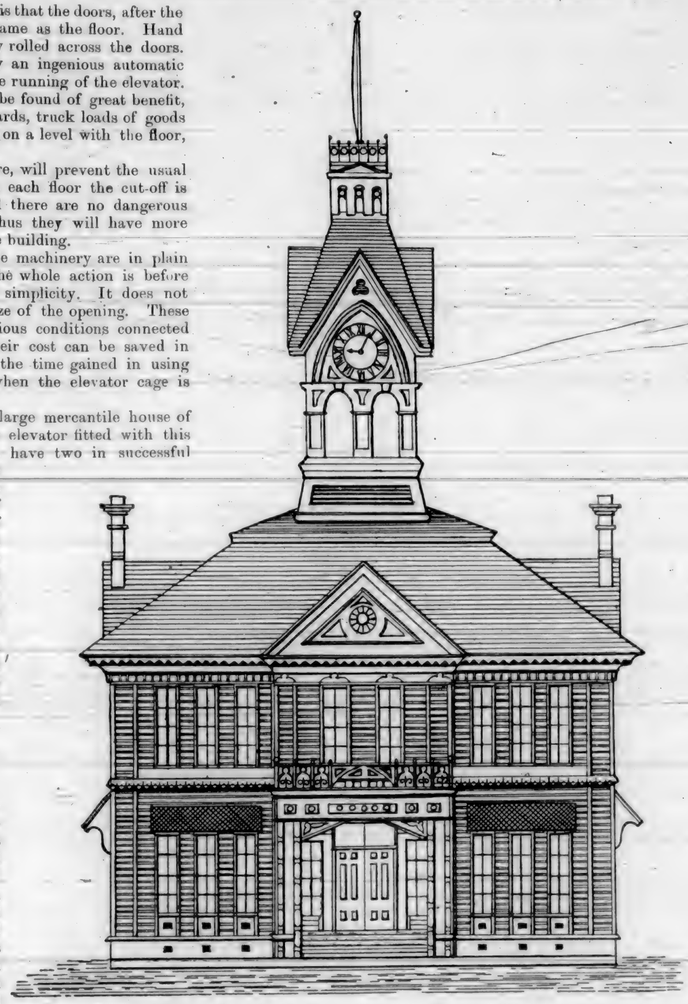
Again, this invention, in case of a fire, will prevent the usual fiery draft up the elevator shaft. At each floor the cut-off is perfect. The firemen instinctively feel there are no dangerous openings for them to fall into, and thus they will have more energy to penetrate into all parts of the building.

All the different parts of the simple machinery are in plain view. In going up or coming down, the whole action is before you, and you wonder at its extreme simplicity. It does not matter about the height of story or size of the opening. These shutters can be fitted to suit the various conditions connected with any description of building. Their cost can be saved in mercantile buildings in one year, from the time gained in using the different floors at all times, save when the elevator cage is stopping at any particular floor.

This device is no experiment. The large mercantile house of Cunningham, Curtis & Welch has the elevator fitted with this device. The San Francisco Tool Co. have two in successful operation. The chief engineer of the Fire Department, the fire marshal, the fire patrol, the city architect, many of our leading architects, and agents of the principal insurance companies and "Insurance Union" have given their approval of the invention. We shall call attention from time to time to the various buildings in which it is to be introduced. The device is clearly illustrated in the advertisement in this issue, and the company are prepared to execute all orders for shutters in new buildings or in those already constructed to insure safety from fire or accident.

Elevation of School Building at Lodi.

LODI is the largest town in northern San Joaquin Valley. It contains many nice buildings, but none receive the notice that is bestowed upon the public-school building. All the citizens look upon it with pride, and strangers entering the beautiful farming town are soon made to feel that more than ordinary attention is given to bestowing a liberal education upon the young of the section in which is built the fine school-house, a faithful representation of which is portrayed above.



Elevation of Public School Building, Lodi, Cal.

Japanese Carpentry.

W. K. BURTON, in the *British Journal of Photography*, gives the following interesting account of how Japanese carpenters work:—

"The work-shop is a room perhaps twenty feet square, the floor all covered with straw mats. We are accommodated with chairs. This is an unexpected and certainly a pleasant advantage. We had looked to sitting on the floor, and accommodating our lower limbs as best we could.

"And now to give some idea of the manner of working, if possible. There are four carpenters in the shop. Each squats on the floor with his bench—or what takes the place of the bench—and his smoking gear beside him. The bench is nothing more than a flat board of hard wood, the dimensions some three or four feet long, about eighteen inches wide, and an inch thick. It lies directly on the straw mats. The smoking gear consists of a stone-ware bowl, which is filled with wood ash, in the center of which a few embers of charcoal are kept always alight. The bowl stands in a square box, in one corner of which also stands a short piece of bamboo, into which is knocked the tobacco ash after smoking. The pipe has a wooden stem and a metal mouth-piece and bowl, the latter very diminutive. A pinch of tobacco is put into the bowl, the bowl is thrust among the live embers, a single puff, or at most two, are taken, the ash is knocked out of the pipe into the bamboo pot, and the smoke is over. The tobacco is the very mildest, and is cut exceedingly fine. I think no Japanese workman is ever without this smoking gear. In his work he pauses every few minutes, takes his smoke, as I have described, very deliberately, then returns to his occupation. The smoke is by no means unpleasant, but would certainly be too mild to satisfy certain photographers at home that I could mention.

"The bench has no arrangement whatever for fixing the work. It is merely the board of wood that I have described, without any addition whatever. That work should be turned out, on such a bench, of a quality to rival all but the finest camera work at home, is a thing I certainly should not have believed unless I had seen it. One thing which enables a Japanese carpenter to get on without any arrangement for fixing his work is that he uses his feet as well as his hands.

"It is doubtless mostly due to practice, but also in great measure to the foot gear used by the Japanese, that they can use their toes to grip in a manner which Europeans could not imitate at all. The foot gear consists either of straw sandals or wooden clogs, the latter generally mere thick slabs of hard wood, which are held on the feet each by a thick cord, which passes up between the big toe and the one next to it, bifurcates just over the toes, and joins the sandal or clog again at each side of the heel. The foot is thus never cramped or distorted, as with us, and the toes can be freely used. A Japanese tailor holds his cloth with his toes, and a carpenter holds and turns about his wood with his feet. I was about to say that he manipulated it, but this, I presume, would not be allowable.

"The tools are much more simple than ours. The hammer is merely a cylindrical mass of iron, with a transverse round hole through which the handle passes. The saw is merely a strip of steel with serrated edge, and with a "tang" whereby it is fixed into a round handle like a chisel handle, much as we fix a file at home. The work is done by the upward or drawing stroke.

"The plane is in general form somewhat like ours, but the wooden portion is much thinner, shallower from top to bottom, and the knife is inserted much nearer one end than with us. It is unlike our planes in that there is no second adjustable iron, and that there is no wedge for fixing the iron. The iron is just in the form of a chisel, and is held in position by friction against the sides. With the plane, as with the saw, the work is done by pulling or drawing, not by pushing. The knife is fixed near the end, which goes in advance as the plane is drawn along. One would suppose that with such a primitive tool only rough work could be done, but the very reverse is the case. I have seen a Japanese carpenter do what anyone who has ever practiced carpentry will know is by no means an easy thing. I have seen him take out of the middle of a board of hard wood a thin, delicate shaving several feet long, and the whole width of the plane-iron. One reason, perhaps, why such good work is done with the Japanese plane is that unless the edge of the knife is kept in very good condition, the tool will not work at all. It is, therefore, kept as sharp as a razor, a deal of time being consumed in the very frequent setting of it.

"One result of the simple construction of the Japanese plane is that a carpenter thinks nothing of making a special plane for any piece of moulding or such like work that he may have to do. These are sometimes very minute. I have seen them only about an inch and a half long and three-eighths of an inch wide. It thus comes that much of the work done by us with gouges, chisels, etc., is done by the Japanese with the plane. None of the other tools that I noticed differed greatly from those used at home, except in being rougher and less finished in appearance.

"The work that was being done was merely the exact copying of an English camera and dark slides. At work of this kind the Japanese are very clever, but they appear to have but little capacity for original mechanical contrivance. They, moreover, have very little idea of saving labor by machinery, or of division of labor. The consequences are that, although they turn out work of the kind that I have been describing, cheaply—the camera was to cost about one half what it would cost at home—they would turn it out no more cheaply if goods were manufactured on a large scale. If a thousand dark slides were to be made, each one would be made precisely as the first, one workman doing the whole of the work. It is probably due to this very fact, to the fact that the Japanese use little or no machinery, and that, as a rule, an article is made from beginning to end by one individual, that we owe the indefinable artistic charm which there is in the commonest product of Japanese labor. It is because each article has something of the individuality of the worker in it.

"The camera maker thought it his duty to keep us entertained as we watched the progress of the work, and brought up to us, one at a time, what he considered the greatest treasures of his store. He brought first a fine and very large musical box. It was of French make, but set to play Japanese airs, or music, rather, for I have failed as yet to find any approach to air or melody in the Japanese singing or playing. He next produced a Hall type writer, afterward various other mechanical toys for our amusement. The bellows of the camera was being pressed in the selling shop by the simple expedient of piling lithographic stones on the top of it to a height of some four or five feet.".

Remaining number of this year given free to all new subscribers for 1888.

HILL'S
Patent Inside Sliding Window Blinds,

Are Adapted to any Style of Window,

And Suitable for all Buildings, Dwellings, Stores, Office Buildings, and for Houses Built to Rent, Hotels, Boarding or Lodging Houses are Unexcelled.

They are entirely inside of the window casing, and while requiring no furring out or boxing, make it an impossibility to tear curtains, interfere with plants or window ornaments, or become broken by contact with chairs or other movable articles.

The light can be admitted and sunlight excluded from any part of the window; can be instantly removed and taken to any part of the house to clean and as easily replaced.

They can be opened or closed with the window raised, and without removing articles from the window-sill, and cannot blow open or rattle. The Blind is very light (one-half inch in thickness) and strong, possessing more durable qualities than a hinged blind one inch in thickness.

There is no sagging, banging, or getting out of order.

They are made in three sections in height (each section sliding past the others), and any number of divisions in width corresponding to the folds in the old-fashioned folding blinds. They require no hinges—all trimmings furnished with blinds—are made of all woods, finished or unfinished.

The Blind manufactured throughout the United States and Canada by the members of the HILL SLIDING BLIND ASSOCIATION, is the only sliding Blind ever put into practical and general use, or that has been adopted and used by the leading architects and builders, both East and West.

It is rapidly displacing the objectionable folding blind, also shades, which since they have ceased to be considered the fashion, are used principally in cheap dwellings and tenements.

The Hill Blind is the only sliding blind made of white cedar, and where the grooved slide can be used as the window stop, or placed on the pulley stile, similar to the ordinary stop—"the slide is only 2⅜ inches wide"—plenty of room can be obtained by setting the casing flush with the pulley stile, in light studded buildings. NOTE.—Any other sliding blind using the slide as the stop for the sash, is an infringement of our patents of February 26, 1884, and February 24, 1886, and anyone selling, using, of making such a blind will be prosecuted by the HILL SLIDING BLIND ASSOCIATION, as they are determined to stop the sale of several cheap and worthless imitations.

The Hill Sliding Screen, working the same as the blind, is the only screen covering one-half of the window, which will remain at any desired point, and which can be instantly removed, when not required, or to clean the windows.

Over eight thousand sets have been specified and put in, throughout the Pacific Coast, since April 1, 1885.

We refer to the following prominent architects of San Francisco, who have used or specified the Hill Blind and Screen; also hundreds of owners throughout the Pacific Coast:

Miller & Armitage, Pissis & Moore, H. D. Mitchell, John Marquis, John M. Curtis, Moore & Schultze, J. T. Kidd, J. H. Humphreys, T. J. Welsh, Jas. E. Wolfe, Townsend & Wyneken, Chas. J. Devlin, Geo. E. Voelkel, Copeland & Banks, M. Balczynski, Edw. R. Swain, Chas. V. Pierce, S. & J. C. Newsom, Wm. Mooser, Chas. Geddes, Macy & Jordan, H. T. Bestor, A. A. Bennett, Salfield & Hohlberg, A. J. Barnett, John J. Clark, G. V. Capelletti, P. R. Schmidt, M. P. Schetzel, Clinton Day.

HINDES & MURRAY,

Main Office and Factory, 411 Mission Street, Corner of Fremont.

Sole owners of the right to SELL and MANUFACTURE for the Pacific Coast, except Counties of San Diego, Los Angeles, San Bernardino, Santa Barbara, Kern, San Luis Obispo, and Ventura in California.

COUNTRY
BUILDING INTELLIGENCE

We earnestly desire the co-operation of country editors and mechanics generally to this department of our Journal. Forward us all the building news connected with your different localities. Architects should also notify us of "plans to figure on." No charge is made for such notices. Direct letters to office of this Journal, 240 Montgomery St.

Alameda.

J. Cordes is building a very handsome two-story house on Briggs Avenue, near Ninth Street, to cost $4,000. C. H. Foster is the contractor.

J. B. Finley is remodeling his cottage on Alameda Avenue, near Willow Street, at a cost of about $2,200.

Work has been commenced at the Clark Pottery Works upon a new fire-brick kiln, which will have a capacity for 40,000 bricks.

Joseph A. Leonard, the architect, has associated himself with A. H. Todd in the real estate, house-building, and house letting business. The firm name is now Todd & Leonard.

Alterations. Owner, John Wulzen; architects, John & Zimmerman; contractor, R. Wadell; cost, $2,500.

Berkeley.

J. L. Barker has two houses in Berkeley under way, to cost $2,000 each.

Dr. George M. Baronidas appeared a few weeks ago before the Berkeley Trustees, and stated that he and his associates were preparing to build a $150,000 hotel, four stories in height, with a bank and drug store on the ground floor; also to erect a large bath-house, 60x80 feet, covered with colored glass, to be used for hot and cold-water baths.

P. S. Glasford is having a $1,700 cottage built on the Hillegas Tract, by C. R. Lord.

J. B. Cogswell has agreed to erect a house for Mrs. H. Gross, to cost $3,100. Percy & Hamilton are the architects.

A. H. Broad has agreed to do the carpenter work on a building for A. Carlisle, on the corner of Vine and Spring Streets. The contract price is $2,720.

Oakland.

George E. De Golia is having a very pretty modern cottage built on Hobart Street, near Telegraph Avenue. A. W. Pattiani & Co. are the architects and contractors, and the price is $1,302. It will be completed by the first of next month.

The California Mill has the contract for the mill work on St. Mary's College, for $16,921. The Mill Company has filed a bond in the sum of $10,000, with C. F. Doe and W. J. Adams as sureties.

The proposed Presbyterian Church of Temescal will cost $8,000.

A nine-room residence is being built for Mrs. J. P. Mene, on Hobart Street, to cost $5,000.

Councilman Wilson's five cottages on Hobart Street, near San Pablo Avenue, are well under way.

A handsome residence is being built by G. W. Kelly on the Glen Echo Tract, to cost $8,000. W. T. Veitch has the contract.

C. W. Gibson has had Charles Mau draw the plans for a two-story flat house, to be situated on Alice Street, between Twelfth and Fourteenth Streets. It will have a frontage of thirty feet, with a depth of seventy feet, and will be of two stories, with six rooms and bath on each floor. The cost will be about $5,000.

Dr. A. Cane is having a handsome house built at Klinknerville, to cost $4,068. It is a handsome two-story building, with all modern conveniences. J. T. Quirk is the contractor, and W. Winterhalter was the architect. It is to be finished by December 30. The contractor has filed a bond of $4,000 with Frank Johnson and D. F. McGraw as sureties.

J. S. Greenleaf is having a house built by Woodhouse & Sandy, at Klinknerville, to cost $2,300.

Pomona.

Killam & Wethercot send the following list of buildings for which they are architects: J. M. Howard, $3,000; J. W. Goodwin, $3,200; I. M. Case, $2,600; A. H. Summers, $3,500; additions to Presbyterian Church, $2,500; J. A. Driffill, $3,200. In addition to the above, there are in course of erection the following: Congregational Church, $5,000; R. M. Kirkland, $3,500; R. G. Hamilton, $2,500; George Way (2), $4,000; A. F. Crank, $3,300; J. J. Burdick, $4,000.

Portland, Or.

Otto Kleeman, the architect, has prepared the plans for a large family hotel to be built on the corner of Fourth Street and Holladay Avenue, for Logus & Burkhard. It will be three stories high, in modern Gothic style, 100 feet deep and 150 feet front. The center tower and observatory will be 105 feet high. The rooms will be laid out in suites, with bath-rooms and all modern conveniences to each. There will be a grand staircase and elevator, besides two side staircases and a freight elevator. The grounds will be laid out around the whole block in walks, with shade trees. The basement and foundation will be of brick, and the other stories of wood, but finished in the finest manner. The estimated cost of the building, without furniture or work on the grounds, is $65,000.

Contract has been let for completion of the Harrison Street school-house. It will cost, complete for occupancy, about $15,000.

I. W. Baird offers to erect a $50,000 theater, if citizens will subscribe a sufficient sum to buy a site for the same.

San Jose.

John Auzerais is having a two-story brick building erected at a cost of $18,000. Theo. Lenzen is architect; M. D. Green, contractor.

G. Peirana is adding a second story to his brick building. Theo. Lenzen is architect; Drew is contractor. Cost, $5,000.

Additions are being made to the Odd Fellows' old hall. Owner, R. Roberts; architect, Theo. Lenzen; contractor, J. D. Stewart. Cost, $6,700.

Theo. Lenzen is also architect for F. Baumgardner's $5,500 building, and also for addition to M. Appleton's house. Cost, $2,000.

Following are the bids received on the Auzerais building, mentioned above: H. Clifton, $16,275; Fuller & Lashbrook, $15,850; M. D. Green, $15,800; W. S. Boyle, $16,127; Thomas Livingstone, $16,125; E. A. Van Dalsen, $15,987; J. D. Stewart, $15,965; A. J. McIlvain, $15,963.

San Luis Obispo.

The new hotel, to cost $110,000, which has already been commenced, will be finished in course of six months, a great benefit to the town.

It is settled definitely that the magnificent Andrews Hotel is to be rebuilt.

Mr. Crocker will commence building a brick store on the southern corner of Higuera and Garden Streets, 45x90 feet ground dimensions, and one story in height. The building will cost about $8,000. Architect Laird has the plans nearly completed.

Contractor I. L. Wilson is now at work on two cottages. One is for Mrs. Kiddoo, and will cost $1,800, and the other is for Mr. Latimer, and will involve an expense of $2,100.

A great necessity of this city is a commodious theater building, with all the modern appliances. It is said that L. M. Warden contemplates erecting such an edifice on his lot on Higuera Street, near Chorro Street.

In the meantime in all the towns south of San Luis Obispo—at the Avila Hot Sulphur Wells, Ynocenta, Arroyo Grande, Nipomo, Santa Maria, Santa Ynez, and Los Olivas, a good deal of building is already under way, or is contemplated, and the next year will see many important improvements. Architect Laird has lately completed plans for an elegant hotel to be erected on the last-named place, to cost $10,000; and a large depot is also to be built very soon.

Contractor Hampton has commenced work on the Marsh Street bridge.

Miscellaneous.

PROPOSALS FOR BIDS TO BE RE-ADVERTISED FOR THE NEW CITY HALL, LOS ANGELES.

The following bids for the new city hall have been received:—

CARPENTER WORK.

W. O. Burr	$109,100
Robert Smiley	98,779
A. Washburne	99,888
F. E. Greene	128,600
W. R. Phelps	116,150
A. F. Mackey	116,000

BRICK WORK.

James W. Wadsworth	$ 98,171

PLUMBING AND GAS.

W. C. Furrey	$ 6,000
H. Williamson	4,344
Wm. Henderson	5,350

It was decided that the three lowest bids would make the cost of the building too much, and it was resolved that bids for the construction of the whole or in part be re-advertised for, returnable on Monday, the 24th instant. The architects, Caukin & Haas, were instructed to cut off as many of the extras as possible, in order to bring the building as near the limit, $150,000, as possible.

J. S. Landon is building a $2,000 cottage in Pasadena. Hill & Dean are the contractors.

T. H. Goff, the architect, is drawing plans for a fine three-story brick building to be erected on Third Street, San Bernardino.

The contract for building J. C. Herrington's residence, in Fresno, has been awarded to A. Jackson, for $3,700. The structure will be a two-story, on North J Street, between Tuolumne and Calaveras Streets.

J. M. Saffell is preparing plans for J. C. Herrington's $5,000 house in Fresno.

The trustees of the new Catholic Seminary in San Rafael will shortly commence work on the $70,000 contemplated building.

The Southern Hotel Co. of Tulare City are preparing to build a $40,000 hotel. Consult architects, McDougall & Son, of San Francisco.

In Los Angeles it is understood that the Southern Pacific Railroad Co. are intending to build an $80,000 depot. Also a $40,000 building for same purpose is contemplated by the Atchison, Topeka & Santa Fe Railroad.

It is understood that the contract has been let for the Terracina Hotel, at Redlands. Full particulars may be had by addressing T. A. Goff. Over $30,000 will be used.

The Presbyterian Church Society of San Diego intend to erect a $25,000 church. Address Reid Bros., architects, for full particulars.

The East Riverside Improvement Co. will commence the construction of a new hotel right away, to cost, when completed and furnished, about $21,000. Bricks for the foundation are now on the ground. A contract has been made to build a fine railroad station before January 1. The Improvement Company has contracted to furnish the railroad company with water. The building of an $8,000 school-house will be commenced very soon. S. H. Herrick, of Riverside, is the manager of the company.

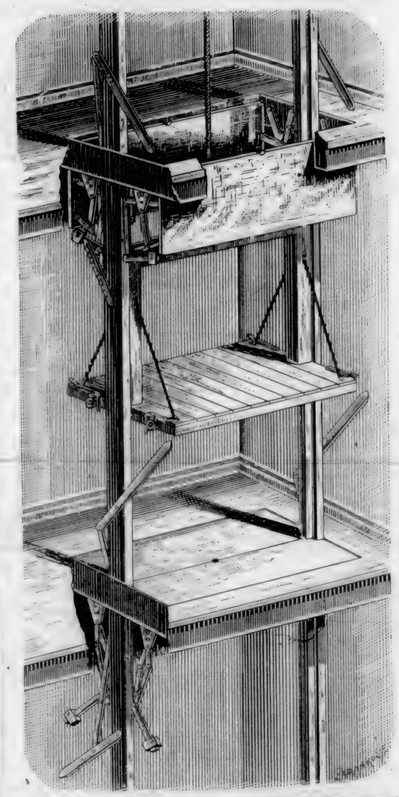
THE PAGE

Automatic Fire Shutter Co. of California.

The Best Automatic Fire Shutter Known.

Manufacturers Under United States Patent of the Automatic Shutter.

INCORPORATED APRIL 29TH, 1887.



ADAPTED TO PASSENGER AND FREIGHT ELEVATORS,

For Protection from Fire in Elevator Shafts, and from Liability to Accident.

PATENTED MAY 10, 1887.

Now in operation at 22 and 24 Jessie St., and 327, 329, 331 Sansome St., S. F. Call and examine the same.

The cut represents a freight elevator, showing two floors of the building. The elevator platform is represented as ascending, having passed through the hatchway of the lower floor. The shutters below the elevator platform have just closed level with the floor, completely and firmly closing that hatchway. The shutters of the second floor are next being opened by the ascending elevator platform, and after it has passed through, these close automatically, in the same manner as seen at the first floor. In the descent of the elevator platform, the shutters open below as it approaches the hatchway, and after passing through, they close again firmly and completely. Each shutter opens and closes automatically as the elevator passes, and are so counterbalanced as to offer no resistance to the ascending or descending platform.

H. W. SEVERANCE,

Manager and Agent,

Office, 218 California Street, San Francisco, California.

The Clerk of the Works.

THE term and business of the clerk of the works are practically unknown in this country. In England the clerks of the works constitute quite a large class, have their own society, and form a useful, prosperous, and intelligent body of men. Here, a synonymous term would be building superintendent. In both countries the general custom is for the architect who draws up a design to personally superintend its execution. This necessitates a visit to the job once a week, or oftener, according to its extent. But when a building in course of erection is very large, as, for instance, a city hall, a private mansion, or any other building of great extent, the works need, in the interest of the owner, a constant supervision, and so the business of the professional clerk of the work arises. The custom of employing such a superintendent is much more common in Great Britain than it is here—in fact, in the former country few jobs of any considerable extent are carried out without his aid.

The duties of a clerk of the works are essentially those of superintending the construction of a building, as a deputy for the architect. He has to see that the work is carried out exactly in accordance with the drawings and specifications. He cannot alter any of the construction on his own responsibility; neither is he supposed to interfere directly with the work of the mechanics. His orders are, however, by courtesy, accepted by the contractor and foremen, and it is not seldom that his personal knowledge is of great benefit to the workmen in helping them out with any complicated or difficult problem arising in the construction. One of his most important duties is to examine the whole of the material delivered upon a job, and to reject any portion which is not of the specific quality. Another is to take measurements, and keep a list of any extra work which may arise during the course of the erection of the building, and in like manner to keep an account of work not carried out in consequence of alterations being made in the original plans, so that due allowance may be made for them. As a rule, the clerk of the works is a mechanic, often a carpenter or mason, who is above his fellows in intelligence and knowledge. Sometimes a draughtsman will act in this capacity, but the necessary and very intimate knowledge of construction and of the characteristics of good materials is such that few are other than advanced mechanics of extensive practical experience. The salary usually paid may be said to be about twice that of the carpenter or mason, and many a young mechanic will study hard in his leisure hours in the hope that he may eventually get to be a clerk of the works.—*Ex.*

Provincial Royal Jubilee Hospital.

TO ARCHITECTS.

Designs, Plans and Specifications are invited for the above building, in accordance with memorandum of particulars, copies of which, together with contour plans of the site, may be obtained on application to the undersigned. A premium of $800 will be paid for whichever designs and plans, if any, may be adopted. Such designs, plans and specifications to become the property of the Provincial Jubilee Royal Hospital Building Committee.

Plans for this building to be addressed, in sealed envelope, to the undersigned, and to be handed to him by or before noon of the 7th of December next.

WILLIAM CHUDLEY, Hon. Secretary,
Sept. 13, 1887. Wharf St., Victoria.

CIVIL ARCHITECTURE,

A SPLENDID WORK,

PRICE, $10.00.

Lumber Market.

THE retail price list of the California Lumber Exchange for September 9, 1887, is as follows:—

Pine, Rough, per M feet	$22 50
Pine, Rough, No. 2	18 50
Pine, Rough, 40 to 50 feet lengths	23 50
Pine, Rough, 50 to 60 feet lengths	24 50
Pine, Rough, 60 to 70 feet lengths	25 50
Pine, Selected	26 50
Pine, Clear	33 50
Pine, Fire Wood	10 00

SPECIFICATIONS.

We have on hand a supply of a

NEW FORM OF SPECIFICATIONS,

Especially adapted for the Pacific Coast.

We will send a Copy to any address upon receipt of 50 cents, or $5.00 per dozen.

Also Palliser's new Specifications, just received.

We can supply any number of either the above.

CARPENTRY

MADE EASY.

By Wm. E. Bell, a practical mechanic, who fully appreciates, from personal experience, that there are many things perplexing to under tand and difficult to do until they are fully explained and tested. It is designed to make the science and art of carpentry clear and comparatively easy to all who require information on the subject. Price, $5.00 by mail, prepaid.

No Others Received.

SAN FRANCISCO, CAL., DEC. 15, 1887.

OUR WEEKLY EDITION.

The initial *number of the Weekly Building News made its appearance last week. The* regular *issue will not commence until January, 1888. For over four years this journal has been printed in Oakland, and, not wishing to change, we made arrangements to have the* Weekly *also published there. But we find the labor too great; so we have completed all the necessary contracts to have the same published in this city. After the first issue the* **WEEKLY BUILDING NEWS** *will appear regularly on Monday of each week.*

COVERNMENT WORK.

We have received authority from the Government at Washington by which contractors will be notified of all work to be done for same on this coast. Other arrangements are being actively consummated by which the **WEEKLY BUILDING NEWS** *will be* **THE** *medium for contractors for all description of work to obtain the newest items in regard to any public work—city, county, country, or Government.*

Close of the Ninth Volume.

WITH this issue we close the ninth volume of this Journal, and in so doing we again desire to thank our patrons for favors received during the past year and also for the past nine years. Looking over the pages as they are now presented and comparing them with those of nine years ago, we cannot help expressing our deep obligations to all who have stood so nobly by us. For nine years, in each successive issue, we find the same familiar "ads.," many of them occupying the same spaces as when they started in 1879. For nine years the same editorial pen has held sway over the various articles presented. We feel that we have given satisfaction to our patrons. No opportunity has been allowed to pass to improve this journal in every manner. We have carefully studied the wants of our readers and endeavored to give satisfaction to all. We will use renewed efforts in 1888 to make this journal equal to any published. To do so, however, we need a little more assistance from members of the architectural profession. *Promises* have been made by the score. What we need, however, is *action.* Make a business of it to send to this office, at least three times a year, an article on any subject of which you have made a study. Send us sketches of original ideas used in your various elevations and details. Full credit will be given in each and every case. Again thanking all for their generous support during the past year and trusting a renewal of the favors for 1888, we lay down our pen on the editorial work of 1887, and wish one and all a Merry Christmas and Happy New Year.

The City Hall Imbroglio.

SOME time ago bids were called for by the City Hall Commissioners for completing the Larkin Street wing of the New City Hall. Upon opening the bids the following were found to be the contestants:—

Headley & Morehouse	$81,755
Charles C. Terrill	82,000
John McCann	86,560
Albert Washburn	84,800
McGowan & Butler	64,800

It was readily apparent to the Commissioners and those present at the opening of the bids that a screw was loose somewhere. It hardly seemed possible that four bids should be handed in with less than $5,000 difference between them and then one of our most reputable contracting firms should be about $17,000 lower than the next lowest bid.

Upon investigation it was soon discovered that a pool existed between the first four named, and that strenuous but unsuccessful efforts had been made to induce the fifth one to join. We do not propose to enter into full details in regard to the affair. The editor of this journal being on a visit East, and having left the charge of the journal in the manager's hands, we frankly admit that we do not feel competent to deal with the subject. We leave it to the editor's masterly hand to deal with the same upon his return. We will say, however, we admire the manly stand taken by Charles C. Terrill. He frankly admitted that he considered the business of pooling issues as perfectly legitimate. Lumbermen have pooled on their products, brick manufacturers on theirs, and so on, and why should not contractors, when the conditions of the contract were very hard, do the same thing.

[*While admitting the manly way in which Mr. Terrill addressed the commissioners, we wish it distinctly understood that we do not indorse his opinions.*—MANAGER.]

Quite in contrast was the action of another bidder who admitted that he had put in a bid but had *never read the advertisement or specifications.* He stated that there was a man who could go to the commission and burst up McGowan & Butler's contract. Auditor Strother, in the manly, independent manner for which he is noted, told Mr. Headley—the bidder referred to—that the man who said he could do such a thing was "an infamous liar." When pressed to name the man who had such a "potent pull," it turned out to be one of Headley's own bondsmen. He also admitted he had offered Butler $5,000 for the contract.

After due consideration the contract was awarded to McGowan & Butler at their figure. The same firm was also awarded another contract on the same building for stone work, etc., for the main tower, the consideration being $32,600.

Annual Building Summary for 1887.

THE record for the year closes with this issue. Although in *number* of new improvements it is behind either of the three years preceding, still in the *value* of the work done, it is exceeded by the single bonanza year of 1885.

The following table will show the monthly totals, and the grand total for the year :—

	Frame Buildings.		Brick Buildings.		Repairs and Alterations.		Total No.	Total Cost.
	No.	Cost.	No.	Cost.	No.	Cost.		
January	40	$109,200	11	$475,000	8	$ 15,500	59	$650,750
February	30	126,000	5	53,250	13	25,200	48	204,450
March	65	221,500	9	105,500	10	26,900	84	353,900
April	77	431,850	6	173,500	17	31,450	100	636,800
May	73	376,700	6	232,000	9	84,100	88	692,800
June	101	477,500	7	196,164	28	57,550	137	731,214
July	70	648,700	2	52,500	20	50,500	92	751,700
August	105	388,100	7	150,000	24	44,250	136	582,350
September	59	402,850	4	44,000	32	161,100	95	607,950
October	63	257,840	2	37,200	19	55,300	84	350,340
November	68	242,700	5	210,500	23	50,000	96	503,200
December	39	185,200	8	258,000	27	66,400	74	509,600
Grand Total	723	$3,949,140	71	$1,987,614	228	$668,250	1092	$6,605,054

In order to compare with previous years, we give the totals for each year since 1880.

COMPARISON.

The number of building engagements, and their value, since 1880, are as follows :—

1880—	397	engagements,	value	$1,754,435
1881—	533	"	"	3,790,732
1882—	785	"	"	3,896,212
1883—	803	"	"	5,261,689
1884—1,127		"	"	6,202,807
1885—1,457		"	"	7,043,999
1886—1,148		"	"	6,401,669
1887—1,093		"	"	6,605,054

The high prices ruling during the year for labor and all kinds of building materials have done much towards causing a cessation of the building of houses of moderate cost.

The labor market all over the State is in more than a satisfactory condition. Full prices rule for every branch of mechanical labor, while in some, men are actually hard to obtain even at extra high wages.

DRAUGHTSMEN.

There is not, throughout the whole Pacific Coast, a *competent* draughtsman idle. During the past year, there has been a dearth of help in this direction, and we have been unable to supply the demand. We can readily place from eight to ten good men who thoroughly understand detail work.

THANKS

Are extended to all those who have so kindly helped us during the past year. We request a renewal of the favors for 1888, and will use our best endeavors to increase the popularity of the CALIFORNIA ARCHITECT AND BUILDING NEWS.

TERMS FOR 1888,

Two dollars per year with the addition of the *Weekly Building News* furnished free to subscribers.

American Edition of the Illustrated London News.

THE illustrations of the *Illustrated London News* (American edition) for November 5, present, as usual, instruction as well as entertainment, and cover the customary broad range of this long-established and widely-known publication. They are indicated by the following titles: Sketches of the Bulgarian Elections, The Disputes Between Fishermen at Plymouth, State of Ireland, The Late Mrs. Craik, H. M. S. Wasp, Sketches on the River Congo, Sketches at the Cat Show, Crystal Palace, The Late Lady Brassey, Grand Durbar at Mandalay, In the Semois Valley, Ardennes, A Tame Lion, Algiers, and The Kali Ghaut, Calcutta. Reading matter in abundance is also provided, while now it is becoming quite generally known that news-dealers everywhere sell the paper for ten cents. Subscriptions can be sent direct to the New York office, which is in the Potter Building.

San Francisco Chapter American Institute of Architects.

THE regular monthly meeting of the Chapter was held in the rooms of the Art Association on Friday evening, December 2. President Geo. H. Sanders in the chair. The following-named members were present: Geo. H. Sanders, W. P. Moore, Geo. H. Wolfe, J. J. Clark, A. Pissis, B. E. Henriksen, J. M. Curtis, Oliver Everett, H. T. Bestor, J. Gash, C. J. Laver, and Clinton Day.

After reading the minutes, the committees on the various classes reported satisfactory progress made by the pupils in the different branches.

The Treasurer made his first report since his inauguration. During the month there had been collected from dues, the sum of $132. A full report was promised at next meeting.

A proposition was received from W. J. Cuthbertson to become a member as Fellow. Referred to A. Pissis, W. P. Moore, and B. E. Henriksen, as investigating committee.

The annual address was read by President G. H. Sanders. A vote of thanks was tendered the reader, and upon motion it was ordered printed in the official organ of the Chapter. [It will be found on another page of this issue.—ED.] Fellow Gash made a few remarks referring to the progress made during the past year, and earnestly entreated the members to make greater endeavors and have 1888 show marked improvement over its predecessor. He would prepare a paper to read at the next meeting and would promise two or three during the year.

The President remarked that the reading of papers at each meeting was the surest method of causing the members to take an interest in the association. He had given a little time during the past month to preparing a list of subjects for papers to be read, and presented the following list for the members' consideration :—

1. The Use of Iron in Architecture.
2. The Distinctive Use of Materials.
3. The Proper Treatment of Terra Cotta.
4. The Legitimate Employment of Stucco.
5. Fire Proofing.
6. What is Style?
7. The Proper Use of Ornament.
8. Ornamental Construction.
9. German Renaissance.
10. French "
11. English "
12. Italian "
13. Gothic "
14. Moresque "
15. Interior Decoration.
16. Exterior "
17. Architectural Timber Work.
18. Constructional Novelties.
19. Improvement in Mode of Internal Surface Finish.
20. Hollow Brick.
21. The Evils of Plaster as an Internal Surface Finish.

An impromptu discussion followed on the last subject mentioned. The President said that architects ought to consider the anomaly of calling for lumber to be thoroughly seasoned; diagonal boarding to be covered with tar, paper, etc., and then having plaster put on, the inside containing tons of water. He mentioned a sample of plastering that had been shown to him, in which the brown coat of mortar had been entirely dispensed with. The laths were closely placed together, and the plaster-of-Paris coat alone applied. Mr. Corbett had informed him that plaster could be so applied that in one day it would be dry and ready to paper on the next.

Clinton Day inquired if such was the case, would not the proposition assume that the laths must be thoroughly seasoned?

The argument will be resumed at a future meeting. The President asked in conclusion, why the plaster-of-Paris coat should be called the *hard* finish when it really was not as hard as the brown coat, when the latter is perfectly dry.

A discussion ensued in regard to the incorporation of the Chapter, and its effect upon those who were obliged to use the courts in order to collect their accounts. One trouble seemed to be that clients did not seem to understand that they were to pay for plans and yet not become the possessor of the plans themselves. Clinton Day naively remarked that people who *built* houses did not care for the drawings, it was those who had plans prepared and *did not build*, that caused trouble.

A full definition was asked for the word "premium," and the following was accepted as a true meaning of the word: Decided that it referred to payment for plans submitted in addition to the regular charges for the same, unless other conditions are specifically described. As a rule the premium was deducted from the architect's regular commission of five per cent.

The most exciting debate of the evening occurred upon the presentation of the following resolution:—

Resolved, That a register be opened in the Secretary's office for the purpose of recording the names of those who are thoroughly proficient in the different branches of work connected with buildings, and who are recommended by one or more architects.

In explanation it was stated that there was no intention of keeping a black list; on the contrary, it was simply the purpose to keep a list embracing the *best* in their various callings.

The whole subject was laid on the table till next meeting.

PROCEEDINGS OF THE CHAPTER.

Full report in this issue of the San Francisco Chapter of Architects should be read by everyone connected with the building interests. The one subject of doing away completely with the brown coat of mortar in plastering is well worth the attention of those contemplating building. Much time as well as expense can be saved by the method proposed.

The definition of the word "premium" is fully given. The advisability of opening a register for the names of *thorough mechanics* is considered. A list of useful subjects is given for future discussion. The President's address should be preserved, as it shows careful study, and many thoughts are entirely original. The whole proceedings are well worth perusal.

Big Redwood Planks.

THERE seems to be quite a competition among the Pacific Coast lumber mill owners as to which has the largest capacity for sawing redwood planks. This state of affairs was brought about by the commissioners of the Humboldt County exhibits inviting samples of redwood planks from the respective mills of the county, to be placed on exhibition at the Mechanics' and State Fairs. "The Carson Mill," says the Seattle *Press*, "was one of the first to respond, by donating a good-sized plank, six feet wide, which was looked upon and spoken of with great favor. The Vance Mill thought that they could do better than that, so they went to work and produced a lot of planks, which measured six feet and eight inches wide. The Vance planks produced a sensation. But McKay's mill concluded they had something to do in this redwood plank business, and so they quietly got to work, and the result of their labors in the sawmill line produces a lot of planks and boards which measure ten and eleven feet in width. These are sawed from a section of a redwood tree thirty feet from the butt, and show the full width of the log, sap and all. They are perfect in grain, with no flaws or knots to mar. This will give an idea of the size of the log, the sap being left to show the natural surface."

A Universal Favorite.

THE most popular, most enjoyable, and cheapest publication on the Pacific Coast is the *West Shore* magazine, and it should be in every house, counting room, and library. The farmers, especially, will find it a clean, wholesome, entertaining family visitor. It is the cheapest illustrated magazine in the world, and has no superior in artistic merit. The *West Shore* for 1888 will be greatly enlarged in size, and improved in contents, both literary and artistic. A magnificent, large oleograph of the entrance to the Columbia River is now being prepared, and is superior in every respect to the handsome colored engraving of Mount Hood issued last year. This beautiful marine picture and the November and December numbers of 1887 will be sent free to all who subscribe now for 1888. A most liberal clubbing list with leading publications is now made up, and will be sent to anyone who desires to take the *West Shore* in connection with other publications. The subscription price is only $2.50. Address L. Samuel, publisher of the *West Shore*, Portland, Oregon.

Sawing by the Thousand.

IN nearly all the saw-mills which "saw by thousand," lumber is not manufactured as it should be, and there is a great deal of unnecessary waste. The interests of the mill man are not naturally those of the log owner. The mill man generally wants to get as many thousand through the mill in a day as possible, and he is not particular whether the lumber is well made or not, or how much material goes into sawdust or mill wood which might go into lumber. The log owner is interested in getting as much good, merchantable lumber out of his logs as possible, and he does not care particularly how long it takes to accomplish it so long as he pays for the work by the thousand. Lumbermen who will take the pains to go to the mills where the mill men for the most part cut their own timber, and job and retail their own lumber, will have it demonstrated to them very quickly that better lumber is made in these mills.—*The Wood-Worker*.

Paper Read before the San Francisco Chapter, A. I. A.

BY GEORGE H. SANDERS.

GENTLEMEN OF THE SAN FRANCISCO CHAPTER OF THE AMERICAN INSTITUTE OF ARCHITECTS: It is customary to demand of the President-elect a more or less elaborate paper as an inaugural address. It may be as well to reassure you by stating at the outset that on the present occasion you will be asked to listen to one of the briefest and simplest.

I propose, in fact, to do little more than to review slightly the condition of architecture in the world at the present time, especially in America, and more especially in our own State and city, with such remarks in *finale* as the subject seems to demand.

Looking over the architectural field just at this time with a professional eye, bearing in mind at the same time the conditions which go to make up at any one time the spirit and form of what we call architecture, and a curious and interesting and at the same time rather hopeful spectacle is presented to us. Much has been written from time to time, on the subject of the Battle of the Styles. But from recent evidences regarding the progress of the fight, one would almost think that the parties were about to shake hands and have a wedding instead. Let us hope if it is so that the auspicious nuptials will be productive of a less motley offspring than we have hitherto had reason to anticipate from the somewhat heterogeneous character of the parentage.

Viewed philosophically, however, the present condition of the architectural art is just such, we believe, as might have been foreseen from the circumstances under which the art has existed for so many centuries. In fact, the changes which have taken place during the last century may be regarded as but a condensation of the variations which have been occurring whenever man has followed his instinct to build, and adorn as he built. From time immemorial great political changes have occasioned great variations in the architectural methods of mankind, the conquerors inevitably carrying their methods with them.

The swarming of the Arians out of the great plain of the Indus into surrounding countries in prehistoric times, everywhere left their traces in the shape of Druidical remains, which have, to succeeding ages, been the wonder and enigma of civilized man.

The colonization of the Greeks left indelible traces of their arts and influence wherever they went. The widespread dominion of Rome in its turn carried its architecture and its institutions throughout the then known world.

The destruction of the Roman Empire by the Vandals from the North inaugurated the Dark Ages, but raised from the fragments that were left a newer and truer architecture, which even now, among us in America, is beginning to bud and blossom with a new life which may result in who knows how much beauty?

The Mohammedan invasions from Spain to farther India resulted in stupendous changes in style and method wherever they went, and in later days, the Spanish invasions of Central and South America, the English in India and ourselves in America, have built up a new world of architecture, which, if allowed healthily and independently to develop, will, it is safe to say, lead to results as far beyond our present anticipations as this present is beyond the promise of half a century ago.

The thousand years which supervened between the breaking up of the Roman Empire and the revival of learning in the fifteenth century witnessed the birth, life, and death of the great styles embraced in the one word "Gothic"—including Byzantine, Moorish, and other Oriental styles of the far East, as well as German, French, and English round-arch styles and the pointed styles which sprang from them in the West and led to the marvelous developments and the exquisite beauty which is sure to result from the rational expansion of natural methods.

But the Reformation, by breaking up the monasteries of Northern Europe, brought to light vast stores of manuscripts and literary treasures preserved therein from classic times. This aroused a taste for classic literature and an admiration for the Pagan lore of Greece and Rome, and together therewith a revival of their arts and architecture.

The Renaissance came and the Gothic, everywhere effete and lifeless, fell before its active and all-powerful rival. First, however, leading to curious amalgamations and transitional mixtures which, however picturesque and novel at the time, were soon superseded by what was considered purer art.

All Europe put on a classic dress and became half Pagan in the process. Even the Church of Rome, which had been the mother of the beautiful art of the Middle Ages, was among the first to adopt the new taste, and a century later the great structure of St. Peter's—and still later, the Protestant Cathedral of St.

Paul's, marked the consummation of one of the most rapid transitions of artistic principle the world has ever known. Succeeding this period came the Neo-Greek era, arising from the travels of Stewart and Revett, and the publication by the press of their great works.

The false and feeble imitations of the beautiful works of Greece in the brick and stucco shams of the time, led to the furious onslought of Pugin and the ultimate Gothic revival. But this in turn led to evils which illustrate the utter futility of copying forms irrespective of the needs and environments of the time. The Parliament Houses of England, to mention one of many cases, are a notable example of the danger of this course, being found on completion conspicuously unfit for the purposes for which they were intended. Constructed architecture *versus* architectural construction is a certain failure wherever and whenever it may be attempted. The vagaries of the Gothicists and the inanities of the classicists brought out the ratiocinations of Violet le Duc and the moralizations of John Ruskin.—than whom, perhaps, no greater or more useful writers on art and architecture have ever taken up the pen. Indeed, Pugin, Le Duc, and Ruskin may be taken to stand for the three vital principles of science, philosophy, and poetry in art, and to have lifted not only architecture but all the other arts as well, into a higher atmosphere and a purer life. At the same time busy writers in every field have been collecting, comparing, and experimenting, until there is a vast fund of materials at command, and fields are not wanting in which to erect nobler temples to the arts than the world has ever known. To them is undoubtedly due in a great measure the vast development of the decorative phase which has supervened during the past quarter century. And although it has been a handful of grain to a bushel of chaff, the higher principles of artistic truth once established on rational grounds have been caught at by lesser lights, popularized and practicalized into possibilities, and the result is, architects of ability entering the field of decorative art and exalting it at once into a higher and better existence. Thence the widespread demand for and supply of artistic materials of all kinds and the great improvement and versatility in design in external architecture—the same principle acting and reacting throughout the whole realm of the arts, especially in the field of domestic architecture. This has resulted in a better quality of design in public buildings the world over, and here let us refer to a peculiar feature of the current century:—

THE GREAT COMPETITIONS.—In preceding ages the patronage of "big jobs" was the prerogative of the great. The successful man was the great artist, who, once gaining recognition by one of the great personages of the day, forthwith became the rage of the time, and by a sort of divine right monopolized every work of importance throughout the land he lived in.

Notwithstanding the many evils credited to them, we think it can hardly be denied that competitions have been the means of bringing out much latent talent which would otherwise have been born to blush unseen. It has served to bring about the universal study of styles, and has, through thorough knowledge, rendered something like the nationalization of *style* an accomplished fact: so that at the present time we have what may be readily recognized as the French, the German, and the English styles—each perfectly distinct from the others, though many and varied be the elements which constitute and make up the whole of each. And in the same sense may we not begin to say that here in America we are fast developing an American style?

And here seems to be the place to notice what has been called the "Richardson style." That the last-named individual builded, if not better than *he* knew, at least a good deal better than some of *us* knew, seems to be conclusive from the strong following which he has obtained. The so-called style has in truth a great deal of elasticity and promises developments which will aid greatly, as *one* of the elements of a national style. That, however, is in fact a much greater matter than the revival under the stimulus of genius of a shadow of the past.

The strongly marked features of the Richardsonian architecture would seem to be the discriminating use of arcuation and trabeation, or a combination of both methods, of closing openings, the use of the round and occasionally the elliptical arch with the free use of shafts and foliated caps, and other decorative features, naturally treated in a Byzantine manner, and roofs of a pronounced but not of a high pitch.

The use of rough stone facings is, of course, a circumstance not essential to the "style," but often aiding admirably in producing a bold and picturesque effect.

The Greeks and the Oriental nations from whom they derived their art employed trabeated or beamed construction to the entire exclusion of all visible arcuation—though arches were occasionally used in a concealed situation.

The Romans, on the contrary, while adhering to the salient features of Greek architecture, boldly adopted the arch, though usually in subordination to the beam, but finally making it a leading feature in their constructions. Surviving the empire, the arch and vault gave rise to the variety of arched styles embraced by the general term Romanesque.

Richardson seems to have adopted the German Romanesque as the central idea of his system, with the immense advantage of a world of variation in the cognate round-arched styles to fall back on, even supposing that a limit to its possibilities of adaptation, combination, and composition is soon found within its own especial limits. Nevertheless we repeat, this does not and cannot constitute an American style, but the outcome of the whole tendency of the national mind developing freely in the employment, in its own peculiar way, of any and all styles of the past, present, and future, governed by true principles of construction, taste and imagination, alone can develop such a style.

The great structures which elevators have rendered possible, and which have lately been erected in such numbers in some of our Eastern cities, almost phenomenal as they are in dimensions and cost, are already beginning to transform our cities, and cannot fail to transform our architecture.

Such vast masses of material piled up to unprecedented heights have the element of sublimity in their bulk alone, and inevitably tend to educate their designers out of all littleness, to cultivate simplicity and grandeur of conception and breadth of treatment in every detail—the same sort of influence which the noble ponderosity of the Pitti Palace must have exerted in Florence, an influence far nobler and better than that which the stupendous but false and imitative architecture of St. Peter's had in Rome, or, still worse, St. Paul's in London. Indeed, in almost every street of the noble Tuscan city, on the banks of the Arno, are found, in temple, palace, and mart, grand examples of noble architecture, pure in form as they are practical in purpose. Eloquent preachers indeed are they, of sound principles, and enduring exemplars of their own true doctrines.

Turning to our own city and State, where the "gospel of wood" has in a sense become vernaculated, though here and there a few solid structures, substantial in form and pleasing in appearance, begin to appear like exclamation points (and sometimes interrogation points) in the dead level of our structural prose, let us briefly consider the result. No impartial professional or unprofessional eye either, it would seem, can fail to observe and to rejoice at the improvements which have taken place.

Compare the pretty, interesting, and continually varied domestic buildings of the present time, which are so rapidly taking the place of the tasteless boxes of a dozen years ago, and one cannot but be pleased with the change. Not but that there is much left to desire, that scarcely a single example can be found which is not more or less susceptible of simpler, honester, more constructional and generally *better* treatment. That alone can come with time and knowledge of the true principles, which have to be learned and to a great degree *evolved* from the new conditions which are every day arising. The thing *is* that a new *idea*, a new departure, has been inaugurated, and a considerable step has been taken towards the solution of the ever evolving, ever growing problem of translating our wants into correspondential language as written in the cities we live in, the houses we inhabit, the clothes we wear, and the lives we live, all potent factors in the development of our civilization and the progress of the world.

One word more on *our* civilization. What does the word mean? It is derived from "civitas," which means a "citizen," and generally may be taken to mean, in a very broad sense, the development of citizens (or city dwellers) out of savages. But here we have the Japanese, in a certain sense a highly civilized nation, wildly reaching out after, and adopting, our institutions, our architecture, our clothes, and our religion. Why? Perhaps it may be said that, emerging from the darkness and twilight of the past, and blinded by a light they do not understand, they are alike unconscious of their own excellencies and of our defects, and in too many cases may be grasping at the shadow, while surrendering the substance. At least it may be taken as a prognostication, if not a prophecy of the universal assimilation of mankind in the future, of the leveling of the mountains, the filling up of the valleys, and the making straight the highways of the good time coming.

Editorial Correspondence.

LAFAYETTE, Ind., November 12, 1887.

REACHED this city on the 10th—fifteen days from San Francisco. The several lay-over stoppages made at cities and places *en route* have consumed time, but in return yielded a line and amount of thought and information which it is hoped will hereafter be utilized in articles pleasing and instructive to the readers of the CALIFORNIA ARCHITECT AND BUILDING NEWS.

This is a staid and quiet place, with but few building improvements under way. The total will not exceed seventy-five thousand dollars, with a population variously claimed at twenty to twenty-five thousand.

There is but one architect—Mr. James F. Alexander, Secretary of the Western Association of Architects, practicing the profession in this city. His operations, however, are not confined to this locality, but extend in all directions hundreds of miles away, with this as his office center. He is a genial, kind-hearted gentleman, deeply interested in the science of architecture, and a most earnest and diligent worker in the interests of the association of which he is at present the efficient Secretary.

La Fayette is prettily situated along the margin of the Wabash River, with splendid surroundings and fertile land in all directions, calculated under favorable circumstances to make it a thriving and prosperous place, with five to ten times the present number of inhabitants. But the wheels of progress appear to be choked by the inactivities of its wealthy men who, having made themselves rich during the prosperous conditions which a few years ago made this a common center for sales and purchases of the product of the soil and merchandise of every kind, for a large extent of country around, ere the present system of railroads supplanted the earlier methods of transportation by horse and mule teams, which brought hither weekly thousands of farmers, stock-raisers, and others, to engage in general traffic and transactions, from which many of those then active in business accumulated large fortunes.

But the changes from the animal to the iron horse demanded new and greater energies and activities, which those who had already reaped the golden harvest failed to put in practice, realizing that their financial safety was assured in the fortunes possessed, with no special care for the future of the city or its people, beyond their own personal interests and conveniences. Consequently the advancements and prosperities have been slow, and La Fayette remains one of the quiet, slow-going, pleasant cities of the Union, with unimproved opportunities, which, utilized for what they are worth, would add largely to both the wealth and population of the place.

CINCINNATI, NOVEMBER 15.—After enjoying the hospitalities of Mr. E. P. Knight for several days, started for Cincinnati at 9 o'clock, A. M., passing through Indianapolis, which presented the appearance of a very important and prosperous city of some 200,000 inhabitants, with a net-work of rails and a large Union Depot, showing it to be a point of large railroad activities, with locomotives and trains of cars moving in all directions. The general aspect of the country and the appearance of the many towns and villages passed through, indicated a degree of general prosperity that seemingly should be gratifying to the people of Indianapolis and the surrounding country. A stoppage of half an hour gave too limited an opportunity to gain more than a passing observation of things in general, which looked well.

At 3:45 o'clock arrived at Cincinnati, and while at first glance not fascinated by the general appearance of the city in proximity to the depot, which is located in one of the older localities, where many of the primitive structures still stand as monuments of the architectural tastes which prevailed at the time when the *too narrow* streets were first built upon, and when four walls, roof, and floors, with small, unornamented openings, served all the then purposes for practical uses. Still—utilizing the opportunities afterward afforded, first impressions were greatly modified, and the beauties and grandeurs of sites, localities, and building improvements—many being, in the fullest sense of the terms, beautiful and elegant, no other conclusion could in fairness be reached than that Cincinnati as a whole is a business center of great importance in many regards, with numerous rows and blocks or single structures of from five to ten stories in height, and well up to, and claiming rank and equality with the best modern buildings erected at equal cost in any other city in the Union; while its hill-tops, rising to altitudes of hundreds of feet along, and looking down upon, the great Ohio River, furnishing a river view of surpassing grandeur reaching across the waters that ever flow between, and divide, the two great States of Ohio and Kentucky, encompassing within the scope of vision from a single point, several cities, towns, and places along or near the river banks on the Kentucky side, which, together with the innumerable lovely building sites and mansion-like edifices distributed in all directions upon those picturesque elevations, gives to Cincinnati advantages and beauties of situation over which its citizens may well be proud.

WESTERN ASSOCIATION OF ARCHITECTS.

The fourth annual session of the Association convened in the large ladies' ordinary of the Grand Hotel in this city, and was called to order at 11 o'clock, by President John W. Root, of Burnham & Root, Chicago; James F. Alexander, of La Fayette, Secretary. President Root delivered his annual address, which was well received.

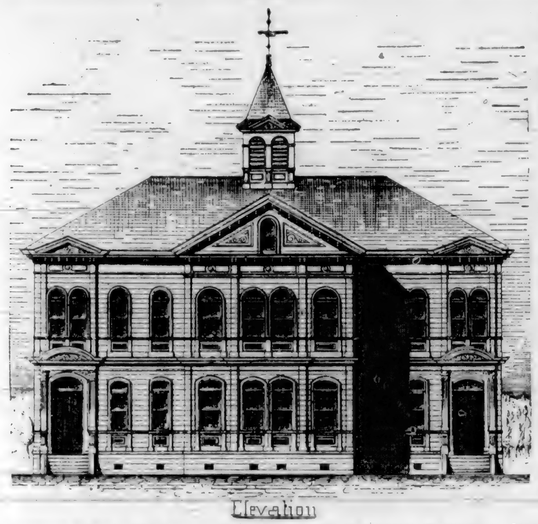
The minutes of previous session were considered read, they having been published in the *Inland Architect*, of Chicago, under the supervision of the officers of the Association, the journal named furnishing a short-hand reporter at its own expense, who reports full proceedings, thus giving the members opportunity to read and criticise the report during interum of session. There were about one hundred members present, as against more than two hundred at the session of last year held at Chicago. This difference in attendance was altogether the result of place of meeting, not as against Cincinnati specially, but Chicago being the more central point of all interests in this section of States, with nearly one hundred and fifty resident practicing architects, only a few of whom felt it possible to tear out four or five solid days from their professional duties and engagements, and the membership of the Association northwesterly from Chicago being large, and Cincinnati lying some three hundred miles southeasterly from the city of the lakes, is the reason why the attendance of members was less than it was one year ago. But these facts seemed not in any degree to diminish or modify the zeal and interest of those in attendance, as the work of the session was taken up and entered into with great earnestness, and the spirit and sentiment permeating and pervading the occasion was clearly in the best interest of the Association, and calculated to make it a power for good to the profession as a whole, and greatly so to its individual members.

The legislation of the session was strongly in the right direction, looking to the improvement and elevation of the profession, and against every practice calculated to impeach or impair the good reputation and honorable position and standing that should be and is enjoyed by every truly good and honorable man assuming and practicing the duties and responsibilities attaching to the practice of the profession.

A CODE OF ETHICS.

Strong condemnation was expressed in deprecation of the unprofessional and mean practices resorted to by many to gain patronage without regard to the means necessary to that end. In view of the facts in this connection, a committee was appointed to formulate a code of ethics for the government of the members of the Association, and the feeling seemed to be unanimous that such a code should exist and be observed, and, so far as within the range of possibilities, be made imperative. Certainly no competent, right-minded man can feel otherwise than in favor of so necessary a rule of practice, in view of the damaging and demoralizing effects resultant from the acts of those who have no sense of personal honor or rectitude toward their fellows or the reputation of the profession, but sink all manly sense of right in the filthy pool of extreme selfishness, grasping for ends and gains which fairly and justly belong to others.

The financial report showed the Association to be in good financial condition. Uniformity of building contracts received consideration and was properly referred. The large number of applicants for membership in the Association made it necessary to postpone action thereon until the members should have an opportunity to criticise the printed list of nearly one hundred names, so that none be admitted who might reflect discredit upon the Association. Action was had in reference to certain statutory revisions in the respective States within this jurisdiction, for the regulation of the practice of architecture and proposing radical reforms in the regulation of the buildings of the National Government. The committee to organize State Associations reported Kentucky, Tennessee, Wisconsin, New York, Michigan, Alabama, and Louisiana, as having joined hands, and added one hundred and fifty names to the roll of the Association. A few minutes before lunch-time, His Honor, Mayor Smith, was introduced and entertained those present with words of welcome. After lunch, eighteen open-topped carriages, some carrying six or more persons, were loaded up with members of the Association, and driven to all points of interest possible, up to an hour after gas-light, including stoppages at the beautiful residences of Mr.



Design for a Six-Room School-House—Salfield & Kohlberg, Architects.

George K. Shoenberg, Alex McDonald, and A. R. Vail, each of which were thrown open to the visiting architects, and full and free opportunity given for inspecting the same from ground floor to roof. One of these very elegant residences is said to have cost $600,000. The floors are about all inlaid in hard wood, with hard woods for finishes generally.

SECOND DAY OF SESSION.

Among other matters considered was that of all the architectural associations of the United States consolidating. A committee was appointed to act with the Corresponding Committee from the American Institute to consider the proposition and report at the session next year.

The eighty names appearing in the printed list for membership were the next in order, with the rule applying that the whole be voted for at once, but any name scratched five times to be considered rejected.

ELECTION OF OFFICERS.

President, Sidney Smith, of Omaha, Neb.; First Vice-President, James F. Alexander, La Fayette, Ind.; Second Vice-President, W. C. Smith, Nashville, Tenn.; Secretary, N. S. Patton, Chicago; Treasurer, S. A. Treat, Chicago; Directors—J. W. Root, Chicago; W. R. Forbush, Cincinnati; J. J. Flanders, Chicago; C. F. Schwinefurth, Cleveland, Ohio; Geo. B. Ferry, Milwaukee, Wis.

Speeches were called for. That of Treasurer-elect Treat was terse, and to the point: "This is my speech, membership dues are payable for 1888."

A vote of thanks followed, and the Convention adjourned *sine die*, to meet at Chicago next year. The arrangements made for a visit to the Mammoth Cave of Kentucky were improved by those who had the time to spare in the enjoyment of this grand wonder of nature.

THE OHIO STATE ASSOCIATION.

There is, as one of the auxiliaries of the Western Association, an Ohio State organization, under whose auspices the present annual session has been held in Cincinnati, the members of which have done well and nobly in the reception and entertainment of the visiting members. Every reasonable provision was made by the Ohio brethren to make the fourth annual session of the Western Association of Architects a success, and they certainly succeeded well. Although California was not officially represented, the representation present attracted much attention to the State, and many kindly expressions followed, hoping, and earnestly desiring, that hereafter, beginning with the session to be held next year at Chicago, the golden chain of fellowship and union with the Association might be consummated with, and extend to, and include, the State of California and other Pacific States. J. E. W.

Design for a Six-Room School-House.

THE accompanying plans illustrate a design for a first-class school-house, arranged to admit speedy egress in case of fire, and thoroughly lighted and ventilated. Large folding doors separate the rear school-rooms and each room is provided with a closet and cloak-room. A wide corridor passes through the building, with a stair hall at each end, giving two entrances, thus separating the two sexes.

The design possesses many other valuable features, but for lack of space they are omitted, trusting that if more definite information is needed, parties will send for same to Salfield & Kohlberg, architects, 339 Kearny Street, San Francisco.

Architects, Attention!

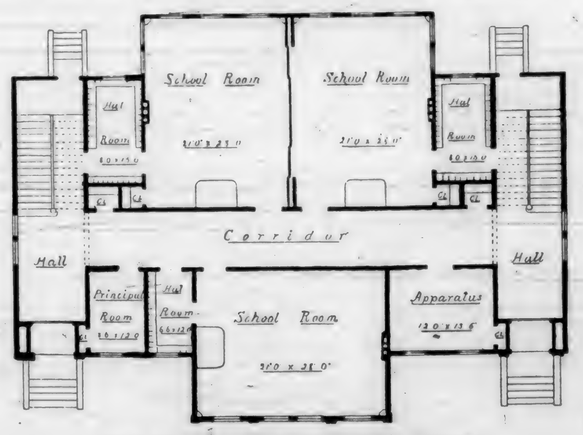
We want every architect on the Pacific Coast to contribute a short article for the January number of this journal. It should be your aim to make your home journal interesting to all who may read it, and there is no surer way to obtain this end than by each one writing a short article. Illustrate it, if need be; we will make the cuts. Be sure that the articles reach this office by the 5th of January.

To Contractors.

What contractor in the city but knows of some little idea that would be beneficial to the readers of this journal. Help to build up this journal by a free interchange of thoughts. It will pay you tenfold to be in communication through our columns with all the master mechanics of the Pacific Slope. Do not let the thought enter your mind that you cannot write well enough. Do the best you can, and we will see that your ideas are presented in proper shape.

Apprentices.

When you have found out any ideas that should be known to everyone, forward them to us, and we will publish them under your own names, that others, hearing of your good, deeds may go and do likewise.



First Floor Plan of Six-Room School-House.

The Back Yard.

BY A HOUSEWIFE.

THERE is need of a crusade in these parts. That defiling of the back yard of the average city home by the ash barrel and its kin is a worse offense against the senses of the properly civilized man, than was the presence of the infidel in the holy places of old, to the pious prejudices of the original crusaders.

Those of the ancients who derived their domestic notions from the cave or cell, would think our modern domestic establishment turned wrong side out. Instead of one or more series of rooms grouped about as many courts prettily ornamented perhaps with fountains playing in the impluvia, we have our rooms placed back to back, so to speak, the best of them looking for public appreciation, and the others asking no odds of the family or neighbors.

Our immediate ancestors had their farm-house with its necessary accompaniment of granaries, barn, etc. We move to town and build our shingle palace or brick mansion with its large front show window, in which the well-preserved, gilt-edged family Bible and the Roger's group have it which and t'other for supremacy—and set up in our back yard to represent the out-buildings of our ancestry, a privy, a pile of slabwood generally as dumped, a few barrels, perhaps a cheap stable. Not then satisfied with the amount of decaying wood about the premises, we lay a lot of wood walk.

Walking along the avenue we see a pretentious residence; it must be occupied by people of great refinement, for is not the most prominent room in the house the library, the whole street side taken up with an immense bay-window, the glass reaching nearly to the floor? How splendidly it was lighted as we passed last night—what elegant sets of books on the shelves—plenty of pictures, too. Let us to-day take a look at the back yard. Why do not these people board up the windows at the back of the house? Here is a well with a dirty puddle by it, the pump standing on a rotting platform, hard by some kitchen garbage, farther on ashes, and so it goes, the whole rear of the lot so bad as to discourage vegetable life even. It is mercifully screened in part from the general view by a high, unpainted board fence, against which, now and then, a weed or tuft of grass grows. Where is th re better field for the crusade?

Older cities East have not outgrown these same traditions. Multitudes of face brick houses are built with every effort for show on the front, and none on the rear. The rear of the lots may be divided by good brick walls, very likely with the unpatented, crystalline anti-feline crestings, but defend us from the sights and smells inclosed by these walls.

Now why should we desecrate the only spot of nature left us in these city homes? It will blossom for us with a little coaxing, and the wilderness of dirt and rubbish may be turned into a garden of roses.

The rear of the house and the out-buildings, though not so expensively finished, have a right to be carefully and artistically done. A wood-shed is not a nuisance if inclosed, well boarded, and painted, and the wood kept inside. A privy has no right to exist. If there be no proper system of drainage in the house for a water-closet, partition off an earth closet from the wood-shed or stable. Tasteful, well-cared-for out-buildings and fences are not only not an offense to the artistic sense, but are rather pleasing, indicating thrift, tidiness, and comfort. But when we consider the opportunities they offer for the support of the vine morning-glories, sweet-peas, nasturtiums, climbing roses, and like forms of plant life, what a joyous recompense for so little labor and care. Then all the available back yard space that is not used for walks, drives, etc., should give either vegetables or flowers—minister to the comfort or culture of the family.

Listen to people who lament the bad influences of street associations upon the children. Yet they say, very reasonably, "The children must have outdoor air," etc., and they have never considered but that the only alternative from the housing of the children is the freedom of the streets. They do not know what moral education is contained in a few feet of ground, congenial work for the hands, and the prettiest of life development studies for the mind. Give each of these street-loving children a flower-bed, a small set of garden tools, some flower seeds, and what help and advice they need, and note if there be not germs of nobler thoughts and desires taking root at the same time in their fertile natures. But—to moralize a little—there is a kinship between the ornamented front and disgraceful rear of a residence,

Second Floor Plan of Six-Room School-House.

and the fine clothes and the false heart of the wearer, and we fear that the majority of people who inhabit that sort of residence would rather risk some contamination of their children's characters than to see their faces, hands, and clothes besmeared with mother earth.

The back yard of the future will be a bower of flowers and greenery, and the leisure-hour resort of the family.—*Northwestern Architect and Improvement Record.*

Wanted—an Architect.

WE have often wondered why contributors to the comic journals should lay the scene of nine-tenths of their outrageous jokes in Ireland. But we wonder no longer, for we have just read one of the best bits of nonsensical fun we have heard of for a long time, which also is Irish "entoirely," and as it is on a matter strictly professional we give our readers the benefit of it. The Naar Board of Guardians, in their capacity of rural sanitary authority for the union, desired to erect cottages under the Laborers' Act, and for this purpose invited "tenders from duly qualified parties for the joint position of architect and clerk-of-works" for carrying out the work. The tenders were "to state the rate per cent on the outlay required for the furnishing of plans and estimates and for superintendence of erection, etc., *which must embrace car hire and all other expenses.*" Eighteen tenders were received. Of these, one Dublin gentleman (we think he must have been a gentleman) required 7½ per cent; three thought they could do it for 5 per cent; whilst two declined to undertake the job for less than 4; another called 3½ per cent a moderate charge, and two others thought 2½ little enough; 2¼ was the percentage asked by two other competitors, and 2 per cent was the rate fixed in two other tenders. But one Dublin boy, who desired a safe thing, asked 1½ per cent on outlay, and £2 10 s. a week for supervision—a reasonable way of looking at the matter we take it—and yet another offered his services for 1½ per cent.

Yet one remained, and he, with a resolute indifference as to what became of him, said he placed his talents and time at the disposal of the guardians for the small sum of *1 per cent on the outlay!* With an irony all the more cutting because it was evidently unintended, one of the guardians got up and solemnly stated his belief that *Mr. So-and-So's tender was exceedingly reasonable!* Need we say that such magnanimity was warmly responded to, and the guardians, without any attempt to obtain a further reduction, unanimously accepted the offer, and appointed the "highly recommended" individual to the proud position of cottage-architect-extraordinary to the Board. Sufficiently absurd in its ludicrousness as this business reads to an enlightened understanding regarding the nature of an architect's duties and his remuneration, there was still needed a climax to complete its absurdity. This is furnished in the statement that after the decision of the guardians the "highly recommended" one was "called before the Board *and his duties explained to him.*"

Though we may read the above in the light of a huge joke, yet there is a shadow of grim reality in the transaction which finds a reflection much nearer home. We need not go beyond the seas to discover people ignorant of the very meaning of the

word architect, but who presume to set up as authorities in the delicate task of selection. Many a competition committee and local authority in England furnish every-day proof to the contrary. Cases there are, too, which, if we cared to rake up dead ashes, we could enumerate as being identical in principle with the one quoted above. The fault of all this lies chiefly with the profession, for, after all, the public do but take architects, like every other purchasable commodity, at their market value. And at the present time the freedom of the Guild of Architects to all comers without respect of persons provides us with an overplus of mediocrity which, unable to produce any architecture, finds its outlet in the mongrel business of half architect, half surveyor. Nor do we see any remedy for such a state of things until the prescriptive right of professional competency shall be made the *sine qua non* of professional practice. Free entrance to the profession certainly, but let there be at least a barred door against the admission to practice of such as have neither the knowledge nor experience to entitle them to be called architects.—*British Architect.*

Eighth Annual Report of the Building Interest of Woodland and Yolo County for 1887.

Editor of the California Architect and Building News, of San Francisco, Cal.—*Dear Sir:* Should you find space in your valuable columns for this conspectus, setting forth the yearly result of the saw and hammer in our land of wheat and vine, you will have the thanks of our appreciative citizens, and the best wishes of the writer.

The closing year has not proved to be one of extraordinary activity in the building line, and while all anticipate larger gains in the future, there are very few that will complain of the past. The enormous advance in lumber has produced a stagnating effect, and settled two facts: 1. We have not experienced a boom. 2. We do not fear the recoiling influence of a collapse. And our present standing is on a solid basis, which has always characterized the uniform stability of our city and Yolo County. A few of the most important improvements will bear the record of the year, and deserve special mention:—

Two new lines of railroad are under course of construction in Yolo County. El Dorado Bridge, spanning Cache Creek, five miles west, is an important item to the interest of Woodland. Cost, $17,500. The new Hesperian College and property, valued at $20,000; the Young Men's Christian Association block and gymnasium, which, when entirely equipped, will be valued at about $30,000; St. Luke's Episcopal Church and lot, valued at $5,000; electric light building, machinery, and entire lines and fittings, valued at $12,000; and many other fine buildings for business and private residences, will date from 1887. The months of August and September have been the most active. This is noticeable nearly every year. The following report, by months, will set forth the number of structures, their kind, style, and value:—

1887.		City of Woodland.						Yolo County.				
Month.	No. per mo.	Frame Buildings.		Brick Buildings.		Addition and Imp't.		Frame Buildings.		Brick Buildings.		Tot. l value per mo.
		No.	Value.	No.	Value.	No.	Value.	No.	Value.	No.	Value.	
Jan	4	2	$ 3,000	1	$2,700			1	$1,500	....		$ 7,200
Feb..	6	4	8,000	....	.....	2	$10,000	....	.....	....		18,000

Total	91	44	$83.700	9	$26,200	21	$24,800	16	$33,660	1	$17,250	$185.560

Woodland and suburbs has contributed to the above seventy-four buildings and improvements valued at $134,700; Yolo County, seventeen buildings valued at $50,850. The county list is undoubtedly but a small portion of what has actually been built, not having time to secure all. The preceding report sets forth but a limited number of buildings, representing an outlay of moderate proportion, nevertheless the magnitude, taken from an architectural standpoint, is most gratifying. The greater number of structures are of good, solid design, well planned and faithfully executed, and the general tone of satisfaction is decidedly unanimous, and it may be hoped that throughout the entire State the year 1887 may be proud of its building results.

It is a fact, nevertheless, that some towns need considerable encouragement in the line of improving in their style of architecture, and they should follow the valuable suggestions set forth monthly in the California Architect and Building News, and they would surely derive a benefit of vast importance. Any person with good eyes and a keen, quick conception need travel but very little to learn and obtain a fair degree of knowledge of the manner and usages of the people of that country through which they pass, and to notice that part most carefully which he is versed in and personally interested. An architect will observe and quickly scan the structures of the city or town and at once pass judgment upon the merits displayed in the buildings. Should that place have had the good fortune of having plenty of right, sound, level-headed citizens, guided by efficient architects and supported by competent mechanics, the building will possess an air of general refinement, embracing artistic beauty, and combining comfort, economy, and durability. This will be plainly discernible throughout the entire place, and is a ruling feature which makes and determines, to a great extent, the prosperity and prominence attained. Such places rapidly increase, and are known as go-ahead localities. But other places unfortunately without such progressive advocates of the true and right, and void of good architectural influence, is another condition and needs no comments. A shoddy, ill-constructed, ungainly building on one corner of a block has been duplicated on an opposite, thus placing the wrong side to the street, with perhaps some prominent wing left off to accommodate the purse of the new builder, having an unsightly part exposed. This and numerous other duplications of rank stupidity, without judgment or taste, will characterize the entire place. And still this class of worthy citizens will wonder why their town does not boom. Under such circumstances, why should it? The omission of improvement in the style of their buildings, and the want of more architectural taste and refinement, is the underlying cause. One thorough, enterprising, persevering architect or mechanic will do more in the direction of elevating the standard of building than a score of those who only copy from others without sufficient discernment to rightly discriminate between true and false styles, or one of merit and up to the times in points of architecture.

The come-by-chance, medley manner in which are introduced many styles of finish in one structure, concentrating the very essence of bad taste and perverted judgment, not having enough of one to classify any known order of architecture, may possess a certain degree of picturesqueness or character to obtain an effect, but this fails to heighten true design, or accomplish any noble result by which we may judge that true artistic excellence was the ruling idea of the designer.

Now let us at once leave *by the wayside* all those old *nondescripts* and *threadbare landmarks* which have outlived their age, for we know we can build better and cheaper, and keep pace with the age we live in, always earnestly endeavoring to take one step further in advance, and with higher aim learn to despise many incongruitous fancies we too often copy and always regret, and by borrowing very little and lending less to perpetuate their existence, we may attain that merit and reward due to all who advocate progression in the erection of our homes and other buildings; and this twofold good we may obtain from every-day life should be secured and placed to the credit side of our improvement account. We would not wish to indulge in any fancy imaginations, or advocate any flimsy surface ornamentation void of utility or protection. This would have a debasing tendency, well calculated to perpetuated retrograding influence. True, architecture must not depend upon inspiration or imagination alone, but must embrace thorough technical knowledge based on personal experience, with long and diligent practice. Without this we are wandering in the dark, and not a single ray of daylight to enlighten our path or gladden our hearts with the visions of brighter and better things in art.

In conclusion, we would wish to tender our thanks for many courtesies and favors shown during the past twelve months, and sincerely desire you may obtain the reward you so justly deserve for the able manner in which you have conducted the California Architect and Building News, to the entire satisfaction and approval of subscribers, advertisers, and constituents in general.

We remain most respectfully yours, Gilbert & Sons.

Scarceity of Skilled Workmen.

There is a common remark among master mechanics that skilled workmen are scarce. The reason of this is obvious. The apprenticeship system, which was general fifty years ago, has almost ceased, or been indifferently carried out. Boys agree to serve three or four years to learn a certain trade, and by the time they have obtained a smattering knowledge of it, disregard their engagements, leave and go elsewhere, and then assume that they are skilled workmen. To back themselves up, they join some labor organization, the majority of whose members are, like themselves, incompetent. If in an establishment there are men who can do a fair day's work, and do it well, the majority at once enter into a combination to reduce them to their own incompetent level. They reason because six honest, capable men can do twice as much work in a given time, it keeps others out of employment. To keep their work upon a level, all must be governed by the lazy, incompetent majority.

Besides, master mechanics, as well as their men, dislike the apprenticeship system, the master mechanics because boys do not begin to pay for a year or two, and the men because it increases their number and has a tendency to lower the rates of wages. An intelligent machinist, at present in California, writes to his father that he never has any difficulty in obtaining employment, because he flatters himself that he can turn out more work in a day than four ordinary hands, and had frequently done so when work was pressing, and, what was more, what he did was well done. Pretenders, who know but little of the trade, frequently spoil work, which not only entails heavy expense, but causes delay.

A skilled workman is always assigned the best jobs, because a foreman has confidence in him that he will come up to time, a matter of no small importance in any establishment. Such a man in a very short time finds himself an object of dislike, if not positive hatred. His employer dares not pay him wages according to his merit, for this would bring about a strike, and his shop-mates say that he works to curry favor, and does more than he is paid for. Thus, the best mechanic in a shop, if he wishes to have peace with his fellow-workmen, must sink himself down to the general level. The best man in a shop is the generally most disliked, even if he should keep down in speed, because he is sure to have the best jobs.

There is just as much friction among workmen themselves as there is between them as a whole and their employers. These facts are well known; every man is a spy upon his neighbor, so that if the labor question were settled between employer and employed, it will never be settled among workmen themselves. Master mechanics see this, and, like their men, make little or no provision to meet the probable eventualities of the future. They work and live by the day, and hence do not care to take apprentices. The result of such a system, a want of system, is seen in the careless way some houses are built; before their shells are completed they tumble down: even the scaffolding of some is so poorly put together that the very men who put it up come down with it, and either lose their lives or have their limbs broken.

In the whole labor market business is unsettled in consequence of discontinuing the old apprenticeship system. The ignorant and insolent are in a majority; and if they can do nothing else, they can fight and create a disturbance. Many of them seem to think that manual labor is degrading, and want to live without work. They envy their employers if they happen to have a few dollars ahead, forgetting the great truth that employers often work eighteen hours out of twenty-four, thinking and arranging the business they have on hand.

When a certain class of mechanics were receiving five dollars a day wages, most of them only worked two or three days in a week, while their employers toiled at their desks every day until midnight, and became rich. Labor of all kinds is honorable, and is worthy of reward.

It is estimated that Placer County has 450,000,000 feet of lumber fit for manufacturing purposes in her forests.

Design for a Public Building to be Built of Stone.

All the mills on the Sound are busy cutting lumber to supply the California markets. They are working 11½ hours per day, the men being allowed an extra day's pay each week. There are no orders for foreign ports, excepting the two for Australian ports from the Puget Mill Company, and the advance in the price of lumber from Puget Sound over that of British Columbia has a tendency to divide our foreign trade with our neighboring mills. The Washington Mill, at Hadlock, has been compelled to shut down for a period of several days, owing to a fire which occurred some time ago, burning out the wooden foundation to the boilers, which will be replaced by brick.

Shingles for Chicago is the latest wrinkle in the business of this bay. J. G. Loveren has shipped 120,000 fancy direct to the South Branch Lumber Company, Chicago.

Something about Redwood Stumps and Roots.

HAVING read several articles in your worthy paper in regard to the merit and valuation of California redwood, in your last issue I noticed two articles, one from Kansas City, Mo., signed C. N. E., and the other signed "Jack Plane.' The last-named article contains all I could say about the virtue of redwood, provided redwood is used when seasoned; green or wet wood is not good either to be used in buildings or for furniture. I have given most of my attention to using redwood in the manufacture of furniture. For certain pieces of furniture redwood could not be surpassed in beauty by any other wood, provided a man understands the finishing of the same to perfection. The recipe given in the article signed "Jack Plane" for finishing redwood would not suit me, especially when redwood has to be finished to retain its natural color. I have been in the business of working and finishing all kinds of wood for forty-five years, and for the last four years I have given most of my attention to the working and finishing of redwood. By experimenting I found that in the finishing of redwood, to have it done well and quick, also to have it retain its natural color, a somewhat different manipulation is required than by finishing other woods intended for fine work. To use fillers, such as corn starch, whitening, etc., is unnecessary, for redwood has no pores to be filled. I have a compound and a way of doing the work to perfection, different from any other process now in use. By my finish redwood is as smooth as glass, the figures of the wood are brought out distinct, whether to be finished in bright natural color or in imitation of rosewood, walnut, mahogany or other kinds. I use mostly such redwood as is rejected by carpenters, or has hitherto been used very little. I use the stumps and roots, which have always been a nuisance to farmers, and which they (the farmers) are glad to get rid of; such stumps, after the timber is cut, are in general left standing, with the expectation that they will rot in course of time, but none have found out yet how long that will take, for I have recently used the wood from stumps of which the trees had been cut down twenty-two years. The stumps were partly burned, and after digging them out I found the inside portion fresh, green and solid. The wood, after being cut in proper shape, now is most beautiful. The diameter of such stumps is often enormous. By proper means and manipulation such stumps can be made to bring more money than the price of the land and the value of timber that has been cut from them. There are fortunes to be made in this point, more reliable than a gold mine, provided someone will carry out a certain and proper plan, which plan I am willing to disclose to any party who wishes to interest himself in such an enterprise, namely, in making the most money out of redwood *stumps* and *roots*.

Anyone doubting my present statement is cordially invited by me to call at my place of business, which is at 576 Seventh Street, corner of Jefferson, Oakland, Cal. There I will convince the most skeptical of the truth of my words, by showing him fine furniture, fine-finished samples of panel-work, picture frames, etc., all redwood, finished in any shade and color; also fancy redwood cut in slabs and in junks in the rough—but the most beautiful pieces I have on hand are always taken from stumps.

My way of finishing redwood to greatest perfection can be learned by anyone, and I am willing to confer my knowledge of working and finishing the same to such parties who wish to profit by it, provided I see some recompense for my trouble.

Respectfully, Wm. Fay.

IVES' PATENT SASH LOCK

MANUFACTURED ONLY BY H. B. IVES & CO. New Haven, Ct. BELL TIP, ORNAMENTAL.

SEND FOR ILLUSTRATED PRICE-LIST.

IVES' SASH LOCKS.

A very important feature of the IVES' SASH LOCK is in its securely locking when closed and simultaneously drawing the meeting rails closely together. All the movements are accomplished by cams without the instrumentality of springs, thus avoiding the possibility of getting out of order. During the past year we have used scores of dozens of these locks, and in every case they have given perfect satisfaction.

HILL'S

Patent Inside Sliding Window Blinds,

Are Adapted to any Style of Window,

And Suitable for all Buildings, Dwellings, Stores, Office Buildings, and for Houses Built to Rent, Hotels, Boarding or Lodging Houses are Unexcelled.

They are entirely inside of the window casing, and while requiring no furring out or boxing, make it an impossibility to tear curtains, interfere with plants or window ornaments, or become broken by contact with chairs or other movable articles.

The light can be admitted and sunlight excluded from any part of the window; can be instantly removed and taken to any part of the house to clean and as easily replaced.

They can be opened or closed with the window raised, and without removing articles from the window-sill, and cannot blow open or rattle. The Blind is very light (one-half inch in thickness) and strong, possessing more durable qualities than a hinged blind one inch in thickness.

There is no sagging, banging, or getting out of order.

They are made in three sections in height (each section sliding past the others), and any number of divisions in width corresponding to the folds in the old-fashioned folding blinds. They require no hinges—all trimmings furnished with blinds—are made of all woods, finished or unfinished.

The Blind manufactured throughout the United States and Canada by the members of the HILL SLIDING BLIND ASSOCIATION, is the only sliding Blind ever put into practical and general use, or that has been adopted and used by the leading architects and builders, both East and West.

It is rapidly displacing the objectionable folding blind, also shades, which since they have ceased to be considered the fashion, are used principally in cheap dwellings and tenements.

The Hill Blind is the only sliding blind made of white cedar, and where the grooved slide can be used as the window stop, or placed on the pulley stile, similar to the ordinary stop—"the slide is only 2⅜ inches wide"—plenty of room can be obtained by setting the casing flush with the pulley stile, in light studded buildings. NOTE.—Any other sliding blind using the slide as the stop for the sash, is an infringement of our patents of February 26, 1884, and February 24, 1886, and anyone selling, using, of making such a blind will be prosecuted by the HILL SLIDING BLIND ASSOCIATION, as they are determined to stop the sale of several cheap and worthless imitations.

The Hill Sliding Screen, working the same as the blind, is the only screen covering one-half of the window, which will remain at any desired point, and which can be instantly removed, when not required, or to clean the windows.

Over eight thousand sets have been specified and put in, throughout the Pacific Coast, since April 1, 1885.

We refer to the following prominent architects of San Francisco, who have used or specified the Hill Blind and Screen; also hundreds of owners throughout the Pacific Coast:

Miller & Armitage, Pissis & Moore, H. D. Mitchell, John Marquis, John M. Curtis, Moore & Schultze, J. T. Kidd, J. H. Humphreys, T. J. Welsh, Jas. E. Wolfe, Townsend & Wyneken, Chas. J. Devlin, Geo. E. Voelkel, Copeland & Banks, M. Balczynski, Edw. R. Swain, Chas. V. Pierce, S. & J. C. Newsom, Wm. Mooser, Chas. Geddes, Macy & Jordan, H. T. Bestor, A. A. Bennett, Salfield & Hohlberg, A. J. Barnett, John J. Clark, G. V. Capelletti, P. R. Schmidt, M. P. Schetzel, Clinton Day.

HINDES & MURRAY,

Main Office and Factory, 411 Mission Street, Corner of Fremont.

Sole owners of the right to SELL and MANUFACTURE for the Pacific Coast, except Counties of San Diego, Los Angeles, San Bernardino, Santa Barbara, Kern, San Luis Obispo, and Ventura in California.

COUNTRY BUILDING INTELLIGENCE.

We earnestly desire the co-operation of country editors and mechanics generally to this department of our Journal. Forward us all the building news connected with your different localities. Architects should also notify us of "plans to figure on." No charge is made for such notices. Direct letters to office of this Journal, 240 Montgomery St.

ALAMEDA.

Central Avenue, nr Grand. Frame building. Owner, C. H. Shattuck; architects, Mathews & Son; contractors, Knowles& Wetmore; cost, $4,747.

1st payment, when roof is sheathed, $475; 2d payment, when inclosed, $900; 3d payment, when ready for plaster, $600; 4th payment, when white mortar is on $500; 5th payment, when building is completed, $1,087; 6th payment, 35 days after completion and acceptance, $1,185. Limit, March 21, 1888. Signed Nov. 14, 1887. Filed Nov. 16, 1887.

High, nr Central Avenue. Frame building. Owner, A. F. Flemming; contractor, J. B. Cogswell; cost, $6 000.

1st payment, when frame of building is up, $1,200; 2d payment, when first coat of mortar is on, $1,200; 3d payment, when plaster is on, $1,200; 4th payment, when the building is completed, $1,200; 5th payment, 35 days after completion, $1,200. Sureties, F. P. Latson. Amount bond, $5,000. Signed Nov. 16. Filed Nov. 18, 1887.

OAKLAND.

Twelfth, nr Alice. Frame building. Owner, C. W. Gibson; architect, Chas. Mau; contractor, J. J. Deuschle; cost, $4,975, except mantels, sidewalks, and sewers.

Payments, 75 per cent work done; balance 35 days after completion. Limit, March 1, 1888. Filed Nov. 16, 1887.

West, bet Ninth and Tenth. Frame building. Owner, A. Martin; architects, Mathews & Son; contractor, R. M. Murray; cost, $2,500.

1st payment, when roof is sheathed, $800; 2d payment, when finished, $1,075; 3d payment, balance 35 days after completion, $625. Limit, 30 days from completion of brick work. Signed Nov. 11, 1887. Filed Nov. 16, 1887.

Oakland Hospital. Owner, Fabiola Hospital Association; architects, Mathews & Son; contractor, Fwohig & Moore; cost, $12,863.

Payments 75 per cent, when work is done; balance 35 days after completion. Limit, April 1, 1888. Signed Nov. 11, 1887. Filed Nov. 17, 1887

Twenty-third Avenue. Frame building. Owner, E. H. Clough; contractor, Wm. McDonald; architects, Goodrich & Newlon; cost, $2,805.

1st payment, when inclosed, $500; 2d payment, when brown mortar is on, $500; 3d payment, when plaster is on, $500; 4th payment, when finished; 5th payment and balance 35 days after completion. Limit, Feb. 1, 1888. Signed Nov. 12, 1887. Filed Nov. 15, 1887.

Harrison. Frame building. Owner, Kate Mitchell; architects Goodrich & Newton; contractor, G. J. Happ; cost $1,310.

1st payment, when inclosed, $300; 2d payment, when brown mortar is on, $300; 3d payment, when painted, $300; 4th payment, when finished, $200; 5th payment, balance 35 days after completion, $210. Limit, Dec. 1, 1887. Signed Oct. 4, 1887. Filed Nov. 17, 1887.

Twenty-eighth. Frame building. Owner, C. Clivio; architects, Goodrich & Newlon; contractor, G. J. Happ; cost, $840.

1st payment, when frame is up, $100; 2d payment, when inclosed, $100; 3d payment, when plastered, $200; 4th payment, when finished, $200; 5th payment, balance 35 days after completion, $240. Limit, Feb. 1, 1888. Signed Nov. 7, 1887. Filed Nov. 17, 1887.

SAN DIEGO.

We are indebted to the San Diego *Union* for the very complete reports presented.

A large brick business building will soon be erected on Fourth Street, between D and E Streets. W. H. Hill and Dr. G. H. Schmitt are the owners. The structure will be three stories in height, and 50x66 feet in size. The cost of the building will be about $10,000. H. J. Simpson is the architect.

A building will be erected on the northwest corner of D and Second Streets. It will be three stories in height. The size of the building is 50x70 feet. Comstock & Trotsche are the architects. The cost of the building will be about $20,000. Mrs. F. E. Hamilton, of Phœnix, A. T., is the owner.

The contract will be let next week for a large residence for E. Morgan. It will be built on the corner of H and Twentieth Streets. It will have two stories. The size of the building will be 38x58 feet. Clements & Stannard are the architects.

The contract has been let for $5,250 for building the residence of Mrs. L. F. Shirley. The location is on Second Street, between Cedar and Date Streets. Clements & Stannard are the architects, and Davey & Melville the contractors.

Work will soon be begun on a residence for T. J. Hayes. It will be located on the corner of H and Twenty-fourth Streets. E. Guenther von Swarzenberg is the architect.

The contract has been let for a boarding and lodging-house to be erected on the corner of Tenth and D Streets. It will be two stories in height. The cost will be $7,000. E. H. Darrah is the owner, and R. E. Osgood the architect.

R. M. Mills will soon erect a two-story dwelling on the corner of Third and Cedar Streets. The cost will be $6,000.

The granite to be used in the construction of the gutter around the Reed Block is on the ground, on the corner of H and Sixth Streets.

The Board of Supervisors are considering the plans for the proposed additions to the Court House, which have been drawn up by Comstock & Trotsche, architects. The cost of the proposed additions will be about $50,000. No definite action has yet been taken, but it is thought that the Board will adopt the plans, and order the work begun soon.

The following building permits have been granted:—

Mrs. Emily Knite, two-story corrugated iron building, on the southwest corner of Sixth and I Streets.

Troop & O'Connell, one-story corrugated iron building, on Sixth Street, between J and K Streets.

Emile Isebel, two-story frame building on lot 2, block 52, Sherman's Addition.

Nat Kennedy, one-story brick building, 25x50, on corner of I and Fourth Streets.

J. Severin, three-story frame building on the corner of K and Fifteenth Streets.

Carl Linguist, two-story frame building on the southeast corner of State and B Streets.

Porter, Lang & Co, corrugated iron building, 50x90, on I Street.

R. Mills, two-story dwelling, corner of Third and Cedar Streets.

Plans have been completed for a residence for J. Bills, of Oakland, to be erected at National City. It is to have two stories and an attic with twelve large rooms. D. P. Benson is the architect.

A residence will soon be erected for A. B. Griffith, at Chula Vista. It will be one and one-half stories in height. The cost will be $6,000. Joseph Falkenhan is the architect.

Plans have been completed in the office of Comstock & Trotsche for a fine residence for Colonel D. Horne, to be erected at Oceanside. It will cost about $10,000, and work will be commenced immediately.

Myerhoffer Brothers, of Oceanside, are making preparations for building a two-story solid brick business block. The cost will be $8,000.

The contract will be let next week for a cottage for J. Paine, to be erected on Coronado Beach, near the Hotel del Coronado. E. Gunther von Swarzenberg is the architect.

H. C. Simpson, architect, has prepared plans for a brick business block, to be erected on Orange Avenue, near the Hotel del Coronado. It will be three stories in height. F. F. Wright & Co. are the owners.

Moser & Whitney have ordered plans for a brick business block to be erected on the corner of Third Street and Orange Avenue. The building will be three stories in height. Joseph Falkenhan is the architect.

The same architect has prepared plans for a fine residence for Postmaster J. D. Brownlee. It is to be erected on G Avenue, near the corner of Third Street.

A residence will soon be built for H. S. Ballow, on the corner of C Street and Orange Avenue. It will be a six-room cottage. Joseph Falkenham is the architect.

A contract will be let next week for a three-story frame building to be erected on the corner of Front and H Streets. J. B. Randall is the architect. The building will be 100x100 in size, with seven stores on the ground floor, and sixty rooms above. The cost of the structure will be $20,000. D. Stone is the owner of the building.

The same owner will soon have a residence erected in Middletown. It will have two stories and an attic, with nine rooms. J. B. Randall is the architect. The cost of the residence will be $9,000.

Comstock & Trotsche, architects, have completed the plans for nine residences, one business block, and a bank building. The work on all these structures is to be begun immediately. They are as follows: Five residence flats for Mrs. E. Pierce. They are to be erected on Florence Heights, adjoining the Southwest Institute. Four of the flats will have six rooms each, and the other ten rooms. The cost will be $12,000.

The contract will soon be let for a cottage for Judge J. D. Works, to be erected on Florence Heights. It will be in the Queen Anne style, two stories in height, with twelve rooms.

A cottage will soon be erected for J. H. Clark, on Fifth Street, between Date and Elm. It will be a double house, containing two stories and a basement, with fourteen rooms.

Work will be begun immediately on a large and elegant residence for John Sherman. It is to be erected on the corner of Second and Fir Streets. The work will be done by the day. The structure will be 46x60 feet in size, and will contain twenty rooms. The cost will be $20,000.

The plans have been completed for a cottage for Mrs. A. Carroll. Its location is on the corner of Twenty-second and K Streets. The cost will be $5,000.

Banking rooms will soon be arranged in the southeast corner of the Horton House for the Bank of San Diego. The offices will extend fifty feet on D Street and forty feet on Fourth Street. The cost of the improvements will be $10,000.

Plans have been completed for a large business block, to be erected on D Street, near the Plaza. The building will cost $20,000.

Comstock & Trotsche, architects of the foregoing eleven buildings, estimate that their total cost will be $60.000.

Gunther von Swarzenberg, architect, has completed the plans for a cottage for Charles D. Blaney. It will be two stories high. The site is on Florence Heights. The contract will be let next week, and work on the building will then be begun immediately.

The same architect is drawing plans for a three-story brick business building, soon to be erected on Third Street. It will be three stories in height and 100x100 feet in size. The cost of the building will be $10,000.

A. H. Towle, architect, has prepared plans for six cottages soon to be erected in a row on Seventeenth Street, from the corner of H Street. Mrs. Reidy is the owner. The cost

will be about $1,500 apiece. The contracts will be let next week.

Dr. Barnes is having a brick building erected adjoining his office on Sixth Street, between D and E Streets. The cost will be $5,000. H. A. Terry is the builder.

Excavation for the foundation of a brick business building, to be erected on Fourth Street between D and E streets, adjoining the site of the proposed Gassen & Pauley Block, has been commenced. The building will have sixty feet front and a depth of sixty-six feet. It will be three stories in height.

The excavation preparatory to the erection of the Gassen & Pauley Block, on the corner of Fourth and E Streets, was begun this week.

A residence will soon be erected for J. H. Hensley on Fourteenth Street, between C and D Streets. It will be two stories in height and will contain seven rooms. The cost will be $2,500.

Excavations were begun this week for a four-story frame lodging-house on the northwest corner of Second and D Streets. It will be 60x80 feet in size.

The following building permits were granted at the last meeting of the Board of City Trustees.

M. G. Wheeler, a three-story frame building, on lots 11 and 12, block 13, Sherman's Addition.

W. H. Forbes, one-story frame cottage, on D street, between Thirteenth and Fourteenth streets.

SAN JOSE.

Among the improvements now going on in this city and vicinity are the following: A cottage for Henry Roehr on St. James Street, between Fifth and Sixth, to cost $2,750; a $2,000 cottage on the Gish road for James Gally; two cottages on St. James Street, near San Pedro, for Mrs. Abels; a cottage on North Fifth Street for Mr. Holland; three cottages for J. A. Clayton; a $5,000 residence at Campbell's Station for Edward Parr; a $6,000 residence on the Alameda for Mr. Baumgardner; store building on Third Street, near San Fernando; cottage on the corner of Santa Clara and Eighth for J. Lotz; a $1,200 cottage on Balbach Street for John Ingham; a $2,500 cottage on Edward Street for T. C. Barry; two $1,600 cottages on Lackawanna Street, for A. and E. Van Dalsem; residence on Stockton and Julian Streets for E. A. Averet; brick business building on North Market for Theo. Lenzen; a $1,800 cottage in the Willows for Mrs. Hart; a $2,500 cottage on Fifth Street, near Washington, for Mr. Hudson; a $2,500 cottage for D. A. Porter on San Fernando, between Fourth and Fifth; an elegant studio corner St. James and Whitney for R. D. Cooper and A. M. Wood; three $1,500 cottages on Fifteenth Street, near Julian for Kennedy, Surryhne & Co. The architects, builders, carpenters, and masons in this city are all busy, and the prospect for a lively winter in the building line is very cheering.

A BRICK ADDITION TO THE ELECTRIC LIGHT BUILDING.

BIDS were received up to 11 o'clock Tuesday at the office of Jacob Lenzen & Son, architects, for a brick addition to the electric light building on Fourth Street, between Santa Clara and St. John Streets. The contract was let to C. Drew, who proposes to make the improvements for $1,200. The addition is necessary in order to make room for larger engines and more machinery.

To-day, at the office of the same architect, bids were opened for the construction of three cottages, and the contracts let as follows: Two cottages for Mrs. Abel on St. James Street, near San Pedro, to Robert Summers.

One cottage for Mrs. Farrell, on Park Avenue, between Orchard and Vine Streets, to Mr. Lobdell.

The cottages will be modern style, and cost several thousand dollars each.

MISCELLANEOUS.

IMPROVEMENTS AT LITTON'S.

Some extensive improvements at Litton's are in contemplation. Colonel Donahue bought the property with a view to subdividing it and selling villa sites. The plans embrace the building of a new passenger depot, about a quarter of a mile this side the present depot (the latter to be retained as a freight depot), the laying out and beautifying of a large park, just west of the track, the opening of a broad avenue from the new depot to the hotel site, where a $100,000 hotel will be built, and many other important improvements.

Galt talks of a flour-mill.

New City Hall. Contracts have been let to McGowern & Butler for finishing portions of the City Hall; contract No. 2 calls for $68,400, and contract No. 4 for $32,600. A. Laver is the architect.

Pacific, bet Hyde and Larkin. Two-story frame. Owner, J. Cuna; architect, W. H. Armitage; contractor, R. F. Bridewell; cost, $2,000.

Page, bet Baker and Broderick Frame building. Owner, City of San Francisco; architects, T. J. Welsh; contractor, J. H. McKay; cost, $20,000.

Pierce, cor Perine. Frame building. Owner, — Rice; contractor; J. Johnson; cost, $800.

Post, bet Fillmore and Webster. Two-story frame. Owner, S. Attell; architects, Townsend & Wyneken; contractor, N. L. Mead; cost, $6,000.

Sacramento, cor Waverly. Chinese Chapel. Owner, Chinese Baptist Mission; architects, Wright & Sanders; cost, $10,000.

San Bruno Road, nr Fifteenth Avenue. Additions. Owner, J. J. Crank; cost, $500.

Scott, nr Clay. Additions. Owner, — Bates; architect, C. I. Havens; contractor, F. W. Kern; cost, $2,000.

Scott, near Sacramento. F. E. Dietz is making additions to the tune of $2,500.

Sea Wall. C. C. Crissman has a $2,400 contract to erect a shed on the wharf.

Sixth Avenue, near R Street. Mr. Legalett is having erected a four-story frame; cost $3,000; Contractor Bolinenberg superintends the work; same owner is also having a two-story frame erected to cost $1,500.

Stockton, nr Sacramento. Alterations. Owner, Zion M. E. Church; architect, Chas. Geddes; contractor, S. M. Hills; cost, $3,000.

Twenty-fourth, near Capp. A one-story frame is being erected to cost $2,500.

Twenty-sixth, cor Valencia. Three-story brick. Owner, A. E. Hecht; architects, Macy & Jordan; brick contractors, Riley & Loane; carpentry, day work; cost, $100,000.

Valencia, bet Twentieth and Twenty-first. Additions. Cost, $1,000.

Van Ness, cor Fulton. Two-story frame Owner, I. Harris; architect, G. E. Voelkel; contractor, J. H. McKay; cost, $12,000.

Washington, nr Central Avenue. Frame building. Owner, J. T. Dunn; contractor, R. O. Chandler; cost, $6,000.

Mechanics' Liens.

LIENS RECORDED.

How to Live a Hundred Years.

"HOW to Live a Hundred Years" is the title of an article in the *Cosmopolitan* for July, the gist of which is that people might so prolong their lives by temperance and abstemiousness as to live to the good old age of a hundred years. Also that such an age, under said conditions, might become the natural limit of life.

There is no doubt but that many of the usual ingredients in the daily diet of the average family might be eliminated therefrom, not only with impunity but with profit. Take pie for instance; if that delectable article, so dear to the American palate, were forever banished from our tables and fresh fruit established in its stead, it would undoubtedly be a change that would go far towards the attainment of the desired longevity. We will say nothing about the substitution of that simple and natural beverage, milk, for coffee and tea, because we should be "treading upon our own [editorial] toes;" we therefore wisely refrain and confine ourselves to the banishment of pie.

But to be serious, let us now consider some of the forces which operate against the health and long life of mankind.

These influences are at work, daily, nightly, hourly with the strength of combination and constant re-inforcement and tend not only to shorten life, but to blot out humanity altogether, if not heeded and a remedy applied in time. These foes to health are found doing their deadly work not infrequently in the houses of the rich, as well as those of the poor, and of people of moderate means.

Plainly speaking, defective plumbing probably kills more people annually than any other cause. The subject of perfect plumbing and proper sanitation is one which too often appeals to deaf ears, or hardened hearts. Unheeded and unrecognized, the

most deadly foes lurk in many a happy home, snatching first one and then another of its loved ones, sometimes destroying a whole household with their poisonous vapors—and it is then termed a "terrible dispensation of Providence." It is characteristic of humanity to lay the blame at any other door than its own. Thus it is that Providence is so often accused of heaping much of the suffering and affliction upon His creatures which is really due to the improvidence of some of His careless or ignorant subjects.

Temperance and abstemiousness will not avert disease and death while our houses are filled with poisonous gases, our tables supplied with impure water, and our atmosphere polluted with foul odors.

Architects, builders and plumbers are frequently blamed for the cheap and poor plumbing found in so many houses. Generally the owner or proprietor is the only one deserving censure. Good plumbing costs more than poor. Plate and stained glass, fine finish, the decoration of walls and ceilings, are the things that show; plumbing is one of the things which is for the most part hidden, or, if not altogether out of sight, is at least not specially ornamental. These considerations settle the question as to where the inevitable "cutting down" is to come in, with the result that beauty and elegance blaze from the windows and shine in the hall and parlors, while death hides in the kitchen and bath-room.

If the grim skeleton could but confront the proprietor of all this grandeur with a bare statement of facts, he might be sadly shocked to hear himself denounced as a criminal. We hope to live to see the time when the sanitary condition of the home shall be the first and most important factor to be considered by all parties concereed in the operation. Heaven speed the day!—*Architectural Era.*

A GIANT of the forest was felled some time ago by the Blakeley Mill Company, which will be heard from in time. It measures 240 feet in length, the first limb being 160 feet from the butt, which measures 72 inches, and 40 inches at the top. It scales 33,000 feet of lumber.

THE foundation of a chimney is no place in which to get rid of all the bats and other refuse bricks that may have accumulated. It is safe to watch the builders very closely and see that they do not put that kind of material in the chimneys they are building for you.

Lumber Market.

At a late meeting of the Lumber Exchange the advisability of increasing the retail price of lumber was the subject of much discussion, but upon vote, it was decided to make no change in the schedule. The prices below are those ruling Dec. 1, 1887:—

Pine, Rough, per M feet	$22 50
Pine, Rough, No. 2	18 50
Pine, Rough, 40 to 50 feet lengths	23 50
Pine, Rough, 50 to 60 feet lengths	24 50
Pine, Rough, 60 to 70 feet lengths	25 50
Pine, Selected	26 50
Pine, Clear	33 50
Pine, Fire Wood	10 00
T. & G. Flooring, 1x6	35 00
T. & G. Flooring, 1¼x6, 1x4, 1¼x4, and narrower	40 00
T. & G. Flooring, No. 2	29 50
Stepping	45 00
Stepping, No. 2	32 50
Redwood, Rough	22 50
Redwood, Rough, No. 2	18 50
Redwood, Surfaced	37 50
Redwood, T. & G. 6 in., 12 feet and over	34 00
Redwood, T. & G. 6 in., 7 to 11 feet	27 00
Redwood, T. & G. 6 in., under 7 feet	24 00
Redwood, Rustic	37 50
Redwood, Rustic, No. 2	32 50
Redwood, T. & G. Beaded, 12 feet and over	36 00
Redwood, T. & G. Beaded, 7 to 11 feet	27 00
Redwood, T. & G. Beaded, under 7 feet	24 00
Redwood, Siding, ½ in	25 00
Pickets, Fancy	26 00
Pickets, Rough Pointed	19 50
Pickets, Rough Square	17 50
Shingles	2 25
Laths, 1½	4 00
Laths, 1½	4 50
Furring, 1x2, per lineal foot	01
Battens, ½x3, per lineal foot	01
Nails, for 10 d	2 90
Lime, per bbl	1 40
Cement per bbl., according to brand	$2 50 to 4 50
Brick, per M	from $6 00 to 11 00
White lead, per lb	06

Linseed oil, 50 cents per gallon in bbl, 2½ cents additional for boiled.

CARPENTRY

MADE EASY.

By Wm. E. Bell, a practical mechanic, who fully appreciates, from personal experience, that there are many things perplexing to understand and difficult to do until they are fully explained and tested. It is designed to make the science and art of carpentry clear and comparatively easy to all who require information on the subject. Price, $5.00 by mail, prepaid.

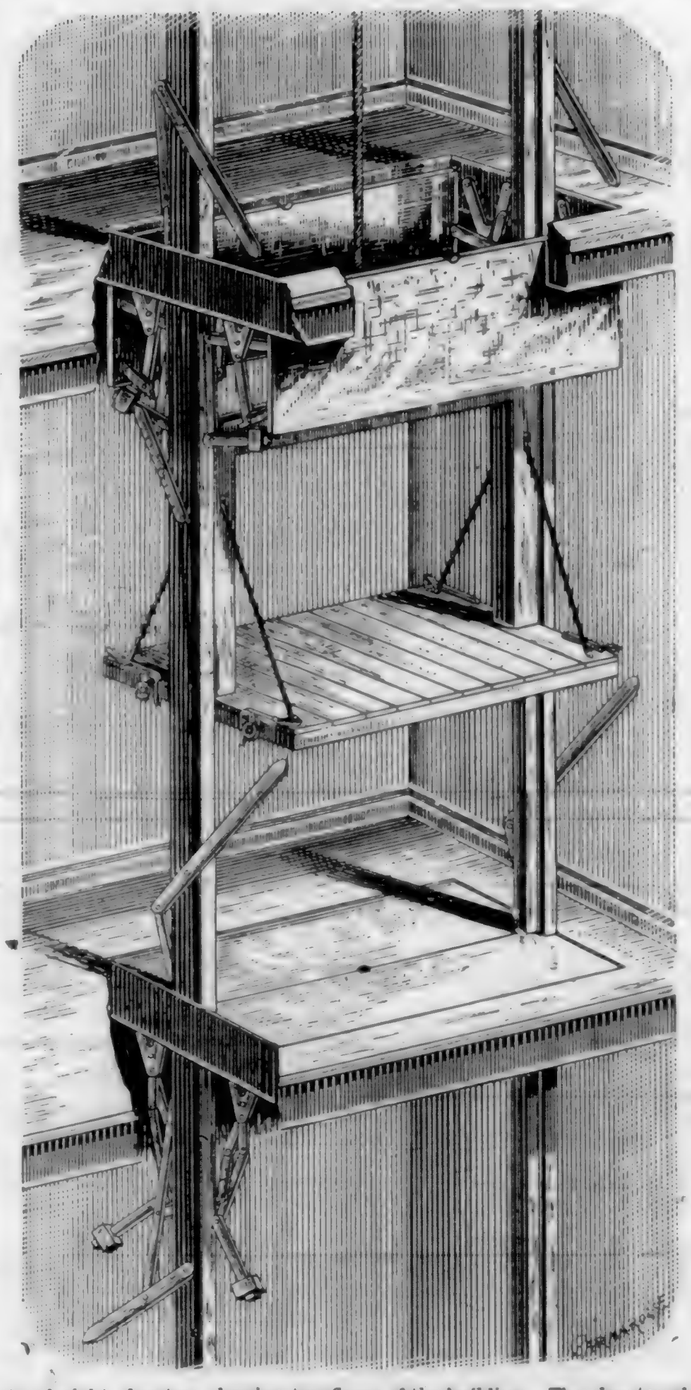
THE PAGE

Automatic Fire Shutter Co. of California.

The Best Automatic Fire Shutter Known.

INCORPORATED APRIL 29TH, 1887.

Manufacturers Under United States Patent of the Automatic Shutter.



ADAPTED TO PASSENGER AND FREIGHT ELEVATORS,

For Protection from Fire in Elevator Shafts, and from Liability to Accident.

PATENTED MAY 10, 1887.

Now in operation at 22 and 24 Jessie St., and 327, 329, 331 Sansome St., S. F. Call and examine the same.

The cut represents a freight elevator, showing two floors of the building. The elevator platform is represented as ascending, having passed through the hatchway of the lower floor. The shutters below the elevator platform have just closed level with the floor, completely and firmly closing that hatchway. The shutters of the second floor are next being opened by the ascending elevator platform, and after it has passed through, these close automatically, in the same manner as seen at the first floor. In the descent of the elevator platform, the shutters open below as it approaches the hatchway, and after passing through, they close again firmly and completely. Each shutter opens and closes automatically as the elevator passes, and are so counterbalanced as to offer no resistance to the ascending or descending platform.

SAN FRANCISCO, JANUARY 15, 1888.

A Change to the City.

For four and a half years this Journal has been printed in Oakland. With the beginning of the year we have decided to change to the city, and our patrons will welcome our improved appearance. The delay in receiving this issue is caused by the great amount of work, necessary to reset every advertisement, etc. Hereafter we will be as usual, promptly on time.

Our Tenth Volume.

With this number we begin the tenth volume of this Journal. For eight years it has carried the distinctive name it now bears. One year previous that time, it went under the more modest one of "*Quarterly Architectural Review.*" So in reality we begin to-day our tenth volume.

We cordially tender our thanks to those who have so generously given us their support during the past nine years, and trust to make this Journal so complete in all its various departments, that it will be found a necessity to every one who intends to build, or who have already built.

There is no surer criterion of success than success itself. The establishment of a *Weekly Building News* proves that our efforts to give only reliable building information, has met and is still meeting with proper acknowledgment by all interested parties.

The Weekly Building News, is published by the same company that have printed the California Architect so successfully. The price has been placed at $2.00 per annum. WE WILL GIVE THE WEEKLY BUILDING NEWS FREE FOR ONE YEAR TO ALL SUBSCRIBERS TO THE CALIFORNIA ARCHITECT.

Bound Volumes of 1887.

We have a few bound volumes of 1887, which we will send to any address upon receipt of $2.50 each. The number is very limited, and those desiring same should send their orders at once.

San Francisco Chapter American Institute of Architects.

The regular meeting of the Chapter was held on Jan. 6th 1887. President Sanders in chair.

The following were present—G. H. Sanders, G. H. Wolf, H. I. Bestor, B. E. Henriksen, R. H. Daley, J. Gash, W. P. Moore, C. J. Laver, J J. Clark, J. M. Curtis, and by invitation J. P. McMurray.

N. J. Cuthbertson was elected a member of the Chapter as Fellow.

J. Gash asked for further time to prepare a paper promiseds as the subject selected required much time and thought to fully elucidate. The subject selected would be "the circle and its relation to architecture."

J. P. McMurray then read a paper on "the best practical way of plastering walls." It was well received, and an animated discussion ensued on the various points presented. The paper was ordered printed in the California Architect and a vote of thanks tendered the speaker.

A general conversation then took place in regard to Eastern Plaster and Golden Gate Plaster. It was decided that the latter was much preferable owing to the fact that the former is affected by the long sea voyage.

California Welcome.

GREETINGS, warm and cordial, were extended to the informal repesentative from the Pacific Coast present at the Fourth Annual Session of the Western Association of Architects, held at Cincinnati, 16th and 17th ult.; and regrets earnest and sincere were freely expressed that there was not a State organization in California, under the jurisdiction and in affiliation with the General Western Association, and represented by duly elected delegates.

WILL MEET AT SAN FRANCISCO.

Many of the officers and members were enthusiastic over the hope and prospect that the architects of California will at once perfect a State organization, and send delegates to the convention to be held in 1888 at Chicago; and as many were the *personal* promises of favoring a session of the Grand Body at San Francisco at an early date.

Personal desires and promises to visit California, were general among the architects present, and the holding of an annual session of the Grand Body in San Francisco seemed to present the most sure and favorable opportunity to that end; as in that event transpiring, such low fare arrangments could be perfected with the railroads as would induce a very large delegation of representative architects to visit California.

The proposition suggested is one worthy of immediate attention by the architects of the Pacific Coast, and one that would be of very great benefit, both to the individual members, and the architecture profession as a whole. The fact of the existence of San Francisco Chapter presents no bar to the forming of a State association under the jurisdiction of the Western Association, as the members of the Chapter and all other architects on the Coast are equally illegable to membership; and the further fact that there are no antagonisms between the two grand bodies, the American Institute and the Western Association of Architects, but a feeling and sentiment largely in the ascendeney, if not seven-eights unanimous, that all the Grand Bodies of the profession unite and become

ONE GRAND ORGANIZATION.

This proposition is freely discussed and debated on this side the mountains, and it is both possible and probable that the union will be perfected. No special terms nor sectional considerations appear to be mixed in. The one broad and comprehensive view of the situation—*the best good of the profession as a whole*, seems to be the aim and object influencing the movement.

WILL CALIFORNIA RESPOND.

Seeing what the brethren of the profession east of the Rocky Mountains are doing and contemplating, for the general good, is it not high time that the architects of California bestir themselves and reach beyond the cramped and narrow limits of exclusive personal interests. Even the giants of the profession in these north-western and lake regions recognize the value and importance of these affiliations, and no argument can be sustained

against the potency of organizations founded for high and honorable purposes, and permeated by the spirit of generous truth and right, where every man lends his personal influence and talents as common helps, and submit to every thought and word of others, better than his own.

The Fresno Jail.

Some time ago, the Board of Supervisors of Fresno County called for plans for a jail building. The designs of Mr. J. Gash, architect, were accepted. The contract was let and the building of the jail rapidly progressed. The Supervisors and architect, not long ago, got at loggerheads with each other; one of the "differences" is fully explained in the circular below. It seems that proper ventilation for tank room had been provided in the plans, etc., but which did not accord with the views of the Supervisors. The latter assumed complete control of the building and followed their own ideas in regard to the tank room. Upon Mr. Gash, *kicking*, and presenting a report from our city health officer, the inspector of plumbing of this city, and the Fresno County physician, in regard to the difficulty, Mr. Gash was excused from further superintendence on the building as architect.

We have not seen the plans as formulated by Mr. Gash, or as they appear changed by the Supervisors, consequently we cannot give an opinion on their respective merits. The gist of the case seems to be—have the board the right to discharge an architect before the completion of the building, simply because their views are not in accord with his.

We take the ground that a public body of any kind, as well as a private individual has the right at any time to dismiss any one in their employ, provided, they pay all just claims due up to time of dismissal. If the architect claims that there is only one proper way to do any certain undertaking, and a public board of any kind claims equally as strong in another way, it seems to us that the party who controls the money is the stronger one of the two and the architect should either endeavor to harmonize the differences, or at once resign and throw the whole blame where it properly belongs.

We are promised a statement from the other side of the case, which we will give due attention when received. The following circular is self explanatory:

December, 12th, 1887.

In the plans of the Fresno Jail looking at it from a sanitary point of view, I believe it will be very unhealthy for the inmates of the prison to have the tanks removed within four inches of the side wall—making a dark recess 30 feet long, eight feet high and four inches wide.

The amount of unhealthy emination that usually leaves a person confined, must necessarily settle there and must produce diseases, known as jail fever, typhoid fever, etc.

By all means there ought be at least two feet space left and side windows for ventilating purposes as shown in drawings. Those windows as now put in could not sufficiently ventilate the prison.

The space of six inches over head should not be less than one foot for ventilation.

The four inch space would also be a perfect nuisance from rats, dead and alive, and the accumulation of filth generally.

J. L. Meares, M. D., Health Officer.

J. E. Sweeey., Inspector of Plumbing, City and County of San Francisco and drawings City and County of San Francisco.

Lewis Leach, Fresno County Physician.

Large and Handsome Display of Architictural Drawings.

THE display of the handiwork of Architects at the session of the Western Association of Architects at Cincinnati was large, and many of them of great merit. The Association some months ago sent out invitations in all directions to Chapters and Architectural Associations, and to persons—S. F. Chapter receiving one, but the only presentation from the Pacific Coast was a set of Photos., of Mr. Haywards residence by Messrs. Piercy & Hamilton.

Nearly or quite five hundred sheets of drawings, most of which were well delineated perspectives, filled the spacious halls and reading room of the Grand Hotel. While some of the efforts were poor as compared with the better conceptions and executions, there was a generous rivalry, and those who were not in the fore ranks as good designers, certainly learned much, and may on other occasions become close competitors, or lead in the race for first premium.

Pine vs. Redwood.

The recent burning of the box factory on San Pedro street should teach builders a valuable lesson. The factory was a large rambling structure and was of Oregon pine. The alarm of fire was turned in as soon as possible and the fire department was on hand immediately, but the big structure was a roaring furnace in a twinkling, and the water poured into it had no effect whatever. Great volumes of black smoke rose from the towering flames, and the structure was destroyed.

Only a short time prior to that disaster Gillespie's lumber mill had taken fire. In general construction and in abundance of inflammable material the two concerns were practically identical except in one particular—the kind of lumber of which they were made. The fire had gained about as much headway when the five engines arrived as it did in the case of the box factory; yet the flames at the mill were extinguished without any trouble and and the resulting damage was trifling. In the case of the mill, an important institution, employing a considerable number of men and large capital, was saved; but in the case of the box factory there was a loss of many thousands and several men were thrown out of employment. There can be no doubt whatever that this striking difference in results was due to the difference in the material employed in the construction of the respective buildings. In the box factory it was pine and in Gillespie's mill it was redwood.

Other instances of this kind could be pointed out in fires that have occurred in this city, and of course a similar condition of affairs exists in every other city on the coast. The result is this: The insurance companies find their principle losses in pine structures, and the higher rate of insurance thus required compels those paying insurance on redwood structures to bear more than their share of the expense of insurance. In order to adjust this discrepency on an equitable basis it would be but right for the insurance companies to charge a lower rate for insuring redwood houses than for insuring those made of pine, other things being equal.

A limited use of pine even in the construction of redwood houses is considered advisable, though not always necessary. Floors and certain timbers are made of pine, because for flooring the pine is firmer and more durable and for joists the pine is stronger. Redwood will break across the grain sooner than pine. But it will be readily seen that where great strength in timbers is to be secured it may be had with redwood by increasing the size, and this would increase the cost correspondingly; but as pine and redwood cost about the same price the greater security from fire when redwood is used will more than compensate for the small extra cost of employing larger timbers.

Redwood is a very peculiar lumber. Although a member of the great family of coniferæ and therefore a cousin of the pine, it differs from nearly all its relatives in at least one important particular—it contains no turpentine, or at best so little that it is not appreciable. In this respect it is more like its cousin the cedar than the pine. When pine is cut the turpentine in it evaporates, leaving a sticky resin that burns with great freedom. The resin of commerce—commonly called French or English resin—is made by distilling crude turpentine taken from living pines. The distillation gives two products, one being spirits of turpentine and the other resin. It is the presence of resin in pine that makes it burn so readily and the absence of it in redwood that makes that so hard to burn. The housewife knows by experience that if she make a redwood fire in her stove it is liable to go out, but that a fire of pine or fir will burn briskly. Hence pine or fir is better than redwood for kindling fires.

Pine that is very rich in resin is more durable than that which is poor; but it is the resin that makes it dangerous for building purposes. Redwood is the most durable of all known woods, and hence on that account alone is cheaper and better than pine.

Builders are beginning to pay more attention to these things and more sensible procedure may be expected for the future. In fact, people here appreciate redwood less than do those of the Eastern States. There it is considered one of the most valuable woods for ornamental purposes and is now used largely in the interior finish of fine houses. The idea has been copied to a certain extent by builders here. There are many varieties of grain, some of them being beautiful and the color of all being richer than mahogany and nearly as rich as the costly rosewood of Brazil.—*San Jose Herald.*

THE RECEIPT is acknowledged of a fine catalogue just issued by E. C. Stearns & Co., Syracuse, N. Y. The book is handsomely bound, containing an unusally large attractive list of Door Hangers, Screen Frames, and other hardware specialties manufactured by them.

Editorial Correspondence.

New York, Jan. 1st., 1888.

It is with greatest pleasure that we send greetings across the great American Continent, to the readers of the California Architect and Building News, wishing one and all a "happy New Year," and blessings and prosperities equal to the necessities and right wishes and desires of all. The years roll by, evolving the special results which follow its events and happenings, and each striking from the tally of time, the simple and smallest figure—one; yet these simplest of enumerations soon accumulate to "three score years and ten," a lenght of life permitted to but a small proportion of the human family, and then the end.

During more than two months journeying from the great business emporium of the Pacific Coast—San Francisco, to the metropolis of the Atlantic—through states, cities, towns, and villages—through fertile valleis abounding in all that pertains to agricultural and pastorial life; over hills of gentle mein, or royal mountains of towering heights and grandures—some sterile and seemingly barren, others well wooded and more or less covered with verdure, and still others capped with eternal snow, cannot be otherwise than a perpetual, ever flowing well of thought, from which one may forever after the experience, draw freely and exhaust not the source.

A thousand features of interest occurring during the journey have for the time being been passed, as the mind naturally inclines to matters and interests of present and immediate surroundings; hence these of New York import become the more special for present notice.

As representative of the C. A. and B. N. we have been most kindly received by the editors and managers of the *Scientific American, Santilary Engineer, Cosmopolitan, Carpentry and Building, Builder and Wood Worker, Building, American Machinist, Mechanical News, Manufacturer and Builder, Painters Magazine, and Real Estate Bulletin* and other journals, all of whom expressed great pleasure at the personal interview and hearty wishes for the prosperty of the California representative of class journals. As a matter of course many questions were asked and answered, but not without some amusement at the queer notions pervailing in the minds of many, in regard to conditions, customs, and matters and things in general in California. To best of humble abilities, erronious opinions and conclusions were corrected and the Golden State as a whole—its resources and possibilities; its manufacturing and commercal intrests and prospects; its agricultural, vinicultural, fruit, mineral and other inexhaustable products and sources of wealth explained and set in proper order. The expressions of great interests in Pacific Coast matters were free and general, and if by wishes as expressed in words, could make the Golden State great and prosperous, there would be a flood in that direction so overwhelming that even the "oldest inhabitant" would stand aghast at the deluge that would sweep from San Diego to Alaska, and from the Rocky Mountains to the shores of the Pacific Ocean.

As representing the architectural profession in California, the welcome and congratulations extended by the many architects called upon in New York has been of the most hearty and earnest character. The members of the profession in this city, as well as those called upon at Denver, Chicago, Lafayette, Cincinnatti, Baltimore and Philadelphia, express a large degree of interest in matters architectural on the Pacific Coast. In many cases California has been referred to as a place of most interesting and special character, abounding not only in endless natural sources of beauty and admiration, but equally special and peculiar in its architecture as represented by the structures erected within its limits. The desire to see personally and understand from observation the architectural specialities of California, has been very generally expressed by members of the profession in all the cities herein named, and fully one-half of those conversed with, have stated a purpose and interest to visit the Pacific Coast at an early day; and fully fifty have personally said to your correspondent, that when the architects of California shall so energize the Chapter work as to render it conspicious for life, action and energy, the project of an annual session of the parent chapter—the Grand Body—to be held in San Francisco will be favored, advocated, and beyond reasonable doubt prevail.

Although there are frequent misrepresentations made in the *Journal* of the United States and the world at large, in reference to California affairs, there is at the same time a conservative, generous and fair tenor of mind among multitudes of fair minded people, who have not seen and do not from personal observation know the actual facts existing in quarters thousands of miles distant, and who are patient to await profs positive, rather than accept the too often unreliable products of imaginative brains, or the say so, I, from sources where individual or colateral interests may be to discredit, reproach or crush, where it would be more truthful, wiser and more just to approve and sustain. This disposition has been clearly manifested and expressed in all the circles entered by us in this and other cities, and the facts herewith stated should be a most energizing incentive to all Pacific Coast architects, from the Sierras to the southern border line, and from the lash and roar of the briny waters that break upon the western confines of our great continent, to the great divide which defines the eastern limits of the State, to harmonize and unite in earnest work, and by manly and concerted efforts and action, bring about the assembling of the representative members of the profession in the United States, upon the shores of the Pacific Ocean. If the Chapter and membrs of the profession in San Francisco will not move in the matter and secure the result, we hope those of Los Angeles and other sections will at once organize and secure to themselves and Southern California specially, the honor, pleasure and profits that most assuredly would flow from such a gathering of architectural peers of the United States.

In this connection it may be well to state that the question of consolidating all present—"parent bodies" into one grand union, encompassing all sections and states, east, west, north and south, is the talk of the hour The matter has been considered and discussed at the late annual sessions of the A. I. A. and the W. A. A., resulting in the appointment of a joint committe consisting of Messrs. D. H. Burnham, (Burnham & Root) Chicago; A. J. Bloor, New York, Secretary of the A. I. A.; T. P. Chandler of Philadelphia; T. M. Clark of Boston; and E. H. Kendall, New York. The committe held its first session in the rooms of the A. I. A. on the 30th ult; and entered into a preliminary consideration of their work with perfect unimity as to the disirableness of consolidation, with no question as to its being recommended by the committe, provided there shall be no hitch in working up the details, which does not at present appear at all likely. The consolidation would have the effect of concentrating in one, all the great talents in the profession, instead of as now, dividing and sectionizing it into two factions, which, although not opposing and antagonizing each other, still not working and co-operating in one harmonious union, for the common good of the profession and all concerned. With all these things considered, it would be indeed strange, if the number of intelligent gentlemen in the profession in California should allow the opportunity to pass unimproved, for a solid and efficient local chapter organization, which would command respect, both at home and abroad, and at the same time wield an influence for good in the general practice of the profession, which would greatly elevate and relieve it of many of the objectionable and injurious features that have become by far, too common, owing mainly to the absence of strict and honorable society relationships, and the non observance of a code of ethics that would render morally impossible, every act not in harmony with a high sense and standard of professional truth, right and justice.

The architects this side the mountains, (east), seem to understand perfectly and thoroughly, the value of, and the benefits to be derived from sustained, efficient, city, state, sectional and national organizations, and thousands have placed themselves on record as members of either the A. I. A. or the W. A. A.; and among the number so recorded are to be found the names of the brightest architectural lights and giants of the profession in the United States. And for the purpose of strengthening and making firmer the affinities, and drawing nearer together in sympathies, cordialities and co-operations, the consolidation bridge is in course of construction, designed to span the entire continent from ocean to ocean, with firm and solid piers and abutments in *every* state! Yes, if California will do her part, and furnish the last link required to complete the grand design.

Building activities in New York are reported as not very brisk. But few of the architects visited claim any large engagements, generally they say—"not much going on in the city," while many report the preparation of plans for country work. But judging from general appearances in the several offices, the conclusion is reasonable that there is no boom on in the building line just now. At the same time considerable building is under way in the Harlem and west side districts, but it is mainly in speculative constructions—"built by the mile and sawed off"—all built "*first class*" and "for sale cheap." However, people seem to accept the gag—"first class," and thousands of mere shells and poorly built structures find ready purchasers as such, which would not qualify as third, and some times fifth rate constructions.

All interested in building should take the *Building News*.

Elevations, Plans and Details of a Country California Home.

The full set of plans presented are well worth the study of those who desire comfort and elegance, and yet have the same at a moderate cost. The exterior will appear much richer when built, than as shown in the cuts. It will be noticed that we have discarded the Queen Anne style of windows so much in vogue. For our part we cannot conceive why architects should insert windows with thousands of corners and angles to be kept clean. Windows with small panes of glass may look pretty from a distance, but they will not bear close inspection. The servant girl has neither the time nor patience to clean thoroughly all the corners, and unless they are so done the window presents to a person of neat and cleanly habits an appearance at once repulsive. These small windows received their name from the date of the first use of glass, when each pane was taxed a certain sum. At first small panes of glass were used; as the tax was on each pane of glass of certain sizes, only the rich could afford many panes, and a house all dotted with small panes of glass received the name of the Queen Anne style. We believe in letting the sun's rays have free scope to our rooms, and this cannot be done by shutting out a goodly portion of the light with bars and stiles necessary to frame many lights in a window.

FRONT ELEVATION OF CALIFORNIA HOME.

The arrangement of the rooms is one of special study. With the exception of the kitchen section, the whole lower floor can be used as one immense drawing room, and yet, by the aid of sliding doors judiciously placed, each room is distinct by itself. The library room is very convenient, having outside communication with the porch, a large closet, fire place, etc.; also direct communication with the dining room.

The arrangements of the kitchen are very complete. An unusual amount of closet and pantry room is provided. The butler's pantry is provided with a sink. The connection with the dining room is convenient. The stairs in rear are very handy for the servants.

The front chamber in second story is octagonal shape. Due care has been given that plenty of room is had for every article of furniture needed in bed room. Ample space will be found for the bed, bureau, easy chairs, etc.; while the closets are not large, the number of them will be found sufficient for all ordinary uses.

The large chamber in center of building will be found a very convenient one. Should the house be placed on a sightly location, the four windows will be very serviceable to gaze on the beauties of nature. Every room on second floor is well supplied with closet room.

No wash basins are shown in any of the bedrooms. Should these be required, ample spaces exist for their location. The house is designed for a location away from a city, where wash bowls in a bedroom are not regarded as a necessity.

The details shown will give any one an adequate idea of the finishes used. No cornices are shown in the parlors, etc., as paper is intended to be used on all the walls except kitchen section.

As shown, the house can be built for $6,000 to $7,000, depending altogether upon location.

Facts and Opinions.

An announcement is made by Merchant & Co., of Philadelphia, that will be read with more than passing interest by all consumers of tin plates. It is to the effect that they have completed arrangements, with reference to the several well known brands of which they make leading specialties, by which for the future these plates will have the actual net weights upon the boxes. They say in their card containing this statement that they have done this in order to protect consumers from being imposed upon by light-weight plates, which may be offered in competition with their plates, and classed as equal to them, and add significantly, that now consumers have it in their power, by weighing competing plates, to determine whether or not they are getting the worth of their money. From these statements, many will infer that this most radical step is simply a defensive measure, and has been resorted to in order to protect the brands of the firm against an aggressive competition, waged not on the basis of quality, but rather upon cheapness alone. Others of our readers will, no doubt, see in this step only the logical outcome of the general line of policy which the firm has been pursuing for many years past, and all such, after recognizing the eminent fitness of this step at this particular time, will look ahead in an endeavor to determine what the next move will be. Whether this step upon the part of Merchant & Co. is purely a defensive measure, or is taken in carrying out a well defined scheme of business, which requires years to unfold in its entirety, its importance to the trade at large, and to consumers in particular, is not to be gainsaid.

The stockholders of the Folding Iron Gate and Guard Co. held their annual meeting at their office (No. 79 New Montgomery street) on Monday evening. The following directors were elected to serve for the coming year: Geo. H. Rice, W. R. A. Johnson, J. P. Le Count, H. Dutard, W. E. Norwood. Geo. H. Rice was elected President. W. R. A. Johnson, Vice-President, J. P. Le Count, Secretary and Manager. The report of the Secretary for the past year was read, and apparently was very satisfactory to the stockholders. The indications are that this enterprise will attain considerable prominence in the near future.

Cheap Building Plans, Studded with Foreign Products.

It is certainly amusing the way some architectural and building publications parade themselves upon their ability to produce "cheap chromos" of what they term desirable residences at a moderate cost. If the pictures were produced without attempting to give specifications, they would be viewed by intelligent builders as more valuable. The specification, however, is the straw that breaks the camel's back, and at once determines that the delineator is a greater success as a picture maker than as an architect. It is not our purpose to hold up the designer to ridicule—he, no doubt, is brow-beaten into the production by glibly stories of the publishers, who enchant the poor devil with visionary dreams of great fame that awaits him. He thus stretches his imagination at the cost of privateering, and grinds them out in quick succession, like the shooting of a Gatling gun.

A certain New York publication has the effrontery to announce in its columns in italics, "an almost endless series of the latest and best examples." It thus bids for the architects' work, and seeks to draw to its own office all the "building plans and specifications" needed on earth. Not satisfied with this, it wants to obtain a patent right for every inventor, do his engraving and herald his invention to the world. After a time the same concern will, no doubt, want to run the government of the United States on moderate terms, to say nothing of wanting to contract for every corn crib or chicken roost from Halifax to Mexico, fore and aft. It prides itself on being a purely American institution, yet it permits its picture makers to specify French sheet glass, to the disparagement of the American product, equally as good. The hardware to be the best city hardware, to simply knock out the home dealer, because he will not subscribe for its sheet. If the house is built in Jericho, the contractors must use Jersey brick, and damn anything for inside finish but two coats of English white lead. It is unnecessary for us to indulge the reader's time with what it dubs as "an extended abstract from the specifications, and covers the most important features." The scheme is to get some one contemplating building interested in the gush it thus throws out with its cheap chromos; then, after the reader finds that no person on earth could build a house from the "extended abstract," it kindly informs him that full plans, specifications and details

may be had on moderate terms at its office. This is the Live and let Live policy of a New York publication.

Architects are certainly interested in it, if they want to starve to death.

Builders cannot live without it, if they want to have no independence. Manufacturers and producers of American building materials certainly want to advertise in no other if they want to encourage foreign competition.

You ask who we hold in this esteem? That prince of borrowed thoughts, borrowed habits and borrowed manners; that stalwart monument of plagiarism; that contortionist of the development of American science; *The Scientific American*, sailing under the appellation of "The Architects' and Builders' edition." You ask us why we assail it then?

We answer: Because we detest its damnable practices, and unbosom ourselves as an organ for the advancement of the American Builders' science, untainted by selfishness, unharrassed by the thoughts of destroying those we first make mad. May we not see it glittering upon the footstool of pure culture, as the representative of the progress of American architecture, manufacture and mechanics.—*Builders' Gazette.*

Campo Seco Stone.

Granite, for a long time, held undisputed sway as *the* building stone. During the past few years, however, numerous quarries have been opened in various parts of the state. Among the more important deposits or quarries are those lately opened by the Campo Seco Co., in Calaveras county. It does not require the tools necessary to work granite; those will be found plenty firm enough that are capable of working sandstone. An immense saving in time for working the stone is thus gained, and is a fact that will be especially recognized by carvers and masons. The stone is of a light gray color, and rapidly hardens by exposure. It is claimed to be absolutely fire proof, thus excelling granite. Another strong factor is the exceeding lightness in weight, thus enabling blocks of almost any size to be conveniently handled. Specimens of the stone taken from the quarry may be seen at the office of the company, 1505 California street.

How to Prepare Calcimine

Some of our readers may wish to prepare their own calcimine, and we give these rules for the purpose: Soak one pound of white glue over night; then dissolve it in boiling water, and add twenty pounds of Paris white, diluting with water, until the mixture is of the consistency of rich milk. To this any tint can be given that is desired.

Lilac.—Add to the calcimine two parts of Prussian blue and one of vermilion, stirring thoroughly, and taking care to avoid too high a color.

Gray.—Raw umber, with a trifling amount of lamp black.

Rose.—Three parts of vermilion and one of red lead, added in very small quantities, until a delicate shade is produced.

Lavender.—Mix a light blue and tint it slightly with vermilion.

Straw.—Chrome yellow, with a touch of Spanish brown.

Buff.—Two parts spruce or Indian yellow, and one part burnt sienna.

2D FLOOR PLAN OF CALIFORNIA COUNTRY HOME.

NEW PUBLICATIONS.

"INTERIOR DECORATION."

By Arnold W. Brunner and Thomas Tryon, Architects.

The authors, in this new work, concede that the house is built to suit the tastes of the owner. The exterior features are all arranged in architectural array, so that the gables and chimneys make, with the walls and roofs, the harmonious composition which, until now, has existed on paper. Within, all is perfect. The halls, rooms, stairways and cupboards are of ample size and properly located, so that every long desired plan is at last realized.

But, alas! smooth plastered walls, well laid flooring and white ceilings are not enough to constitute what we call a home. The house must be decorated, and it is with the broad purpose of illustrating how this can best be done artistically, that the authors have placed before the people generally, the above named book.

For sale at this office. Price $3.00.

"MANTLES AND SIDE WALLS."

BY E. PRIGNOT AND OTHER ARCHITECTS AND DESIGNERS.

32 LARGE PLATES.

The designs represented are in the Cheminee, Louis XIII, and Louis XVI. styles. The engravings are very fine, and artistically represent the various fine details.

Price, in portfolio form, $3.00. Send to this office.

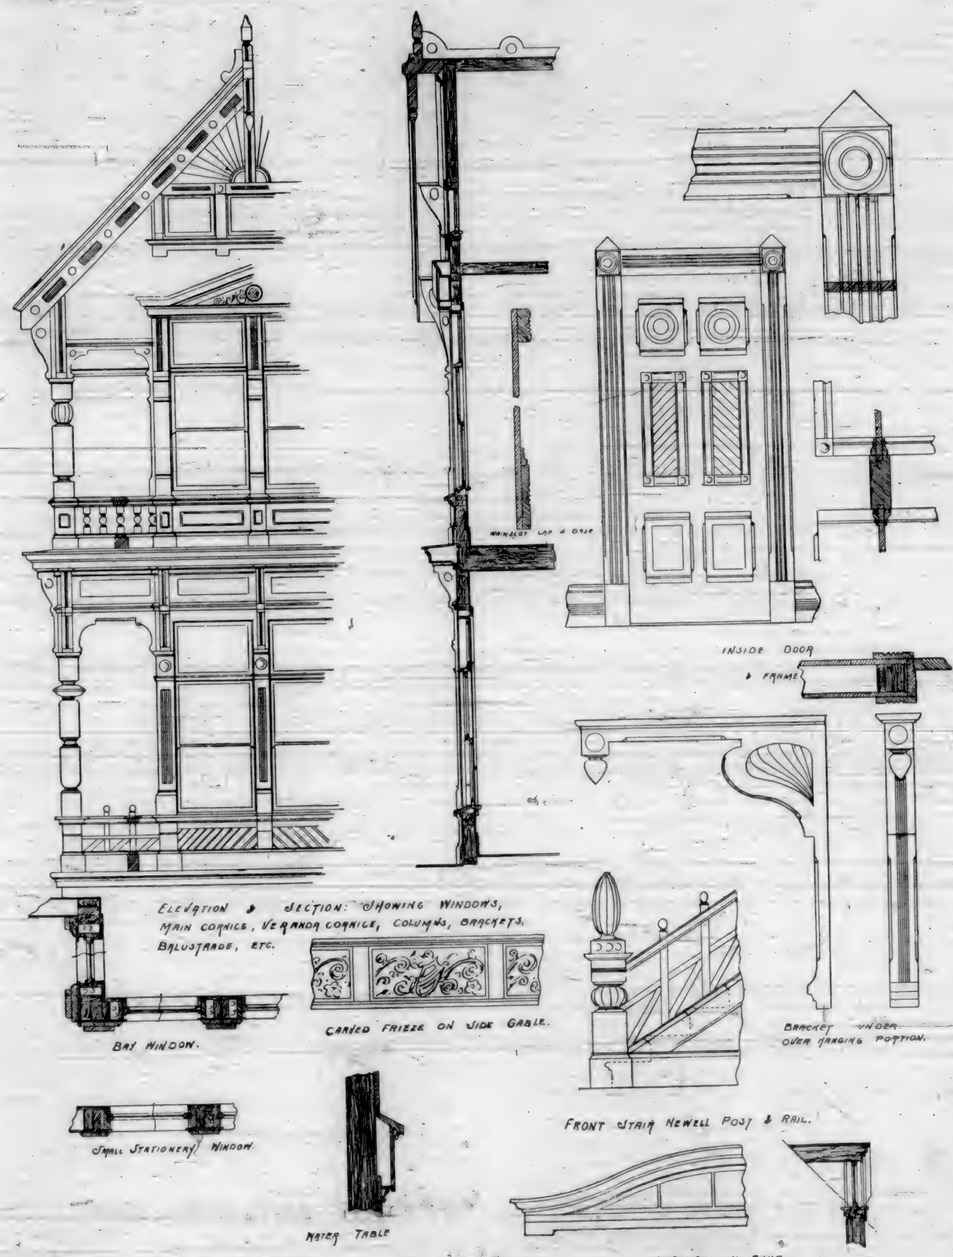
STORE FRONT AND INTERIOR DETAILS.

A NEW WORK, EDITED BY F. A. WRIGHT.

This is No. 2, of the series being issued by W. T. Comstock. The remaining numbers will treat of "Doors and Windows," "Gables," "Small City Houses," and other kindred subjects. Notices of each will appear when received. The price of each number is $1 00.



EXTERIOR AND INTERIOR DETAILS OF CALIFORNIA COUNTRY HOME.

The Best Practical Method of Plastering Walls.

Paper read by J. P. McMurray before the S. F. Chapter, A. I. A.

Before we consider the best method of making and applying mortar to walls, let us examine the nature and properties of the materials used and their chemical action upon each other. If these facts can be correctly ascertained we will be better prepared to bring about the proper result, as it will be evident that any process or condition that facilitates the natural, chemical or mechanical action of the material used will improve the mortar.

The common limes are nearly pure carbonates of lime, the only effect of burning them is to drive off the carbonic acid. By slaking them the lime becomes a hydrate, and in this state is capable of acting chemically, though feebly on the surface of pure siliceous sand. As such sand is silicic acid all alkalies are solvents in a greater or less degree. This combination causes the first setting of the morter, which is also strengthened by the mere mechanical action of the sand. The greater part, however, of the lime has not combined with the sand, but remains in the state of a hydrate, in the proportion as the latter absorbs carbonic acid from the air it gives out its water and passes to the state of a carbonate; such morter therefore acquires its final hardness and dryness when the whole of the hydrate has been decomposed and the water has been replaced by carbonic acid. In losing 22 per cent of water it combines with 46 per cent of carbonic acid.

We have now a general idea of the nature of the materials under consideration, and will proceed to make our mortar with the best lime and clean, sharp sand. (Loam in sand is always detrimental, but clayey earths are not necessarily so.) We will use our judgment as to the proper proportions of lime and sand, as a barrel of lime varies in strength as well as in quality, owing to the size of the lumps and the sand varies in degree of coarseness. The lime should be slacked under water and not allowed to burn. This should be mixed with an abundance of good long hair, before the sand is worked in. The hair should be thoroughly beaten before soaking, so as to break up all clots which are a source of weakness as well as a waste of material. The sand should then be well mixed in as the grit assists in the seperation of the hair, and a thorough mixing of the sand and lime at this time is very important, as it materially assists in bringing about the first condition of hardness by having every particle of sand in contact with the lime. The longer it remains in this condition, if moist, the better for freeing the silica of the sand.

The mortar is now ready for use if the lathing is properly done. Green laths are best for several reasons, they retain the proper width of key which should never be less than $\frac{3}{8}$ of an inch. While the dry lath as soon as wet, swell, and pinch the key, thereby weakening it, shrinks as the mortar dries out, and repeats it with every coat of mortar, which must effect to some exient the bond between the lath and the mortar, While the green lath retains the full width of key and shrinks only once, and then very gradually and does not split at ends by nailing as the dry lath. The joints should be broken every 5 or 7 laths as the settling of joints, or the springing of a stud makes a crack by the opening of butt ends of lath. No knotty, sappy or unusually thin lath should be used. They can be put on quite open, as we will use our mortar well haired and not wet and slushy, and to bring about this result we will temper the mortar 24 hours before using it, which will add materially to the first condition of hardness by bringing fresh particles of lime in contact with the silica of the sand, not pulled down and hashed up with water, but well tempered with the blade of the hoe as if for immediate use. When ready for use there will be less water in its composition, and yet it will be of proper consistency to spread. Mortar thus treated will make larger and stronger keys, being tougher and the particles of lime and sand form a closer union, thus assisting the second or mechanical condition of hardnees as well as the chemical action of the material. Mortar, like steel, is improved by working it. This coat should just cover the lath nicely, no matter how thin, as we will draw up on the same scaffold with a good heavy coat of brown mortar, made as the first, but without hair, and containing more sand. This we will leave with the proper application of the darby.

We draw up with brown mortar for the reason that the mortar applied to the lath requires more lime to make it adhesive to the wood and toughness to hold the key from dropping. If it is drying weather the windows should be in, or the space covered with muslin to insure slow and uniform drying to assist in the third condition of hardness. At the proper time it must be well floated, not only for the purpose of leveling the surface which is of only a secondary importance compared to the working up and compressing the mortar and bringing the particles together, as a large portion of the water has evaporated, leaving air spaces to be filled by compression. The proper time to float is when the larger portion of the water has evaporated and the moisture apparently gone; but the proper application of the float brings the moister to the surface leaving a nap on the surface of the wall.

Floating when dry does injury by weakening the parts when there is not moisture enough in the wall to make it adhesive again. When dry, finish with high gaged stuff. The best and least wavey surface can be produced by laying on the gage stuff with a float and drawing up with a trowel; the wooden float cuts through an inequality on the wall while other smooth steel trowel has a tendency to slip over it.

The above method is two coat work, properly speaking, calling for more labor than the usual way of putting on two coat work. And we believe that it complies better with the conditions and natural qualities of the material used than any other process in practice. But as there is a very general belief that a good job of plastering should have three coats of mortar, it will be necessary to compare the merits of the two methods as practically in use. In three coat work the scratch coat must be necessarily thin, as there is to be a brown coat over it; if the scratch coat were to be heavy, the brown coat would weaken by overloading the wall or ceiling, as the brown coat has to be sufficiently thick to cover the irregularities of the scratching and raking up of hair and mortar in scratch coat. Therefore the thin scratch coat is cut up and weakened by the scratching, and being thin, it dries out rapidly, not having time for proper crystalization and when dry the heavy sandy brown mortar requiring pressure to spread, springs and enfeebles the keys more or less. The lath if dry goes through a second swelling and the brown coat dries quickly as it has the atmosphere on one side and the lath and scratch coat on the other to absorb the moisture and the union between the two coats is never perfect and can be often seen separating by the jar on sides of casings, etc. And in regard to straightness, that should be done on the joists and studs previous to lathing. It is not good practice to overload lath, to straighten a wall, and there is no reason why a straight wall should be made crooked by the application of $\frac{3}{8}$ of an inch of mortar if properly applied. It might be well to say here that grounds $\frac{3}{4}$ thick are sufficient for lath and plaster and every wall should have that amount on all its parts.

By the two coat process we get the proper kind of mortar on the lath for keys and adhesion to the wood, the brown coat with the proper sand for strength, which also prevents cracks, by having sufficient sand to prevent shrinkage and giving as heavy a body as the lath should be required to carry, which is all in one body, the union being perfect and a thick moist body, which insures slow drying and what is of great importance, a plastic body to float and compress, if taken in the proper time and no hair to collect in tufts on the surface by floating. The strength of the above wall can be greatly increased by the addition of say, 1 barrel of plaster of Paris to the hundred yards of the first application, as this coat is where the greatest strength and adhesion is needed. There are probably sufficient glutinous scraps in the hair to retard the set of the plaster, if not, a little glue size may be added so that no inconvenience may occur by fast setting. By far the hardest walls we have ever seen were composed entirely of sand and plaster of Paris, about 2 parts of sand to one of plaster mixed with hair and applied in the usual manner as common mortar.

A Guaranteed Fire Proof Roofing.

Attention is called to ad., of M. Ehret Jr. & Co., St. Louis, Mo. They make a specialty of water and fire proof roofing at less price than metal or shingles, and is so simple that any one can put on from six to eight hundred feet a day. It is durable, of light weight and is adapted to any climate. Has been in use more than 6 years in all parts of the United States, Canada and Europe. Send for samples and net prices. Special prices to Dealers, Contractors, Builders, etc. Quality of goods are fully guaranteed.

WARREN H. WILLIAMS.

Warren H. Williams.

Another one has gone to meet the great Architect of the Universe above. Warren Haywood Williams is no more. It was our painful duty in July, 1880, to chronicle the death of his father; and to-day we offer the last tribute to his son, who in his lifetime well performed the duties of his chosen profession.

Warren H. Williams was born in the city of New York on the 9th day of February, 1884. He started for this city at an early age and arrived here in August 1852. The career of young "Warry" as he was familiarly called by his schoolmates, is well remembered by the Manager of this Journal. Both came to California in the same year, and it seems noticeable that the difference in their ages was just about equal—in number of days—to the difference between the time of the arrivals of each in this state.

Passing over his school boy's days, Mr. Williams entered his father's office—the late Stephen H. Williams—on the 2d day of January, 1860. As an apprentice, he showed remarkable quickness in adapting himself to the various requirements of his future calling. He became a full partner with his father not long afterwards, and remained with him until Sept. 6, 1872.

Salt Lake City, in 1872, was a city of great expectations, and Mr. Williams concluded to open an office there. The boom, however, was of short duration and after a trial of but a few months, he left the city of the saints, and cast his lot with the citizens of Portland, Oregon. He arrived there January 23, 1873, and has ever since—until his demise—been intimately connected with the growth of that city. He worthily won the esteem of the entire commercial community. He was also an active worker in many secret orders, and was a Fellow of the San Francisco Chapter American Institute of Architects.

A special meeting of the Chapter was called upon receiving information of the death of Mr. Williams. A goodly number of the architects were present. The President stated the object of the meeting, and by a resolution, the following named Fellows were selected as a committee to prepare suitable resolutions: R. H. Daley, G. H. Wolfe, T. J. Welsh, J. J. Clark and the President G. H. Sanders.

At a meeting of the Committee held immediately after the close of the special meeting of the Chapter, the following preamble and resolutions were adopted:

Whereas, Under the dispensation of Divine Providence, our late Fellow, Warren Haywood Williams, has been removed by death, at Fresno City, on his return from the Eastern States, whither he had gone for the benefit of his health, and,

Whereas, We deem it expedient, and due to our late brother as a son of a late distinguished member of the architectural profession on this coast, and himself a prominent and successful architect, and a Fellow of the S. F. Chapter of the A. J. A., and as a mark of respect to his family, to offer the following resolutions:

Resolved, That we tender to his bereaved wife and family, our united and sincere condolence and sympathy on the sad occasion which has deprived them of a husband, father and brother, and ourselves of a friend and fellow member.

Resolved, That these resolutions and preamble be forthwith engrossed and forwarded by the Secretary of the Chapter to the family of the deceased.

Plaster for Mouldings.

Where walls and ceilings are to be moulded whilst yet in a plastic state, some decorators are using a fibrous plaster, with the object of securing greater firmness and tenacity. The idea itself is not new, animal hairs having formerly been intermixed with lime, but this is a new application. In England and France a fine wire netting is at times inserted between two courses of plaster, to afford greater firmness in holding picture frames. The tenacity of some of the old mouldings in old New York houses, whilome aristocratic, is very remarkable, retaining as they do, their original sharpness of outline.

The mechanic who thinks he has arrived at perfection may be written down as an ass. There is no such thing as "perfection" in the mechanical arts, and the man who claims to be a complete and finished mechanic knows in his heart he claims that which does not belong to him, and he will soon discover that his vanity, or his fraudulent pretenses do not deceive the employer to any great extent. Blow and bluster will not make good work, or pass for efficiency, and the man who uses those sort of weapons seldom deceives an employer. "I never employ a man who knows it all," said a large contractor to us the other day. "Give me a modest, neat looking man," he continued, "and I'll hold you a dollar he is a good workman, and one that may be relied upon; though, of course, that sort of man seldom comes in search of employment. Bragging fellows, who state they can do anything from dressing a board to designing and building a cathedral, are quite numerous, and may be had at any moment." Doubtless this is true, but it does not argue that there are not many of the modest workmen. There are plenty of them, good, reliable fellows—fellows that seldom or never have need to seek employment. They are always engaged. Most of them own their own homes, are intelligent chaps, models in their own neighborhood, the best of citizens, have neat, thrifty wives and healthy, happy children, and their country is proud of them, for it understands that they are towers of strength and bulwarks of true freedom. It is not from this class Anarchists or noisy demagogues are drawn: they do nothing until they have first considered the results, and all their actions are tempered with wisdom, hence their ability to become good mechanics.

Building engagements have been limited in number during the past week, in every portion of the State. The exceedingly cold weather has been responsible for much of the dullness, as Contractors do not find it to their advantage to start work, when men have to spend half their time keeping their fingers warm.

It will be strictly the aim of the management of the Weekly to give only *live* items of building news, and not try when times are dull, simply to fill up the pages with information that is of no good to any one, in a practical sense.

Weekly Building News

—IN CONNECTION WITH—

California Architect and Building News!

$2.00 PER YEAR.

RICHLY Rewarded are those who read this and then act; they will find honorable employment that will not take them from their homes and families. The profits are large and sure for every industrious person. Many have made and are now making several hundred dollars a month. It is easy for any one to make $8 and upwards per day, who is willing to work. Either sex, young or old; capital not needed; we start you. Everything new. No special ability required; you, reader, can do it as well as any one. Write to us at once for full particulars, which we mail free. Address Stinson & Co., Portland, Maine.

DEEP Sea Wonders exist in thousands of forms, but are surpassed by the marvels of invention. Those who are in need of profitable work that can be done while living at home should at once send their address to Hallett & Co., Portland Maine, and receive free, full information how either sex, of all ages, can earn from $5 to $25 per day and upwards wherever they live. You are started free. Capital not required. Some have made over $50 in a single day at this work. All succeed.

INVENTION has revolutionized the world during the last half century. Not least among the wonders of inventive progress is a method and system of work that can be performed all over the country without separating the workers from their homes. Pay liberal; any one can do the work either sex, young or old; no special ability required. Capital not needed; you are started free. Cut this out and return to us and we will send you free, something of great value, and importance to you, that will start you in business, which will bring you in more money right away, than anything else in the world. *Grand outfit free.* Address True & Co. Augusta, Maine.

HILL'S
Patent Inside Sliding Window Blinds,

Are Adapted to any Style of Window,

And Suitable for all Buildings, Dwellings, Stores, Office Buildings, and for Houses Built to Rent, Hotels, Boarding or Lodging Houses are Unexcelled.

They are entirely inside of the window casing, and while requiring no furring out or boxing, make it an impossibility to tear curtains, interfere with plants or window ornaments, or become broken by contact with chairs or other movable articles.

The light can be admitted and sunlight excluded from any part of the window; can be instantly removed and taken to any part of the house to clean and as easily replaced.

They can be opened or closed with the window raised, and without removing articles from the window-sill, and cannot blow open or rattle. The Blind is very light (one-half inch in thickness) and strong, possessing more durable qualities than a hinged blind one inch in thickness.

There is no sagging, banging, or getting out of order.

They are made in three sections in height (each section sliding past the others), and any number of divisions in width corresponding to the folds in the old-fashioned folding blinds. They require no hinges—all trimmings furnished with blinds—are made of all woods, finished or unfinished.

The Blind manufactured throughout the United States and Canada by the members of the HILL SLIDING BLIND ASSOCIATION, is the only sliding Blind ever put into practical and general use, or that has been adopted and used by the leading architects and builders, both East and West.

It is rapidly displacing the objectionable folding blind, also shades, which since they have ceased to be considered the fashion, are used principally in cheap dwellings and tenements.

The Hill Blind is the only sliding blind made of white cedar, and where the grooved slide can be used as the window stop, or placed on the pulley stile, similar to the ordinary stop—"the slide is only 2⅜ inches wide"—plenty of room can be obtained by setting the casing flush with the pulley stile, in light studded buildings. NOTE.—Any other sliding blind using the slide as the stop for the sash, is an infringement of our patents of February 26, 1884, and February 24, 1886, and anyone selling, using, of making such a blind will be prosecuted by the HILL SLIDING BLIND ASSOCIATION, as they are determined to stop the sale of several cheap and worthless imitations.

The Hill Sliding Screen, working the same as the blind, is the only screen covering one-half of the window, which will remain at any desired point, and which can be instantly removed, when not required, or to clean the windows.

Over eight thousand sets have been specified and put in, throughout the Pacific Coast, since April 1, 1885.

We refer to the following prominent architects of San Francisco, who have used or specified the Hill Blind and Screen; also hundreds of owners throughout the Pacific Coast:

Miller & Armitage, Pissis & Moore, H. D. Mitchell, John Marquis, John M. Curtis, Moore & Schultze, J. T. Kidd, J. H. Humphreys, T. J. Welsh, Jas. E. Wolfe, Townsend & Wyneken, Chas. J. Devlin, Geo. E. Voelkel, Copeland & Banks, M. Balczynski, Edw. R. Swain, Chas. V. Pierce, S. & J. C. Newsom, Wm. Mooser, Chas. Geddes, Macy & Jordan, H. T. Bestor, A. A. Bennett, Salfield & Hohlberg, A. J. Barnett, John J. Clark, G. V. Capelletti, F. R. Schmidt, M. P. Schetzel, Clinton Day.

HINDES & MURRAY,

Main Office and Factory, 411 Mission Street, Corner of Fremont.

Sole owners of the right to SELL and MANUFACTURE for the Pacific Coast, except Counties of San Diego, Los Angeles, San Bernardino, Santa Barbara, Kern, San Luis Obispo, and Ventura in California.

COUNTRY BUILDING INTELLIGENCE.

We earnestly desire the co-operation of country editors and mechanics generally to this department of our Journal. Forward us all the building news connected with your different localities. Architects should also notify us of "plans to figure on." No charge is made for such notices. Direct letters to office of this Journal, 230 Montgomery street.

ALAMEDA.

First and M. Frame building. Owner, Patrick Callaghan; architect, M. J. Welch; contractors, McCate & McGlinching; cost, $4,800.

Klinknerville. Additional story; owner, C. A. Klinkner; architect, Chas. V. Pierce; contractor, S. A Boynton; cost, $1,057.

Webster and Durant. Frame building; owner, Peter Thomson; architect, Matthew & Son; contractor, B. S. Spencer; cost, $4,070.

Klinkerville. Frame building; owner, C. A. Klinkner; architect, Chas. V. Pierce; contractor, S. A. Boynton; cost, $4,000.

SAN DIEGO.

Building operations are being pushed with the utmost activity in every portion of the city. Work was begun during the week ended Saturday last on six lodging-houses, with nearly 200 rooms, and as many more are to be erected.

A three-story frame lodging-house is being erected on Eight street, between E. and F. J. K. Butler, J. S. Harris and A. N. Kimball are the builders and owners. The building will contain thirty rooms and will cost about $3,000.

R. E. Osgood is preparing plans for a two-story house for R. Steadman, to be erected on Fourth street, near the Florence Hotel. It will contain twelve rooms and will cost $3,000.

Work will soon be commenced on a tenement house block for John Bovyer. It will be erected on the corner of Elm and Boulevard streets. The house will cost $16,000 and will be divided into four houses of seven rooms each. A. H. Towle is the architect.

A. T. Large, Jr., has prepared plans for a frame business building to be erected on the corner of H and India streets. It will be two stories in height and will cost $3,000.

Plans are being prepared for a large Unitarian church to be erected on the same lot as the present building. The new auditorium will be 45x70 feet in size. Comstock & Trotsche are the architects.

E. B. Newkirk and J. M. Apfeld are the architects and builders of a four-story frame lodging-house and business building now being erected on the corner of D and Columbia streets. The building will cost $8,000.

The car-sheds and stables being erected for the San Diego Street Company are very extensive. They are located on the north-west corner Arctic and D streets. The sheds for stabling horses will be 500 feet long and eight feet wide. In the center there will be a two-story frame building, 30x220 feet in size.

Joseph Falkenhan, the architect, is building for himself a residence on Coronada Beach. It will contain fourteen rooms and will cost $5,500.

A residence is being erected for John Ringen, on block 8, Coronado Beach. It will be two-stories in height. The cost will be about $5,000, French & Wilde are the builders.

Standard & Clements are the architects of a two-story frame business building being erected for W. J. Warner in Roseville. The cost will be $3,500.

Extensive additions are being made to the residence of Warren Kimball, in National City. The cost will be $5,000. R. C. Ball is the architect.

The following building permits have been granted by the Board of City Trustees since our last report:

J. H. Clinkscales, one-story frame dwelling, on lot D, block 13, Horton's addition.

Charles S. Sherman, a corrugated iron building, 16x50 and 12 feet high, on Seventh street between E and F.

E. H. Gates, five one-story frame houses, on L street, between Tenth and Eleventh streets.

Susan A. Felly, iron addition to house on east side of Third street, between G. and H.

C. A. Severin, two-story frame building for a hotel, on lot 2, block 19, Sherman's addition.

How Quin Har, a corrugated iron building with tin roof, on lot H, block 111, Horton's addition.

J. P. VanClain, two-story brick and corrugated iron building, on lot B, block 86, Horton's addition.

A. H. Julian, corrugated iron building, on lot D, block 95, Horton's addition.

Brewster & Whalen, a two-story veneered, brick and corrugated iron building on the corner of Fourth and C streets.

R. W. Taylor, two-story frame building, on lot F, block 43, New San Diego.

Fox Brothers, one-story corrugated iron building, 50x75, on Sixth street, between G and F.

T. W. Graham, a two-story frame building, on block 202, lots G and H, Caruthers & Horton's addition.

C. E. Keller, a residence on lot 1, block 59, Sherman's addition.

T. P. Noble, one-story frame cottage on Thirteenth street, between F and G.

J. D. Works, a dwelling house and stable on lots G, H and I, block 310, Horton's addition.

George M. Hellar, four-room frame cottage, on lot 10, block 51, Sherman's addition.

William D. Connell, one-story dwelling on west side of Ninth street, between H and I.

D. B. Cosgriff, two-story frame house, corner of L and Fourteenth streets, San Diego.—*San Diego Union.*

Work is now progressing rapidly on a very large and fine building on the west side of Fifth street, between C and D streets. Mrs. Emma Sheldon is the owner, and J. D. Raymond the contractor and builder. The structure is to be solid brick, four stories in height. The size of the structure will be 56x85 feet. The front will be of pressed brick and galvanized iron, with a mansard roof.

T. O. Weary, the architect, will soon build for himself a residence on the corner of Date and First streets. It will be two stories in height, with eight rooms, and will cost $5,000.

Work has been commenced on a three-story business block, on the corner of Fifth and B streets. In size it will be 50x55. The cost of the building will be $10,000. John Dill and Frank Klepsh are the owners. E. Guenther von Schwartzenberg is the architect. The same architect has completed plans for an eighty-four room lodging-house, to be erected on Eleventh street, near H. It will be three-stories in height, 70x100 feet in size. L. Kloe is the owner. The cost of the structure will be about $14,000.

The following building permits have been granted during the last two weeks.

Daniel Cleveland, six-story brick block with basement, corner of Sixth and E streets.

Kirby & Beam, addition to house on Sixth street, between E and F, 20x24 feet, front of glass and sides of iron.

S. G. Ingle, salesroom under warehouse on Sixth street, to be covered with corrugated iron.

Hamilton & Co., iron shed, 20x 20, on G street, between Fifth and Sixth.

Frank E. Johnson, corrugated iron office, 6x20, on E street, between Fourth and Fifth.

W. T. Walker, frame building on Sixteenth street, between G and H streets.

Jesse Gilmore, wooden building, lot 7, block 298, Middletown.

D. Chollister, a frame dwelling house on lot 9, block 3, Bay View Homestead.

S. J. Beers, one-story frame cottage on lots 41 and 42, block 129, Mannasse & Schiller's addition to San Diego.

Joseph Logan, two-story corrugated iron building, on lot J, block 37, Horton's addition.

Calvin Washburne, two frame houses on I street, between Second and Third streets.

T. P. Russell, one-story corrugated iron building, corner Sixth and I streets.

C. W. Street, two-story frame building, on lot K, block 39, Horton's addition. Three store rooms below and forty-four lodging rooms above.

William H. Carter, three-story building, corrugated iron, Sixth street between G and H.

T. W. Hampton, two story frame building, on lot F, block 228, Horton's addition.

John R. Booth, two frame dwellings, one lot on B, block 251, Horton's addition, and one on lot 11, block 297, Middletown.

A. W. Tripp, frame dwelling, block 1, lot 4, Sherman's addition.

M. G. Kellogg, corrugated iron building, west side of Fourth street, between H and I streets.

T. K. Smith, veneered brick building, on lot E, block 100. Horton's addition.

J. B. Hooper, frame cottage, lot A, block 55, Horton's addition.

M. G. Kellogg, brick veneered building, on lots K and L, block 46, Horton's addition.

Henry B. Morris, one-story frame dwelling, on lots E and F, block 48, Horton's addition.

J. A. and Eliza Sheriff, corrugated iron warehouse, corner Fifth and L streets.

Henry Timpkins, stable, 36x50, on city block 288.

L. E. Huff, stable, on lot 9, block 177, Horton's addition.

C. H. Ackerman, one-story corrugated iron building, 45x50 feet, three one-story cottages, and 1 two-story building, on southeast corner A and Artic streets.

M. J. McCarthy, two-story frame building, 20x32 feet, on lots E and F, block 130, Horton's addition.—San Diego Union.

MISCELLANEOUS.

Hill & Dean are building a $2,000 house in White's addition, Riverside, for F. A. Tettley; also a $1,500 house in the same addition for Mr. Cronin.

In Lugonia, three houses are to be erected on the property of Mr. Morrison.

At Medford, Or., the Episcopal Church people have secured a handsome building site, and expect to erect a church thereon.

The building trade in Alameda is very active for this season of the year, and the outlook for increased activity is very bright. A number of magnificent residences are in course of construction in the central portion of the city, which section has been built up considerably during the past six or eight months. The prevailing style of architecture is pleasing. There is no city in the State which can claim superiority to Alameda in point of beautiful dwelling houses, and there are very few cities that can equal our own in this respect. The neighborhood in the vicinity of High street has been graced by a number of handsome dwellings, the most notable being that of Hermann Cordes. The West End is holding its own. At the present time there are few business structures under way.

INSOLVENCY SETTLEMENT.

The accounts in the solvency matter of R. P. Sanchez, a carpenter and builder, have been ordered by Judge Finn to be settled on payment to the creditors of 6.27 cents on the dollar.

MEADE'S HOTEL AT FRESNO.

J. J. and T. D. Newsom, the architects, have brought suit against George W. Meade to recover $3000 for forming and drawing plans and making estimates for a $200,000 store and hotel building at Fresno City, proposed by the defendant.

PUNGENT ITEMS ON BRICKS.

Bricks are made of mud and so are brickbats, but base ball bats are not. Some bricks are made of soft mud and others are not. You can't throw a soft mud brick like you can a hard brick. People in glass houses don't throw bricks or brickbats. Bricks are worth more money than brickbats, but I like to throw the brickbats the best. A brick is made the size of a brick and not of a brickbat. Bricks are of all colors. A man who makes bricks is a brickmaker when he is poor and a brick manufacturer when he is rich. A hen can lay eggs but she can't lay a brick. A man who lays brick is sometimes called a brick mason, but not the kind of a mason that goes out at night and comes home with a brick in his hat. Bricks are made of clay and Henry Clay was a brick when he made a speech. A sick kitten likes to lay up to a hot brick. When winter comes pa makes ma have a hot brick because her feet are cold. A red-headed girl is called a brick-top, and when she goes out you always see a white horse go by. There are good bricks and some bad bricks, but any man who makes bricks thinks he makes the best bricks. Bricks are made for houses and to walk on. A man when he is busted walks around and presses bricks and is dry for a drink. A man can get to be a lawyer if he studies hard in four years, a doctor in three years, and a preacher in no time; but pa says it takes twenty years to be a brickmaker. This is all I know about bricks.

NEW LUMBER COMPANY.

"The Garden City Lumber Company." The objects of the corporation are to manufacture lumber, shingles, laths, etc., and every kind of rough and dressed building material; also to buy, sell, exchange and deal in the same; to purchase land and erect buildings thereon, and to transact all business incidental to the purchase and disposal of lumber, wood, building material and woodwork, and real estate. The principal place of business is to be in San Jose, and the term of existence of the corporation is fifty years. The capital stock is in the sum of $100,000, divided into 1,000 shares of $100 each; the amount actually subscribed is $10,000. The directors for the first year are T. J. Gillespie, J. C. Morrill, Mattie Fisher, Peter Baltz and R. H. Jamison, the last named being of Agnews.

CHICO

Comes to the front with an offer of a half block of land and $10,000 cash, to any one who will build a $75,000 hotel.

Mr. T. E. Snell has had erected at Smith Creek, Santa Clara Co., a cottage of eight rooms a laundry with modern improvements and a granery; cost, $3,000. James F. Talbot was the builder.

WINTERS.

L. A. Danin is building a shop—F. McNeal is making additions to his own dwelling—T. D. Ball is superintending additions to W. J. Pleasants' house in the town of Pleasants. Mr. P. is also having a fine stone foundation prepared for the erection of a dwelling which will be built in the spring.

REDLANDS.

Jones & Griffiths are preparing plans for a $15,000 school building.

Clark's Pottery at Sacramento was lately burned, entailing a loss of over $40,000.

Chinese carpenters in San Francisco have struck for $3 per day. The regular wages have been $2.50. Thus, one by one, do the guileless Chinamen imitate the ways of the heathen Americans.

F. T. Fuld of Riverside proposes to erect 10 houses on his Grove St. property.

Address Architect W. H. Carson in regard to a new $10,000 church shortly to be erected in Woodland.

PERIODICALS WANTED.

Geo. D. Kellogg, of Newcastle, Cal., is the President of a literary society, that is free to all residents of that growing town. All editors are requested to forward him copies of their respective journals. We cheerfully place the Society on our free list, and hope others will follow.

PURCHASING AGENCY.

We can supply contractors, builders, or owners with anything required to erect and complete a building, at the very lowest market prices.

S. & J. C. Newson have dissolved partnership, the former retaining control of the S. F. office.

SITUATION WANTED.

One of the best and quickest draftsmen in the State requires a situation. First class perspective and colorist. Specimens forwarded. Address A. B. care of Harris & Jennens, 1104 Grand Avenue, Kansas City, Mo.

NEW CITY HALL.

The following bids were received for work on the New City Hall as follows:

For completing the stone steps leading to the colonnade of the Hall of Records:

John Sheedy	$5,987
M. J. Healy & Co.	8,000
Degan & Orford	5,528
McGowan & Butler	7,615

For erecting fifteen iron columns and one tier of rolled-iron joists:

Reese Llewellyn	$36,700
Savage Sons & Co.	40,000
Sims & Morris	37,500
O'Connell & Lewis	34,600

Bids were ordered to be advertized for 5 days, after which time will be considered.

GOVERNMENT WORK

Several announcements from the office of the Supervizing Architect of the U. S. Treasury Department have been received. The date for which the articles are to be furnished will not allow contractors in this city, time to present bids. Those who make a business on bidding on Government work, will do well to call in this office at least once a week.

Officers of the San Francisco Chapter American Institute of Architects for term ending Oct, 1888:

President	G. H. Sanders
Vice "	W. P. Moore
Secretary	G. H. Wolfe
Trustees	A. Laver
"	J. Wright
"	A. Pissis
"	J. E. Wolfe
"	B. E. Henriksen

DEATH OF WARREN H. WILLIAMS.

Warren Haywood Williams, son of the late Stephen H. Williams, died on Saturday morning, January 7th, at 5:30 A. M. in Fresno City. Aged 44 years.

TWO DOLLARS PER YEAR.

The California Architect and Building News and the Weekly Building News will be furnished conjointly to subscribers for TWO Dollars per annum.

1,500 a week is the absolutely guaranteed circulation of this Weekly Building News.

ANNUAL BUILDING SUMMARY FOR 1887.

During the year just passed the following number of buildings were erected:

FRAME BUILDINGS.

	No.	Cost.
January	40	$160,200
February	30	126,000
March	65	221,500
April	77	431,850
May	73	376,700
June	104	477,500
July	70	648,700
August	105	388,100
September	59	402,850
October	63	257,840
November	68	272,700
December	39	185,200
Total	723	$3,949,140

BRICK BUILDING.

	No.	Cost.
January	11	$475,000
February	5	53,250
March	9	105,500
April	6	173,500
May	6	232,000
June	7	196,164
July	2	52,500
August	7	150,000
September	4	44,000
October	2	37,200
November	5	210,500
December	8	258,000
Total	71	$1,987,614

REPAIRS AND ALTERATIONS.

	No.	Cost.
January	8	$15,500
February	13	25,200
March	10	26,900
April	17	31,450
May	9	84,100
June	26	57,550
July	20	50,500
August	24	44,250
September	32	161,100
October	19	55,300
November	23	50,000
December	27	66,400
Total	228	$668,250

Making a grand total for the year of 1093 buildings, value $6,605,054.

The number of building engagements and their value since 1880 are as follows:

Year	No	Value
1880	397	$1,754,435
1881	533	3,790,732
1882	785	3,896,212
1883	803	5,261,689
1884	1,127	6,202,807
1885	1,457	7,043,999
1886	1,148	6,401,669
1887	1,093	6,605,054

Receipts of Lumber for the Year.

The following table shows the total amount of pine, redwood, shingles and ties received in San Francisco during the year 1887:

Months.	Pine.-Ft.	Redwood.-Ft.	Shingles.-M.	Railroad Ties.-No.
January	21,917,000	9,136,078	3,735,500	18,000
February	8,856,000	5,612,494	2,546,000	28,100
March	16,936,672	10,559,292	6,006,000	85,015
April	16,817,000	6,104,000	1,400,000	8,938
May	12,545,000	10,833,350	1,002,400	53,319
June	21,619,000	3,681,000	751,800	86,860
July	12,825,374	18,446,473	6,389,355	108,751
August	17,158,883	9,479,124	6,577,036	205,701
September	20,898,200	7,488,527	4,973,400	175,293
October	22,519,000	13,649,485	4,344,000	147,268
November	17,835,616	16,761,790	11,936,111	101,503
December	19,981,236	6,943,976	10,008,500	74,788
Total	209,908,981	118,693,590	59,689,702	1,093,536

Subscribe for The Weekly Building News.

A company has been incorporated at Enterprise, Or., for the purpose of building a flouring mill.

A new block is to be built just across Fourth street from the Redlands Hotel, in town of Redlands.

The building occupied by the Land and Town Company will be moved next week, and the erection of the new three-story block commenced. The new structure will be 50x100 feet, and will be built of stone, similar to the material used in the building of the Sweetwater dam.

The Congregationalists have decided to build on A street, Ontaria, and have secured two lots on the southeast corner of Palm avenue.

Twenty houses are under contract to be built at Redlands close to the southern foothills.

The dwelling house on the corner of Main and Second streets, Seattle, was, Tuesday, being raised preparatory to being moved to the north end of the Stetson and Post block, to make way for a business block to be erected by Judge Thomas Burke.

ARIZONA IMPROVEMENTS.

Robert McPherson of McPherson, Los Angeles county, has been in the city for several days in connection with Arizona water schemes. Mr. McPherson is President of the McPherson Canal Company, which is prosecuting a plan for bringing water from the Gila river, and applying it to the irrigating of some 80,000 acres desert land in the neighborhood of Gila Bend. He has also large interests in the St. Louis Canal, which conveys water from the Salt river for the watering of an immense tract of land in the Salt River Valley, near Phoenix, Ariz. Mr. McPherson asserts that water alone is needed to convert Arizona's howling deserts into gardens of fertility.

DEPOT GROUND.

Active work was commenced yesterday laying off the ground for a depot near the cemetery, on the line of the proposed San Bernardino and Bear Valley Railroad. This road is an established fact and work will soon be commenced surveying the right of way. We understand that a right of way has already been procured as far as the foothills near Arrowhead.

OLD SAN JOSE LANDMARK.

It is Torn Down to Make Way for Improvements.

The old adobe house on Market street, near the junction of First, was yesterday torn down to make way for nineteenth century improvements. The house was built in 1846 by Pedro Zepeda and was always occupied by members of his family. In 1852 John Balbach bought land adjoining and also acquired an interest in the Zepeda property. The removal of the house became necessary on account of the recent opening of a new street, 60 feet wide, running from Market to Orchard and lying between Balbach and Colfax. Upon the site of the old adobe will be erected two handsome stores by A. F. Herrmann and James P. Pierce, the present owners of the property.

ABRAHAMSON'S VENTILATORS.

The following buildings are in the course of construction, for all of which the Abrahamson Ventilators have been specified by the architects, and contracts have been made to furnish them for each of the buildings:

In all the class and teachers rooms of three new public schools in S. F.
San Jose Court house.
Fresno Jail.
Merced Young Ladies Seminary.
Woodland Bank.
Woodland Presbyterian Church.
Alameda Presbyterian Church.
Oakland Presbyterian Church.
Also specified in the New St. Mary's College, Oakland.

These Ventilators are also in use in all the principal departments in the United States Mint, S. F.

G. Swabacher's corner, Clay and Franklin streets.

Club Rooms, corner Sutter and Kearny streets.

Residence, corner Turk and Buchanan streets.

S. F. Verein, corner Sutter and Dupont streets.

H. Liebes & Co. fur work-shops.

Bohemian Club.

Many others are specified by architects for large hotels and private residences.

State, County and Shop Rights For Sale.

Work was lately commenced on the second story of C. F. Roe's building on Third street, San Bernardino. The entire upper floor will be occupied by the Board of Trade.

CRAIG,
Notary Public and Commissioner of Deeds,
316 MONTGOMERY ST., BET. CAL. & PINE,
Commissioner for New York, Arizona, Nevada, Pennsylvania, Utah, Oregon, Idaho, Washington Territory, Ohio, Massachusetts, New Hampshire, Illinois, New Jersey, and other States and Territories.
Depositions a Specialty. Acknowledgements taken and oaths administered at any hour of the day or night. LEE D. CRAIG
Residence—507 Turk St., cor. Larkin.

SAN FRANCISCO BUILDING NEWS.

(We give a list of all contracts recorded from middle of November to date.)

Broderick, between Page and Haight. Frame building. Owner W. P. Turner; architect L. B. Townsend; contractor N. C. Post; cost $5200, limit April 28, 1888; Signed Jan. 9th, 1888; filed Jan. 11th, 1888; amount of bond $2500, surety Chas. Moe.

1st payment $1200, to be paid when frame is up and chimney half up; 2d payment $1100, to be paid when house is enclosed roof on, and first coat of mortar on; 3d payment $700, to be paid when outside work is done and house hard finished; 4th payment $900, to be paid when all is done and accepted by architect; 5th payment $1300, to be paid 35 days after completion and acceptance or if said builder shall show all bills clean on the house.

Bartlett and Twenty-second. Two-story and basement. Owner, Henry C. Videau and Ella Videau; architect, Huerne & Everett; contractor, F. W. Kern; cost, $4,250; limit, 85 days; signed Dec. 31, 1887; filed Jan. 3, 1888; filed at request of said architect; amount of bond $4,250; sureties, F Joost and O. W. Norswell.

1st payment, $1,062 50, to be paid when frame is up, rustic on and roof sheathed; 2d payment, $1,062 50, to be paid when brown coat of mortar is all on; 3d payment, $1,062 50, is to be paid when building is completed and accepted by said architect; 4th payment and balance, $1,032 50, to be paid 35 days after completion and acceptance.

Eddy, bet Jones and Leavenworth. Two-frame buildings. Owner, John Manning; architect, T. J. Welsh; contractor, George W. Hanisbrough; cost $10,900; limit, 100 working days; signed, Jan. 3d, 1888; filed Jan. 7th, 1888; filed at request of architect. Amount of bond $8,560. Sureties, D. S. Cartwright, and D. W. Hawley.

Webster. bet. Bush and Sutter. Additions to Six houses; Owner, J. H. Smyth; Contractor, C. B. Kimball; Cost, $4,000.

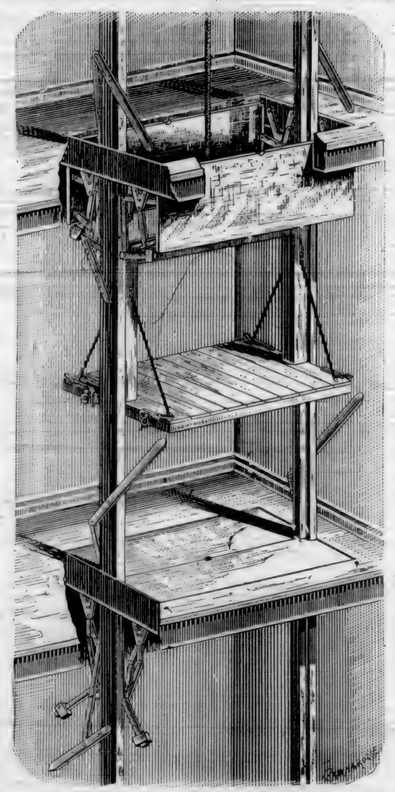
THE PAGE

Automatic Fire Shutter Co. of California.

The Best Automatic Fire Shutter Known.

INCORPORATED APRIL 29TH, 1887.

Manufacturers Under United States Patent of the Automatic Shutter.



ADAPTED TO PASSENGER AND FREIGHT ELEVATORS,

For Protection from Fire in Elevator Shafts, and from Liability to Accident.

PATENTED MAY 10, 1887.

Now in operation at 22 and 24 Jessie St., and 327, 329, 331 Sansome St., S. F. Call and examine the same.

The cut represents a freight elevator, showing two floors of the building. The elevator platform is represented as ascending, having passed through the hatchway of the lower floor. The shutters below the elevator platform have just closed level with the floor, completely and firmly closing that hatchway. The shutters of the second floor are next being opened by the ascending elevator platform, and after it has passed through, these close automatically, in the same manner as seen at the first floor. In the descent of the elevator platform, the shutters open below as it approaches the hatchway, and after passing through, they close again firmly and completely. Each shutter opens and closes automatically as the elevator passes, and are so counterbalanced as to offer no resistance to the ascending or descending platform.

H. W. SEVERANCE,

Manager and Agent,

Office, 219 California Street, San Francisco, California.

Lumber Market.

At a late meeting of the Lumber Exchange the advisability of increasing the retail price of lumber was the subject of much discussion, but upon vote it was decided to make no change in the schedule. The prices below are those ruling Dec. 1, 1887:

Pine, Rough, per M feet	$22 50
Pine, Rough, No. 2	18 50
Pine, Rough, 40 to 50 feet lengths	23 50
Pine, Rough, 50 to 60 feet lengths	24 50
Pine, Rough, 60 to 70 feet lengths	25 50
Pine, Selected	26 50
Pine, Clear	33 50
Pine, Fire Wood	10 00
T. & G. Flooring, 1x6	35 00
T. & G. Flooring, 1¼x6, 1x4, 1¼x4 and narrower	40 00
T. & G. Flooring, No. 2	29 50
Stepping	45 00
Stepping, No. 2	32 50
Redwood, Rough	22 50
Redwood, Rough, No. 2	18 50
Redwood, Surfaced	37 50
Redwood, T. & G. 6 in., 12 feet and over	34 00
Redwood, T. & G. 6 in., 7 to 11 feet	27 00
Redwood, T. &G. 6 in., under 7 feet	24 00
Redwood, Rustic	37 50
Redwood, Rustic, No. 2	32 50
Redwood, T. & G. Beaded, 12 feet and over	36 00
Redwood, T. & G. Beaded, 7 to 11 feet	27 00
Redwood, T. & G, Beaded, under 7 feet	24 00
Redwood, Siding, ½ in	25 00
Pickets, Fancy	26 00
Pickets, Rough Pointed	19 50
Pickets, Rough Square	17 50
Shingles	2 25
Laths, 1¼	4 00
Laths, 1½	4 50
Furring, 1x2, per lineal foot	01
Battens, ½x3, per lineal foot	01
Nails, for 10 d	2 90
Lime, per bbl	1 40
Cement per bbl., according to brand	$2 50 to 4 50
Brick, per M	$6 00 to 11 00
White lead, per lb	06
Linseed oil, 50 cents per gallon in bbl, 2½ cent additional for boiled.	

CARPENTRY MADE EASY.

By Wm. E. Bell, a practical mechanic, who fully appreciates, from personal experience, that there are many things perplexing to understand and difficult to do until they are fully explained and tested. It is designed to make the science and art of carpentry clear and comparatively easy to all who require information on the subject. Price, $5,00 by mail, prepaid.

SAN FRANCISCO, FEBRUARY 15, 1888.

The Editor's Return.

The editor of this Journal has returned from his four months' trip to the East, and hereafter will attend to the editorial management.

Scarcity of Draughtsmen.

Already has the demand for draughtsmen begun. We must admit our inability to fill orders. No competent men are to be had in this city. There are a few floating around, but they are not of that steady disposition required by an architect.

Eastern young men who are thoroughly proficient can find no better field than California. Work promises to be plenty during the entire year. We will cheerfully answer all communications.

ENCLOSE STAMPS FOR REPLY. This announcement is necessary. Last year, more than one hundred letters were received, some of them from England, desiring information on the subject matter, and almost, without exception, we were expected to give our time, to answer letters, and pay the postage besides. This, in future, we must decline to do, and unless a stamp is enclosed for a reply, we will not answer letters.

A Welcome Visitor.

Thos. E. Hill, editor of *Hill's National Builder*, Chicago, is on a tour to this coast. He paid this office a visit, and we were pleased at his remarks in regard to the progress of San Francisco Architecture. He has promised to prepare a paper to be read before the Architects of this city. Due notice will be given of time and place of meeting.

Bound Volumes.

A few bound volumes of 1887 are now to be had. The number is very limited. A copy will be sent to any address upon receipt of $2 50.

San Francisco Chapter American Institute of Architects.

The regular meeting of the Chapter was held on Feb. 3d, in the rooms of the Art Association. President Geo. H. Sanders presided. The following members were present—G. H. Sanders, G. H. Wolfe, J. J. Clark, A. Pissis, R. H. Daley, J. Gash, C. J. Laver, H. T. Bestor.

R. H. Daley, as Chairman of the Committee on Memorial resolutions, reported that at a meeting of the Committee, an appropriate preamble and resolutions had been prepared, and the same suitably engrossed. It was before the Chapter for adoption. On motion, report was received and adopted and the Committee discharged with the thanks of the Chapter.

The discussion was then renewed in regard to the advisability of the Chapter having a "*Book of Registry*" to contain the names of responsible and competent mechanics in the various trades pertaining to the building interests.

Mr. Gash took a favorable view of the proposition and thought it best to have a register containing the names of the various contractors who were proficient in their calling, so if any architect wanted a competent man, he could find his address by consulting the registry. A good man would take pride in having his name placed where it would be seen by the principal architects of the city.

The President remarked that he had called the attention of his partner to the proposition, and it had met with a favorable reception.

Mr. Daley inquired by what process would a name appear on the register—ballot or recommendation?

Gash replied that names would appear as they received the endorsement of the architects belonging to the Chapter.

A discussion ensued in regard to the formality by which names would appear in the book.

Mr. Pissis said, he had not, as yet, found any necessity for such a book, even if one was in existence. The good contractors would not want their names there, as they generally had all the work they could do. It would simply be a scramble amongst the poor and incompetent men to have their names appear where they would consider it beneficial to themselves.

Mr. Daley thought that the members would be placed in a delicate position. Some architects would heartily endorse a particular man, while others, would find serious fault with he same-party.

Mr. Clark had studied the matter a little and thought the best way was to have a "*Trial Book.*" A name endorsed by an architect, was to be placed in the book. Then, if after a certain period, say a month, no fault was registered against the name, then the name was to be entered in the "*Registry.*" By this means, a judicial investigation, as it were, would be made of each name.

On motion, a committee of two were appointed to consider the whole matter. J. J. Clark and John Gash were named as such committee.

John Gash then read a paper on the subject—"*The circle as a factor in Architecture.*" It was received with applause and a vote of thanks tendered the reader.

Mr. Sanders vacated the chair and gave a history of the working of the various classes connected with the Chapter. The principal reason of satisfactory progress not being made, was the fact that no suitable place of meeting could be had. The students should have a large room where they could have models, instruments, papers, etc.; without these no class can be successfully conducted. Two nights and one afternoon each week ought to be devoted to the classes. During the past month in company with another teacher, he had visited various buildings searching for suitable rooms, as yet, however, unsuccessfully.

On motion, it was decided that the Chapter as a whole, be appointed a Committee to secure rooms for the use of the Chapter and students.

Adjourned.

TEN CENTS does not seem to amount to much as it rattles around in your pocket, but sit down and figure up whether it will pay you best to buy two glasses of beer, or two instructive papers.

Some Hints on Building and Estimating.

*From "Hints and Aids in Estimating," by F. T. Hodgson; Industrial Pub. Co., N. Y., as printed in *Builder and Wood Worker*.

The rules known to architects, builders and contractors, for an approximate estimate of buildings by cubing the quantities, are of little services to beginners, unless they possess an intimate knowledge of the different classes of buildings and their values, and can make the proper allowances for extra charges to be added for costly material and enrichment, all of which have to be taken into account. It is always the safer way to take trouble and time in fully preparing a statement in brief of details, both of work and material, when making an estimate, then omissions will likely be noticed and adjusted.

It must always be borne in mind that it is not the mere wall, rough carpentry, plastering and roofing that makes the great bulk of the cost of a building, unless one of a very plain description. It is the decorative part and interior finish and numerous small, but expensive, items that fill up the bill.

In the first place, there should be a design of the building, elevations, plans and details; and no proprietor, builder, or contractor should begin work until these are supplied; for building without a plan is like sailing a ship without a rudder, and is sure to end in trouble and dissapointment, both to contractor and owner. After a plan is agreed upon, and the contract signed, no deviation should be made, as very often what may appear a trifling matter to the owner, may involve so many changes in other parts of the building, as to be more costly than serviceable.

After the quantities are taken out, and written down in the form already given, and the prices current for material and labor in each particular added—the prices being for the completed work, as, for instance, the price of a door should mean the cost of the door, frame, casings, architraves, locks, hinges, mouldings, fixings and hanging complete, including the painting. By adopting this system the estimator will know that each item is complete, and it will almost be impossible to err in the final result. When all the items are written up, and everything is known to be entered, the totals should be made up, and 20 per cent. added to cover contingencies.

It is convenient practice to those unaccustomed to taking out quantities, to note down on the plan of each room the quantity of plastering, cornice, flooring, wainscoating, windows, doors, blinds, etc., contained therein, and abstract afterwards the different items under their proper headings.

The following is a good form for an estimate. Use foolscap paper, and rule the same as this:

Quantities.	Description of Work.	Price. $ cts.
300	Yards, cubic, excavating for foundation walls, drains, posts, etc., etc., and removing stuff	
40	Toises rubble masonry in foundation walls, including all materials set in mortar, pointed, including moving rubbish	
84	Thousand bricks laid in mortar, in walls and in partitions, joists struck, including setting of all walls, plates, boards and offset timber	
3001	Feet lineal, of flooring joists, 10x3, fixed complete, with all trimming pieces, etc	
16	Squares of 1¼-inch matched flooring, laid complete, including nails	
14	Door, 3x7 feet, 2 in. thick, in four panels, moulded on both sides with 7¼-inch moulded architraves, casings, frame and threshold complete, including 3-inch butts and lock worth not less than 80 cts.; hung and trimmed complete	
12	Window and frames, sashes 6 ft. x3 ft. 4 inches in four lights. Frames to be prepared for weights, sashes to be double, hung and furnished with proper window locks. Glass to be ———— brand and well glazed	
12	Pairs of inside shutters or blinds, to open in two flaps or each side, moulded soffit, sills, etc., hung complete	
1	Double windows, etc	
12	Summer blinds, etc	
80	Yards of stucco cornice	
106	Yards of plastering, three coats hard finish, including lathing and all materials	
7	Centre pieces	
2	Stucco brackets in hall	
2	Flights of stairs, including rails, newels, balusters, brackets, and all complete	
20	Squares of shingling, etc., including all materials	

The foregoing description will be a guide for all other items. After making use of these forms, they should carefully be laid aside for future reference.

General Memoranda of Items for Estimates.

Excavations, per cubic yard. Ascertain the quantity of earth to be excavated for foundation walls, drains, fence posts, etc.

Foundation Walls, per cubic foot, 87 feet English, to the toise of masonry. Find the number of cubic feet in walls and footing courses, deducting all openings over 9 feet in width.

Tile Drains. Calculate the number of lengths, bends and junctions required; add cost of laying and connecting, including covering in, etc.

Galvanized Iron and Lead Pipes. State the length and diameters of all galvanized iron pipes necessary, and the weight of lead pipes per yard lineal, together with all traps, overflow pipes, and cocks necessary.

Water Closets. If water closests are to be provided, state how to be fitted up, and cost.

Bath. State description of bath, if of galvanized iron or other metal, including fixing in frame and casing.

Brick Walls, per foot cube. Twenty bricks (of 8 inches x2¼) are generally allowed to a cubic foot. Find the number of cubic feet in the walls, division walls and chimneys; deduct all openings; measure all chimneys as solid.

Carpentry. Under this head commence with the heavy timbers, such as flooring joists, roofing, wall plates, lintels, bond timbers, wood-bricks, insertions for cornices, projections for galleries, studding for partitions, furring for ceilings, skirting, trimmers, etc.; framing for stables, fencing and posts.

Joiner's Work. This will include all floors, doors, windows, blinds, shutters, casings, base, and fittings of every description in wood work; all the different sized doors and windows must be kept separate.

Stove Pipe Rings. State number.

Mantle Pieces and Grates. Number mantle pieces and grates, and state price; provide for hearth stones and fixings all complete.

Closets. State quantity of shelving required, cloak nails, hooks, etc.; omit not to calculate for plastering and skirtings.

Pantry. Describe the fitting up of pantry, wheather with cupboards or open shelves, and state if with sinks, and cost.

Kitchen. State how to be fitted up with shelves, pantry, closet, etc.

Bell Hanging. State number of bells, fixed complete.

Gas Pipes. State number of lights in each room, etc.

Staircases. Describe the different stairs and their length, width and thickness; state the kind of balusters and their numbers, also newels; give the dimensions of hand rail.

Roof. Describe the kind of roof; whether metal and what kind. If slate number of piles of felt under it, gravel, etc.

Gutters and Conductors. State the width of gutters and how to be lined, and also length and direction of gutters.

Outside Porches. Provide for all double doors and constructions of porches as described in specifications, as well as all steps leading thereto.

Fences. State the different kind of fences and take a price at per lineal foot, including gates and everything necessary to complete them.

(TO BE CONTINUED.)

About Lending Tools.

"Idler in the *Manufacturers' Gazette* has a few words to say about lending tools, which we deem worthy to be passed around. There is no practice that deserves condemnation more promptly and severely than this.

"Charley" says: "Never lend a tool to a man who gets less than $2 per day, for men who are not worth that money are not supposed to understand the use of the tools."

"Charley" also says: "Don't lend tools to a man who gets over $2 per day, for that man is able to buy tools of his own."

These rules are worthy of careful consideration by every mechanic. There is nothing more aggravating than the tool-borrowing man, who poses as a brother workman. There are cases where it is right to lend tools, but it is not right to find tools for "wood-butchers" and "pick-axe" mechanics, who steal into a trade of which they know little or nothing.

A man who has brains enough to make him a good mechanic, always takes pride in having a complete set of tools for the work he expects to perform, and it is not right for him to find tools for every "bummer" who may chance to get 'longside him a job.

The monkey wrench should not be excepted, or placed upon the "lending list," neither should the hammer or cold chisel be found there.

It is a good policy to lend a decent man tools until pay-day, especially when the man in question has come to work on a strange job, or on work different from what he has been accustomed to.

If after pay-day this man has purchased none of the tools he needs, it is safe to set him down as a "beat", and never lend to him.

It is true that "circumstances alter cases," but they never alter the "free-lunch" tool fiend into a worthy mechanic. The only way to deal with him is to "say no," and then "stick to it."

Editorial Correspondence.

Boston, January 7, 1888.

After nearly three weeks spent in New York, the great emporium of American enterprise and active life—arrived in this city of crooked, criss cross, irregularly defined, and especially in the old quarters—narrow streets. To one accustomed to the comparatively straight and systematic lay out of highways as found in San Francisco, Sacramento, Salt Lake City, Denver, Chicago, Philadelphia and other cities where some attention has been paid to right angles, equilaterals and parallels, the twists, turns, curves and-all-around-the-compass directions of streets in Boston becomes confusing.

Commonwealth Avenue with its great width, lined along each side with costly and substantial residences, more or less elegantly finished and furnished, but all of the kind in which the outlay has been unstinted, and the beautiful and esthetic sought after and utilized—is one the most striking reliefs from that contractedness everywhere to be found in the Boston of one hundred years ago. Columbus and other avenues, and the extension of Tremont and other streets made to conform to the more modern idea of widths and straightness, are admirable improvements in the highways, and goes very far towards relieving Boston of the reputation long attached as being the city of all cities for crooked streets.

The march of improvments are visible everywhere and on every hand in and around this city.

The numerous modern styles—five, six, seven, eight and ten story brick and stone edifices of recent construction, many of them occupying sites of former antiquated structures, to be seen in the business sections of the city—the filling in of the "Back Bay" district for building purposes; the laying out of scores of miles of new, and the extension—and as much as practical and possible—widening and straightening of old streets and avenues, and the erection of thousands of new buildings, to meet alike the wants and comforts of those who obtained their bread through labor and toil, and those whose pathways through life, dame fortune in her awards for merit and skill in business pursuits or as often—her freaks of bountous gifts at random thrown into hands unsoiled by any honest effort to earn the gold with which their paths seem to be lined, and to whom every luxury of need or purest fancy comes at the bidding, clearly indicate a growth, expansion and enlargement of the most gratifying character to the people of the Hub, and no one need be surprised at any hurrahing or exultation that may be heard from this section of the country or its people.

When size, growth and prosperity of birth place and ancestry becomes the topic of the hour, and when the boulevards, parks and drives contemplated to be made and built along both shores of Charles River shall be completed as now projected, it may be expected that the people of this city who have not traveled widely, will then assert and believe that Boston is a city unparalleled and unequalled by any other upon the American Continent. The Boulevard project, when carried into effect, will certainly be a grand feature in providing miles of pleasure grounds for man and beast, along the borders of the river named, and form a picturesque view of great beauty on both sides of the water.

16th. The appearances outdoors to-day are very wintry. There was snow on the ground upon our arrival in Boston, and there have been several falls since, but none more than four to ten inches up to date on an average in depth, neither of which remained in its glory long, as in every instance a gentle shower of rain wound up the ceremony, and melted away much of the snow, greatly to the disgust of those who had prepared themselves with gingling bells, fine horses, handsome sleighs, elegant robes and all the prerequsites to a pleasant ride, including "Forms Devine" wrapped in mantles and furs, defying winter's fiercest blast.

Such a thing never occurring in California, it seems a strange sight to see brick buildings under way, with their unfinished walls covered and the structure deserted—not a man to be seen anywhere, and the only noise to be heard—the bleak winds whistling through the appertures and among the timbers and scaffolding. The sigh—O, for the "glorious climate of California" was natural and earnest.

Have seen and conversed with a goodly number of Boston architects, and have found them all pleasant, sociable gentlemen, ready to impart all desired information, and to offer their personal attention in any services asked of them. As a rule, all the offices show signs of activity, and architects speak encouragingly of the prospects for the year for this city and its approximities, and some are so confident as to predict that years of splendid prosperity will follow. They report favorably upon the responsibilities, methods and practices of contractors engaged in the building business, as a rule the tricky and untrustworthy being the exceptions. Consequently architectural and building pursuits in this section of country are rendered far more pleasant, than in cities and places where the pre-eminent thought and incentive to action is to make money, with every sentiment of fair dealings and sense of honor between man and man, held subserviant to the possibilities in sight.

Six hours visitation and inspection of, and through the more prominent of *Harvard College* buildings, Cambridge—Mass. afforded an instructive and pleasant passtime.

The newer of the college buildings conform to the more modern ideas in architecture—press brick with stone trimmings—the stone being made a prominent and expressive feature.

In this connection the brick manufacturers' art becomes an important factor, as bricks are made in all manner of shapes and forms, serving very effectively to express many of the prominent details.

Messrs. Burnham & Root have adopted this style for the San Francisco *Chron cle* building, and while there is nothing new in the *style* adopted, as compared with brick structures in Chicago, Baltimore, Philadelphia, New York, Boston, etc., the gentlemen named have enjoyed so large and extensive a practice in that class of buildings, that something unique and excellent may be expected in the details of the edifice.

The interior of *Memorial Building, Law College, gymnasium* and others of the Havard College buildings are very handsome in many of their details and general effects—and an additional beauty met the practicle eye in the character of mechanical execution visible throughout. The contrast between the newer edifices, and those first erected for college purposes, very clearly illustrates the progress that has been made in the science of architecture within the past forty years. The evolutions which have rolled in upon the professions so many and varied changes in conception and delineations, have also modified and changed constructive science in a thousand ways. Many things in construction done and practiced at the present time, and found to be improvements upon old methods, and amply sufficient for the purposes for which they are intended, were unknown in architecture and construction a few decades in the past, or if known and comprehended, were discarded by the architects and builders of former times; and noting the changes in their endless rounds as evolved within the past one-third of a century, who can tell what yet may come to pass, alike in architecture and building, as well as all other arts and sciences.

Leaving the college grounds, a position in front of the old home of the immortal Longfellow called up many tenderemotions—thankfulness that heaven had given to our beloved land one so good and great as he, to be known and recognized the world over as one of the great poets of the age, and sincere sorrow that he and all such human gems could not remain in life with full vigor of body, mind and intellect, far beyond the allotted period of man's existence.

Thence with feeling of patriotic reverence, standing beneath the unleafed branches of the *old elm* tree, where the immortal Washington assumed command of the armies of the feeble few in number, but great and grand in patriotism, valor, purposes and achievements, the impression came with force that the spot whereon we stood was hallowed ground, and that when the people of these United States shall forget or fail to recognize the sacredness of those places memorable in our country's history, and protect and preserve with earnest care, every fibre to the utmost and last possibility, that bears the impress to any extent, of those patriot fathers who imperilled and sacrificed their homes, their comforts and even their lives to rear the Alters of Liberty—free and glorious in every part, and far greater than was ever before enjoyed by mankind, that then the leaves of the tree of liberty should begin to wither and fall, and the oppressions and manacles which our forefathers severed and destroyed return upon an ungreatful and forgetful people

Returning to Boston in the face of a cold bleak wind, with the thermometer below zero, and the ground covered with snow eight or twelve inches deep, was an experience that contrasted vastly in favor of the climate of California. The beautiful snow and fields of crystal ice are all very well in poetry, and even in experience when the experience is tempered withall the antidotes of warm clothing, furs, robes and wraps—blazing fires or heated fumes from furnaces through pipes, registers, etc., but not half so delightful to those unused to the severe chills of winter's bitterest cold, whose breath comes from below zero—when subjected to the severity of blasts so cold and piercing that the blood seems to chill and crystalize in the veins through which it is intended to flow.

As the result of diligent inquiries and investigation all along

the line of travel, from San Francisco to the north-western boundaries of the State of Maine, in reference to matters pertaining to building and fire laws and ordnances, we have found those in operation in Boston to be more comprehensive, well defined and complete, than those of any other city passed through during the journey from the Pacific to the Atlantic Coasts. The system of building and fire laws operating here, including the *Fire Department* in all its specialties as such—extinguishing fires and performing all acts special to the department work. Second—a "*Building Inspectors Bureau*," with a chief inspector, deputy inspectors, secretaries, etc.,—all of course under the control and directions of the Chief of Bureau. This department controls all matters pertaining to the erection, alteration and repairs of buildings, granting permits in either cases, without which no one is allowed to build, alter or repair buildings. Plans in all cases of intended improvements must be submitted for inspection at this office, to be criticized by deputies who possess all the advantages to be derived from a mechanical education and experience in practical building, and therefore fully competent to adjudge and pass upon the merits or demerits of a set of plans, and recommend or disapprove the submittals, subject to revision by the head of the department, whose sanction and approval must accompany every "building permit" issued. This department controls all that pertains to building construction, and full and complete record is kept of every building erected since the organizaton of this department, and of each and every alteration or change made in connection therewith. The library of registry and record is very large and daily increasing, and the written reports that each deputy is required to file daily, fill scores of cases and places of custody. The plumbing department is also under the same jurisdiction, and a corps of competent plumbing inspectors supervise all in that line: so that, while the fire department is in full control over all fire matters, the construction of buildings is placed in hands and under regulations and supervision of such character that the best possible results are attained without any jarring or conflicts, each pursuing the even tenor of its way, and good management seeming to prevail in all the departments.

January 20. The last few pages of this manuscript were pencilled at the old family home of the Emerson family, situated in a beautiful—for Maine—small valley, the boundaries of which forming in part the dividing line between the States of Maine and New Hampshire.

Snow, snow and ice everywhere, as far as the eye can reach, and the winds wafting the snow in almost blinding drifts in the faces of those compelled to be outside, piling up here and there, while through every crack and crevice, however small, the currents force the particles of winter's white mantle in piles within dwellings and places designed for shelter and comfort.

To morrow morning at break of day, sleighs will be awaiting at the door to carry us nine miles away to the cars that will take us back to Boston. The ordeal will require all the courage and daring possessed by three stray San Franciscians to brave the storm, and battle with the fierce winds, cold, and drifting snow that is sure to be encountered—still we hope to survive.

25. Have reached the Hub and find it still stinging cold, but nothing in comparison with the murderous blizzards that have swept over the north-western and other sections of the country, carrying death and sorrow in their paths. But the date, and the dangers of snow storms and blockades on the mail routes remind us that to ensure receipt of this in time for the February issue, it should be consigned to the mail box without further delay; with this only added, that our visit of more than three months from San Francisco to Maine, has been full of interest and pleasure, with not a single event so far occurring to mar or impair the happiness enjoyed. All arrangements to that end being completed, we shall now wend our way homeward as rapidly as possible, and prepare the next *Editorial Correspondence* in the city of San Francisco.

A Western Magazine.

The January number of *The West Shore*, though somewhat delayed in publication by reason of its change of form and increase of size, has reached us, accompanied by an elegant oleograph in nine colors. This is a splendid marine view, showing a large ocean steamer crossing out to sea from the mouth of the Columbia river. The magazine itself is a specially fine one, having numerous illustrations tinted in the pages amid the reading matter. As usual it is full of information about the great Northwest. Published by L. Samuel, Portland, Oregon, at $2 50 per year.

"The Circle as a Factor in Architecture."

Paper read before the S. F. Chapter A. I. A. by Fellow John Gash.

Mr. President and Gentlemen:

I have taken for my papers this evening the "Circle as a Factor in Architecture."

The term Architect is taken from the Greek Architection, meaning a master builder and is known to be used as early as the days of Heredotus.

It is reasonable to suppose that it was the first of arts, since men preferred habitation to dwell in, before the need of the ornaments which the other fine Arts may add.

While its origin was as simple and rude as man himself, yet as the dawn of civilization began to illuminate the human mind, so did it develop with it the first and leading one of the fine Arts.

Of the divine origin there can be no doubt, as animals inferior to man bear testimony thereto, by the display of the instinct they show in their little habitation. The birds adopting the "circle" as their universal style and the bee the Heragon. That man should adopt the Circle as a factor in Architecture would be reasonably expected and that it should hold the first place in the Geometrical laws that were afterwards applied to the use of stone and wood for building purposes giving as the poet says to "airy nothing an existence." And here I would say that it is only when those laws are observed by the Architect that his work may be considered as belonging to the fine Arts.

However skillful the sculptor may be, or powerful the painter may be with his brush, yet if the subject selected is not of beautiful form and symmetry, the eye is not satisfied, and the efforts of the artist is in vain, hence the Architect must ever bear in mind the necessity of the true application of the circle, square and triangle, in his work. Amongst the Ancients the circle was a very prominent factor, not only in Bumlany, but in their religious customs and superstitions, and that it would be so, might be inferred from the solemnity with which the Eastern nations welcomed it, the most glorious of all conceivable or inconceivable objects, the *rising sun*, and as he lifted his head above the Eastern Horizon, and as each portion of its outline developed itself, filling the human mind first with awe, then with joy and gladness as it cast its light and heat all around, making nature itself laugh with joy, and as the Monarch of the day travelled on his course, the grand refrain of nature went after until one grand girde of joy encompassed the whole earth. Little wonder man should take so beautiful a form, as a factor in his work and make it the emblem of "beauty and strength" as shown in Architecture more especially.

That this intuition was universally observed in building, may be manifestly seen in the Ancient Architecture of Egypt, India, Persia, China, Greece and Rome, but while the circle may be said to be applied in the grand plans for buildings in the above countries, it remained for the Roman Architect to make the circle the factor of classic Architecture and the stepping stone of building to be classed as the foremost of the so-called "fine Arts."

While the Architect of Greece may take the tree as a factor for the columns of its temples, she can nevertheless lay but very small claim to the circle, having more a love for the Ellipses as may be seen from the ground plans of many of her public buildings and the general profile of the molding employed in her ornamental decoration.

To Roman Architecture are we indebted for the "Circle as a factor in architecture" both in the ground plans, columns, moldings, and general proportions. Taking a circle for the outline of the length and height of the building and regulating therefrom the height of its columns, taking the diameter of one of these for a module or unit of measurement, every height of column, its capital, front, cornices, and every member thereof, being some portion of the diameter of the column which is used as a unit of measurement. To the researches of Gwilt, Sir William Chambers, Palladio, Vignoli and others are we indebted for those measurements, as taken from the Theatre of Marcellus, The Temple of Concord, Colloseum, The Roman Pantheon, The Temple of Bachus, The Arch of Tetus, and the Farnese Palace at Rome. In each and all of these you will see the semi-circle and quadrant of a circle the factors employed in various proportions with the fillet forming the cornices and facades of the above buildings.

The diameter of the column being the unit of measurement, what is known as the five orders of Architecture is distinguished by the number of diameters in each order, the Tuscan being 7 dia, the Done 8, the Ionic 9, and Corinthian 10, and from these diameters the entire outline of the orders are measured.

It is true the Capitals and Entablatures are destructive and different, nevertheless the principal is the same and all based on the circle as a factor.

It is sometimes foolishly remarked how singular it is that a new order is not yet discovered by the American Architect.

It may just as well be said why does not a new system of calculation be discovered, but just as long as the nine digits are adopted as the basis of calculation, so long with the present system of calculation exist and so it is in Architecture, so long as the circle remains as the factor of assign, so long with what is known as the five orders exist. While classic architecture thus used the circle as its factor, it yet remained for Gothic Architecure to give it the soul like existence which it has, as may be seen not only in its moldings but in the ground plans, doors, windows, naves, aisles, spiresand towers of its building. The *semicircle* starting as some small river rising as if from the sands of time, and becoming a leading factor in what is known as the Norman style, as may be seen in Westminister, Winchester, Ely, Oxford and in fact in all churches and buildings of the 11th and 12th centuries. Nevertheless much earlier specimens of Architecture claim the semi-circular arch, examples of which may be found in Egyptian tombs dating as far back as the building of the Pyramids, the Arch of Cloacci, Maxima in Rome, constructed in the reign of some of her earlier irngs. The *semi-circle* wended its way into the 12th century and there known as the early English flowed on in every conceivable form that the genius of the architect could conceive, the pointed arch formed by the intersection of two circles with equal radius, formed what may be called the true Gothic Arch, the circular or rose window with its trefoils or three circles, the quatrefoil or 4 circles, the ball floor used as an ornamental molding, being a globe like figure with trefoil six rings in its face.

Perhaps the best example of this class of rose window is to be found in Lincoln Cathedral, York Cathedral, St. Ouen in Rouen and Strassburg Cathedral. Flowing o'er into the last half of the 13th century, what is known as the *decoration period*, the circle cuts a very prominent figure—more prominence being given geometrical figures in this period than any other, also the soft curvings of tracery like the winding of some mighty stream, softly curving and branching into numberless tributaries, so beautiful, does the tracery of this period blend one part of a circle into the other, that nature seems almost surpassed in beauty—St. Mary's of Chiltenham and others being fine examples.

The ever changing hand of time still varying in style, flows into the transition or perpendicular style of the 15th century by reason of what was called the Flamboyant style, of the last century introducing in its place, the square and rectangle style, the pine Gothic and Lancet Arch was a leading factor as may be seen in York Cathedral, Swinbroob Oxfordshire, the new College of Oxford and also Merton College. In the 16th century the Roman style was revived, intermixed with Gothic details and known as the Renaissance, and revivng the semi-circular Arch, the circular Dorne, the circular Apee, a marked feature of the church architecture of this period.

Thus you see the circle played a very marked factor in architecture and not only in that but in navigation and astronomy and it is the leading factor. By the use of the circle and the labors of Sir Isaac Newbon, Napier and others the navigation can as miuutely travel the pathless ocean, and by his quadrant locate the island he may discover with the same pression as an Architect would a door or window in a building.

In like manner the Astronom through the labors of Gallio, Hersith, and others so carefully the orbits of the heavenly bodies that the very day and hour of an Eclipses can be foretold hundreds of years ahead.

The great mathematician of the ages past have been found in the circle, no easy problem it being yet an unsolved question to find the exact ratio between its diameter and circumference and being a perfect figure in itself it plays sad havoc with the square and triangle and yet by ehe compass taking one extreme of the diameter of a circle, as center and the center of circle as radius and describing an arc joining the other extreme end of the diameter with the two points where the arc cuts the circumference you form an Equalateral trianglo inscribed with a circle. The sections of a circle by geometrical lines form man a very pleasant study nor only to the architect but to all lovers of geometry Fluids as well as solid bodies are under circular influence Quicksilver when separated from the ore and raised in smoky vapor, being finally separated, forms into liquid bodies, each particle of which is a globule in itself and water when separated into separate drops, form into globules in like manner. The pearly tear that falls from the eye drops in the form of a circle and as the poet beautifully describes it:

"The very law that molds a tear,
And bids it trickle from its source.
That same law preserves the earth a sphere
And guides the planets in their cource."

Wonderful figure without beginning or end, what a fitting emblem of Divinity itself.

Campo Seco Stone.

Winters, Cal., January 31st, 1888.

To the Publishers of The California Architect and Building News:

In the present (January) number of California Architect and Building News I see an article, headed "Campo Seco Stone," which attracted my attention in as much as I believe we have the same or something very similiar near Winters in inexhaustible quantity and very easy of access—the Winter & Ukiah R. R. will cut through a fine ledge of it. The road is already graded a few miles out of Winter, past or through the quarry. I consider it one of the best building materials extant—considering cost.

In 1861 the undersigned superintended and planned a house (farm house residence) for the old California Pioneer, John R. Wolfskill, Esq. He thought to build an *adobe*, but I prevailed on him to use the soft stone—so we called it here. Some said it would not bear its own weight, but I was satisfied that it would make a substantial house if properly constructed. I came to the conclusion from noticing the stone where it cropped out of the ground and had been exposed to the sun for many years, had become quite hard and in some instances had become parcially glazed over, similar to arch brick in a brick *kiln*. When it is first taken out of the ground (when it is damp) it will scarcely bear its own weight; it is so porous when it gets dry (which it soon does in our hot sun) it is not heavier than green wood.

When I commenced the house I knew but little about how to handle stone, and could find no one who knew any better than I did, so I had to study and experiment. I got a couple of brick masons to lay the stone, and had to use farm laborers in the quarry and to saw up the stone at the building. I got a cross cut saw, and set two men to work, but the saw soon got dull and I very soon found it would not do to file it every time it got dull, so I set my wits to work to devise "ways and means" to cut or *gum* the teeth. I made a pattern for a die and clamp and had a rough blacksmith to make them. In that way we got along very well. However, should I have another job I would go to the saw works and get a *soft saw*, they are just as good and I *think* better than hard ones, and they are easily gummed, and I would also go to a machine shop and get something made so the saw could be easily sharpened. We used up eight cross cut saws on the job. The house is 52 feet front, by 22 feet wide, with an L 22x33 feet, all two story high. The first story walls are two feet thick, and the second are eighteen inches thick; the partitions are twelve inches; the house is the most comfortable to live in there is in this part of the country; cool in summer and warm in winter; it is a non-conductor of heat or cold; is perfectly fire proof.

My great anxiety during the building of the house was in regards to the plastering. I was afraid the mortar would not cling or hold to the stone. When the plasterer got ready to commence operation I sent a man ahead of him with a water pot and had him wet the walls as wet as they could be made. The result was entirely satisfactory. The plaster stays better on than any house in this vicinity.

Twelve years ago Mr. W. came to me and asked me what I thought he had better do with his house, he said the mortar joints on the outside (where they were most exposed to the weather) were open and mortar had got out of some of them. I advised him to have it painted and *sanded* (after having it well painted up). He done so, and it looks as well to-day as it did the day the painter finished it. The house does not possess any architectural beauty. It was built a long time ago. I got the *study* from Ranlet.

If you can pick out anything in this communication that you think will interest the *readers* of the California Architect and Building News, all right; if not consign it to the W. B. I will cheerfully answer any questions, that I can, should any one wish to learn anything further. I should be glad to see *the stone* in use, I believe it can be got cheaper than brick and is much better for residences. When the walls are thoroughly dry, then paint as above. There is no damp. Any one who would take the trouble to come to our town and call at Mr. Wolfskill's ranch could see for themselves. Mr. W. takes pleasure in showing his house and orchard He has date trees in bearing and most everything else.

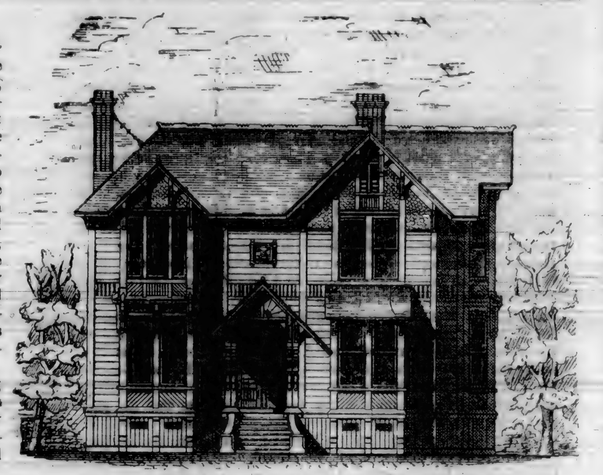
Respectfully,

T. D. Ball.

A Country Dwelling.

The principal object of anyone contemplating building is not only to have a symmetrical, attractive elevation, but to have the interior well arranged, and suitable to their wants and tastes. A building may have many projections, and look very neat and attractive from the outside, but it is often the case that when the interior is examined, the arrangement of the rooms, halls, stairs, etc., is so poorly designed that no person understanding the value of a convenient house would care to live in it. This difficulty is easily overcome by careful study, and judicious arrangement of halls, closets, sideboards, etc. The cuts on this page show the elevations and plans of a building especially designed for a country residence. To give full effect to the design, it should be built at some distance from other buildings, surrounded by tall trees and shubbery. One would at once notice its homelike and picturesque appearance.

The front entrance is protected by a projecting gable, supported by neat columns. The front doors are double and neatly panelled. The bay window is covered by a heavy projecting gable, and furnished with pilasters and panels. The house should be painted in parti-colors.



A COUNTRY DWELLING—SALFIELD & KOHLBERG, ARCHITECTS.

The rooms are all large, well lighted and with ample means of ventilation. Closet room will be found in abundance. No wash bowls are shown in the bed rooms, but they are so arranged that should the owner desire the same, there is desirable room for one in each apartment. The rear porch is so arranged that in hot days it can be used as a dining room. If another room is wanted, it can be easily had by making the kitchen two stories high, instead of one as shown.

Saltield & Kohlberg are the architects. Any information in regards to the plans given will be furnished by them.

Their office is at 339 Kearny Street.

The Marshall Monument.

Miller and Pinkham have prepared a competitive design for the "Marshall" monument. The lower portion of the base consists of granite blocks one foot in height by fifteen feet square. On top of this is a similar layer of granite thirteen feet square by two feet in height, the corners projecting and sides leveled. On each projecting corner there is a bronze bear; while on the leveled sides is cut in large letters "Marshall." There is still another layer of granite one foot in height by six feet square, which supports the pedestal; four feet square by five feet six inches in height. The lower portion of the pedestal is finished with base and brackets; the upper with molding. The pedestal is polished and on each side there is a sunk bronze panel with the following inscription, and sketches: "Sutter's Mill, location of discovery." The "Great Seal of California" (while in the Godess' hand is held a wreath) "To the memory of Jas. W. Marshall, Discoverer of Gold in California." On the fourth his nativity, age and a historical sketch.

This pedestal is surmounted by a granite column cylindrical in form, sixteen and one-half feet in height, four feet in diameter at the base, and three at the top, finished with molded cap. Standing on this, is a figure of Marshall six feet and six inches in height. One foot is perched upon a rock, while his elbow rests on his knee and in his hand he holds a nugget, which the attitude of the figure would suggest he was contemplating.

The height of the entire structure is thirty-two feet and six inches. The whole presents a very striking appearance, being of fine proportions, original in design and historical.

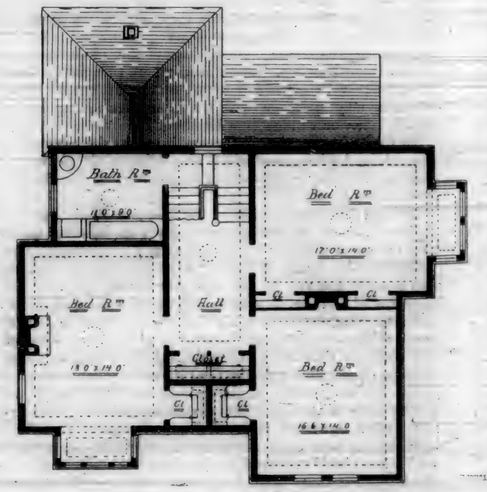
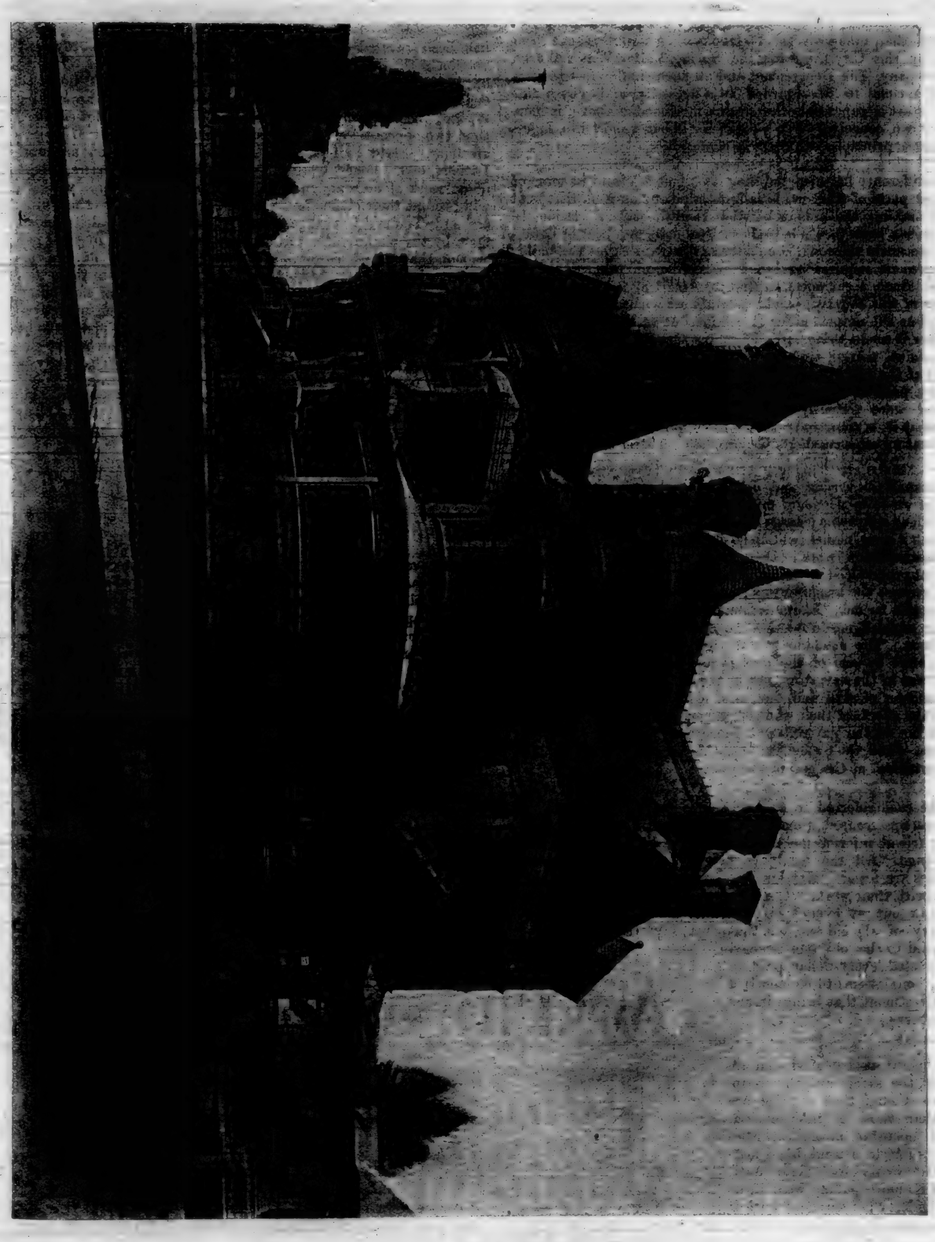
FIRST-FLOOR PLAN COUNTRY BUILDING.



SECOND-FLOOR PLAN COUNTRY BUILDING.



A RESIDENCE IN SOUTHERN CALIFORNIA.

Another Reliable (?) Journal.

Another party has been found who intends to start a journal, one of the principal aims being to give a full and accurate report of all building contracts, recorded and unrecorded, etc. The prospectus claims that it is the only journal that gives such information. *This is a palpable falsehood*, and one that condemns the whole project, almost before it is placed before the public. For more than nine year the California Architect has been taken by the City Assessor, the Spring Valley Water Works, Gas Company, Fire Department and all such similar institutions. It has become to be regarded as a necessity, and why a man should start a paper flaunting such a falsehood as above, is more than we can conceive. We predict for it but a short life, unless its business principles are entirely changed.

The difference between building in America and in some of the older parts of the world is illustrated by an item that is at present making the rounds of the English papers. Some 16 years since a town hall was built at Rochdale, at a cost of $150,000. Recently the town council have discovered that the building at present requires thorough re-roofing and other expensive repairs. Such occurrences as this in America, at least in many portions of this country, would pass almost without notice, being accepted as the natural order of affairs, but on the other side of the water it seems things are different. One of the aldermen, on the occasion named, took the opportunity to denounce the contractors of the building, stating that they had scamped the work in every possible way, and measures by which they might be punished were seriously considered. The item in question concludes that it is monstrous that a town hall which was erected at so great an expense should require repairs after only 16 years.

Owners of expensive and delicate wood-working machinery too often waste by economy misapplied. Not long ago I visited an old friend who owns a large establishment. He was complaining about a new planer which he had lately put in. It would not do satisfactory work. It seemed to be balky. The superintendent pronounced it "no good," and it was left standing idle. At my request the machine was started and a specimen of work was brought to me. Examination of the work and then of the machine enabled me to remove the cause of trouble in less than a half-hour. The machine was all right. It is one of the best planers built by one of the best firms in the country, and the trouble was in the operators, not in the machine. The operators were not men of skill and tact, and every machine in the place showed the effects of their want of judgment. They were "cheap" men so far as the pay-roll was concerned, but they were very dear men when the owner made up his record of profit and loss and reputation at the end of the year.

* * *

In the case referred to a change was made. A new superintendent was secured, a man who has tact, skill and experience, and my friend informs me that already he sees the benefits of the change. All the machines now run well and satisfactory. Stoppages are fewer. Repairs are less. Customers are better pleased with their work. The men are instructed how to get the best work out of every tool. The new manager receives twice the salary of the old one, but the owner says that, where every dollar paid to the old one seemed to be wasted, every dollar paid to the new one seems to be merely a good investment that brings immediate returns.

* * *

The moral is that good men are the best, the safest and the cheapest, even though their salaries are larger than those of inferior men. A good operator never furnishes machines for the second hand market. He wears each one until there is no more paying wear in it. When he has "got through" with it the planer is only fit for the scrape pile.

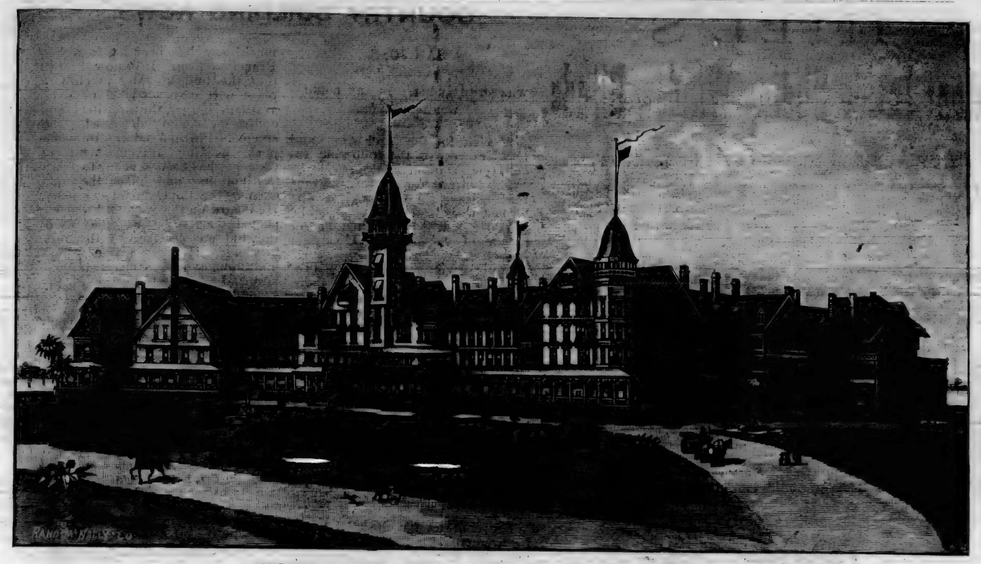
It is intimated in Chicago that the coming building season is casting a shadow before it in the shape of a renewal of the demands of the workingmen who were defeated last season in their attempt to secure higher wages and shorter hours. This excludes the bricklayers, who feel bound by the results of the arbitration which was had in their case, also the gas-fitters, who have a contract with their employers which they will respect, and the stone cutters and stone handlers, who are also expected to abide by the terms of the contract made some time since, but it includes almost all other classes of working men employed in the building trades. The following scale has been printed in the Chicago daily papers as embodying a portion of the demands which will be made: Carpenters, 35 cents an hour for eight hours' work. Cornice-makers, eight hours to constitute a day's work at $2 50; regulation of the apprentice system; no shop employing less than 30 men to be allowed more than two apprentices. Painters, eight hours' work at 37½ cents an hour. Slate roofers, eight hours' work at 35 cents an hour. Lathers, eight hours' work at $3 a day. Hodcarriers, eight hours' work at 30 cents an hour. The tin and sheet-iron workers will present their claims for an adjustment of rates to the Builders' and Traders' Exchange in a few days. The scale decided upon by the workingmen will average an advance of over 10 per cent on that of last season. It is stated on the part of the employers that it is not likely that they will acceed to these demands—at least not without a struggle. There was no feeling of amity between the employing carpenters and their men after their trouble of last summer, and the feeling at present is of the same nature. The master carpenters' is the strongest element in the Builders' and Traders'-Exchange hall. That body is likely to oppose the journeymen as radically as ever. Should the action of the masters be against accession, a general strike in the building trades will probably be set for May 1. This will be a most unfortunate occurrence for the Chicago building trades and allied interests.

Wood Working Chiplets.

By Job in Lumber World.

Operatives in wood-working establishing are necessarily subjected to the unpleasant and unwholesome effects of dust, and in planing mills and similar establishments it seems to be impossible to escape this nuisance. Modern shops are supplied with machines for carrying away much of the dust and shavings made by wood working machinery, but even in the best-equipped shops the workers are obliged to inhale more dust than is wholesome. I have always noticed that planing mill, saw-mill and furniture factory operatives, and in fact all men who work in wood, have a peculiar appearance that is the result of inhaling wood-dust. An observer would never mistake an old planing mill operator for a worker in a machine shop. Each bears in his face and general appearance the marks of his occupation.

In wood-working shops it is the men in the smaller plants who suffer most from the baneful dust nuisance. I have seen large and well-furnished planing mills in which there was very little dust flying, even when every machine was in full operation, while in a small shop I have seen one planer make the air solid and unbreathable with dust. Every occupation has its unpleasant features, and this is the most unpleasant feature of wood-working.



SOUTHERN CALIFORNIA HOTEL ARCHITECTURE—REID BROS. ARCHITECTS

Don't Take a Back Seat.

Make up your mind you will have a front seat in life, and attract to you the powers that carry you to the front seat. If (in mind) you take the back seat, you get only the back seat. The confident determined mood of mind, steadily kept up, brings to you other confident people. Confidence, in the business world, means both cash and credit.

Don't be a screw! What keeps thousands of noses on the grindstone of hard times, is that they have no confidence or courage in themselves to take risks or responsibilities. They keep a poor-house in their minds and live in it. They aspire to be only a screw in the business machine, instead of striking out and making a machine of their own. The screws are book-keepers, telegraph operators, clerks, and all who never hope or plan for anything beyond a situation and steady wages. Confidence and brains combined find such screws ready made by the thousand. They make the screw do as much work for as little money as possible. When one screw is worn out they throw it aside and get another.

The screws find fault with the monopolist. Their real slavery is in their own minds. They never think, aspire, plan, or demand in thought to be anything but screws. They think there is no place for them at the head of abusiness. Their first and great step towards staying permanently at the tail of a business lies in thinking that they must remain at the tail.

Real business does not lie alone in being industrious. The goody-goody books and maxims have only told half the story about industry. A great deal depends upon what you are industrious about. If you spend all your time in polishing pans or blacking boots, your industry won't carry you very high. The industrious mind in a rested body plans in an hour what brings in more money than a tin pan polisher may earn in a year. People who work only, or mostly, with their bodies, have as good a right as the capitalist to work with their minds. The world always wants new things, more curious things, more improved things, more amusing things. No workman in any trade, any art, any profession, should be content with doing what some one else has done before him, even though he does it well. He should aim at doing something better than any one has done before him. When he can do this, he must next push it on the world's notice.

Push is a talent as much as skill in any art. You can commence pushing by imagining yourself a pusher. Keep yourself before yourself in your mind as a pusher, and such a frame of mind will at length make you push. There is a power of continual imagination of yourself in any certain character which does make you more and more like such character. Imagine that the best belongs to you, and you will find the best coming to you. Imagine the worst—see yourself in the poorhouse—and the poorhouse comes to you. Success, like charity, must commence at home—in the mind.

If now you are compelled to live in a poor room, and on poor fare, do so only under protest. Keep your mind on the better room and on the better fare. Don't say "I s'pose I must always take up with this." But say, rather, "I am going to have better things than these." You are then creating for yourself strength, not weakness. You are then ever strengthening this inexplicable mental attraction which will bring these things to you.

Bound Volumes.

A few bound volumes of 1887 are now to be had. The number is still very limited. A copy will be sent to any address upon receipt of $2 50.

Sawdust waste continues to disturb some of our esteemed cotemporaries. One of the most esteemed, the Chicago *Timberman*, figures out that in 1882 the Saginaw river mills sawed 1,000,000,000 feet of lumber, and that 200,000,000 feet of the timber went into sawdust via the circular saw. Estimating the cost at $14 a thousand, our cotemporary decides that lumber worth $2,800,000 was in that year in one section turned into sawdust and burned. It is claimed that this wastage could be reduced twenty per cent. by substituting the band saw for the circular saw.

If your town has no efficient fire department, give your people no rest until one is provided. It is the duty of every one to help create a healthy public sentiment in this respect. A town that is "at the mercy of the flames," and whose people have not enough public spirit to provide fire extinguishing apparatus, is not a town fit for a wise man to live in.

HILL'S

Patent Inside Sliding Window Blinds,

Are Adapted to any Style of Window,

And Suitable for all Buildings, Dwellings, Stores, Office Buildings, and for Houses Built to Rent, Hotels, Boarding or Lodging Houses are Unexcelled.

They are entirely inside of the window casing, and while requiring no furring out or boxing, make it an impossibility to tear curtains, interfere with plants or window ornaments, or become broken by contact with chairs or other movable articles.

The light can be admitted and sunlight excluded from any part of the window; can be instantly removed and taken to any part of the house to clean and as easily replaced.

They can be opened or closed with the window raised, and without removing articles from the window-sill, and cannot blow open or rattle. The Blind is very light (one-half inch in thickness) and strong, possessing more durable qualities than a hinged blind one inch in thickness.

There is no sagging, banging, or getting out of order.

They are made in three sections in height (each section sliding past the others), and any number of divisions in width corresponding to the folds in the old-fashioned folding blinds. They require no hinges—all trimmings furnished with blinds—are made of all woods, finished or unfinished.

The Blind manufactured throughout the United States and Canada by the members of the HILL SLIDING BLIND ASSOCIATION, is the only sliding Blind ever put into practical and general use, or that has been adopted and used by the leading architects and builders, both East and West.

It is rapidly displacing the objectionable folding blind, also shades, which since they have ceased to be considered the fashion, are used principally in cheap dwellings and t nements.

The Hill Blind is the only sliding blind made of white cedar, and where the grooved slide can be used as the window stop, or placed on the pulley stile, similar to the ordinary stop—"the slide is only 2⅜ inches wide"—plenty of room can be obtained by setting the casing flush with the pulley stile, in light studded buildings. NOTE.—Any other sliding blind using the slide as the stop for the sash, is an infringement of our patents of February 26, 1884, and February 24, 1886, and anyone selling, using, or making such a blind will be prosecuted by the HILL SLIDING BLIND ASSOCIATION, as they are determined to stop the sale of several cheap and worthless imitations.

The Hill Sliding Screen, working the same as the blind, is the only screen covering one-half of the window, which will remain at any desired point, and which can be instantly removed, when not required, or to clean the windows.

Over eight thousand sets have been specified and put in, throughout the Pacific Coast, since April 1, 1885.

We refer to the following prominent architects of San Francisco, who have used or specified the Hill Blind and Screen; also hundreds of owners throughout the Pacific Coast:

Miller & Armitage, Pissis & Moore, H. D. Mitchell, John Marquis, John M. Curtis, Moore & Schultze, J. T. Kidd, J. B. Humphreys, T. J. Welsh, Jas. E. Wolfe, Townsend & Wyneken, Chas. J. Devlin, Geo. E. Voelkel, Copeland & Banks, M. Balczynski, Edw. R. Swain, Chas. V. Pierce, S. & J. C. Newsom, Wm. Mooser, Chas. Geddes, Macy & Jordan, H. T. Bestor, A. A. Bennett, Salfield & Hohlberg, A. J. Barnett, John J. Clark, G. V. Capelletti, P. R. Schmidt, M. P. Schetzel, Clinton Day.

HINDES & MURRAY,

Main Office and Factory, 411 Mission Street, Corner of Fremont.

Sole owners of the right to SELL and MANUFACTURE for the Pacific Coast, except Counties of San Diego, Los Angeles, San Bernardino, Santa Barbara, Kern, San Luis Obispo, and Ventura in California.

COUNTRY BUILDING NEWS.

SAN JOSE.

WHAT THE ARCHITECTS ARE DOING—WORK GOING ON.

A visit to the architects and builders reveals the following encouraging state of affairs:

The contract for erecting a seven-room cottage for W. T. Oliver was let last week, the lowest bid being $2,650. It will be situated on the corner of Locust and Goodyear streets.

Louis Scheller will build a two-story brick structure on San Fernando street, the lower store to contain two stores and the upper fifteen office rooms. Contractor Scow will build it and the Santa Clara Valley Mill and Lumber Company will furnish the mill work. The cost is $7,453.

The contract for constructing a two-story brick building for J. T. Colahan has been let through Jacob Lenzen & Sons for $3,300. The lower story will contain one store and the upper eight office rooms. It is on the site of the old Chinatown facing on San Fernando street.

The contract for the mill work for a cottage for R. C. Stiller has been let through the architect, Theodore Lenzen, to the Independent Mill and Lumber Company. The cottage will be finished with a brick cellar 35 by 45 feet, which will be fitted up and used for wine storage. The dwelling part will contain seven rooms. Total cost over $3,000.

P. Maguire intends building a double house containing six rooms in a suite on the corner of Fourth and San Fernando streets, and a similar one on the corner of Pleasant and San Agustin streets, for renting purposes.

Architect Page has prepared plans for a $5,000 house on Third and Julian streets for G. B. Bowman and a $1,000 office for Dr. Pierce, at Second and St. James streets.

J. Lenzen & Son have plans for a cottage for Mr. Habuemann at San Carlos and Locust streets, to cost $1,450; frame cottage with brick basement for Mr. Oliver at Goodyear and Locust streets, $2,700; on Fifth, between St. John and Santa Clara streets, one-story frame for Mr. Coats, to cost $2,700.

The following houses are being built in different sections: On Lenzen avenue for Mr. Rohb, one-story, $2,500; on Tenth street, near Santa Clara, three frame cottages with finished brick basement, for N. B. Edwards, to cost $2,000 each; on Park avenue, between Vine and Orchard streets, a one-story cottage for Mrs. Ferrel, to cost $2,600; two cottages on St. James, near San Pedro street, for Mrs. Ables, to cost $1,500 each.—[Herald.

AN IMMENSE ESTABLISHMENT TO BE ERECTED IN OAKLAND AT ONCE.

The scheme for erecting an immense pork packing establishment in the suburbs of Oakland is being energetically pushed, and it is now announced that the erection of the building and establishment of the industry are only questions of time. Already $250,000 has been subscribed, and United States Senator, John P. Jones is said to have secured a controlling interest in the enterprise. A site has been purchased on the low land near the foot of B street at a cost of $11,000, and the contract for the necessary machinery has been let to a San Francisco firm. It is now known that the building and machinery plant will cost $100,000 or over. William Berger, the architect and contractor who designed and erected. Philip Armour's immense pork packing establishment in Chicago, has been sent for to erect the building and place the machinery for the Oakland company. He is now on the way, and was expected to arrive last Saturday evening, but was detained by the snow blockade. He may arrive at any hour now, and as soon as he gets here and has time to look over the ground work is to be begun. It is estimated that this enterprise will be backed by a capital of $1,000,000, and will become one of the city's largest manufacturing interests.—[Tribune.

SACRAMENTO.

The Siller Bros. have purchased lot five, on the southwest corner of Thirteenth and P streets, of J. M. Beebe, and will commence immediately to erect four neat cottages, two fronting on thirteenth street and two on P street. That part of the city is fast losing its vacant lots and will soon be compactly built. The lot above referred to was purchased five years ago for $1,000, and was sold for $2,000. Between four and five years ago this entire block was vacant, and now it is expected that within three months the last vacant lot will be built upon and occupied.

At the awarding of the contract for the building of the new addition to the Odd Fellows Temple, on Ninth street, between J and K, Tuesday evening, George B. Dean, a Sacramento contractor, secured the prize. His bid was for $8,888.88, and the work is to be completed by June 1st. The new addition joins the old hall on Ninth street, and will be twenty feet wide by eighty feet long, and three stories high. The architecture, externally, will conform with the old building. The new part will be used for a banquet hall and Lodge rooms.

A NEW LODGING HOUSE.

Dr. Bogart is building a two-story frame boarding and lodging house on his property on E street near First. The building will contain thirty rooms and will be completed in thirty days. San Bernardino is sadly in need of lodging houses and it is to be hoped that more persons will build them. It is firmly believed by those interested in the future prosperity of San Bernardino, that there will be sufficient demand for furnished rooms in this city to fill all the lodging houses that can be built within the next five years and there is not a better investment in the county than in the building of such places for rent.—[Daily Index.

ANOTHER THREE STORY BRICK.

The Farmers' Exchange bank San Bernardino, which institution has recently puchased that property on Third street on which now stands two frame stores occupied by the Capitol saloon and McGill's Furniture store, have given the tenants of those places notice to vacate within thirty days, when the directors of the bank will immediately commence the construction of a fine three-story brick building on those premises.

SAN DIEGO.

A house containing flats is being built for D. C. Collier, on Seventh street, near Cedar.

J. Pattinson is the contractor for a ten-room lodging house on Arctic street between A and Ash.

The brick work has been begun on Chadbourne & Co's block, on the corner of Fourth and C streets.

Four frame building are being erected for Sidney Thomas on lots A and L, block 326, Horton's addition.

Schioder & Weary, architects, are prepairing plans for an $8,000 residence, to be erected near the Hotel Del Coronado.

Work will soon be commenced on two two-story frame tenement houses on Ninth street, Thomas B. Sanderson is the owner.

A two-story residence is being built for F. O. Wadsworth on G street, between twenty-fourth and twenty-fifth. The cost will be $3,600.

A five-story brick building with frontage of sixty-five feet, will soon be erected on Fifth street, between C and D streets. Nesmith is the owner.

J. Van Claine is the owner of a three-story lodging house being built on Seventh street, between J. and H. In size it will be 50x70 feet, and the cost will be $7,000;

The erection of the Grand Army building, designed by Bordwell, Kooken & Co., will soon be pushed with as much energy as possible. The excavating has already been begun.

James W. Reed is the architect of a $50,000 residence being built for H. L. Story, opposite the Hotel Del Coronado. The house, stable and carriage-house are to be of stone.

Arrangements are being made to build two first-class apartment houses, 25x60, three stories high, on Orange avenue, Coronado Beach. T. Thompson and T. J. Fisher are the owners.

Plans have been drawn for a ten-room cottage for R. K. Clark, to be erected on H street, between Twenty-third and Twenty-fourth. It will cost $3,000. C. F. Kirby is the architect.

Clements & Stannard are the architects of a three-story veneered brick business building now being erected on Seventh street between F and G. In size it will be 50x80 feet. The cost will be $10,000.

The large frame hotel being built for N. E. Nason on the corner of D and Front streets is nearly completed. The building is 100 feet square and four stories high. It contains 100 rooms, and is to cost $25,000.

A contract for the erection of a residence for J. G. Gordon has been let for $5,300. In size it will be 53x38, two stories in height, with ten rooms and a detached kitchen. Bordwell, Kooken & Co. are the architects.

Work is in progress on a two-story business building on Fourth street, between F and G. It is to be 50x90 feet in size, and will contain twenty-nine lodging rooms on the upper floor. Tallefer & Co. are the contractors, and Boswell & Cook, the architects.

Building improvements in this city during the past week were pushed with even greater activity than usual. The principal rush is in the direction of business and lodging houses, although a large number of fine residences and cottages are being built.

W. T. Whiteway is the architect of a large three-story building being erected on Seventh street, bet. G and H. In size it will be 50x88 feet. There will be two stores on the lower floor and thirty lodging rooms above. The cost will be $10,000 A. B. Foreman is the owner.

SAN BERNARDINO.

A steam laundry is wanted in this place.

Bids are wanted for the new Cunningham warehouse.

J. W. Kent is building an elegant residence on the Martin tract.

Numerous artesian wells are being sunk in different parts of the valley.

A dozen or more nice looking cottages are going up on the Boren tract. A year ago the place was a howling wilderness.

J. E. and M. W. Littlefield have the contract for five new Andreson-Drew block. It will be 3 stories high, 80 by 100 ft. in size, with a wing 32 by 80 ft.

A gentleman just in from Chino says that ground has been broken for the smelting works soon to be erected. When in operation Chino will be a right lively spot. He also said that the narrow guage road between Ontario and Chino is nearing completion. When the whistle of the engine is heard keep an eye out for an unusual boom.

PERRIS.

George S. Blethen, of San Diego, is going to move here, and will commence his residence this week.

Mr. Reyon, one of San Diego's oldest citizens, has spent the winter here, and is so well pleased that he is going to build and locate here for life.

Ora Oakes, a "a well-to-do" merchant of San Francisco, purchased a block in Blethen's addition and is going to build a fine business house and residence.

The greatest need of Perris is a bank. We want one badly and the man that starts it will make money. Any one with surplus capital could do well here now and build up a splendid business.

A company is now forming in San Diego to put in a warehouse here for handling grain, which will help this country, and also tend to turn matters toward San Diego. The warehouse is to be built in the Y where the road branches to San Jacinto on Blethen's addition.

SEATTLE

In the town of Morro, J. K. Wolfely is hauling lumber. He will build a dwelling.

The Presbyterian Society is on the lookout for a choice lot which they can adorn with a church.

Otto Ranks has secured the contract for the "Boston Block". His bid was $94,250. Mr. Herman Chapin is the agent for the owners, who reside in Boston.

POMONA.

During the year 1887, there were built in this place, 268 buildings, the cost of which was $668,553.

BAKERSFIELD.

KERN COUNTY CALIFORNIA.

A gentleman from Fresno tells the *Bulletin* of the recent purchase in Fresno county by Moore & Smith, the lumber merchants, of some 3,000 acres of timber land: "This firm next spring will erect two mills, sixty miles up the Kings river from Fresno, where the lands are situated. Each of the mills will cut from 75,000 to 80,000 feet a day. They will also build a standard-gauge railroad from Centerville, twenty-two miles southeast of Fresno, up on the Kings river canyon, the site of of these mills, and perhaps beyond.

OAKLAND.

A new car repair shop is being built in the West Oakland railroad yards.

It is understood that a new Episcopalian Church will be built here shortly.

Wells, Fargo & Co. will build a new express office near Sixteenth street station.

John Ziegenbein is building a cottage on Thirteenth street near the intersection with Peralta street.

The California Door Company has entirely completed its building in West Oakland and has commenced operations.

The East Oakland Brewery on the corner of East Fourteenth street and Eighteenth avenue will have some $5,000 worth of improvements put upon it during the coming few months.

FRESNO.

Geo. W. Strine will soon begin the erection of a two-story residence on the corner of Mariposa and R streets, to cost $4,000

Work has commenced on a $5,000 residence for Lee Gundlefinger, on the corner of Inyo and K streets.

FRESNO CITY.

Attorney E. W. Risley is having plans drawn for a fine residence. The house will cost $1,000 and will be erected on north I street at the corner of San Joaquin street.

LUGONIA.

An $1,800 residence is to be built on the Morrison Bently tract by a lady from Los Angles.

Mrs. Early is having built a residence on State street, between Sixth and Seventh, Redlands, to cost $2500.

ALAMEDA.

Mr. J. N. Webster is having a neat and comfortable cottage erected on Pearl street, a short distance south of the Narrow-gauge. It will cost about $1,500.

The plans for the Riverside Y. M. C. A. building have been accepted by the building committee, and the contract will be let if it doesn't exceed the estimated cost made by the architect, which is $22,000.

D. W. Walker has taken the contract for the erection of two miles of picket fence, on the ranch of J. C. Holloway near Sebastopol.

BUILD HOUSES

The inquiry of people coming into this city, for houses to rent is met with the answer that there are scarcely any houses fit to be occupied, which can be obtained at any price. Every house that is built for rent is now occupied and people are compelled to either seek quarters in uninhabitable buildings or leave the city. It is suggested that capitalists who would otherwise put their money out at a low rate of interest, build habitable dwellings and make preparation for the people who are coming into this city if they desire prosperity. The investment proves to be a paying one, working the benefit of both the individual and the entire community.—[Santa Rosa Republican.

COLTON STREET RAILROAD.

Ground has been broken from the Davenport corner, north; we do not know just how far, for the street railroad. The men are at work leveling and preparing for the ties. The ties are being distributed along the line as fast as possible to-day and it is Mr. French's desire to get them laid and all in readiness to begin putting down the iron as soon as it arrives, which he thinks will be in three or four days. The cars will be here probably by the time the track is ready. We have reason to hope that it will not be long before we have a street railroad in actual operation between this place and San Bernardino.

A NEW HARDWARE COMPANY.

The Dunham, Carrigan & Hayden Company has been incorporated to deal in hardware and metals of all kinds, both wholesale and retail.

The capital stock is $900,000, of which $630,000 has been subscribed. The directors are Benjamin F. Dunham of Oakland, Brace Hayden of New York, Andrew Carrigan, Claude T. Hamilton and Charles E. Miller, of this city.

The Riverside Press imforms us that A. C. Willard, manager of J. C. Pelton's office in this city says, that if lumber could be obtained, he would have underway in ten days eighteen cottages, ranging in price from $1,800 to $3,500 each. Work on three private residences costing from $10,000 to $13,000 each, would be commenced within sixty days.

A large new brick building is in course of construction on the corner of First and F streets, San Bernardino. It will be occupied as a wholesale grocery store by Messrs. M. A. Newmark & Co., of Los Angeles.

E. J. Davis has commenced the erection of a one-story brick business block, 54x60 feet, on his lot, corner of Main and Ninth streets, Riverside. It will contain two large store rooms.

The Supervisors of Auburn have ordered the erection of a $3,000 building 50x90 feet as additional room for the County Hospital.

Dr. Squires will soon commence the erection of a dwelling in Redlands.

SACRAMENTO

SAN BERNARDINO.

A $2,200 school house has just been completed at Irvington.

Work on Col. D. A. Shaw's new residence at Lugonia, to cost about $8,000, will soon begin.

Architect Goff has completed plans for a $15,000 residence to be erected by W. L. Wilkens, on the corner of Tenth and G.

Gee Brothers yesterday began laying the mosaic pavement at the E street entrance to the Stewart.

In about ten days the new $12,000 residence of James Waters, Jr., on Second, between G and H, will be ready for occupancy.

Mr. Chris Kurtz has concluded to erect, in a short time, a four story brick block on the site of the present old land mark, now occupied by him in San Bernardino.

Notwithstanding what has been said concerning the Electric Light and Power Company, work on improvements continue with unabated zeal At considerable expense a new dynamo and other accessories to good lighting are being made, and when finished will be one of the most complete plants in the state.

ALAMEDA.

A handsome cottage is in course of construction on Regent street, south of San Jose avenue. It is for G. A. Flach, recently from New York. It contains five rooms and will cost $2,500. J. A. Leonard is the contractor.

Plans have been submitted to the Trustees of the Methodist Church which, if adopted and ordered made will result in the church building becoming enlarged and being made, more imposing in appearance. Part of the plans call for the raising of the building some fifteen feet, which will increase the acoustic qualities of the Auditorium. It is also proposed to extend the front of the building eight or ten feet, so that the stairs leading to the entrance will commence at the sidewalk.

The contract has not yet been awarded, but Lynne & Lyman being the lowest bidders, will probably be given the contract to-day.

SAN LOUIS OBISPO.

Arroyo Grande seem always to get in on the good things. The latest is a building association that has recently been organized. Already several thousand dollars of the stock has been taken and several cottages spoken for. The leading gentlemen in the project are S. Clevenger, J. F. Beckett, J. W. Lewis, Isaac Kite, Y. Y. Newman, J. S. Brooks, F. L. Warner and Chas. Chrannell.

OREGON NEWS.

SALEM, OREGON.

Eds. Weekly News. — Enclosed please find postal order for your Building News. I congratulate you on the energy shown in establishing a weekly record of building improvements.

—Business at this time of the year in Oregon, is necessarily dull. A stock company will build a $4,000 hotel at Dallas, Polk County, about 12 miles from this place. Mr. D. Pugh, is the architect, The same gentleman is architect of the additions being made to the asylum. Will keep you informed of news from this section.

Mr. A. Pauly, of Pauly & Sons, Tehachipa, arrived here yesterday, states that the business of the manufacture of lime in that vicinity is growing to large proportions. The firm of Holmils & Co., of San Francisco, are now running three kilns that turn out from five to six thousand barrels the month, which is far from supplying the demand, and the business might be extended indefinitely if it were not for want of fuel. About two hundred and fifty cords of wood are used monthly. Most of this lime goes to Los Angeles, where it is considered the best in the market and always has the preference. Hendrickson & Co. are about to start four more kilns, which they expect to have in operation next month.

In building the Coronado Hotel, at San Diego, which is perhaps the largest and most gorgeous in its appointments of any hotel in the world, 400 carpenters have been at work for two years. They now have there, direct from Chicago and New York, 300 hotel waiters, and every room in the house is already engaged from the opening date, which is the first proximo. The Atchison and Topeka Company are the principal owners of this hotel, and they have sold lots enough in the vicinity to pay for the building and furniture.

Work has been commenced on the fine new $100,000 hotel at Hesperia, and also for a fine new building to be occupied by the *Herald*. The company have plenty of water for domestic and irrigating purposes and a sixteen-inch main, filled with water under pressure, runs the entire length of town.

A. S. Danielson, of Clinton Ranch Home, San Bernardino, is just completing three dwellings on Danielson Avenue, a few rods north of the Base line. Two are one and one-half story houses and one a cottage, all to cost about $6,500.

J. P. Stewards is building a $1,000 barn for S. Hoy in the town of Winters.

WORK ON THE FLUME.

The line of the great San Diego Flume has been graded down to near the Sweetwater trestle, which is the largest along the whole route. Progress was impeded to a certain extent during the recent heavy rains, as it was impossible to do hauling of any description, yet the contractors figured on certain allowances to be made for inclement weather, and they express no fear that they will loose the $30,000 bonus by reason of a failure to complete the work by March 1st. Within a fortnight it is expected that the laying of the flume will progress at the rate of two miles per week.

THE REDLANDS SCHOOL HOUSE.

Bids for the construction of the new Redlands school house were opened yesterday afternoon at the office of Jones & Griffiths, architects.

Following are the bids:

Lynne & Lyman	$15,500
Minor	16,750
Beach	17,500
Hero	16,898
Malone	21,969
Wernicke	17,115
Gee Brothers	19,688
Bishop & Zroicker	17,080

THE NAIL WORKS BUILDING.

A large quantity of lumber for the San Diego Iron and Nail Company's mills at Roseville, Point Loma, was received by the Russ Lumber Company last night. It will be lightered to the Roseville wharf during the first of the week when work will be commenced on the buildings for the new enterprize.

It is said that a large force of men have commenced work on the extension of the Utah Southern south from Frisco, Utah, and that it is the intention of the company to build straight through Nevada to California and Los Angles.

A street-paving contract, involving $160,000, is now being executed at Santa Barbara. It is claimed that this is the largest contract of the kind ever let in the State.

C. W. Filkins, of Riverside, has purchased three lots in block C, this city, and will at once begin the construction of a tenement row.—[Index.

A new shingle mill is to be buil, nine miles from Saratoga, Santa Clara county, It will cost $3,000, and give employment to thirty men.

Work has been commenced on the foundation for the new post-office building on the corner of E and Court streets, San Bernardino.

The foundation is being laid for a one story brick building, to be rected on Orange street, Lugonia. T. P. Minor has the contract.

The excavation for the foundation the Hotel Vendome in San Jose are entirely finished, ready for the bricklayers.

Dr. Sandborn has just begun the erection of a fine house in Redlands.

Senator Button intends to erect a residence in Colton.

LUMBER MILL MACHINERY MEN.

The large saw mills of Renton, Holmes & Co., at Port Blakely, have been burnt down completely. With their accustomed energy, the gentlemen named will immediately commence to rebuild. Lots of new machinery, etc., will be wanted. The loss was about $250,000.

BIDS FOR THE CONVENT.

The following bids for building the Convent School building in Petaluma have been received by Father J. F. Cleary.

Jas. Melnery, San Francisco	$24,950
A. C. Hanson, Petaluma	23,293
J. M. Kill, Petaluma	20,082
E. D. Hedges, Petaluma	19,200
Geo. Furner, Petaluma	19,071
Bateman Bros., San Francisco	18,995

A new ferry depot will be built on Coronado Beach, San Diego. J. T. Barnes & Co. are the contractors. It will cost $7,000.

A large hotel is on the tapis in Marysville, the cost is set at $100,000. Address A. F. Abbott for particulars

BUSINESS CHANGES.

Thos. J. Welsh, architect, has moved from 302 Montgomery St., to Room 95 Flood building, corner Market & Fourth Sts.

J. I. Kidd & Chas. V. Pierce can now be found at 410 Kearny St.

Sam Newsom has assumed control of the City office, his brother being in the lower country office.

Chas. Kenitzer has taken a partner and the firm name is now Kenitzer & Kollofrath.

1st payment, $4,332; 2d payment, $4,332; 3d payment, $4,332; 4th payment, $4,332. Duffy Bros., plumbing, $3,444.

Turk, bet. Hyde and Larkin. Plumbing; cost, $3,444; owner, George T. Marye, Jr.; contractors, Duffy Bros.; architect, Wm. F. Smith.

1st payment, 50 per cent. of value of work when rough work is done; 25 per cent. on completion; balance, 35 days after completion; limit, May 1, 1888; signed, Dec. 29, 1887; filed, Jan. 28, 1888.

Vicksburg and 24th. Add tions to a frame building; owner and builder, D. Linden; costs $500.

York, bet. 22d and 23d. One story frame, (painting and grading are excepted in contract); owner, E. Woods; architect, M. T. Welsh; contractor, F. T. Williams; cost $12.0.

1st payme t, when br wn mortar is on, $420; 2d payment, when buildi g is finished, $420; 3d payment, 35 days after acceptance, $420; surety, J. Rose, $800; signed Feb. 4, 1888; filed Feb. 6, 1888.

Vallejo 92 W. Davis, W. 45x60. To build complete 2-story building; cost, $1,960; owner, Nicholas Luning; contractor, F. W. Ke n; architects, Percy & Hamilton.

1st payment, 75 per cent. of labor and material in place in building, will be paid as work progresses; bal. in 35 days after completion and acceptance; limit, April 30, 1888; sureties, O. W. Nordwell and F. Joost; amount bond, $4,000; signed, Jan. 26, 1888; filed, Jan. 30, 1888.

New Montgomery, cor Mission; 4-story and basement brick building. Owned by the Sharon estate, and to be occupied by Wells, Fargo & Co. Architects, Shepley, Rutan & Coolidge; (the latter is the supervising architect on this coast) mason, Geo. Richardson; carpenter, Adam Miller; plumber, W. F. Wilson; estimated cost, $250,000

M. C. de Laveaga is having 29 mantels made by W. H. McCormick for $1160, to be finished the 10th day of March; 1st. payment, when the entire work is commenced $696; 2nd. payment 35 days after completion, $464; the mantels to be made of best Italian oeinee; P. R. Schmidt is the architect; signed, Feb. 2nd. 1888; filed, Feb. 7th 1888.

ELECTRIC IMPROVEMENT COMP'Y

Fisher's System of Electric Street Railways,
American System of Electric Arc Lighting.
Standard Underground Co.'s Lead Covered Cables,
Mather's System of Incandescent Lighting.

CALLENDER INSULATING AND WATERPROOFING CO.'S HOUSE AND TRINIDAD ELECTRIC LIGHT WIRES.

Estimates furnished for Electric Railways, Electric Light and Steam Plants.

OFFICE—217 Sansome Street, San Francisco, Cal.

"Botch" Workmen.

Last month we made reference to half-fledged workmen. These remarks referred more particularly to carpenters, but it does not necessarily follow that carpenters are the only persons possessing the quality of "botch." We have met plasterers, painters, plumbers, tinners, bricklayers, and stonecutters, whose reputation for first-class "botch-work" ranked much higher than that of any carpenter we ever met.

The uninitiated would scarcely believe it, but it is a fact that first-class bricklayers—good honest capable workmen—are more difficult to find than other workmen connected with building. Indeed, few know the amount of "botch" bricklaying that is done in every town and city in the country. It is much easier to pass off "botch" brickwork as good than carpenters' or joiners' work, and fewer people are qualified to judge of the quality of the former than of the latter. The same may be said of plastering. Perhaps there is no branch of building where less knowledge and skill are used than in plastering. For some reason that we could never discover, the man who plasters your house knows less of his trade, the qualities of the materials he employs and the manner of making the best use of his tools and appliances than any other workman. So well is this understood that most men who have carried the hod to a plasterer for three or four weeks aspire to become plasterers—and they generally get there—and thus the influx to the trade, of incompetence, goes ever on, and plastering goes ever on, and plastering keeps in a chronic state of "botch-hood."—*Builder and Woodworkers*

We are in the habit of regarding the Egyptian obelisk as almost without precedent in the way of size of single stones, and yet it occasionally happens that modern quarrying operations produce stones of as great a size. A very large stone was recently taken out of the Bodweil quarries, at Vinal Haven, Me., a short time since, that is an illustration in point. A local paper, after making the assertion that it is the largest stone ever quarried in the vicinity named, adds that, if erected, the gigantic shaft would be the highest, largest and heaviest single piece of stone now standing, or that ever stood, so far as there is any record. According to this authority, it considerably exceeds in length any Egyptian obelisk. The shaft in question is 115 feet long, and 10 feet square at the base. Its weight is estimated at 850 tons.

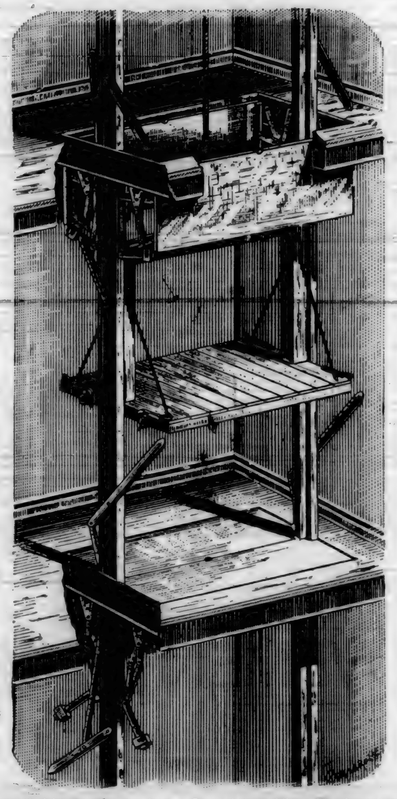
THE PAGE

Automatic Fire Shutter Co. of California.

The Best Automatic Fire Shutter Known.

INCORPORATED APRIL 28TH, 1887.

Manufacturers Under United States Patent of the Automatic Shutter.



ADAPTED TO PASSENGER AND FREIGHT ELEVATORS,

For Protection from Fire in Elevator Shafts, and from Liability to Accident.

PATENTED MAY 10, 1887.

Now in operation at 22 and 24 Jessie St., and 327, 329, 331 Sansome St., S. F. Call and examine the same.

The cut represents a freight elevator, showing two floors of the building. The elevator platform is represented as ascending, having passed through the hatchway of the lower floor. The shutters below the elevator platform have just closed level with the floor, completely and firmly closing that hatchway. The shutters of the second floor are next being opened by the ascending elevator platform, and after it has passed through, those close automatically, in the same manner as seen at the first floor. In the descent of the elevator platform, the shutters open below as it approaches the hatchway, and after passing through, they close again firmly and completely. Each shutter opens and closes automatically as the elevator passes, and are so counterbalanced as to offer no resistance to the ascending or descending platform.

Manager and Agent,

Office, 218 California Street, San Francisco, California.

Lumber Market.

At a late meeting of the Lumber Exchange the advisability of increasing the retail price of lumber was the subject of much discussion, but upon vote, it was decided to make no change in the schedule. The prices below are those ruling Dec. 1, 1887:

Pine, Rough, per M feet	$22 50
Pine, Rough, No. 2	18 50
Pine, Rough, 40 to 50 feet lengths	23 50
Pine, Rough, 50 to 60 feet lengths	24 50
Pine, Rough, 60 to 70 feet lengths	25 50
Pine, Selected	26 50
Pine, Clear	33 50
Pine, Fire Wood	10 00
T. & G. Flooring, 1x6	35 00
T. & G. Flooring, 1¼x6, 1x4, 1¼x4 and narrower	40 00
T. & G. Flooring, No. 2	29 50
Stepping	45 00
Stepping, No. 2	32 50
Redwood, Rough	22 50
Redwood, Rough, No. 2	18 50
Redwood, Surfaced	37 50
Redwood, T. & G. 6 in., 12 feet and over	34 00
Redwood, T. & G. 6 in., 7 to 11 feet	27 00
Redwood, T. & G. 6 in., under 7 feet	24 00
Redwood, Rustic	37 50
Redwood, Rustic, No. 2	32 50
Redwood, T. & G. Beaded, 12 feet and over	36 00
Redwood, T. & G. Beaded, 7 to 11 feet	27 00
Redwood, T. & G. Beaded, under 7 feet	24 00
Redwood, Siding, ½ in	25 00
Pickets, Fancy	26 00
Pickets, Rough Pointed	19 50
Pickets, Rough Square	17 50
Shingles	2 25
Laths, 1½	4 00
Laths, 1½	4 50
Furring, 1x2, per lineal foot	01
Battens, ¼x3, per lineal foot	01
Nails, for 10 d	2 90
Lime, per bbl	1 40
Cement per bbl., according to brand	$2 50 to 4 50
Brick, per M	$6 00 to 11 00
White lead, per lb	06

Linseed oil, 50 cents per gallon in bbl, 2½ cent additional for boiled.

CARPENTRY MADE EASY.

By Wm. E. Bell, a practical mechanic, who fully appreciates, from personal experience, that there are many things perplexing to understand and difficult to do until they are fully explained and tested. It is designed to make the science and art of carpentry clear and comparatively easy to all who require information on the subject. Price, $5.00 by mail, prepaid.

SAN FRANCISCO, MARCH 15, 1888.

Quarterly Summary of Building Operations.

The quarter just closed has been a very satisfactory one as regards the number of new buildings. We tabulate each month separately:

	Value.
JANUARY.	
60 frame buildings	$190,200
4 brick "	279,000
13 alterations	29,100
77	$498,300
FEBRUARY.	
51 frame buildings	$186,500
2 brick "	258,000
8 alterations	18,200
61	$462,700
MARCH.	
36 frame buildings	$147,200
1 brick "	10,000
8 alterations	31,600
45	$188,800
Making a grand total for quarter:	
137 frame buildings	$523,900
7 brick "	547,000
29 alterations	78,900
173	$1,049,800
1st quarter of 1886—252 engagements	$1,359,532
" " 1887—191 "	1,209,100
" " 1888—173 "	1,049,800

Taking the extortionate prices of lumber into consideration, (compared with those ruling in 1886) and the summary given above is a very encouraging one. So far the prospects look decidedly more encouraging than at a similar period last year.

The system now in use in this city of recording contracts compels us to keep two statements as regards the cost of buildings. For instance, a contract is let, with plumbing and painting excepted. Each architect has a system of his own, by which these items can be approximately valued. We simply place our valuation on price recorded, and in our summary give full value of building. The apparent difference between the summary, as given each month, and the quarterly summary is thus accounted for. We shall use the utmost care in giving careful estimates; we do not claim perfection, but we think our reports can be relied upon as being about correct.

Raise in Prices of Lumber.

Lumber prices have again been advanced as the following changes will prove: Spruce, dressed half-inch, shelving to 14-inch, $37 50, an advance of $2 50. Dressed redwood, half inch tongued boards, $34, an advance of $3; dressed redwood, surfaced and grooved, 1x6, 12 feet and over, No. 1, $37 50, an advance of $3 50; the same other sizes, No. 1, $37 50, an advance of $1 50; the same, 7 to 11, No. 1, $28, an advance of $1; the same, under 7, No. 1, $25, an advance of $1; the same, rustic, No. 1, $38 50, an advance of $1; the same, rustic, No. 2. $33 50, advance of $1, the same, tongued and grooved, beaded, 12 feet and over No. 1, $37 50, an advance of $1 50; the same other sizes, No. 1, $37 50, an advance of $1 50; the same, 7 to 11, No. 1, $28, an advance of $1; the same under 7, No. 1, $25, an advance of $1. Pickets, rough, pointed, $20, an advance of 50 cents; pickets, rough, square, $18, an advance of 50 cents.

The most noticeable change is in the advance of 1x6, tongue and groove, redwood, there being a raise of $3 50 per M. rustic has been raised $1 00. Perhaps there may be a just cause for the advance in prices, but we fail to see it. The recent burning of one of our largest mills had no bearing on above quotations, as said mill never sawed redwood lumber, its product being pine, fir, spruce, etc., no redwood whatever growing in that locality. There is as yet, no stringency in the labor market, so that bugbear cannot be urged. There is nothing on the surface to indicate any just reason for the raise.

The whole matter simply resolves itself into this:—every indication points to a large increase in the number of new buildings. The gentlemen comprising the Lumber Exchange are all rolling in wealth, but they are not satisfied, and seeing a chance to fleece a few more dollars from a willing public, they unite, heart and soul in so doing, and virtually say to the public, we care nothing for the future welfare of the City, as long as we can squeeze a few more dollars from those who have to build. Gentlemen of the L. E., is it not time to call a halt?

Enlargement of our Weekly Eddition.

The *Weekly Building News* is meeting with great success. We have labored diligently to give our readers a full account of building operations in various portions of the Pacific Coast. That is the sole aim of the *Weekly*. Every item, every editorial, will relate strictly to building matters, and we hope to secure a goodly portion of those interested in building matters, as our regular subscribers.

Advertisements Solicited.

Extra reasonable rates will be given to those placing advertisements in the WEEKLY BUILDING NEWS. To meet the space for those whom we are confident will help us, we will shortly enlarge the present weekly edition to a

FOUR PAGE SHEET

And as soon as possible thereafter, to eight pages. Remember for the first year we give the 'California Architect and the Weekly Building News" together for TWO DOLLARS PER YEAR.

Editorial Correspondence.

No one who has remained continuously west of the Rocky Mountains, since California became one of the great sisterhood of States, can rightly comprehend, or form any correct and sufficient conception of what lies easterly of the great dividing ridge.

By careful reading and attention to published statements, the mind may be trained to an extent within its capacity, to follow the advancements and improvements from time to time reported through the various channels of information, but conceptions and conclusions so reached, are more likely to fall short of the positive actualities, and the mind pictures thus drawn fail in accuracy at every point, and the magnitude that abound on every hand be scarcely approached—particularly in all the larger cities of the United States, and also in the lesser live cities advantageously situated, with good surroundings, and blessed with enterprising, energetic citizens, possessing sufficient mental and physical lubrications to run out beyond the stingy confines of extreme selfishness, into the broarder fields of liberal ventures, calculated to develop not only every reasonably assured recourse, but also those having no stronger claim to favor than the possibilities. Hence growth, increase and advancement rule generally in the older cities of the United States, while others that at the dawn of in American rules and laws upon the Pacific Coast, were mere camps, military posts, or small villiages, have become great cities extent and expansion, great in business enterprises, and successes, and so great in future prospects, that no sane man would venture to predict or determine, other than as a speculative proposition.

New York, Boston, Philadelphia, Baltimore, Washington D. C., Cincinnatti and many other of the earlier settled cities of the Union, have multiplied the number of constructions within their boundaries, from fifty to five hundred per cent., and investments to cover similar sized lots and parcels of land, a thousand per cent. in some cases, thus showing that with all the other great onward and upward movements in commercial, manufacturing and general business directions, in their thousands of shapes and forms, beauty, solidity and durability in the construction of buildings have kept pace in the onward march, transforming barren wastes, sterile plains, and mountain sides into thrifty places for the habitation of men, who—"Trusting in God and keeping their powder dry"—have "gone West," dotting the continent across with unmistakable marks of American civilization.

* * *

Since return to San Francisco, all sorts of enquiries and questions have been propounded, which to answer fully would occupy many columns of this Journal. "Which do you consider the greatest city of the East?" being the most frequently asked. While Chicago is a vigorous, persistant ambitious aspirant for first place, New York smiles, confident that the Survey of the City that will pluck from it the long worn laurels of supremacy as the pre-eminently Chief City of the Union, has not yet been made. Still Chicago is spreading and growing in all directions, and gathering under its municipal wings and within its Corporate folds, scores of square miles of adjacencies, peopled with industrious, progressive people, being hindered only so far as the waters of the great Lake commands in the absorption of other additions. In time, it is altogether possible that in population the City of the Plains will stand unequaled in point of population. The thousands more of square miles of level land, adjacent to the present City, suggests the possibility of further annexation and additions, which consummated would provide business and residence accomodations for five millions or more people. So that in the matter of population, Chicago may in time exceed even New York, as the area of land limitations are vastly in its favor; unless the latter shall enter the field of annexation and gather in Brooklyn, Williamsburg and other places, "across the river," and cover the sister islands with the mantle of New York jurisdiction, and make them all with their hundreds of thousands of industrious people, members of one great municipal family.

But New York and Chicago are but two of the great family of American Cities. Philadelphia, Boston, Baltimore, Cincinnatti, St. Louis, Minneapolis, St. Paul, Kansas City, Denver, and far too many to name—other prosperous and more or less great cities,—east, west, north, south and central, have strong claims to high consideration, as occupying honorable positions, most of them having doubled or trebeled the number of former population, and correspondingly advanced in all the elements and characteristics necessary to future greatness.

* * *

ARCHITECTURE EAST AND WEST.

The prevailing styles east of the Rocky Mountains are widely different from those so generally adopted in California, except so far as the introduction of light colored sand stones and press brick used in the more recent constructions in San Francisco are a departure from former styles. In the eastern cities, brown, rose or other dark colored stones are prominent factors in building constructions, alike in business, residence, church and other edifices, and the variety of treatments are only equaled by the diversity of conceptions and conceipts affecting the minds of the designers.

While this outstretching, far reaching, unrestrained disposition to bring forth and introduce something new and original, has evolved very many superb and beautiful structures, and developed masterly skill and genius on the part of the designer, it has also originated many architectural monstrosities, so entirely deficient in lines of beauty and symmetry, as to induce a smile from the beholder, contemplating some of the queer, not to say ugly, examples of this unrestrained by rule—architectural libertanizm to be found in the prominent cities, and the architects in some of the lesser places, seeking to imitate, and being able to defend themselves in the creation of designs decidely peculiar, by reference to the execution of similar things at the hands of more pretentious architects in larger cities, become as reckless and extravagant, as vain in their ideas of the consistant and beautiful, and bring forth designs based only upon individual

Timber Piles and the Teredo—A New Invention Wanted.

The chief engineer of the San Francisco Harbor Commission has recently made a report on the experiments ordered to be carried out with piles prepared by various methods, with the view of determining the best way of competing with the *Toredo navalis*. In June, 1882, in pursuance of the orders of the board, ninety-nine piles were driven in Mission street pier 1, then being constructed. During the past month, after an exposure of five years and four months, one or more of the piles of each method, and four unprepared, or naturally bark-protected piles, were removed for examination. When deemed best, a sample of these piles was preserved for future examination. The various methods were given the names of the inventor or experimenter to identify them. All of the prepared piles were barked for a distance of forty-feet, which was the length treated.

A. W. Von Schmidt, of San Franbisco, prepared two piles by jacketing the driven pile with sewer pipe, and filling the space between the pile and the pipe with concrete or grout composed of sand, gravel and Portland cement. The cost of this covering exclusive of the cost of furnishing and driving the pile, was 75 cents per linear foot, or $30 00 per pile—a total of $60 00 for the two. One of these piles was removed. It was found that the teredo had not attacked it, but near the upper part one or two sections of the sewer pipe had been broken and the limnoria had weakened the pile about one-fourth or one-fifth of its original strength.

Frank Shay, of San Francisco, prepared twenty-three piles at 25 cents per linear foot or $10 00 per pile. His method was a modification of the Culver process, or a covering of asphaltum and burlap. The modification consisted of a substitution of wire cloth for the burlap. The pile was given a coat of hot asphaltum, then wrapped in the wire cloth and given a second coat of asphaltum, dusted over with sulphate of lime. Two of these piles were removed, and found so badly injured as to break in drawing them from under the cap. Only traces of the recovering were left.

James McKeon & Co., of Oakland, prepared ten piles, at 16½ cents per lineal foot, or $6 50 per pile. The protecting coat consisted of so-called "marine cement," applied, whitewash fashion, in four coats. The composition of this marine cement was kept secret, except that it contained an "extremely poisonous substance of great efficacy." This coating did not adhere well in driving the pile. Two of the piles thus prepared have been removed, and both have been practically destroyed by the teredo.

W. H. Raye, of Oakland, prepared twenty piles at 16½ cents per lineal foot or $6 45 per pile. His method of protection was similar to one just described, and the material used was a wash of Portland cement and other secret iugredients. The two Raye piles removed were practically destroyed by the teredo. Pearce & Beardsley, of Oakland, prepared forty-four piles at 34 cents per foot and $13 55 per pile. Their covering was another modification of the Culver process of burlap and asphaltum, and was a covering of burlap, saturated with "Pearce's compound," a mixture of naphta and carbon, bi-sulphide, with a small proportion of lime-stone, kaolin, sawdust, and sulphur. Of

the piles thus prepared, two were removed. One has been practically destroyed, and the other seriously attacked.

There were driven at the same time, and in the westerly part of the pier, eleven cedar piles. Two of these were removed and found very slightly attacked—practically as sound as ever, although the bark fell off in removal. It is to be regretted that these piles were not subjected to a more severe test, and unless otherwise ordered, they will be redriven in that part of the water front most infested by the teredo, so as to further test their resistance powers.

In August, 1882, two eucalyptus piles, furnished by Mr. William T. Coleman, were bolted under the same pier. In October, 1886, one of these was removed, and found very seriously injured by the teredo, and the sap wood above water had rotted to a depth of 1½ inches. Four yellow piles driven at the time of construction were also removed for comparison. All had been very slightly attacked, but not one of the four so seriously as to in any way impair its strength. Many of the fender piles, however, had been entirely cut off, and the mooring and cluster piles destroyed.

To sum up: The coatings applied by the various experimenters, depending upon their adhesion to the pile, utterly failed to afford even the protection given by the bark. This has been the history of such experiments in other places. Of the eight coated piles removed belonging to Shay, McKeon, Pearce & Beardsley, and Raye methods, but one retained sufficient strength to permit its removal, and this one was more severely attacked and damaged than any of the four "unprotected" piles pulled up or the cedar piles. These results are however not wasted, as they afford valuable guides for the future to those unacquainted with the history of pile protection, and point out what lines of experiment may be avoided.

The Von Schmidt trial was not a new experiment, as this method has been tried elsewhere—notably at Galveston, Texas—and found too costly and liable to injury to compete with the old fashioned and efficient cresoting process. Considering the fact that about forty-five per cent. of the gross receipts of this board have been spent in wooden structures, and that about twice to twice and a half the cost of a pier is spent in repairing it before the entire renewal becomes necessary, this question of pile preserving is most important, and it is recommended that more extended and better directed experiments be made.—*Scientific American.*

The Plumber and His Tools.

BY A MASTER PLUMBER.

The old adage, "A workman is known by his chips," is also trite when used in reference to the character of his tools and his care for them. To no branch of industry does this apply more forcibly than to the plumbing trade of to-day. In the long ago, when the art of the plumber was far behind its present state of advancement, the trade was handicapped in its endeavors to improve its condition by the absence of the manufacturing interests which abound to-day, and which so bountifully provide all plumbing material, sanitary specialties, tools, etc., adapted to particular uses.

In the present age, both manufucturer and plumber are working hand in hand, keeping even pace with the times, and meeting the growing demand for better work. The result is apparent. To-day the plumbing trade stands in the foremost ranks of industrial pursuits, and the old time spirit of conservatism that characterized too many of the craft, is fast disappearing.

The old-fashioned ways of their "daddy's" that were once held so very, very dear, are being reverently laid down to rest, and in their places spring up the methods of the wide-awake children of progress, armed and equipped for a more important work, the battling with the rapidly increasing needs of the present.

In all branches of industry, vast progress has been made. The public has learned justly to discriminate between good and indifferent work. Therefore, to keep abreast of the times should be the aim of every intelligent mind; to do so requires not only a study of the end, but also of the means contributing to its attainment. Not the least important of these means are the tools of the craft. As a true tempered sword to the hand of the swordsman, so is a good tool in the hand of a skilled artisian; both hold the ring of success in the very clink of the metal. With a clear head, a steady hand and the finished tools of to-day, no man has any excuse for being a clumsy mechanic; and the workman who does not realize this, must sooner or later go to the wall, where he properly belongs. Neither has he any excuse for begrudging his tools the care necessary to keep them in good condition. As a man's clothing reveals, in a certain sense the character of the man—an absolutely unclean condition bespeaking his own low estimation of himself—so it is with his tools. No plumber has a right to enter a household with a dirty bag (naturally suggestive of a poker and its accompanying Italian) and proceed to terrify the inmates by opening up a sarcophagus of dried mummies, dignified by the name of a "kit." If he does so he is very apt to be the man not wanted in the event of future repairs being needed on the same premises.

To this slovenly class of mechanics is due the prejudice actually existing against the craft; for, if a man has no respect for himself, he certainly will not respect the rights or interests of those unfortunate enough to employ him.

Many people dread the entrance of a plumber into their homes; not on account of the bill that is so sure to shadow him as his faithful, much needed helper, but because of the damage to walls, woodwork, etc., that is almost as sure to follow in his wake. Much of this destruction could be totally avoided by the use of proper tools. Of course it is not necessary that a plumber should carry a carpenter's or mason's kit in addition to his own special stock, but a good, sharp, compass saw, or a couple of wood chisels would never come amiss. Neither would a gouge or two (on intimate terms with a grindstone) a small pointing trowel, nail punch and floor chisel. The latter in lieu of some of the crowbars now used for that purpose, will not only be found handy, but absolutely necessary, unless floor-butchering is the aim in view. As regards special plumbing tools, they should be selected carefully, from the class that combines strength, lightness and beauty of design. The old fashioned tools that make the helper a beast of burden and a hunchback before he reaches his majority should be discarded, and, where obtainable, adjustable tools should be used instead. Indeed, so very handy are many of these devices that a man can now carry half a dozen of the old time contrivances in his own coat pocket. Among small tools, one that will be found most indispensable, is a pair of five-inch or six-inch pocket plyers. The plumber who does not possess this always handy tool has lost a great helper, and will speedily repair his oversight, unless he unfortunately belongs to that class of numsculls who would not hesitate to us. an old chisel and hammer on a watch spring.—*Sanitary News*

Who Owns the Tools in the Mill?

Perhaps whose place it is to furnish the tools? would be better. I don't know that any law-suit ever came out of this, as to whether the owner or the employe ought to furnish the tools necessary to do the work and repairs in and about a planing mill. Take it all together a man needs from some source a pretty good kit of both carpenter and machinists' tools—saws, augers, bits, chisels, plains, &c., in the way of carpenters' tools, and hammers, drills, cold chisels, hack saw, &c.; in the way of machinists' tools. A fair kit of tools for a foreman of a mill can not be provided for less than an even hundred dollars, and then he will not have much to brag about.

Tools in a mill are very much shorter lived than the ordinary carpenter's kit, because in the repairs about a mill, which are much oftener done in a hurry than at leisure, he is expected to pitch in, with nails and bolts more often in the way than otherwise, and hand saws and chisels, come out of the skirmish with blunted and broken teeth and broken corners, the whole kit very often the worse for the skrimmage.

No proprietor ever asks how much the broken bit, auger or chisel costs, or ever insists on furnishing tools for these hand jobs. Very often it may cost a foreman five dollars to replace broken tools, after repairs have been made. Now is it not as proper and right for the mill owner to furnish these tools as it is for the employe, or is it supposed that custom has made it a law that employes must furnish their own tools, and get no recompense for breakage and hard wear? Every *man* takes pride in having a fair kit of tools, even to wrenches, and I think I have set the price low when I said a hundred dollars would only make an average or poor show of such a set of tools. I have a single rachet drill, with drills, that cost only a trifle short of $30, and it does not take much of a drill to cost a dollar!

The owner never thanked me for using these costly tools in times when minutes represent dollars in their business, and never say, when a drill is broken, "run up to the store and get one to replace it." Are all owners like this, or have I fallen among thieves who take the whole pound of flesh and give nothing in return? When I use all my tools up, can I get a place to work where the owners find their own tools for repairs?—G. Rumble in *Wood-Worker*

California Colonial Architecture.

We herewith present the plans, elevation, details and specifications of a country dwelling, in what we term, for want of a better name, "California Colonial Architecture." Extreme simplicity chartcterizes the exterior, relieved somewhat by the rather novel arrangement of the brick columns, as shown. These should be built of a good quality of hard brick, with joints nicely struck. The interior arrangement is somewhat different from any we have ever published. Sizes of all rooms are distinctly marked, and the plan is sufficiently plain to be understood by those seeking a design for a comfortable home. Any information in regard to the plan will be furnished upon inquiry being received. Following are a general set of specifications to be followed by those considering the plans given.

FRONT VIEW.—CALIFORNIA COLONIAL ARCHITECTURE.

Brick Work.—The foundation walls to be of hard brick. Height, 3 feet above ground. Should a sufficiency of stone be obtainable, it may be used instead of brick. Chimney's to be built as shown. Flues 8x8 inches, well pargetted. The chimney in front to be built of best hard burned brick, joints well struck, and to be in every way a clean, smooth job. Ash vaults to be placed in each chimney, as per details. The mason is to furnish all rough brick, mortar etc., for setting mantels, ranges, etc. The doors to ash vault to be 12x16 inches cast iron, with hinges, latches, etc., completed. Ventilating grates to be placed in basement wall, ten in number, to be situated where directed by the owner or architect.

Carpenter Work.—All timber used, unless otherwise specified, to be of the best quality of Puget Sound or Oregon Pine. All joists and studs to be mill sized. Special attention must be given to the thorough nailing of every standing part.

Wall plates (basement) redwood, 3x12 inches; underpinning, (basement) redwood, 3x6 inches; braces (basement) redwood, 3x6 inches; corner posts (basement) redwood, 6x8 inches; main sills, pine, 6x10 inches; 1st floor joists, pine, 2x10 inches; 2d floor joists, pine, 2x10 inches; intermediate sills, pine, 4x8 inches; headers and trimmers, pine, 4x10 inches; ceiling joist. pine, 2x6 inches; rafters, 2x6 inches; hip rafters, 2x10 inches; valley rafters, 2x10 inches; corner posts, 4x6 inches; outside studding, 2x4 inches; partition studding, 2x4 inches; closet studding, 2x3 inches; joists and studs, 16 inches from centers; rafters, 32 inches from centers; underpinning, 32 inches from centers. All corners and center posts in basement to be thoroughly braced. All angles and corners to be thoroughly braced throughout the building. A line of flush bridging to be placed around the entire building, and in each partition, midway between floor and ceiling. All corners to be solid, to receive necessary lathing. The ends of the joists to be solid bridged. Bridging for wainscoting to be inserted wherever said material is to be used. Place double line of herring-bone bridging in each set of floor joists, to be well nailed, using 2x4 lumber. Carpenter is to do all cutting necessary for plumber or mason. He is also to see that wall plates on the brick or stone work are level.

Roof.—No. 1 shingle to be used, laid 4½ inches to weather. Sheathing 1x6, joints broken every other course. Shingles to be well nailed; no one nail in three shingles will do. If particular attention is not given to this requirement, the roof will have to be taken off and replaced. The carpenter to guarantee the roof for one year, the owner claiming the right to hold $50 of the contract money to secure this result. Gutters and conducters to be placed as per details.

Rustic.—No. 1 rustic to be used, not over 8 inches wide. All channels behind casings to be thoroughly plugged, plugs first being dipped in white lead, a bead to be driven in each one to hold it in place.

Porch Ceiling.—To be of clear, well seasoned redwood T and G, not over 4 inches wide; both tongues and grooves to be painted before being nailed in place.

Floors.—To be of first quality, 1x4, T and G pine, well seasoned, and not to be laid until building is enclosed. Floors to be laid before partitions are set. Porch floors to be vertical grain, and tongues and grooves to be painted before nailing, to be face nailed, nails set and holes puttied.

Stairs, Etc.—Main stairs, as shown, 7½ inch risers of redwood; treads of Oregon pine; rails, newell and balusters of main stairs to be of black walnut; newells 9 inch square of design as per details. All stairs to be housed, keyed, blocked, glued and put up in a workmanlike manner, with the risers tongued into the treads, back tongued and properly furred for plastering. Hand rail hung on iron brackets at each 4 feet up one side of rear stairs; 2-inch carriages for all outside steps, cut out of solid plank, and set not over 2 feet from centers. Give all outside steps ⅜ of an inch pitch in one foot of width, so that water will easily drain off.

Wainscoting.—The dining room to be paneled 4 feet high. The kitchen to be wainscoted 3 feet 6 inches high, except over sink, to be 5 feet; bath room to be 5 feet all around; rear stairs to be wainscoted 3 feet high, same to continue around rear hall.

Windows.—To be in design as per plans and details, all hung with weights, and to be fitted with Ives' Patent Locks and Norris' sash pulleys. Use best Silver Lake braided cord.

Doors.—To be of uniform height (with exception of front door) in each story, 1⅜ inches thick, sugar pine stiles and rails, redwood panels raised and moulded, width as per plans. Front doors 1¾ inches thick, made as per details; colored glass in panels of front door.

Inside Finish.—None of the inside finish is to be put up until plastering has been completed and the building thoroughly swept clean. Use none but clear and well seasoned redwood, the whole of which is to be smooth dressed and sand papered. Grounds to be put on for plastering work, ⅞ of an inch square. Clothes closets to have 1x14 shelves, with a rack under for hooks. All shelves in closets to be placed as directed. Kitchen pantry to have 4 rows of shelves, with flour bins etc., complete. Sinks in kitchen to have moulded caps, drain boards, frame and drawers of sugar pine. Casings for doors and windows to be 1x16, made as per detail, with corner blocks. Base boards to be of rustic 10 inches wide, and a light moulding 2½ inches wide. Picture moulding in parlor, dining room and the two principal chambers. Mantels in hall and dining room to be made of walnut, at a cost of about $75 each.

Plastering.—All walls and ceilings throughout the building to be lathed with 1½ inch pine laths, with joints broken every 8th lath. Rough or brown coat to be made of fresh burnt lime, and clean, sharp sand, to be well tempered and a sufficiency of hair to be used. White coat to be of Plaster of Paris, trowelled to a smooth and polished surface. In all cases brown mortar to extend to the floor.

Plumbing.—Gas pipes to be run so as to have a drop light in each room; gas pipe in newell at foot of main stairs. Side light in kitchen over sink. "Golden Gate" water closet to be used, with everything complete. Safe wastes under bath tub, water closets and wash bowls with 1-inch waste pipe discharging on outside of building through proper conductors.

Painting.—The outside of the building to be painted with 3 coats of paint, of colors selected by the owner. Roofs to have 2 coats of Prince's metallic paint. The inside finish to be of oak, cherry or walnut, as owner may select. All grained work will have a heavy coat of varnish. All iron and tin work to have two coats of paint. All work to be thoroughly cleaned before priming; all nail holes, cracks or other defects are to be thoroughly filled with putty. The graining to be a good imitation of the wood selected by the owner. Angle beads to be whiteued. Use none but the best lead and pure linseed oil.

Generally.—Drawings and specifications are intended to illustrate each other generally, so that a thing shown on one and not mentioned in the other, or *vice versa*, is to be done the same as if fully set forth in both. All works are to be done with the most approved kinds of the various materials mentioned, and none but the best workmen are to be employed.

PERSPECTIVE VIEW.—CALIFORNIA COLONIAL ARCHITECTURE.

Keep Plumbing Fixtures Clean.

There are many housekeepers who imagine that first class plumbing should not require any attention. How often have we seen plumbing fixtures of the best design and quality kept in the most filthy condition—a condition so bad that inferior plumbing would cause less injury to health?

Where people are aware that the plumbing in their houses is of an inferior quality, they take every precaution to reduce the evil to the greatest possible extent by cleanliness; but when the plumbing is of the best quality many seem to think that cleanliness is not required, and blame the plumbing for any sickness which may result from their carelessness in not keeping the fixtures clean.

The fact of the matter is that the better the plumbing the greater the care to keep everything in perfect order. Where there is good work there is generally a large number of fixtures, and the more fixtures the greater the necessity of cleanliness. In houses where the best plumbing is done, servants must be to a large extent depended upon to keep everything in order; and where servants are not closely watched, the work they should do is only too often neglected. The habit which many servants have of storing anything and everything about the plumbing fixtures should not be allowed. It should be insisted upon that all fixtures should be left perfectly open and clear, so that a free circulation of air should pass in and about them. Closets, sinks, etc., should be regularly cleaned and all copper lining kept bright. The wood-work surrounding all fixtures should be thoroughly washed at frequent intervals or otherwise kept perfectly clean. In short, we would urge the most perfect cleanliness of all the figures and surroundings in every part.

The servants' fixtures should receive the attention of the mistress, as servants are proverbially careless of their surroundings. It is not enough that the principal fixtures should be clean—all should be clean, even in the most out of the way part of the house.

It often happens that because the plumbing is good, temporary and local smells are noticeable. With bad plumbing there is always a close, heavy odor, to which people become accustomed, and the temporary odor is not noticeable. When plumbing is good, the careless or indifferent use of the apparatus may be noticeable because of the absense of the overpowering and ever-present odor usually about inferior work.

Another portion of the house that should receive close attention is the cellar. Nothing should be allowed to remain in it in a state of decay or filthiness. The cellar should be kept as scrupulously clean as any part of the house.—*Canadian Architect.*

Redwood.

Redwood can be sucessfully utilized for encasing engine cylinders, parts of cotton machineay, moldings, patterns and dozens of other uses to which white pine and various hardwoods are now put. The California Redwood Association, through its local representative, seems determined to push the semi-obscure wood to the front this year, and as a competitor, it may change the complexion of trade in certain directions. Every honest effort will be made to boom redwood. As the quality is invariably clear, the only thing to be done is to advertise that fac and place the selling price on a basis where consumers cannot but observe the advantages offered.—*N. W. Lumberman.*

Paper hangers' paste is best made by first heating the water to boiling, then adding flour, stirring constantly to prevent the formation of lumps. The flour may be passed through a sieve, so as to insure it a more equal distribution Agitation is continued until the heat has rendered the mass of the desired consistency, and a few moments further boiling it is ready for use. In order to increase its strength, powdered resin in proportion to one-sixth to one-fourth of the weight of the flour is added. To prevent its souring oil of cloves or a few drops of carbolic acid should be added.

Even in the Holy Land, sanitary improvement is the order of the day. Bethlehem has well paved streets and Jerusalem is becoming clean. Tanneries and slaughter-houses have been banished from the city proper, a system of sewerage is underway.

Cement to Fasten Glass to Brass.—Boil three parts of resin with one part of caustic soda and five parts of water, thus making a kind of soap, which is mixed with half its weight of plaster of Paris.

Files: Their Use and Abuse.

No one thing stands out more prominently in the cash account of an ordinary planing mill plant, than the money paid for files; and with graining machines, grindstone and emery wheels, and whatever appliances there may be for sharpening saws, planer knifes, side cutters, &c., still there seems to be a bottomless pit in the file account that unceasingly swallows up greenbacks, gold and silver dollars, and silver certificates alike, seemingly without any mercy or recompense. A dozen files melt like the dew, and it is a lcuky thing if more than half of them are ever got togethor and taken to the file cutter to be cut.

The few different kinds of files used in saw and planning mills would seem to be a reason why the expense for files should not be so large, the common single-cut mill file being about all the kind that is used. A very few bastard double-cut, will suffice for all the repair work done about a mill, and unless we go largely into small sawing, where a taper file can be used to good advantage, the flat single cut mill file is about all we find use for. Files ought to be made of a uniform, even grade of steel, well and evenly hammered, so that when they are hardened they will not warp [illegible].

We very often find files, especially re-cut files, that fold up in hardening so one side is round and the other hollow, and consequently from such files we get but little work and of a poor quality. Very much depends upon the coarseness of the cut of mill files, as too coarse a cut will not do as good work or last as long as the finer cut ones.

There are five grades of single-cut files known to the trade, rough, coarse, bastard, second cut and smooth. The bastard cut is the nearest right for sharpening planer knives and side cutter bits, as well as for filing generally. In some cases the "coarse-cut" will answer, but the rough-cut ought never be used on work of this kind. For small, nice saws the second-cut is very nicely adapted; as they leave a fine clean edge. I have had double-cut files that have done splendid work on saws, but generally they are not as good for saw filing. Very much depends on the users of files, whether they are long or short-lived. When you see a man trying to make a file cut both ways you may know that he journeys often to where the files are kept, and the file account runs up amazingly. A man should never allow himself to let his file drag on the back stroke, as it wears out much faster than the forward stroke does, and a gigging stroke is abominable. A long, steady, even stroke will do more work than three little, short, quick ones will, and the files last very much longer. The very first thing a person ought to learn in filing, whatever it is, whether iron, brass or steel, or thing else in fact, is to lift the file from the work on the back stroke.

As I have already said, much of the value of the file depends on the filer and it is worse than useless to try to determine the value of files in the hands of nine-tenths of those who are required to use them. It is a trade to learn, and to learn it well requires as much brain and skill as any other trade. How many persons using files can file two pieces of iron or steel so that when rubbed togethor one will lift the other? And still it is a thing that can and has been done.

With all the appliances for sharpening saws and cutters, we cannot get along without the file. It is a good servant, but subject to to all sorts of abuse and neglect. Frequently a man is set to run a table saw, and in most cases he is expected to do his own filing. The result is, all sorts of shaped teeth and a big file account, which not infrequently amounts to nearly as much as the man's wages do. One *great* source of loss is the abominable carelessness in regard to looking after the worn out ones. We find old files everywhere. If a man wants to clean out an oil hole, he gets a file and uses the tang, and lays it down just where he uses it, and that ends *that* one. If he wants to pry anything apart, he gets a file, and that breaks it, and that one is gone. If he wants to scrape the dirt from a piece of stuff, he gets a file, and if it is not just right for what he wants, and it will serve him better if broken, he hits it a clip with a hammer, and that settles *that* one; and from driving nails to blocking up machinas we find the file is *always handy*, and when he once goes astray, it goes to the bourne from whence no file ever returns. If lumber working firms would get in the habit of *charging the files to the man when taken*, and giving him credit on their return, there would be fewer files lost, and more work done with what are used. Somebody should know when a file is properly worn out. Many persons in filing use up but little more than half the file, and what is left sharp goes to the grinder as readily as if worn smooth from tip to tang.

I see no other way to lessen the cost of files than to make those who use them responsible, and hold them to strict account for every one taken—*count them out and count them back*, and hire those to do the filing who understand their use. One man in a mill, large or small, is enough to have the care of the saws, and if he cannot do it alone give them competent help. Then your file will do all it can or ought to do. He should know when a file is poorly cut or improperly hardened, and all poor or imperfect cutting or tempering should be returned to the cutter and the price deducted from the bill.—*J. T. Langdon in Wood Worker.*

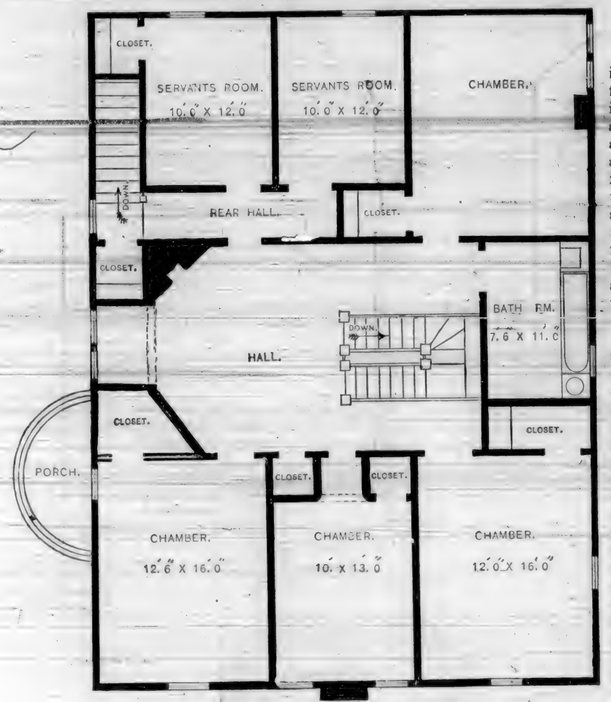
DETAILS OF CALIFORNIA COLONIAL PLAN.



SECOND FLOOR PLAN.—CALIFORNIA COLONIAL ARCHITECTURE.

Land Sharks.

They are always found in any western city, about the hotels, and on the street corners, a set of men claiming to be real estate agents. They are like a lot of vultures watching for their prey. They do not give a stranger time to rest, eat or sleep, until he is given a description of all the cheap property they have for sale.

It is generally safe for a stranger to steer clear of all persons who thus button-hole them.

If you desire to purchase a farm or city property, consult some real estate agent at his office, from whom you are likely to obtain reliable information, and if he does not have what you want he will not bore you.

When you find a man who does not have a business to justify him in keeping an office, it is safe to let him alone.

The real estate business may be, and is carried on in just as honorable a manner as any other business, and an honorable agent is often a great help to a stranger in assisting him in making selections of what he wants, but the class of agents referred to above, bring the entire business into bad repute, so that many times strangers on coming to a place feel like avoiding all real estate agents.

Were concave ceilings introduced into parlor, dining and reception rooms, better opportunities for the decoration would be afforded. A concave sky, although the curve is all but imperceptible, is certainly more pleasing than a flat sky. With such a ceiling the cove could be dispensed with, and with it angular molded lines, forming border of ceiling, would disappear, giving place to flower, leaf and branch designs reaching upward and outward. To a lofty room such a ceiling would impart increased stateliness. Where the ceiling is structually flat converging ribbed arches with central pendant or base might be carried out in paper mache. Rooms present so many angles, mantels and furniture contributing a considerable share, in additions to walls, that curvilinear forms are welcome variations. Even deep coffers, polychromatically decorated, are enchanced in beauty by a curved ground, which carries the eye naturally from one side to the other side of the ceiling surface, thus causing it to take in the whole.

Favoritism.

Of all contemptible phases in any kind of business it is to have a few men who always receive special favors, always have the best part of the work, and if work is dull or anyway slack a few are favored and always kept at work at something, or nothing, as the case may be, while the others, less favored, are sent home and have to shift as best they can for the necessities of life. In the milling business, where men work through thick and thin, rain and shine, and lug and tug, it is the quintessence of meanness to send part of the men home and let a few favored ones have the benefit of a partail rest. Men that work in a gang through all the weathers and under all conditions should all have the same treatment exactly, and if there's "rest for the weary" let all share alike.

We all know when the season is up and the plant shuts down until another season, that everybody has to ride out on the white horse. There is no cause or complaint about this; but some mills run through the year, and a few cold days in the height of winter are the only times they hold up, and then foremen of gangs often take the opportunity to show some personal feeling which has arisen out of some trivial thing when work was driving, and the thing was laid up until a more convenient season when the blow would be felt, and the poor fellow should feel there is such a thing as a *boss*. Every man in a gang or crew of men should have exactly the same treatment and the same kindness and consideration. No two men have the same capacity for work, and foremen should know just where to place every man so he can work to the very best advantage.

No foreman should discriminate between any of his men, or allow himself to treasure up anything said through the busy season. If the man has done anything worthy of censure, let it be given then and there, and if necessary discharge him at once; but the foreman should never disgrace himself so much as to carry the load and dump it on the poor fellow's head when he is in a tight place and can not get work.

So many days work means so many dollars, and necessity and not choice compels most men to labor through rain and shine for the necessaries of life for themselves and those depending upon them for support, and these men who labor long and well should all share alike at the hands of those who employ them.—*Woop Worker.*

Panel Doors.

The house carpenter of the last and previous generations, who could from rough lumber make a good four-panel door in twelve hours, was considered a fair, diligent worker. A greater number left the door unsmoothed and unfit for the hinges than those who gave it the finishing touches requisite for the priming and hanging.

What of these necessary appendages now? Such is the present demand for first-class panel doors that, were it not for our improved wood-working machinery, the number of door makers would be necesarily, multiplied by a full score. Indeed it is exceedingly doubtful whether one hundred men can, now, be fouhd in this or any other country, who can make, finish and smooth-up as many panel doors in a given time—say one week—as five practical workers with our present door-making machinery.

A late census report before me says that "figure 445 illustrates a machine, with a capacity for 500 doors per day, working on doors of seven feet in length on both sides of the door every minute. Tenons, wedges, etc., are cut off by adjustible saws at the work end, and, the table adjusts for thickness by inclined planes." And this machine can instantly be anjusted for doors of any orcinary thickness. What would 40 men do towards finishing up 500 doors of their own make? It would take them double the time of the two men at the machine?

These facts are introduced not only to illustrate the wide progress made in wood-working machinery, but also to impress the minds and hearts of many uneasy workers who are clamoring constantly for fewer hours of labor and higher wages than before genius and skill furnished these beneficent machines, which now perform nearly all the heavy, muscular work, merely requiring of us activity, punctuality and strict attention to our business.—*W. W. E. in Wood Worker.*

HILL'S

Patent Inside Sliding Window Blinds,

Are Adapted to any Style of Window,

And Suitable for all Buildings, Dwellings, Stores, Office Buildings, and for Houses Built to Rent, Hotels, Boarding or Lodging Houses are Unexcelled.

They are entirely inside of the window casing, and while requiring no furring out or boxing, make it an impossibility to tear curtains, interfere with plants or window ornaments, or become broken by contact with chairs or other movable articles.

The light can be admitted and sunlight excluded from any part of the window; can be instantly removed and taken to any part of the house to clean and as easily replaced.

They can be opened or closed with the window raised, and without removing articles from the window-sill, and cannot blow open or rattle. The Blind is very light (one-half inch in thickness) and strong, possessing more durable qualities than a hinged blind one inch in thickness.

There is no sagging, banging, or getting out of order.

They are made in three sections in height (each section sliding past the others), and any number of divisions in width corresponding to the folds in the old-fashioned folding blinds. They require no hinges—all trimmings furnished with blinds—are made of all woods, finished or unfinished.

The Blind manufactured throughout the United States and Canada by the members of the HILL SLIDING BLIND ASSOCIATION, is the only sliding Blind ever put into practical and general use, or that has been adopted and used by the leading architects and builders, both East and West.

It is rapidly displacing the objectionable folding blind, also shades, which since they have ceased to be considered the fashion, are used principally in cheap dwellings and t nements.

The Hill Blind is the only sliding blind made of white cedar, and where the grooved slide can be used as the window stop, or placed on the pulley stile, similar to the ordinary stop—"the slide is only 2⅜ inches wide"—plenty of room can be obtained by setting the casing flush with the pulley stile, in light studded buildings. NOTE.—Any other sliding blind using the slide as the stop for the sash, is an infringement of our patents of February 26, 1884, and February 24, 1886, and anyone selling, using, of making such a blind will be prosecuted by the HILL SLIDING BLIND ASSOCIATION, as they are determined to stop the sale of several cheap and worthless imitations.

The Hill Sliding Screen, working the same as the blind, is the only screen covering one-half of the window, which will remain at any desired point, and which can be instantly removed, when not required, or to clean the windows.

Over eight thousand sets have been specified and put in, throughout the Pacific Coast, since April 1, 1885.

We refer to the following prominent architects of San Francisco, who have used or specified the Hill Blind and Screen; also hundreds of owners throughout the Pacific Coast:

Miller & Armitage, Pissis & Moore, H. D. Mitchell, John Marquis, John M. Curtis, Moore & Schultze, J. T. Kidd, J. H. Humphreys, T. J. Welsh, Jas. E. Wolfe, Townsend & Wyncken, Chas. J. Devlin, Geo. E. Voelkel, Copeland & Banks, M. Balczynski, Edw. R. Swain, Chas. V. Pierce, S. & J. C. Newsom, Wm. Mooser, Chas. Geddes, Macy & Jordan, H. T. Bestor, A. A. Bennett, Salfield & Hohlberg, A. J. Barnett, John J. Clark, G. V. Capelletti, P. R. Schmidt, M. P. S hetzel, Clinton Day.

HINDES & MURRAY,

Main Office and Factory, 411 Mission Street, Corner of Fremont.

Sole owners of the right to SELL and MANUFACTURE for the Pacific Coast, except Counties f San Diego, Los Angeles, San Bernardino, Santa Barbara, Kern, San Luis Obispo, and Ventura in California.

COUNTRY BUILDING NEWS.

SAN DIEGO.

The erection of a two-story frame building for T. O. Wadsworth will soon be begun on lots 39 and 40, block 7, Reed and Chase's addition.

Work has been begun on a three-story corrugated iron warehouse for D. H. Hewitt. It is located on lots K and L, block 60, Horton's addition.

George Journey, builder, is erecting a corrugated iron warehouse for J. W. Wescot on Seventh street, between H and I. It is 50x100 feet in size.

Breden & Hatcher, builders, are erectig a substantial corrugated iron warehouse for Toles & Decker, on Sixth street between K and L. It will be 50x100 feet in size and will cost $5,000.

A store building for George N. Hale & Co. is being erected on D street between Fifth and Sixth. It is of frame, 50x75 feet in size. F. E. Joanson & Son are the builders.

John Diehl and Fred Vitepsch have obtained a permit from the Building Inspector to erect a three-story brick building on lot G, block 10, Horton's addition. The cost of the building will be $7,700.—*Union*

Work on the foundation of the Snyder block on Sixth street, between E and F is progressing rapidly. The plans have recently been changed so as to enlarge and materially improve the building. It will have a basement and four stories instead of three.

A business building is being erected for H. N. Conklin, on Sixth street between I and J. The building will be sixty feet square, and will contain two large stores. J. Bailey is the builder. The cost will be $5,000.

A three-story brick building, 50x 90 feet is being erected by T. K. Smith, on Ninth street near I. There will be two large stores on the ground floor, and forty lodging rooms in the upper stories. The cost will be $12,000. S. C. Smith is the architect and contractor.

Stannard & Clements, architects, are preparing plans for a hall, and business building, to be erected on the corner of Fourteenth and H streets. It will be 50x70 feet in size and two stories high. The cost of the building will be $40,000.

A cottage will soon be erected for Carl Schutze, on D street, between Thirteenth and Fourteenth. It will contain five rooms and a basement, and will cost $2,000. Emil Guenther von Schwartzenburg is the architect.

F. E. Johnson & Son, builders and contractors, are erecting a corrugated iron warehouse for J. Sheriff, at the foot of Fifth street. It is two stories in height, and 50x 100 feet in size. Two similar warehouses will soon be erected in the same neighborhood. They will cost about $4,500 each.

The building operations of this city are still seriously interfered with by the continued scarcity of lime. During this week work was suspended on three large lodging houses and two business buildings, because no lime could be procured to finish the plastering. Dealers in lime do not promise any change for the better for ten days or two weeks, and then the market will only be supplied temporarily. In the meantime work is suspended on ten large business structures and innumerable smaller buildings.

REDDING.

F. Dustin is building a $1,500 residence on Willis street.

Mr. G. Haskell is building a $1,500 cottage on Willis street.

Work will soon be commenced on Harry Hill's new two-story dwelling on Market street. This will be a fine building.

Mr. H. Nunnamaker is preparing to erect a $2,000 cottage on the corner of Court and Tehama streets. J. G. Farhner is the contractor.

Mr. England, of Santa Cruz, is building a fine building on Court street. Cost, $1,500. Farhner, contractor.

The contract is out for a $30,000 hotel, to be erected by a stock company on the corner of Market and Butte streets.

St. Claire's new four-story residence is about completed. This structure will cost between $5,000 and $6,000. Farhner, contractor.

F. H. Deakin's new two-story stone front brick building on Market street is completed. Holt & Gregg contractors.

Hoff's new brick building on Yuba street is almost completed. It is quite an ornament to Yuba street. Holt & Gregg are the builders.

McCormick, Saeltzer & Co.'s new three-story store to be erected on the corner of Market and Yuba, will be begun in about a week. The building will have a firm iron front. Holt & Gregg contractors.

ED. "NEWS:"—I see by the BUILDING NEWS received by the *Democrat* that you wish a correspondent in every city, and so I will try and furnish a few of the most important items weekly, if the same will be acceptable. I send a few by this mail. We are having quite a building boom, so I can furnish a good deal. Yours respectfully, J. D. Stanford.

SEATTLE, W. T.

Over three hundred frame dwellings now in process of construction and about eight or ten frame store buildings. Building boom is expected in the spring. Yours truly,

JAMES A. CAREY,
Pub. *Seattle Star.*

Seattle, W. T., Feb. 15, 1888.

SAN BERNARDINO.

R. A. Davis is building a cottage on G, near Ninth street.—*Index.*

G. H. Wadleigh is building a residence on Tenth street near F.

A three story brick block will soon be started by W. Smith Hale.

L. W. Heath is building a neat cottage on E, near Ninth street.

J. D. Greenwade is erecting a $7,000 residence on Seventh street.

Mr. Byrne's $20,000 house is almost ready for carpets, furniture, etc.

Several new residences are in process of erection on the Alta Vista tract.

H. H. Whaley has concluded to erect a brick block opposite the Andreson-Drew building on E street.

The contract has been signed for the new post office block, Littlefield Bros. are the contractors, and the amount is $47,780.

R. E. Davis has the contract for building the new schoolhouse in the Fairview district, and expects to begin the work in a few days.

Jones & Griffith, architects, have prepared designs and plans for a $50,000 building for the Farmers' Bank. Contract will be let early in March.

Plans are being drawn for a $30,000 school building, to be built at an early day in this city. It will have all the modern appliances, and will be one of the best and most substantial structures in the state.

Mr. E. Somers is having prepared plans for a three-story brick building, to be erected on the southwest corner of E and Second streets. It will have a frontage of 225 feet, the lower floor to be used for stores and the upper for offices.

SAN LUIS OOBISPO.

Wanted.—Some one with some capital and more energy and sense to start a few lime kilns in this county. Lime is steadily climbing up in price. There is found to be a heavy demand for it the coming years, and we have as good material as there is on the coast in many parts of the county to make it out of, and still there is not a barrel being burned. Talking the other day with a practical builder, he told us at the old Dana homestead he kicked out of the ground some lime which had [been] left over and thrown aside in building operations there about, thirty-five years ago, and the lime was still as hard as a rock. That is the kind of material we have; wood is abundant, and some one is allowing an opportunity to make a fortune escape him.

RIVERSIDE.

The contract for the Y. M. C. A. building has been signed. H. A. Westbrook is the contractor. J. C. Pelton is the architect. The bids were as follows: S. B. Robinson, $16,387; H. A. Westbrook, $15,777; B. B. Taylor, $16,705; John E. Porter, $16,763; A. W. Boggs, $17,666; J. E. Gibson, $19,000.

MODESTO.

I. E. Gilbert & Co. have engaged architects to prepare plans for a fine 2-story brick building. It will be commenced in April.

SALEM, OR.

Architect D. Pugh is preparing plans for a $3,000 residence for F. Stenver.

HESPERIA.

A contract was yesterday let for the construction of a school house up Lotle creek. It will be after a modern design.

C. A. Barnes yesterday let a contract for the building of a large planing mill at Hesperia, and work will begin in a few days.

General Manager C. A. Barnes is to have a new granite dwelling, to cost $4,000, J. C. Pelton, of Los Angeles, being the architect. It will front the Park, on Olive street.

Contracts for the building of eighty houses at Hesperia have been let. Failure to obtain the necessary lumber is the only thing holding back the activety of the saw and hammer.

COLUSA.

A. J. Hankins is building a commodious two-story residence in the southeastern part of the city.

Steps are being taken to build a club house at Arlington. I. Thomas offers 100x300feet for the building. Twenty-seven hundred dollars has already been promised for the erection of the house.

Addington & Green are erecting a one-story brick building adjoining the post office. P. Muttersbach is also building a one story frame dwelling on Clay street. Several more buildings have been erected lately and several more are contemplated.

FRESNO.

J. L. Smith has been awarded the contract for the County Hospital. His bid was $25,240. The highest bid was $33,348. This is entirely too much difference on a job costing the above amount.

On Monday last, E. O. Miller let the contract for the building of his residence on Court street, to Mr. Banta for the sum of $4,694, the building to be completed within 90 days. It will be two stories in heigh', Eastlake finish, and will contain eight rooms.

EUREKA.

Henry Rohner will have erected on the corner of Fifth and E streets, this spring, a two-story building, 90x110. The structure will contain three store rooms and the upper portion fitted for tenements and office purposes.

SANTA MARIA.

Jones and Lucas are having erected a 2-story building 50x60.

J. F. Goodwin will shortly erect a 2-story brick building.

Jas. Beattie is about to build.

WHITE OAKS NEW MEXICO.

G. R. Young has closed a contract with Mr. Foley to erect a store foundation 25x85 feet, with a cellar 25x30 feet. On the corner of White Oaks Avenue and Carizo street.

To be Rebuilt. — Paulson & Drum are rebuilding their sash and door factory, recently destroyed by fire, on a much larger scale. The excavating for the planing mill is being carried on rapidly, and when completed this portion of the mill will be 80 feet longer than the old one. The saw mill part of the establishment will also be greatly improved, and the output increased to 30,000 feet of lumber per day.

Tacoma, Feb 1.

REDLANDS-LUGONIA.

Four brick buildings are under way on Orange street.

The proposition has been advanced to combine these two towns under above name. We hope the name selected will be different, as it is too cumbersome.

A contract for building a new five-story flouring mill at Milton, Or., has been let to an eastern contractor. Lumber has been purchased and work commenced. These mills and a large foundry on the same acre of ground will cost $30,000. The power will come from the Walla Walla river by race and flume.

A LARGE TWO-STORY BRICK BUILDING WILL SOON BE BUILT IN SAN JOSE.

Architect B. J. Clinch of San Francisco has completed the plans for a new additional building for the Sisters of Notre Dame, which have been approved, and the specifications will soon be in readiness for bidders. The new building will be a two-story brick 96x40 feet. The first story will be occupied by class rooms, piano rooms and parlors. The second will be used exclusively as a chapel. The Rev. Father Kenna, who has urged the erection of the new building as a necessary adjunct to the beneficial and increasing labors of the Sisters, will assist in securing subscriptions for it, as it cannot be built without some outside assistance.

ANOTHER NEW CHURCH.

The Centennial Methodist Episcopal Church of West Oakland has contracted for a lot on the north east corner of Tenth and Union sts. 61½x140½, on which it expects to build an edifice costing in the vicinity of $12,000. The church will be 55x85 feet in the clear, and two stories in height. The architecture will be in modern style, and the building will be finished and furnished so as to give the best facilities for effective church work in all departments.

NEW CHURCHES FOR OAKLAND.

A lot has been purchased by the Centennial Methodist Episcopal Church of West Oakland. It is located on the northeast corner of Tenth and Union streets, in a most excellent locality. The trustees of the church have under consideration he advisibility of the construction of a church building to cost $12,000. Plans have been prepared which provide for a frame building in a modern Gothic style. The plans provide a church 55x85 feet, with seating capacity of 500 per sons. The finishing will be in hard, natural woods.

The Unitarian Church Society has re-organized, so as to have the power to hold real estate, and before this year is ended will build some kind of a house of worship to cost about $25,000. No plans have yet been decided upon.

There is considerable talk of building a church below Seventh street, in order to carry the warfare of the cross into the enemy's country This plan has been talked about only, but it might be carried out before the end of the year.

H. E. Hatch will build for the First Universalist church and parish of this city a small church building. It is to be on the west side of West street between Eleventh and Twelfth streets. The cost will be $2000; J. C. Matthews & Sons are the architects.

The new church building of the Seventh Day Adventists is nearly completed.

The Brooklyn Presbyterian church has been fully finished a nd the new windows inserted.

The old Brooklyn Presbyterian Church on East Fourteenth street near Fifteenth avenue, will probably be moved to Fruit Vale, and used thereas a branch of the main church.

The proposed building for the Young Men's Christian Association building was fully described in the *Tribune* of Monday. The structure will cost $45,000, according to the plans considered.

OAKLAND BUILDINGS.

The Burdick residence on Nineteenth street, is being rebuilt by W. T. Veitch at a cost of $1500.

T. H. Downing is building a residence on Ninth avenue and Twenty-first street, to cost $5,000.

San Diego Land and Town Company, two-story frame building for offices, lot L, block 144, Horton's addition; cost $3,000.

Charles Collins, one-story brick building, 42x100, lots G and H, block 109, Horton's addition, cost $3,000.

The plans have been completed in the office of R. E. Ball in this city for the San Diego Land and Town Company's building at National City.

Armitage & Wilson are the architects of a five story brick building being erected on Fifth street between G and H. It is brick throughout and 25x100 feet in size. The cost will be $15,000. C. Tyler Longstreet is the owner.

Work will soon be begun on a three story brick building on the corner of B and Fifth streets. The size of the building is 52x54 feet and it will cost $8,000. E. Guenther von Schwarzenberg is the architect.

The new Presbyterian church, upon which work has already been commenced, will be a handsome and commodious structure. The galleries and auditorium will seat 700 persons. Reed Brothers are the architects.

SAN BERNARDINO.

For a few weeks past the *Index* has made prominent the matter of public improvements, not only in the sewerage and side-walking of the city but in letting its readers know of the many magnificent business and residence houses in contemplation, together with dimensions and probable cost. The result has been most satisfactory, as it has attracted the attention of the outside press. For instance the San Francisco *Building News*, which is authority on such matters, clipped from the *Index* twenty building items for one week. Such instances of recognition in matters of such material worth to the city are cheering, and the *Index* will continue in giving to the public all legimate building news to be found, as will be seen below.

[Thanks, Bro. Editors of the *Index*, for your kin lly notice of the Building News. It is our intention to give credit for all news in these columns to the proper authoriti s. We are afraid, however, we will have to send a bill to the *Index* for a new pair of scissors, as the buildi g items are so numerous in its columns that one pair will soon be worn out.

LUGONIA.

F. A. Shorey will build a 2-story brick block.

Mrs. Wilson will build a fine residence.

REDDING.

We have won the county seat fight. Hurrah for Redding.

Pete Hoff is laying a fine concrete sidewalk in front of his new brick.

Mr. Baker is building a neat residence in the west end, near West street

Mr. B. Leighbin will build a fine house shortly on his ranch on Stillwater.

Mr. G. Remple will shortly build a brick residence on the east side of the river.

Mr. Manning, of Los Angeles, is building a handsome residence on the hill in the west end of the city.

Thos. Houston is preparing to erect a fine $2,000 residence on his lots on the corner of Continental and Butte streets.

A gentleman from San Jose is erecting quite a handsome residence on Sacramento street in the west end.

H. R. Bemis is erecting a fine residence in the west end on Sacramento street. J. G. Farbner is the contractor.

Mrs. C. A. Parker will soon commence to build an addition to her handsome residence on the corner of Court and Butte streets.

It is rumored that the railroad company will build a fine eating house in this city the coming spring. Lumber is already on the ground, and we believe the rumor is true.

Mr. Skinner of Santa Cruz was in town a few days since, looking for a location. He intends to erect a fine dwelling as soon as he finds a suitable place.

The Odd Fellows are now taking stock, and will soon commence the erection of a magnificent structure (brick) on the corner of Butte and Market streets. The upper part to be used as a hall for themselves, and the lower story to be used for stores, etc.

I. D. Stanford.

ARROYO GRANDE.

The first house of the Building Association will be soon finished.

As soon as the weather permits a kiln of 200,000 bricks will be burned and lots more to follow.

Still the houses go up. There has been thirty-two buildings put up here during the last year. If we continue at this rate we will have a city yet. Several more houses are under contract.

J. W. Smith is putting up a neat residence, and it is said he and some one else will soon be keeping house then; he will also put up one to rent. Mrs. Lowe will soon begin two $1,500 cottages, both of which are already rented.

Carpenters are coming here from Nipomo to work, the demand for them at present being much greater than the supply. During the past three months there has been a great deal of building going on. At present there are in the course of construction or soon to be commenced several houses.

The King County Investment Company, Seattle, contemplates the erection of a number of cottages in the very near future, on some of its property in the eastern part of town.

The Arlington House, in Seattle, partially destroyed by fire, will be immediately rebuilt. Address the owners, Crawford & Harrington.

PETALUMA.

E. W. Guerkink has commenced a cottage on Eighth street; also one on Sixth street.

CONTRACT AWARDED.

DESCRIPTIONS OF THE DESIGN SELECTED FOR THE MARSHALL MONUMENT.

The design submitted by F. Marion Wells of San Francisco was unanimously adopted by the Marshall Monument Commissioners. It will stand 39 feet 6 inches in height. The monument itself will be 30 feet high, of colossal proportions, the cap being 5 feet square, on top of which is a portrait statue of Marshall 9 feet six inches in hight. The plaster of Paris model of the statue on file represents the "Discoverer of Gold," dressed in the garb of the frontiersman of forty years ago. His pants rolled up to the boot tops, soft felt hat, pistol at his side, his arms bared to the elbow. In the open palm of his hand rests a nugget of gold, the first taken from the mill race at Coloma. His right hand index finger extended points to the river below to the very spot where the memorable discovery was made. To give some idea of the size of the monument, it can be stated that one block of granite will weigh fourteen tons, and the statue itself will weigh between five and six tons. The monument will rest on the grave of Marshall, on the apex of Marshall hill, which is elevated above the main street of the town of Coloma some 300 feet, and it is half a mile distant. It is a sightly point, and for this reason was selected by Marshall as his last resting place. It can be seen from every point in the valley, and no one can ever pass through that most beautiful mountain vale without seeing this monumental pile. The Commission had two objects in view—size and symmetry of form—both of which are attained in the design adopted. Made of native granite, it will stand for ages, and through all time will be an honor to the state, as well as serving to perpetuate the name and history of the man who made the discovery that at once populated the Pacific coast, and within three short years carved from the wilderness of the west a state that now is, and through all time must be the brightest star in the Confederation.

The necessary papers will be drawn up within a few days, the contract awarded and the monument completed within the next ten months.

The "Chronicle" at its Old Tricks

It is the chief duty of any journal to give as near a possible, exact information in regard to any transaction which has taken place. In giving building news, too much care cannot be exercised, as some mistakes will inevitably occur. When a newspaper of the standing of the *Chronicle* wilfully alters items from the WEEKLY BUILDING NEWS, and claims them as original, it is about time to show how the building reports of the said morning paper are made up.

In its issue of March 9th, it records—"19 building contracts were filed during the week closing yesterday." *There was absolutely no such thing, neither was there one-half of that number.* It then goes on with a reputed list of *recorded* contracts, of which the abstracts are as follows:

Valencia and 24th; frame building by day work; cost, $5,000.

There is not a contractor or material man in the city who will not laugh at the idea of a man building a house, paying each week all the labor employed, and all sums due for material, and then rushing down to the recorder's office to file a contract that does not exist.

Again, B. Bergfeld is listed as erecting several houses. He is credited as owner and builder. Why should he record a contract when none exists?

The law does not require a contract to be recorded when the amount is under $1,000; and yet we have the 8th item in the *Chronicle's* list as "Additions—Owner, John Parry; cost, $500." Surely a man must be a spendthrift to record a contract for which there is no necessity.

There are several other blunders given, showing conclusively that whoever writes up the *Chronicle's* building news, he or they are sadly deficient in knowledge of our building laws.

A grand blunder is again made when the ubiquitous, etc., says, the amount for this week is $19,000, the largest of any for this year. Reiterating "he or they" have kept no statement of their previous reports, as the above is an egregious blunder.

The whole long and short of the matter is, that the report was copied from the "WEEKLY BUILDING NEWS" and the editor of the *Chronicle* has not the manliness to allow his reporters to give credit to the "WEEKLY." There is this grand difference between the two reports: The "BUILDING NEWS" gives a list of ALL buildings in process of erection, when the contract is recorded you will find in this Journal an abstract of everything connected with the same, giving time of payments, etc.; when the contract is not recorded, the main items alone are given and do not cover as recorded contracts. The *Chronicle* reports embraces those that are recorded, and even-

The Weekly Building News in connection with THE CALIFORNIA ARCHITECT AND BUILDING NEWS for $2 per annum.

JOYFUL NEWS TO TILE LANDS RESIDENTS.

The use of the mosquito has at last been discovered. Professor Webster says that "injurious organic matter in the water, instead of decomposing and poisoning people, is changed into 'wiggle-tails' which in due time become mosquitoes, and the winged matter flies away, leaving the water purified to the extent of their ability to remove the impurities. If fish are kept in the water they eat the "wiggle-tails," and grow large enough to serve as food for man. Thus the poisonous ingredients of impure water becomes healthful food. Without mosquitoes most marshy or swampy land would be dangerously insalubrious."

MONOPOLY SHOT FROM "WINTERS."

I see the BUILDING NEWS is improving. The number just received is quite interesting. I take great interest in reading of building improvements in different parts of the coast. I wonder if the California Lumber Exchange believe in a *future state* talk of monopoly. I think they are the worst I ever saw. Mr. E. Dafoe is building a two-story house in Winters, at a cost of $2,500. T. D. Ball.

Brick masons have commenced work on the new fire and burglar proof vault for the postoffice in Modesto. The vault will be built from the ground floor and will be a solid, substantial structure.

J. H. Waggoner is having a neat and conveniently arranged cottage erected on his lots in the northern part of the city at the intersection of Stanislaus, Silva and P streets, Fresno.

Col. C. B. Barstow, contractor and builder, is erecting in Sumner a two-story building for Mrs. M. M. Crawford.

Archbishop Gross, of Portland contemplates building a sister's school at Roseburg the coming summer, so says an exchange.

J. A. Webster will soon commence a new building in Fresno.

Geo. L. Joy of South Riverside will build a $10,000 residence. The contract has just been secured by Mr. Porter of Riverside.

F. A. Treen has secured a contract to make additions to Hasbrouck & Co.'s store in Seattle.

Architect Boone is hard at work on plans for A. W. Engel's residence

SAN FRANCISCO BUILDING NEWS

CITY CONTRACTS.

Albion Avenue, near 16th street. Additions to U. S. Laundry; cost $500.

Bartlett, cor 25th, 2-story frame. Owner, B. Edwards; builder, Ellis; cost, $3,500.

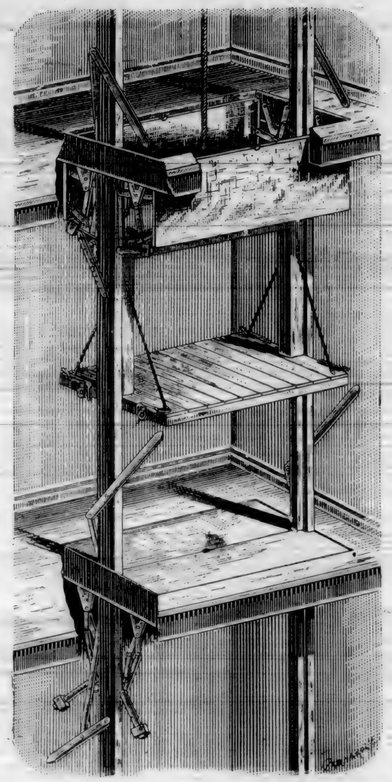
Automatic Fire Shutter Co. of California.

The Best Automatic Fire Shutter Known.

INCORPORATED APRIL 29TH, 1887.

Manufacturers Under United States Patent of the Automatic Shutter.



ADAPTED TO PASSENGER AND FREIGHT ELEVATORS,

For Protection from Fire in Elevator Shafts, and from Liability to Accident.

PATENTED MAY 10, 1887.

Now in operation at 22 and 24 Jessie St., and 327, 329, 331 Sansome St., S. F. Call and examine the same.

The cut represents a freight elevator, showing two floors of the building. The elevator platform is represented as ascending, having passed through the hatchway of the lower floor. The shutters below the elevator platform have just closed [illegible] with the floor, completely and firmly closing that hatchway. The shutters of the second floor are next being opened by the ascending elevator platform, and after it has passed through, these close automatically, in the same manner as seen at the first floor. In the descent of the elevator platform, the shutters open below as it approaches the hatchway, and after passing through, they close again firmly and completely. Each shutter opens and closes automatically as the elevator passes, and are so counterbalanced as to offer no resistance to the ascending or descending platform.

SAN FRANCISCO, APRIL 15, 1888.

Is a Wife Responsible for Plans Ordered by the Husband.

An interesting case to architects has been on trial in our lower courts, and as it has been appealed, the decision will be awaited with interest. It seems that an owner A wanted to have changes made in a certain building across the bay, employing for his purpose an architect B; A represented himself as having certain monetary interests; it was generally understood between the parties that the wife was the one having the cash, and in her individual right. B goes on and prepares an elaborate set of plans, with tracings, etc., complete. Owing to arrangements made by A not being consummated, and a general decline in the real estate boom then in progress, nothing further was done than the preparing of plans, estimates, etc. Several weeks rolled away, when B, seeing that no work was intended to be done, presented his bill to A. The latter, to use a California phraze, was completely busted. After a still longer wait, the demand was again made, the wife of A being included in the summons to settle the bill. The wife acknowledged that all the money was her individual property, and claimed that she had given no instructions to the architect in regard to the plans, neither had she become responsible in any way for debts, architecturally or otherwise, contracted by her husband. B brought suit for $299 in the Justice's Court, and recovered judgment against the husband and wife. B proved that the wife was around the building and gave numerous suggestions in regard to the alterations to be made in the building. A appealed the case to the Superior Court, and in a short time it will come up for trial. We will be present and will report the case in full, as many points of importance to architects will be presented.

A Hint to Painters.

Bright colors and positive tints may be employed in outside decoration with excellent effect in emphasizing architectural features, but the more brilliant they are, the greater is the demand for good judgment in their application.

Editorial Correspondence—East and West of the Rocky Mountains.

With kindest consideration and sympathies for and with the people of those storm, tornado, cyclone, and tempest-cursed sections of the American Continent, where terror, suffering and hundreds of deaths from these causes have so fearfully distressed the inhabitants, and caused losses and sorrows beyond intelligent conception or accurate computation, it is with gratitude and pleasure that we refer to the goodly land of the Pacific Coast, exempt as it has been until now, and is likely to be in the years to come, from those severities of climate which have prevailed in various sections and portions of the Atlantic and inland states within the past two months, destroying so much of human life and comforts, and furnishing matter and facts of the saddest kind to shade the pages of local history.

In California—Storms have touched lightly; winter has past harmlessly, and bright spring in all its grandest glories has come, opening up and manteling fields, orchards and vineyards with richest verdure, foliage and blossoms, while as yet ice and snow hold sway over thousands of square miles of country east of the Rocky Mountains, and the husbandman's arm yet remains partially powerless to plow or sow, and seeds and roots in the ground as yet are unable to shoot forth and come to life. It would not be reasonable to expect that all, or a majority of those who have passed through the trying and hard climatic conditions that recently paralized business and produced a semi-chaotic state of affairs in New York City and State, and in other Atlantic and northwestern sections of country, will abandon their homes and seek refuge in California; but to as many as will come, the Pacific slope offers immunity from anything approaching the climatic terrors of the recent past, east of the great mountain divide.

But shelter and security from winter storms and bitter temperatures are not the only inducements offered to those who desire to escape from possible reoccurrences of that which befel so great a number of people, and devasted so large an area of country since the commencement of the present year. Beyond these considerations lies the other material fact, that almost every part of the Pacific Coast extends assurances that industrious, frugal and enterprising men will find ample fields in which to sow and reap, by the earnest and right application and exercise of their mental or mechanical abilities of whatever honest or honorable character they may be. Although vast areas of the public domain has been taken up, and thousands of acres are daily being secured by location or purchase, there still remains of virgin soil, land enough for a vast number of people, and California will only begin to appear in her true character as a State among those of longer settlement, when thousands more farms, and as many farmers' homes and families occupy present waste places, and orchards and vineyards greet the eye, where at present the dreariness of unsown and uncultivated fields are to be seen; or flocks or herds of animals feed in ranges of valley and hill country, almost if not quite as great in extent of acreage, as the entire of some of the smaller States of the Union. True—*land lovers*—men whose heart and soul is set upon the possession of all the land they can by any means gain control of, and whose delight and greatest joys center in grasping and holding as much of earth as possibilities will permit, have held a chain around the neck of California's prosperity, and by far too much of this state of things still continues; but, as compared with the earlier years of the State's history, this evil has abated to some extent, either from coin poverty to maintain the luxuries of land richness and wealth, or death has interposed its prerogative, and bid the "Land King" lie as humble beneath the surface of earth, as he who in life owned not one foot of land. So that, one by one large holdings have been segregated into smaller divisions, and thrift and earnest work has transformed many that were desolate places, into prosperous and interesting districts. But with all this happening to a certain extent, there are still too many grasping tyrants over the

soil; too many occupying and exercising exclusive individual control over sections of country that should be owned and occupied by a thousand honest tillers of the soil. But the evolutions and mutations of time are ceaseless and tireless, and judging the future by the past, it is reasonable to presume that within the present generation great changes will be wrought, and much that is now owned and held in single hands, will be well distributed. But aside from life by the soil, new towns are springing up in all directions throughout the length and breadth of the State—some of them assuming the importance of from three to twenty thousand of inhabitants, and all more or less prosperous—some growing to be important centres of trade and commerce, while in all the older cities, from San Francisco down, the prosperities are great and permanent, with apparent future of the most encouraging character.

All these things considered, with the many not mentioned, certainly presents California in a most enviable light, as one of the most favored portions of God's heritage as to climate, and boundless in resources for the uses, purposes, and happiness of the people who dwell within its limits. The inducements are many, why hundreds of thousands of people east of the Rockies should come to the Pacific Coast, and enjoy life in security from reoccurences of the fearful visitations of the past season with them. Nor is California the only place upon the Pacific Coast inviting and justifying multitudes to "Come West," for the facts stated in reference to California, are largely applicable to all sections from San Diego to Alaska.

The attention of architects and builders on the Coast is respectfully invited to the advertisement of Messrs. N. & G. Taylor Co., the old established tin plate and metal dealers of Philadelphia, in the present issue. It may not be generally known but this firm was the first to guarantee brands of roofing tin, also the first to have stamped upon each sheet the thickness of the tin and the name of the brand. They are the sole importers of the genuine old style brand of roofing tin. In a letter to us the other day they say that the past season has been the largest they have ever experienced for the sale of their guaranteed brands of roofing-tin. In fact, they consider a new era has dawned upon the trade. Certainly there is no question about this, as there is a noticeable demand from all over the country for the better qualities of roofing-tin. Every mail brings them letters, particularly from architects seeking information on the subject of roofing-tin.

Messrs. N. & G. Taylor Company feel confident that a better time is quickly approaching, when architects will use special care in the wording of their specifications and clearly name the brand of roofing-tin they wish used. The next important thing is to see that the roofer to whom the contract is awarded uses the brand as specified. Under cover of the guaranty made by Messrs. N. & G. Taylor Company, architects are perfectly safe in specifying the genuine old style brand of extra heavy ternes. Every perfect sheet is stamped with the name of the brand and thickness, also the trade mark, thus absolutely protecting architects, roofers and property-owners in every possible way against the fraudulent use of inferior tin and dishonest competition. Write to them for information and samples of the tin. The brand, we understand, is carried in large stock by all the leading jobbers on the Pacific Coast.

No More Fences.—Every progressive and intelligent land owner should seriously consider the following resolution; not only meditate upon it, but demand of his member in the Legislature to act accordingly.

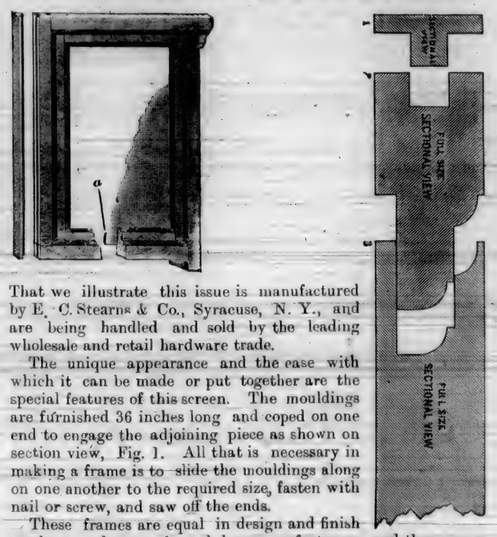
Whereas, the wholesale devastation of our forests is detrimental to the best interests of the soil;

Whereas, a great deal of timber is yearly wasted by maintaining unnecessary fences, and,

Whereas, the Supreme Courts of some States have decided that a barb wire fence is illegal; therefore,

Resolved, That every State should amend their existing fence laws so that no land owner is compelled to maintain any fence whatever.

The Stuart's Window Screen Frame



That we illustrate this issue is manufactured by E. C. Stearns & Co., Syracuse, N. Y., and are being handled and sold by the leading wholesale and retail hardware trade.

The unique appearance and the ease with which it can be made or put together are the special features of this screen. The mouldings are furnished 36 inches long and coped on one end to engage the adjoining piece as shown on section view, Fig. 1. All that is necessary in making a frame is to slide the mouldings along on one another to the required size, fasten with nail or screw, and saw off the ends.

These frames are equal in design and finish to those made by sash and door manufacturers, and they are retailed at much less cost, all stained, which is at a much lower price than the cost of the usual square stick with half round moulding to tack over the wire cloth.

Fig. 2 shows the frame put together before the mouldings have been sawed off, and the wire cloth is shown broken away to expose to view the small strip 'a' which is furnished to tack over the wire cloth.

There are sticks, as shown by No. 1 in Fig. 2, to allow the screen to slide up and down; thus the window can be raised and lowered without disturbing the screen.

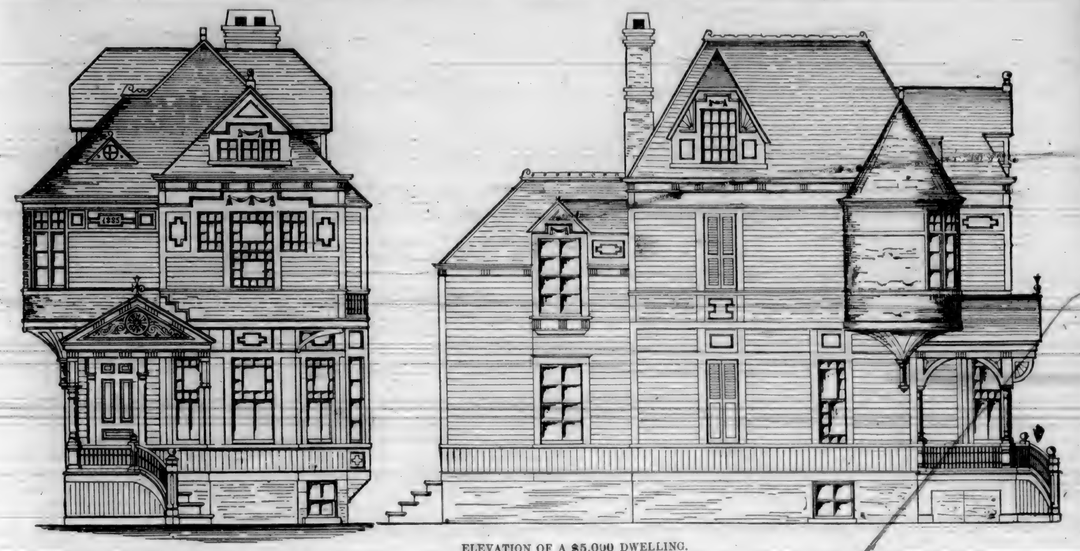
A Fire Kindler—Not Patented.

When the corn season commences, just save the cobs. Then get a boiler into which you put six gallons of water, and one pound of saltpetre. Heat it to the boiling point, and then put in as many cobs as the water will cover. Let them stand a short time, and then take them out and place in the sunlight until thoroughly dry. They can be easily lighted with a match after they are dry and will make a hot fire.

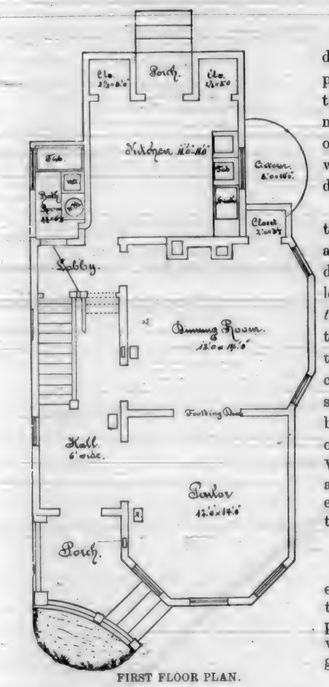
MAKING AUGERS.

The principle of the auger now in use all over the world is said to have been discovered by accident. In 1680, Benjamin Pugh, an Englishman, while watching some boys working endeavoring to bore a hole in the ground with a piece of iron barrel hoop, noticed that after the hole had been sunken some distance into the earth, and the pliable metal of their improvised tool had become heated, it twisted and carried the dirt up to the surface nicely, and he could not see why the same principle should not apply to wood. The invention of the auger was the result.

Although everyone is perfectly familiar with this common place tool, but comparitively few know the process of its manufacture. In making augers, says a contemporary, the iron which forms the main or spiral part is welded into the steel of which the tip is made before forging. The bar is then put under hammers and forged into shape. It is then put into what is called a "wringing machine" and twisted up in a rough shape into the spiral form, after which it is passed through "crimpers," giving a uniformity of twists. The augurs are next put through "straighteners" and revolved, making them perfectly straight, when they are ready for putting on the head, which is the most delicate operation in their manufacture, and requires the work of a skilled artisan. They are then subjected to a "grinding out" process, which consists of putting them through two rubber wheels to rough polish the twist. The fitter-up then takes hold of them and "lightens" or fits the head; then the filers file down and sharpen the heads, after which they pass through the hands of the polishers, where they are polished and hardened ready for market.



ELEVATION OF A $5,000 DWELLING.

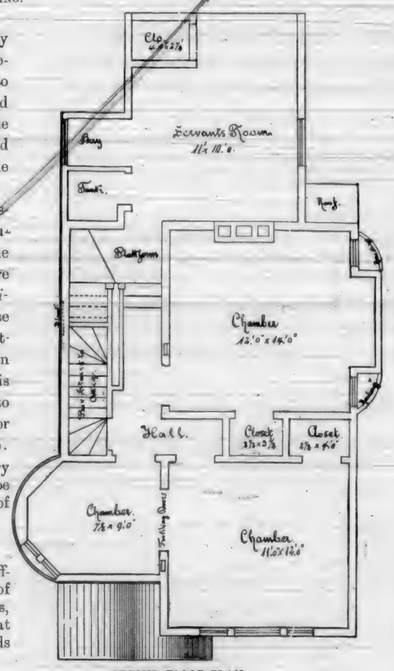


FIRST FLOOR PLAN.

The elevation and plans given are entirely different from anything that has heretofore appeared in this journal. To give full effect to the design, the lot on which it is built should not be less than 40 feet in width. But little ornamentation is used on the exterior, good work being the essential in order to show the design in its beauty.

The internal arrangement is plainly illustrated, and varies somewhat from plans usually presented to California builders. The design was formulated in Canada, and we were led to ask the editors of the *Canadian Architect and Builder* the use of the cuts, because the price given was $3,000, and we were utterly unable to comprehend the difference in cost between building in Canada and in this state. Why it should cost about double to build in this state is one of the problems for our manufacturers and builders to determine. With a finished basement to contain a laundry and other conveniences, the price would be even greater than that placed at the head of this article.

Grindstones, large or small, good or indifferent, are hopelessly ruined by running out of true. A wobbly grindstone and a nervous, passionate mechanic make a combination that will spoil every tool in the shop that needs grindstone treatment.



SECOND FLOOR PLAN.

A Few Hints for the Builders' Association to Consider.

Architects and contractors, says the *Sanitary News*, will be interested in the action taken by the National Builders' Association at its annual meeting in Cincinnati last week. The association decided that general plans, details and specifications when offered for final competitive estimates, should be on a scale of not less than one-eighth of an inch to the foot, should be done in ink or some unfading process, and be complete in every part; such parts of the work as require a higher scale to be comprehended should be one-fourth of an inch to the foot; specifications should be definite; estimates should not be made to cover an indefinite depth of foundation, but where the soil requires going below the depth indicated on the plan, it should be paid for as extra work at agreed prices; the specification is to be the guide for estimating, and all demands made by the specifications, unless objection be made thereto in writing when the bids are submitted should be covered in the estimate offered; improper demands made by plans are not to be considered; grouping of special work must be mentioned and placed under appropriate headings; specifications must distinctly state when it is necessary to cut or change the work of one mechanic in placing the work of another, and such work should be cut or changed by the mechanic who put it in at

the expense of the mechanic for whose accomodation the change is made; contractors are not to be restricted as to sub-contractors, without notice; on reserved portions of the work, let by the owner to a third party, the principal contractor should receive 10 per cent; the lowest invited bidder, whether a general or sub-contractor, should be given the contract and estimates for changes should be made only by him, unless the changes involve a complete alteration in the plans, and then the full competition should be again opened; in no case are the lowest two-bidders to be called upon to estimate upon changes to see which shall have the contract. If the price estimated for changes should not be satisfactory to the owner, it should be settled by arbitration Compensation for the lowest bidders when all estimates are rejected is demanded as follows: For estimates amounting to $5,000 or under, $25; $5,000 to $50,000, $50; over $50.000, $100. When security is demanded of the contractor, a like sum should be given by the owner. A good deal of discussion was indulged in on the rights of sub bidders in the hands of architects and the general contractors—unsolicited bids—and a rule was passed to the effect that any member detected in trading on any of the sub-bids will be liable to forfeiture of membership, censure or suspension. It was also decided that bids should be opened in the presence of bidders when practicable, and that when a penalty is demanded for delay in completion beyond the day named, a premium of like amount be awarded the contractor, for completion before the time. These remedies, some of them are new, but all seem to be just, and we await with interest their practical operation.

Chisels.

In mortising without a machine, grind your chisel to a long basil or bevel. It will drive easier with a mallet.

Keep the flat side of the chisel facing the marks.

Grind the chisel on one side only.

A paring chisel is the very finest chisel made. It is long, thin, and made of fine steel. A paring chisel should have an octagon handle, long and true, and should be put on in perfect line with the blade of the chisel.

Paring chisels, as the name indicates, are used for "paring or cutting any superfluous stuff on fine work." They are the sharpest and the most dangerous tools, when in good order, an amateur can use.

A mortise chisel is a thick, heavy tool, made of iron faced with steel. Generally there is a socket to receive the handle. Sometimes the top end of the handle is enclosed in an iron ring, placed there to resist the force of the mallet used in "driving" a mortise.

A firmer chisel is one midway between a mortise and a paring chisel. It is the most useful for amateurs, as it can be used for mortising and paring. They are pretty strong, and generally have turned handles with brass ferrules. For general work they should not be ground too thin, for if they are finely tempered they will break when used for mortising, and if used for paring they will answer very well if ground medium in thickness.

If I was asked how many chisels an amateur should want, who did not have "wealth enough" to get complete sets of the three kinds, I should say:

For paring chisels, get one two-inch, one one-and-a-half-inch, and one one-half-inch; for firmer chisels, get one one-and-three-quarters, one one-and-a-quarter, and one three-quarters; for mortise chisels, get one quarter-inch, one three-eighths, and one half-inch. These will give the amateur a fair supply and give him all he wants for general amateur work.

Gouges are not so much in request by amateurs; sometimes, however, work cannot be done without them. It is generally the best policy for an amateur to buy gouges only as he wants them. The style of gouges is unaccountable; every curve requires a different set of gouges. When you want a gouge, get the curve, take it to a dealer, and get a tool to suit.—*Universal Tinker*

For sharpening tools, instead of oil, which thickens and smears the stone, a mixture of glycerine is recommended. The proportions of the composition vary according to the class of tools to be sharpened. One with a relatively large surface is best sharpened with a clear fluid, three parts with glycerine being mixed with one part of spirits. A graver, having a small cutting surface, only requires a small pressure on the stone; and in such cases the glycerine should be mixed with only two or three drops of spirits.

The mechanic who thinks he has arrived at perfection may be written dowu as an ass. There is no such thing as "perfection" in the mechanical arts, and the man who claims to be a complete and finished mechanic knows in his heart he claims that which does not belong to him, and he will soon discover his vanity, for his fraudulent pretenses do not deceive the employer to any great extent. Blow and bluster will not make good work or pass for efficiency, and the man who uses that sort of weapons seldom deceives an employer. "I never employ a man who knows it all," said a large contractor to us the other day. "Give me a modest, neat looking man," he continued, "and I'll hold you a dollar he is a good workman and one that may be relied upon; though, of course, that sort of man seldom comes in search of employment. Bragging fellows, who state they can do anything from dressing a board to designing a cathedral, are quite numerous, and may be had at any moment." Doubtless this is true, but it does not argue that there are not many of the modest workmen. There are plenty of them, good, reliable fellows—fellows that seldom or never have need to seek employment. They are always engaged. Most of them own their own homes, are intelligent chaps, models in their own neighborhood, the best of citizens, have neat, thrifty wives, and healthy, happy children, and their country is proud of them, for it understands that they are towers of strength and bulwarks of true freedom. It is not from this class anarchists or noisy demagogues are drawn; they do nothing until they have first considered the results, and all their actions are tempered with wisdom, hence their ability to become good mechanics.—*The Timber Worker.*

IMPORTANCE OF CARPENTRY.

The carpenter has more to do with the co struction of a building than any other person employed by the architect. Whether a building is to be erected of brick or stone, still it is the carpenter who forms all the patterns and guides for the bricklayer or the mason to work from. Nay, even if a cottage is to be built of mud, the first step is to procure boards adapted by the carpenter for forming moulds, by which this mud is brought into the required form; or, even if the mud is heaped up with forks, as in the cob walls of Devonshire and Wiltshire, the carpenter is required so supply what are called wooden bricks to be built into the walls for attaching, at a future period, the internal finishings.

In the interior of the house everything depends on the carpenter, and most things are, indeed, done by him. The floors and doors and windows are almost entirely his work, and he forms mouldings for the cornices which are put up by the plasterer If, therefore, we could improve the taste of the rising generation of carpenters, we should have no fear of operating, through them, all on the various artizans employed in the construction of houses, and ultimately, on the general taste of the whole community. —*J C, Loudon.*

Before the passage of an insolvency law a note was given. After the law was passed a new note was given in renewal of the first one .In suit upon this last note the defense of discharge under the insolvency law was made. Held that the maker's discharge under the insolvency was a bar to the suit, even though the note was given in renewal of one made before the enactment of the insolvency law.—*Snow vs. Foster, Maine Supreme Ju'd ial Court.*

Humboldt Ties Preferred.

The following from the Auburn *Republican* incidently brings to view the connection that Humboldt County has with a growing demand for an article that this county can supply in unlimited quantity. At the same time it is wise to avoid wasting the timber, or railroad building is yet in its infancy in this State:

"There are probably more new ties used in the course of a year on the railroad between Rocklin and Summit than any roadbed of the same length on the coast. The heavy gaade, and particularly the numerous curves, are hard on the wearing quality of ties, and there are from twenty to twenty-five thouaand new ones put in between Sacramento and Tamarack, a distafice of 93½ miles, every year. The number of ties to a mile is about 2,700, and a regulation tie is 6x8 inches and eight feet long. A better quality of tie is necessary for the mountains than for the level tracks in the valley. According to Roadmaster Rabe, the very best tie is made of redwood, but he gets very few of these, only occasionally making requisition for them from below. These redwood ties come from the Humboldt forests, and will last twelve or thirteen years. After that service they make good fence posts, and readily sell for that purpose, each tie being good for two posts. By far the greater part of the ties used on this division come from our own mountains. Mr. Rabe says the next best tie after redwood is made from the heart of the sugar pine. These ties come mostly from Towle Bros., and from the vicinity of shed No. 27. They cost 36 cents each, but under steel rails they last from ten to twelve years, and Mr. Rabe has seen them in good condition after being laid fourteen years. Only a few of these choice ties can be had, because the heart of the sugar pine is too valuable, and is in great demand for other purposes. The common ties, and the kind mostly used, is made of red fir, yellow pine or spruce. These cost the railroad company about 34 cents.

A young man seeking employment in a Southern City saw the word "Push" on the door of a large manufacturing establishment, and walking in accosted the proprietor: "I saw your motto on the door and came in to tell you that I wanted work. I am chock full of 'push,' and if you will give me something to do I will demonstrate what I say. A man needs 'push' to get along in the world these days." The proprietor was so pleased with the youth's manner and business-like air that he gave him a job unloading pig iron in the foundry at 75 cents a day. In three years that same youth was foreman in the foundry department; three years later he was foreman of the shops, and he is now a partner and manager of the concern.—*Ex.*

Don't Undervalue the Boy.

Too many men make their boys feel that they are of little or no account while they are boys. Lay a responsibility on a boy and he will meet it in a manful spirit. On no account ignore their disposition to investigate. Help them to understand things. Encourage them to understand what they are about. We are too apt to treat a boy's seeking after knowledge as mere idle curiosity. "Don't ask questions" is poor advice to boys. If you do not explain puzzling things to them, you oblige them to make many experiments before they find out; and though experimental knowlege is best in one sense, in another it is not, for that which can be explained clearly does not need experimenting with. If the principle involved is understood, there is no further trouble, and the boy can go ahead intelligently.

Do not wait for the boy to give up before you begin to treat him as an equal. A proper amount of confidence, and words of encouragement and advice, and give him to understand that you trust him in many ways, helps to make a man of him long before he is a man in either stature or years.

Give him tools, and let him find out for himself whether he has got any mechanical taste or not. Do not discourage him, as parents are apt to do, by saying; "Oh it is no use for you to try to do anything with tools. I never have any taste that way, and of course you have not." If a boy finds he can make a few articles with his hand, it tends to make him rely on himself. And the planning that is necessary for the execution of the work is a discipline and an education of great value to him. The future welfare and happiness of the boy depends on the surroundings of his youth. When he arrives at that period in his life when he is obliged to choose what profession or what line of business to follow, it is highly important that he should take no false step. And if in his youth he has cultivated a taste for any particular branch, the choice of a profession or business will be made more easy.

"MANTLES AND SIDE WALLS."

BY E. PRIGNOT AND OTHER ARCHITECTS AND DESIGNERS.

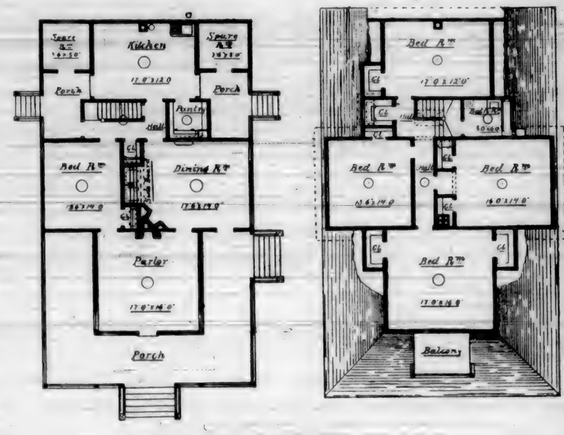
32 LARGE PLATES.

The designs represented are in the Cheminee, Louis XIII, and Louis XVI. styles. The engravings are very fine, and artistically represent the various fine details.

Price, in portfolio form, $5.00. Send to this office.

"School House and Church Architecture" ..... $ 3 00
"Public Buildings" 3 00
"Detail Cottage and Constructive Architecture" 6 00
"Modern Architectural Designs and Details" 0 00
"Monckton's Practical Carpenter and oiner" 5 00
Mechanics' Geometry (how to frame by card board models) 5 00

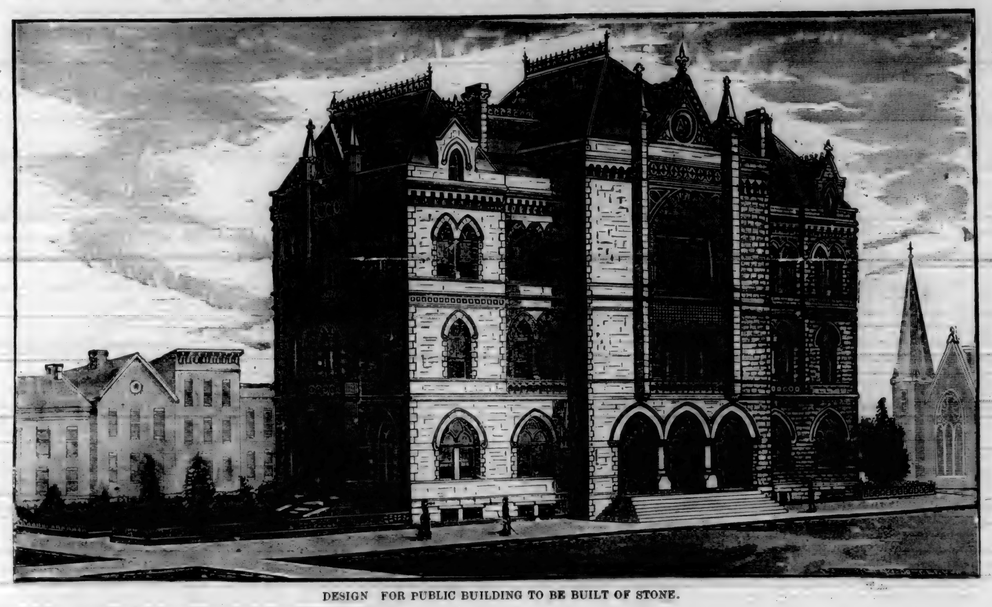
Elevation



A Country Residence.

The above engraving illustrates a very pretty and unique design for a ten-room country dwelling lately built at Vacaville, Solano Co., Cal. The building site is on a sloping ground, surrounded by large, spreading shade trees, making a most beautiful building spot for a country residence. A glance at the plans will readily show the reader the beauty of arrangement, convenient apartments and superiority in every way of the design for a country dwelling, where the summer days are hot and sultry. One principal feature of the design is the large front porch, enclosed by neatly turned balusters, shading the rooms from the hot sun and affording a very pleasant and agreeable sitting place during warm weather. The kitchen is placed in the rear of the building and the entrances are protected by two porches furnished with balusters, railings and steps to correspond with the front porch. A spare room opens off of each rear porch which are intended to be used for workingmen and cook. The kitchen is provided with a spacious pantry with shelves, drawers and a slide to pass dishes into the dining-room. The dining-room has a large sideboard placed in a recess with an ornamental arch in front. One chimney contains fire-places for the dining-room and parlor, and separate flues for the bed-rooms on the second floor. The second floor contains four large bed-rooms, a bath-room and numerous closets. The bath-room is furnished with a wash-basin, water-closet, bath, and a clothes-shute running down to a basement room fitted up with clothes-box, wash-trays and all necessary conveniences used in a laundry. The basement is finished into a milk-room, store-rooms, etc. A commodious balcony is constructed in the roof of the front porch, which is reached through two front windows in the bed-room of the second story. The elevation needs no description, as a close examination will reveal many features which are novel and beautiful. Full information in regard to painting, plumbing, etc., will be forwarded on application. Address,

Salfield & Kohlberg, Architects, 339 Kearny St.



DESIGN FOR PUBLIC BUILDING TO BE BUILT OF STONE.

Mechanics' Institute Exposition of 1888.

THE BOARD OF TRUSTEES announce that the TWENTY-THIRD INDUSTRIAL EXPOSITION OF THE MECHANICS' INSTITUTE will open in its grand exhibition building, bounded by Larkin, Hayes, Polk and Grove Streets, on TUESDAY, AUGUST 7TH, 1888, and will close on SATURDAY EVENING, SEPTEMBER 15TH, 1888.

The past Exhibitions held by the Institute have done more than all other means combined to illustrate the advance in inventions and mechanic arts upon this Coast.

The Mechanics' Institute of San Francisco was first organized in 1855, but it was re-incoporated in 1869 under the provisions of a liberal Act of the Legislature providing for the formation of Mechanics' Institutes, Chambers of Commerce, and kindred useful bodies. The designs and objects of the association, set forth in its articles of incorporation, are most useful and important to the commonwealth, and include the maintenance of a great and growing Library of circulation and reference, the formation of classes, and delivery of Lectures for tuition, and the purchase of propety and erection of buildings for any scientific, mechanical and literary purpose.

Article VI of its Articles of Incorporation reads as follows:

"No shares of stock, nor any individual right in the property of this Association shall exist or be aquired during the existence of the Association, but the property belonging to and in the name of the Mechanics' Institute, shall be held in trust by the Trustees for this Association, and never be diverted from the purposes and intention for which it is organized."

All the profits and pecuniary results of the Exposition, Library, property and enterprises of the Mechanics' Institute inure solely to public and useful ends, and not to the private or personal benefit of any one

The membership of the Mechanics' Institute is large, and it is supported by all classes; it is primarily an association of mechanics, and its exhibitions are emphatically expositions of Pacific Coast industry. During the past two years, the management has greatly enlarged the scope of the Fairs, which now include comprehensive exhibits of the natural products of our soil, the fruits of husbandry, also ores, minerals and timber, and other exhibits illustrative of the natural wealth of our State and Coast.

Regarding the coming Exposition, it is the intention of the management to make every effort to surpass the successes of the last few years. Everything points toward a prosperous year; a large concourse of visitors from the East is expected, and the Exposition will furnish a grand opportunity of displaying the products of our workshops and manufactories, and of advertising the capabilities of the climate and soil of this Coast, and its advantages for resideе and investment.

The SAN FRANCISCO AND NORTH PACIFIC R. R. CO., the NORTH PACIFIC COAST R. R. CO., and the PACIFIC COAST STEAMSHIP CO. (MESSRS. GOODALL, PERKINS & CO., AGENTS), will transport exhibits free of charge, and the SOUTHERN PACIFIC CO. has also adopted a liberal policy regarding the Exhibitions of the Mechanics' Institute.

The Exhibition Building is complete in all of its appointments. *No charge* is made to exhibitors for space. *Steam power* and *water* furnished *free*.

Arrangements are being made to secure art exhibits, pictures, statuary, etc., of unusual merit.

A large orhestra of skilled musicians, including solo performers, will render a grand concert each afternoon and evening during the continuance of the Exposition.

Other attractions and interesting features will be presented from time to time.

The Rules and Regulations governing the Exposition, Premium List, and Applications for Space will soon be ready, and can be had, or will be sent with any further information desired, on application at the office of the Institute, 31 POST STREET, SAN FRANCISCO, CAL.

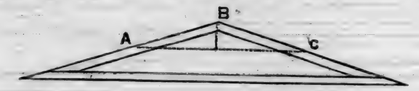
PURCHASING AGENCY We have perfect arrangements by which we can supply merchandise of any description connected with the building interests, at the very lowest market prices. Architects, Draughtsmen, or Mechanics can obtain the best articles of all kinds. Contractors' orders promptly filled. As far as possible, we will purchase from those advertising in this Journal. By helping our advertisers, we necessarily help ourselves; our patrons are well aware of this fact and many have authorized us to make special prices on all goods ordered through this agency. We will use all legitimate methods to largely increase the subscription list of the "California Architect and Building News." By attending to the wants of those unable to visit the city, using the utmost diligence and economy in purchasing, we expect to add at least 1000 subscribers to our list.

EVERYBODY'S COLUMN.

Questions and Answers.

Under this head it is our purpose to give practical information on any subject within the scope of this Journal which may be asked for by any of our readers. We cordially invite inquiries and will do our best in all cases to get useful replies.

C. B. asks:—"Will you please give me a little help? I wish to know how to set out the curve for the centre of a brick arch, the rise of which is very small in comparison to the span. Suppose I wish to make a centre for an opening five feet wide and that the rise is only four inches. I cannot use a piece of string or a compass, as the center would be away nearly in the next block.



Answer: To set out the curve in such a case as our correspondent refers to is not at all difficult. Proceed as follows: Mark out on the floor, or on a large bench with a piece of chalk, two points at a distance apart equal to the opening, in this case five feet. Connect these two points, A and C, by a straight line and divide it into two equal parts. In the centre set up the rise B four inches, when you will have three points, A, B and C, representing the rise and the opening. Now take a piece of board at least fifteen feet long and cut the top off in two splays so that the apex of them is on the point B, while the two splayed lines pass through the two points, A and C. If two nails be driven in at A and C respectively, and a pencil or sharp point be affixed to the board at B, it will describe the arc required so long as the splayed sides are kept against the nails, A and C. Instead of using one piece of board, three pieces nailed together will answer the purpose as shown in the cut.

J. H. R. writes: "Will you please give me a rule for calculating the strength of an ordinary floor joist?"

Answer:—Multiply the breadth of a beam by 600 and this by the square of the depth and divide by the length. The breadth and depth are taken in inches while the length is taken in feet. For example, suppose the joist to be ten feet long and two by five inches. Then $2\times600=1200$. $1200\times25=30,000\div$ by $10=3,000$, which represents the number of pounds required to break the beam when supported at both ends and uniformly loaded. To find the load which it is safe to put upon it, divide by six.

Geo. McL. asks for a means of preventing the bottoms of posts which are set up in damp ground from rotting.

Answer:—Cover the parts with a coating of creosote or oil of tar, or char them and cover with coal tar.

S. T. asks how to render window glass semi-opaque.

Answer:—Dab the glass over with putty and varnish or make a solution of alum and apply it to the surface of the glass when it will be found to crystalize, forming what is known as frosted glass. To prevent it from being rubbed off it is advisable to give the surface a coating of clear varnish.

W. T. W. writes:—"The kitchen sink of my house has become stopped, in consequer ce, I believe, of grease accumulated in the pipes. Will you please give me a recipe which will clear it; something which will prove effectual in keeping it clear."

Answer:—If the trouble arise from the cause you mention, you may clear the pipe by pouring down a solution of common lye made by dissolving it in boiling water. If you will pour down a little of the hot lye from time to time, it will dissolve the grease and keep the pipes always clear.

John S. W. would like us to indicate the best form of joint for connecting the foot of principle rafter to tie beam in a framed roof.

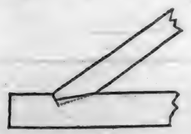


FIG. 1.

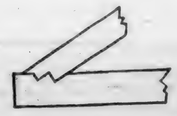

FIG. 2.

Answer:—Opinion differs among practical carpenters as to which is the best form, but that represented in Fig. 1 is certainly one of the simplest while nothing can be said against its efficiency. It is, however, sometimes objectionable from the fact that it necessitates cutting in at some distance from the end, and to overcome this the form shown in Fig. 2 is recommended. In both cases it is very necessary that some means of preventing the boards separating be used. An iron strap encircling the two pieces is perhaps the best that can be used, or an iron bolt answers where the weight is not very considerable.

R. R. S. asks how to remove varnish from a valuable piece of furniture.

Answer:—Soak a piece of soft rag in methylated spirits and briskly rub the wood the same way as the grain. This is a somewhat slow process, but it is thoroughly efficient while no injury can possibly be done by it to the article under treatment.

G. H. has a store in this city, the windows of which are frequently covered with moisture or frost. He would like to find a way to keep them clear.

Answer:—The accumulation probably results from a want of a proper system of ventilation. By forming an iron grating or suitable outlet at the top of the window, the moisture-charged air will have an opportunity of escaping and will, in many cases, get rid of the trouble, but where this cannot be done, the formation of double windows is recommended.

G. G. asks:—"Is there not some way in which we can darken oak?"

Answer:—Yes. Apply with a rag or brush a solution of bichromate of potash of a strength depending upon the depth of color required.

Half-Timbered Houses.

HUNTSVILLE, ALA., Jan. 16, 1888.

TO THE EDITOR:

You would oblige a subscriber by giving a short history of the half-timbered houses erected in England during the Elizabethan period, and their characteristics. Yours truly,

WM. H. H. Subscriber.

ANSWER.—These buildings were constructed of timber framework, arranged sometimes vertically, with horizontal beams at stated intervals, or the timbers were arranged diagonally, so as to form geometrical figures, as squares, diamonds, triangles, etc., etc., the space between the timbers being filled with plaster and cement work studded with pebbles, broken glass, etc.; in fact, the same class of work now known as Rough-Cast work. In many examples curved timbers were introduced, branching from a center post, after the form of a king post in a truss framing.

Another peculiarity of half-timbered houses consists in projecting the second story beyond the face of the lower, and supporting the projection on ornamental timber brackets. The gables surmounting these projections were finished with barge boards, frequently of delicately carved work and of beautiful design.

The gable proper was paneled up in various designs and enclosed square mullioned windows, filled with small square lights and diamond shaped glass.—*Builder.*

White Paint Mixture.

LOUISVILLE, KY., Dec. 27, 1887.

TO THE EDITOR:

Can you give a reader a good mixture for painting what is known as white work? and oblige GEO. C. K.

ANSWER—The following is an excellent whitework finish: After applying one or more coats of white lead, mix and apply as color-and-varnish either pure white lead or dry zinc in hard drying varnish; give ample time for drying; then rub down with fine pumice stone and apply a second coat of above mixture, adding a little more varnish, but not enough to affect the purity of the color. When dry, rub lightly with pulverized pumice stone, wash clean, and then rub every part nicely with pulverised rotten stone being careful to have every part of the same lustre. This gives an egg-shell finish to the surface.—*Builder.*

METHOD OF USING GLUE.

CRAWFORDSVILLE, IND., Feb. 25, 1888.

TO THE EDITOR:

Please give the proper method of using glue, and oblige Jas. H. G.

ANSWER.—Much depends on the quality of the glue and the manner of its application. One fact is self-evident—that if the body is of sufficient strength to fully penetrate the fibers of the wood, and yet leave sufficient in the joint to form a cementing of the parts, the work will stand without shrinkage. Use glues that are slow-drying, for they are the strongest and most reliable. For general use, the following directions are to be observed: Break the glue into small pieces; put into a pot, and soak ten to twelve hours; then boil until properly done; place the same into any air-tight receptacle, and when cold cover it. Use from this prepared mixture from time to time as required, melting in a double pot, as usual.—*Builder.*

COUNTRY BUILDING NEWS.

SAN BERNARDINO.

T. H. Goff will soon erect two residences.

Gee Bros. are about to build a large workshop for their own use.

Plans for a $3,000 residence are being prepared for Isaac Benjamin.

J. C. Christy has let a contract to Uttley Bingham for the erection of three residences.

Brick-laying has begun on the Van Dorin building, on Third street.

Plans are being drawn for Mr. Tittle by Jones & Griffith for a brick stable on the corner of D and Second.

Mr. E. Somers intends to soon begin the erection of a building 100x100, on his property corner of E and Second. He says it will be a daisy.

Work on the foundation of the Smith Haile building, on Third street, has begun the water having been pumped from the foundation.—*Index.*

Mr. M. Katz has notified Jones & Griffith to prepare plans for a three-story building to be erected on his Third street property, adjoining the Occidental. It will cost about $30,000.

Plans are being drawn by Jones & Griffith for a building to be erected on the corner of D and Fourth. It will be three stories and to cost about $25,000. Mr. A. Swring will build it.

Architect Goff is preparing plans for a three-story building to be erected near D on Fourth, by Lawyer Otis. It will be 70x70, and will cost not far from $35,000. The building is to be constructed after the latest designs.

Yesterday T. H. Goff, the architect, let the contract for erecting the large building for Dr. Bogart, on Court street, to Ernest Waycott. The price is $11,075, and the building is to be ready for occupancy by June 1st.

Jones & Griffin yesterday received instructions from Mr. Chris. Kurtz to prepare plans for a building 80x170, to be built on the site now occupied by the Southern hotel, corner of D and Fourth. The building is to cost about $40,000, and will be used as a hotel.

Ed. Katz and Charles Leonard yesterday purchased the adobe portion of the old Southern hotel, which is to be torn down to make way for an elegant three-story brick building. Plans for this new building are being drawn and will soon be ready for contractors to bid on. Messrs. Katz & Leonard are to use the adobe walls in a large warehouse which they are to begin the construction of in a short time, and for which Messrs. Jones & Griffith are to draft the plans.

Architect Goff is preparing plans for a three-story building to be erected near D on Fourth, by Lawyer Otis. It will be 70x70, and will cost not far from $35,000. The building is to be constructed after the latest designs, have all the modern improvements, and will do much toward bringing out that section of the city.

Gessner & Skinner intend to build a foundry in Colusa. We understand the people of that town have given a bonus of $1,600 in order to get the works running.

Plans are ready for figuring in the office of Thos. J. Welch for a new school building on Kate street.

Yesterday Architect Goff let the contract to the Pioneer lumber company of Colton, for furnishing the lumber and mill work for a residance to be erected on the corner of G and Tenth, for Mr. L. B. Wilkins. The house is to cost $5,500.

The old buildings on Fremont street, formerly occupied by Kittridge and others, are being rapidly torn down, to make way for a fine five-story brick building for Huntington, Hopkins, & Co. Wright and Sanders are the architects.

We give elsewhere, details of the contract of J. W. Wissinger to construct retaining walls, etc., on the property on Sutter street near Powell. This is but the preliminary work for the magnificent new hotel building to be immediately erected.

SAN DIEGO.

John Kastle, one-story frame store, lot A. Block 138, Horton's addition, $1,500.

The same contractor will also build two dwellings for O. J. Stough, at Morena. They will cost $4,000.

W. H. Middleton, two-story frame dwelling 34 x 60 feet, lot A, block 27, Higgins' addition $6,500.

J. S. Harbinson, one-story and basement brick building, 48 x 70, lots K and L, block 86, Horton's addition, $3,500.

Morris Philbrook, one-story frame dwelling, 22 x 44 feet, lot 4, block 57, Sherman's addition $1,300.

C. F. Fisher, two-story frame dwelling, lot 8, block 11, Culverwell & Taggart's addition, $750.

Wisecarver & Benton have secured the contract for building three two-story dwellings on the corner of Union and Beech streets. They will cost $4,400. John A. McRae is the owner.

A. Beaton is the owner of a fine two-story residence that will soon be erected on First street between Ivy and Juniper. The cost will be $3,000.

A contract will be let in a few days for the San Marcos Hotel. It will be a two story frame structure, and will contain forty rooms. The cost of the building will be $15,000.

E. Guenther von Schwarzenberg will soon begin the erection of a dwelling for himself on Twenty-third street. It will be two stories in height, and will cost $2,500.

Competitive plans are on the boards in several offices in this city for a large Catholic church, to be erected on the site of the present church on the corner of Fourth and Cedar streets.

J. B. Boughton has secured the contract for building George J. Leovy's residence on the corner of Ivy and Brandt streets. It will be two stories in height and the contract price is $3,700.

The contract for building Henry Timkins' residence on Florence Heights has been let to J. W. Heterington for $10,500. It will be a very fine structure, two stories in height. Comstock & Trotsche are the architects.

J. Hirschler is the owner of two frame business buildings, now being erected on Coronado Beach at the corner of Orange avenue and Fifth street. Each building is 22x50 and will contain a large store on the first floor and eight lodging rooms above.

A building designed for stores and offices is in course of construction opposite the Hotel del Coronado. Willis C. Vajen is the owner. A similar building will also be erected on the same block for W. H. Holabird. G. A. Doud has the contract for both buildings.—*Union.*

The cost of the new church will be about $50,000. In size the structure will be about 75 x 150 feet.

Contracts for moving the old Unitarian church and building the new one, have been let to Kirkwood Brothers for $9,210.

Work will soon be begun on a residence for W. H. Middleton, in Higgins' addition. The cost of the building will be about $6,500.

Subina Noble, two-story store and dwelling, 28 x 50 feet, lots 2 and 3, block 178, Mannasse & Schiller's addition, $2,700.

Work on the many large buildings in this city that has been delayed on account of the weather and want of building materials is now being pushed with the utmost activity. Builders of solid structures complain, however, of the poor quality of the bricks furnished by the various yards. Many of them crumble to pieces when they are dumped on the streets. In order to overcome this defect, architects have added to the thickness of the foundation and other walls in many buildings. This is notably the case in the Snyder block, where the foundation walls have been ordered to be six inches thicker than was originally intended. Building Inspector Thielen has notified several brick makers that they must furnish better bricks in the future or he will condemn them. Mr. Thielen says the defect can be remedied with very little expense or trouble. The chief difficulty is that not enough fuel has been used in burning the brick. A few cents have thereby been saved on each 1,000 bricks, and, in consequence, only the poorest quality has been turned out.

Plans are being prepared in Stannard & Clements' office for an agricultural hall and opera house. It will be a two-story frame building, 100x120 feet in size, and will cost about $20,000. A. E. Horton is the owner, and he intends to have it finished in time for an agricultural exhibition this fall.

Work will soon be begun on a residence for W. J. Warner on Florence Heights. It will be two stories in height and will contain eight rooms. The inside finish will be very fine, and the building will cost $4,500. Clements & Stannard are the architects.

A cottage will soon be erected for Dr. Eichler on the corner of State and Elm streets. It will cost $2,000. Emil Guenther von Schwarzenberg is the architect.

Architect Kirby is preparing plans for a stable for John G. Capron, Esq. It will be erected on the corner of Twelfth and D streets. The building will be one and a half stories in height, with a mansard roof nearly forty feet square.

A fine two-story residence will soon be erected for J. A. E. Thoustrup on the corner of Second and Ivy streets. The building will be 48x75 feet on the ground floor.

SAN LEANDRO.

A $2,000 Jewish synagogue is being erected on Chumalia street. Mr. Kaselaw is the contractor.

Mrs. E. Hesser will soon build two fine commodious cottages on Ward avenue.

The contract for building the wall around the plaza and the fountain in the plaza was awarded to the Oakland Artificial Stone Company at $1 per lineal foot, including six posts, and $2 each for all extra posts and $110 for the fountain basin. The work will be commenced next week.

The contract to remove the dirt from Watkins street was awarded to N. L. Hansen at the rate of 3 cents per lineal foot. There will be about 4,000 lineal feet of dirt removed. The contract for the pavement and curbing in front of Hall's drugs tore was let to B. Bonnett at 14 cents per square foot for the pavement and 50 cents per running foot for the curbing.

OAKLAND AND VICINITY.

CENTRAL OAKLAND.

Oliver Coffin is building a residence of two stories and basement on Poplar street. W. Berry is the contractor. The cost will be $4,500.

Cameron & Macdonald, contractors, are building a cottage on Brush street, which will cost $2,000.

Charles Mau is building a two-story residence on Filbert street between Eighth and Tenth streets. Mr. Mau is his own architect and contractor. The cost will be $7,000.

Joseph Fisher is building a cottage on Simpson street. Knowles & Wetmore are the contractors; cost $3,000.

William Stack is building a cottage near Harrison and Fifth streets for self, at a cost of $1,500.

H. M. Smith is building a two-story residence on Eighteenth street, at a cost of $2,500. Knowles & Wetmore contractors.

Thomas Ahern is building a cottage on Delger street, which will cost $1,500. Andrew Hughes is the contractor.

S. A. Snyder is building a five-roomed cottage on Delger street, between Telegraph and San Pablo avenues, which will cost $2,000. R. M. Murray is the contractor.

Mrs. L. Batterman is building a residence near the corner of Market and Seventh streets, to cost $1,500. F. A. Tietjen is the contractor.

WEST OAKLAND.

E. C. Loftus is building a two-story residence on Magnolia street between Eighth and Tenth streets, which will cost $3,500. Clelland & Davis are the contractors.

A. B. Farr is building a five-roomed cottage on Tenth street, near Cypress street, costing $1,500.

George Smith is building a two-story residence of nine rooms on Eighth street. Hugh McCracken is the contractor. The cost will be $3,500; Charles Mau architect.

J. Hackett is building a five-room cottage on Twenty-fourth street; cost $1,500. John Bauman is the contractor.

John Meyers is building a residence on Peralta street. H. L. Hanson is the contractor, and the cost will be about $3,000.

John Ziegenbein is building two cottages on Union street, at a cost of $3,600.

A. W. Pattiani & Co. have filed another building contract for a cottage to be built on the corner of Chestnut and Twenty-eighth streets, for A. F. Malone, Esq. Cost, $2,500.

John Martens is building a two-story house on the west side of Magnolia street; cost $3,200; Charles Mau architect; P. F. Nelson contractor.

EAST OAKLAND.

F. Senlich is building a cottage on Valdez street, near the Twenty-third avenue railroad depot; G. Dieke is the contractor; cost $1,500.

The California Cotton Mills Company is building a cottage south of the factory, near the Twenty-third avenue depot. Cost $1,500.

Mrs. Vincent is building a cottage on East Eleventh street, between Twenty-fourth and Twenty-fifth avenues, to cost about $1,500.

BUSINESS BUILDINGS.

Mr. Schuler is erecting a building on Seventh street; the cost will be $1,000.

C. Paul is building a two-story store, with residence above, on Telegraph avenne near Charter street. The cost will be $2,000. G. L. Voice is the contractor.

Mrs. L. Batterman is building a store, with residence above, on the corner of Market street and Seventh street. F. H. Tietjen is the contractor; cost $2,000.

BERKELEY.

A large two-story residence is being built by W. B. Heywood, on the corner of Vine and Arch streets, Berkeley. Charles Man is the architect and C. R. Lord contractor. The cost will be $6,000.

F. K. Shattuck will build a number of cottages on Blake street.

SUBURBAN.

R. Christopherson is building a cottage on Harmon tract, Lorin, to cost $2,500.

Boudry & Milwain are building a cottage on Ross & Ruby streets, to cost $2,000.

Peter Perkinson is building a cottage on Felton street, Paradise Park, to cost $2,000.

J. E. McElrath is building a cottage on Grand and Forty-seventh streets, Temescal, to cost about $800.

J. Rickard & Co., contractors, are building a two-story residence on Adeline and Monroe streets, Fruit Vale, to cost $4,000.—*Tribune.*

ALAMEDA.

Two very handsome cottages are in course of erection on the north side of San Antonio avenue between Walnut and Oak streets, by T J. Pine. Each will contain six rooms and will have all modern improvements. Their total cost will be about $7,000.

Mr. Nixon is having erected a $4,000 house on Santa Clara avenue.

Mack Lovelace is having a pretty cottage erected on his lots in the Decker tract, Lemoore.

SAN JOSE.

F. W. Fennant is having plans drawn by Jacob Lenzen & Son, architects, for a two-story brick building.

Contracts have been let for the Hotel Vendome. D. J. Byron has secured the brick work, and Mr. Summers the carpenter work. Jacob Lenzen is the architect.

A TWO-STORY BRICK BUILDING FOR SOUTH SECOND STREET, SAN JOSE.

Jacob Lenzen & Son, architects, have drawn plans for a handsome two-story brick building for F. W. Tenant, which he proposes to erect at once on his property just south of Germania Hall on South Second street. The building will have a frontage of 58 feet and a depth of 120 feet.

RAGGIO'S NEW BUILDING IN SAN JOSE.

The excavations for the foundations for G. Raggio's new building on the southwest corner of First and Julian streets are completed, and in a day or two the brick masons will commence work. The building will be of brick, three stories high; it will have a frontage of 87 feet on First street. The cost will be 30,000.

CALISTOGA.

Bids were received as follows for the erection of a school house in this town. The figures are remarkably close.

John Taylor, Calistoga	$6,175
Thos. B. Bassett, Lakeport	6,200
John Morton, Calistoga	6,470
J. C. Mixon & Son, St. Helena	6,534
Wm Commary of San Francisco	6,598

PETALUMA.

C. Tempel, the hardware merchant, will in a few days commence the erection of a two story brick building on his lot on the south side of Kentucky street near Western avenue. The building will front 50 feet on Kentucky by 80 feet in depth and is intended for business, and will it is said be occupied by the owner. Mr. Temple went to the city last Monday to contract for an iron front for the building. A. B. Case, who owns the adjoining lot, it is said will also build about the same time.

Messrs. Jones & Griffith, architects, have just completed the plans for a new two-story brick building 5x65 feet, to be erected on Orange street, Redlands, by Mr. George E. Otis of San Bernardino.

FRESNO.

M. J. Church contemplates the erection of a large Sanitarium in this city in the near future. The building will be a four-story brick and will cover a quarter of a block of ground.

The members of the Adventist church held a meeting on Monday afternoon, and a fund of $31,000 was subscribed to be used in the construction of a church edifice. The following persons compose the committee to draft plans and specifications and select a site for the new building: M. J. Church, J. W. Beall, V. B. Stephens, J. M. Church, W. D. Bowen, F. R. Dunlap, W. H. Ingels, Mr. Darling, and A. A. Cooley.

A two-story residence will be erected for Mrs. Geo. McCullough on her premises north of the Court-house. Size will be 30x40 feet and two-stories high; established cost about $3,000. J. M. Saffell is the architect. Bids will be received by him until next Saturday at 5 o'clock for the construction of the building.

SOME ELEGANT BRICK BUILDINGS.

Donahoo, Emmons & Co. have commenced breaking ground on I street, at the rear of their hardware store on Mariposa, for a fine three-story brick building, 25x75 feet. This is the first of the two which they propose to build before they have finished. The other will also be three stories high, and will stand on the grounds which they now occupy. The former is expected to be finished by the latter part of next month, when the one to be erected on Mariposa street will be begun. The proposed three-story brick for the First National Bank, adjoining and on the corner, will also be commenced at that time, and the two will go up at once.

LUGONIA.

F. A. Shorey, the indafatigable contractor and builder has just commenced another house on the Inter-Railroad tract, making five dwellings which he has in course of construction at the present time, three for Bentley & Morrison, one for Miss Washburn and this last one for G. F. Lyons, the popular painter. When these buildings are finished Mr. Shorey will put up a two-story brick block for himself, on the west side of Orange street, opposite the *Southern Californian* office.

RIVERSIDE.

Wednesday a contract was let by the Southern California Motor Road Co., to build a bridge across the Santa Ana about 1200 feet above the California Southern bridge. The bridge will be a little over half a mile in length, and the cost of its construction will be in the neighborhood of $30,000. The Pacific Bridge Co., of San Francisco, secured the contract.

TULARE CITY.

Work has been commenced on Krogh's brick building. Preliminary notice of this job was given some time ago in this journal.

COUNTRY BUILDING NEWS.

SAN BERNARDINO.

T. H. Goff will soon erect two residences.

Gee Bros. are about to build a large workshop for their own use.

Plans for a $3,000 residence are being prepared for Isaac Benjamin.

J. C. Christy has let a contract to Uttley Bingham for the erection of three residences.

Brick-laying has begun on the Van Dorin building, on Third street.

Plans are being drawn for Mr. Tittle by Jones & Griffith for a brick stable on the corner of D and Second.

Mr. E. Somers intends to soon begin the erection of a building 100x100, on his property corner of E and Second. He says it will be a daisy.

Work on the foundation of the Smith Haile building, on Third street, has begun the water having been pumped from the foundation.—*Index.*

Mr. M. Katz has notified Jones & Griffith to prepare plans for a three-story building to be erected on his Third street property, adjoining the Occidental It will cost about $30,000.

Plans are being drawn by Jones & Griffith for a building to be erected on the corner of D and Fourth. It will be three stories and to cost about $25,000. Mr. A. Swring will build it.

Architect Goff is preparing plans for a three-story building to be erected near D on Fourth, by Lawyer Otis. It will be 70x70, and will cost not far from $35,000. The building is to be constructed after the latest designs.

Yesterday T. H. Goff, the architect, let the contract for erecting the large building for Dr. Bogart, on Court street, to Ernest Waycott. The price is $11,075, and the building is to be ready for occupancy by June 1st.

Jones & Griffin yesterday received instructions from Mr. Chris. Kurtz to prepare plans for a building 80x170, to be built on the site now occupied by the Southern hotel, corner of D and Fourth. The building is to cost about $40,000, and will be used as a hotel.

Competitive plans are on the boards in several offices in this city for a large Catholic church, to be erected on the site of the present church on the corner of Fourth and Cedar streets.

J. B. Boughton has secured the contract for building George J. Leovy's residence on the corner of Ivy and Brandt streets. It will be two stories in height and the contract price is $3,700.

The contract for building Henry Timkins' residence on Florence Heights has been let to J. W. Heterington for $10,500. It will be a very fine structure, two stories in height. Comstock & Trotsche are the architects.

J. Hirschler is the owner of two frame business buildings, now being erected on Coronado Beach at the corner of Orange avenue and Fifth street. Each building is 22x50 and will contain a large store on the first floor and eight lodging rooms above.

A building designed for stores and offices is in course of construction opposite the Hotel del Coronado. Willis C. Vajen is the owner. A similar building will also be erected on the same block for W. H. Holabird. G. A. Doud has the contract for both buildings.—*Union.*

The cost of the new church will be about $50,000. In size the structure will be about 75 x 150 feet.

Contracts for moving the old Unitarian church and building the new one, have been let to Kirkwood Brothers for $9,210.

Work will soon be begun on a residence for W. H. Middleton, in Higgins' addition. The cost of the building will be about $6,500.

Subina Noble, two-story store and dwelling, 28 x 50 feet, lots 2 and 3, block 178, Mannasse & Schiller's addition, $2,700.

Work on the many large buildings in this city that has been delayed on account of the weather and want of building materials is now being pushed with the utmost activity. Builders of solid structures complain, however, of the poor quality of the bricks furnished by the various yards. Many of them crumble to pieces when they are dumped on the streets. In order to overcome this defect, architects have added to the thickness of the foundation and other walls in many buildings. This is notably the case in the Snyder block, where the foundation walls have been ordered to be six inches thicker than was originally intended. Building Inspector Thielen has notified several brick makers that they must furnish better bricks in the future or he will condemn them. Mr. Thielen says the defect can be remedied with very little expense or trouble. The chief difficulty is that not enough fuel has been used in burning the brick. A few cents have thereby been saved on each 1,000 bricks, and, in consequence, only the poorest quality has been turned out.

Plans are being prepared in Stannard & Clements' office for an agricultural hall and opera house. It will be a two-story frame building, 100x120 feet in size, and will cost about $20,000. A. E. Horton is the owner, and he intends to have it finished in time for an agricultural exhibition this fall.

Work will soon be begun on a residence for W. J. Warner on Florence Heights. It will be two stories in height and will contain eight rooms. The inside finish will be very fine, and the building will cost $4,500. Clements & Stannard are the architects.

A cottage will soon be erected for Dr. Eichler on the corner of State and Elm streets. It will cost $2,000. Emil Guenther von Schwarzenberg is the architect.

Architect Kirby is preparing plans for a stable for John G. Capron, Esq. It will be erected on the corner of Twelfth and D streets. The building will be one and a half stories in height, with a mansard roof nearly forty feet square.

A fine two-story residence will soon be erected for J. A. E. Thoustrup on the corner of Second and Ivy streets. The building will be 48x75 feet on the ground floor.

SAN LEANDRO.

A $2,000 Jewish synagogue is being erected on Chumalia street. Mr. Kaselaw is the contractor.

Mrs. E. Hesser will soon build two fine commodious cottages on Ward avenue.

The contract for building the wall around the plaza and the fountain in the plaza was awarded to the Oakland Artificial Stone Company at $1 per lineal foot, including six posts, and $2 each for all extra posts and $110 for the fountain basin. The work will be commenced next week.

The contract to remove the dirt from Watkins street was awarded to N. L. Hansen at the rate of 3 cents per lineal foot. There will be about 4,000 lineal feet of dirt removed. The contract for the pavement and curbing in front of Hall's drugs tore was let to B. Bonnett at 14 cents per square foot for the pavement and 50 cents per running foot for the curbing.

OAKLAND AND VICINITY.

CENTRAL OAKLAND.

Oliver Coffin is building a residence of two stories and basement on Poplar street. W. Berry is the contractor. The cost will be $4,500.

Cameron & Macdonald, contractors, are building a cottage on Brush street, which will cost $2,000.

ALAMEDA.

Two very handsome cottages are in course of erection on the north side of San Antonio avenue between Walnut and Oak streets, by T J. Pine. Each will contain six rooms and will have all modern improvements. Their total cost will be about $7,000.

Mr. Nixon is having erected a $4,000 house on Santa Clara avenue.

Mack Lovelace is having a pretty cottage erected on his lots in the Decker tract, Lemoore.

SAN JOSE.

F. W. Fennant is having plans drawn by Jacob Lenzen & Son, architects, for a two-story brick building.

Contracts have been let for the Hotel Vendome. D. J. Byron has secured the brick work, and Mr. Summers the carpenter work. Jacob Lenzen is the architect.

A TWO-STORY BRICK BUILDING FOR SOUTH SECOND STREET, SAN JOSE.

Jacob Lenzen & Son, architects, have drawn plans for a handsome two-story brick building for F. W. Tenant, which he proposes to erect at once on his property just south of Germania Hall on South Second street. The building will have a frontage of 58 feet and a depth of 120 feet.

RAGGIO'S NEW BUILDING IN SAN JOSE.

The excavations for the foundations for G. Raggio's new building on the southwest corner of First and Julian streets are completed, and in a day or two the brick masons will commence work. The building will be of brick, three stories high; it will have a frontage of 87 feet on First street. The cost will be 30,000.

CALISTOGA.

Bids were received as follows for the erection of a school house in this town. The figures are remarkably close.

John Taylor, Calistoga	$6,175
Thos. B. Bassett, Lakeport	6,200
John Morton, Calistoga	6,470
J. C. Mixon & Son, St. Helena	6,534
Wm Commary of San Francisco	6,598

PETALUMA.

C. Tempel, the hardware merchant, will in a few days commence the erection of a two story brick building on his lot on the south side of Kentucky street near Western avenue. The building will front 50 feet on Kentucky by 80 feet in depth and is intended for business, and will it is said be occupied by the owner. Mr. Temple went to the city last Monday to contract for an iron front for the building. A. B. Case, who owns the adjoining lot, it is said will also build about the same time.

Messrs. Jones & Griffith, architects, have just completed the plans for a new two-story brick building 5x65 feet, to be erected on Orange street, Redlands, by Mr. George E. Otis of San Bernardino.

FRESNO.

M. J. Church contemplates the erection of a large Sanitarium in this city in the near future. The building will be a four-story brick and will cover a quarter of a block of ground.

The members of the Adventist church held a meeting on Monday afternoon, and a fund of $31,000 was subscribed to be used in the construction of a church edifice. The following persons compose the committee to draft plans and specifications and select a site for the new building: M. J. Church, J. W. Beall, V. B. Stephens, J. M. Church, W. D. Bowen, F. R. Dunlap, W. H. Ingels, Mr. Darling, and A. A. Cooley.

A two-story residence will be erected for Mrs. Geo. McCullough on her premises north of the Court-house. Size will be 30x40 feet and two-stories high; established cost about $3,000. J. M. Saffell is the architect. Bids will be received by him until next Saturday at 5 o'clock for the construction of the building.

SOME ELEGANT BRICK BUILDINGS.

Donahoo, Emmons & Co. have commenced breaking ground on I street, at the rear of their hardware store on Mariposa, for a fine three-story brick building, 25x75 feet. This is the first of the two which they propose to build before they have finished. The other will also be three stories high, and will stand on the grounds which they now occupy. The former is expected to be finished by the latter part of next month, when the one to be erected on Mariposa street will be begun. The proposed three-story brick for the First National Bank, adjoining and on the corner, will also be commenced at that time, and the two will go up at once.

LUGONIA.

F. A. Shorey, the indafatigable contractor and builder has just commenced another house on the Inter-Railroad tract, making five dwellings which he has in course of construction at the present time, three for Bentley & Morrison, one for Miss Washburn and this last one for G. F. Lyons, the popular painter. When these buildings are finished Mr. Shorey will put up a two-story brick block for himself, on the west side of Orange street, opposite the *Southern Californian* office.

RIVERSIDE.

Wednesday a contract was let by the Southern California Motor Road Co., to build a bridge across the Santa Ana about 1200 feet above the California Southern bridge. The bridge will be a little over half a mile in length, and the cost of its construction will be in the neighborhood of $30,000. The Pacific Bridge Co., of San Francisco, secured the contract.

TULARE CITY.

Work has been commenced on Krogh's brick building. Preliminary notice of this job was given some time ago in this journal.

COLUSA.

Carpentry Made Easy,

By a Practical Mechanic who fully appreciates, from personal experience, that there are many things perplexing to understand, and difficult to do, until they are fully explained and tested.

It is designed to make the Science and Art of Carpentry clear and comparatively easy to all who require information on the subject. While it will be found indispensable to the learner, there are items of information worth ten times its price to any well informed Carpenter.

It treats on the science and art of Framing, on a new and improved system, with specific instructions for building Balloon Frames, Barn Frames, Mill Frames, Warehouses, Church Spires, &c. Also a system of Bridge Building, and bills and estimates of cost, and valuable Tables.

Part I treats of Geometry applied to Carpentry.

Part II treats of the use of the Square in obtaining Bevels; Balloon Frames, in all their departments; Roofs of all kinds—their proper pitch, length, width, dimensions, &c.; Church Spires, Domes, &c.

Part III treats of Trestle, Arch and Straining Beam Bridges, and general principles of Bridge Building.

Part IV fully defines the terms and phrases used in the work, and explains the following Tables, viz: Table 1—Length of Common Rafters; Table 2—Length of Hip Rafters; Table 3—Octagonal Roofs; Table 4—Length of Braces; Table 5—Weight of Square Iron; Table 6—Weight of Flat Iron; Table 7—Weight of Round Iron; Table 8—Weight and Strength of Timber, and how to calculate the Strength of Timber of all kinds.

This book is also of use to all who have barns, bridges and outhouses to build, and require information how to accomplish the work.

Price, $5.00 Per Copy.

North, Central and South American Exposition.

NEW ORLEANS LOUISIANA: { NOVEMBER 10, 1885. MARCH 31, 1886.

DIPLOMA OF MERIT

IS AWARDED TO

THEO. W. PETERSEN & CO.

★ OF SAN JOSE, CAL. ★

In acknowledgement of meritorious display of PRESSED BRICK, in the Collective Exhibit of California.

In acknowledgement of which the Signature of the proper Officials and the seal of the North Central and South American Exposotion are hereto attached.

[ATTEST]
CHARLES TURRILL, Commissioner.

I. M. W. COMICO, President.

B. D. WOOD. Director General.

THOS. WOODWARD, Chairman Committee on Award

SAN DIEGO, CAL., FEBRUARY, 18, 1888.

T. W. PETERSEN & CO.

DEAR SIRS:

I send you by mail, Diploma awarded you by the North, Central and South American Exposition, for your display under my charge.

Kindly acknowledge receipt in enclosed envelope.

Very Respectfully

CHAS. B. TURRILL.

Commissioner for California; North, Central and South American Exposition, and Manager Southern Pacific Company's Display.

The above diploma was given to the firm mentioned, for the best display of PRESSED BRICK, at an Exhibition that attracted world wide attention. MR. PETERSEN has made a special study of Kiln burning, so as to have all the bricks of an even color. We have seen car-loads of bricks, delivered in this City, and the uniform color pervading the entire lot, was such as to attract more than ordinary attention from those around. MR. PETERSEN absolutely guarantees that every brick is perfect. If edges or corners are broken, he does not allow them to leave the depot. Any one ordering brick from above firm, can rest as that they will obtain the very best Brick there is made in California. San Francisco address is Townsend St. between 6th and 7th. San Jose, P. O. Box 187.

How the Mechanic Can Educate Himself.

"It was but a few years ago that the opinion was quite prevalent that any mechanic who wrote for publication was a theoretical fellow and not considered of any practical value in the world. This idea, if not quite dead yet, certainly has no very large following among intelligent persons. The test of time has shown that these theoretical fellows have come to the front and accomplished the most, even in spite of the mistakes that they have made, which were the laughing stock of the purely practical man.

While it may be true that some of the best mechanics in the country do not write at all, yet it is an undeniable fact that the one who does write is a better and more intelligent mechanic than he would have been if he had not written at all. The very fact of a man attempting to explain to others what he has learned, and trying to put it in such a shape as not to convey a wrong idea, invariably leads the writer to a better understanding of the subject than he would otherwise have had.

The editor of this journal has at various times advanced new ideas that were in opposition to the prevalent teachings of the day, and in nearly every instance the new idea had its inception while writing on the subject, so that in a number of cases the article actually written was a flat contradiction to what it was the original intention to write. More often, however, the new ideas that come this way change the entire drift of the article and bring in branches of the subject that were not originally contemplated.

To the young man who wishes to make himself proficient in any branch of mechanics, we say, think over the subject carefully, write out your ideas and send them for publication. The effort will be of great benefit to you, even if you never hear from it again. Do not be afraid of making a mistake that some one will find out; the writer has made a good many, and acknowledged them too, and we do not know that it ever hurt him. A mistake made will be pounced upon by some watchful person, and then the original writer will have learned something that he would never have otherwise found out."

The above remarks should be carefully considered by our own mechanic. We take pleasure in publishing them as they appeared in a late issue of *Wood and Iron*, published in Minneapolis, Minn.

Rooms for the Chapter of Architects.

Those having rooms vacant in a desirable quarter, suitable for meetings of the Chapter, will please send terms for the same to G. Wolfe, Secretary, 240 Montgomery street, before the 1st of June. Rent must be moderate. All propositions must be in writing.

San Francisco Chapter, American Institute of Architects.

The regular monthly meeting of the Chapter was held Friday evening, May 4th. The following members were present: G. H. Sanders G. H. Wolfe, Albert Pissis, W. J. Cuthbertson, R. H. Daley, J. M. Curtis, H. T. Bestor, John Gash, C. J. Laver. A few visitors were also present.

The proposition of M. J. Lyon to become a member as Student was referred to the following committee: Cuthbertson, Daley and Curtis.

But one member of the "Registry" Committee being present, progress was reported, and the committee was requested to have full report at next meeting of the Chapter.

A discussion ensued which was participated in by every member present, in regard to procuring a room for the use of the Chapter. Several locations were canvassed, and the Chapter resolved itself into a "Committee of the Whole," to report at next meeting.

W. J. Cuthbertson presented the following motion, which was adopted:

Resolved, "That a committee be appointed to consider the subject of "COMPETITIONS; to draw up a set of rules in regard thereto, and to present their ideas to the Chapter for consideration." President appointed as such committee, Fellows, Cuthbertson, Gash, Curtis and Pissis.

Mr. Gash presented the following: "Where the law of California calls for a premium being offered to architects for submitting drawings for competition, it is always understood that such *premium* has nothing to do with the usual *commission* allowed architects for drawing plans and preparing specifications."

The above was signed by all those present, as individuals, with the understanding that it was not an official act of the Chapter.

Meeting adjourned.

High Buildings in San Francisco.

The contemplated erection of the *Chronicle* building, with a greater number of stories than has hitherto been seen in San Francisco, seems to have disturbed some minds badly and caused sensative natures to fear and tremble, that should the "dreadful thing" be consummated an "awful calamity" must in the nature of things follow, by reason of the unsteady, earthquaky nerves of old mother Earth, or the high revelries and antics sometimes indulged in by the elements, forces or whatever it may be that occasionally scares so many people, and once in a decade of years—more or less—shakes down a ricketty old chimney in San Francisco, and frightens housewives and kitchen maids by the rattling or tumbling down of dishes and odds and ends, so carelessly laid or placed that a very small sized earthquake would cause them to fall and rattle without any extra effort on the part of the shaker.

Supervisor McDonald, in the consideration of the question of privilege, asked by the monied man of the *Chronicle*, to be allowed to construct an oriel window over the lines of the streets, made himself a conspicuous representative of that class of people who limit and constrain their conceptions of allowable things within the mental fossilations which becomes alarmed at anything outside of stiff necked training; or that looms up higher, delves deeper, or spreads broader than the personal limitations of thoughts which holds them in the "old beaten tracks," with reluctant concessions in favor of anything that is new and of seemingly strange concept.

It is a strange assumption indeed that denies to the people of San Francisco the right to cope with the other great cities of the American Continent when progressive and enterprising business men and committees have found it the right thing to do, to build high as well as broad. And it is a safe assertion to make that the shake that would damage a well consucted ten-story stuc-

ture, built upon correct architectural and mechanical principles, would wreck most seriously hundreds of the shoddy edifices in this city of one-half the number of stories. It is not so much the height or number of stories that should command attention as the character of construction. If the municipality had a well organized *Building Bureau*, under the direction and management of men competent and qualified by experience and mechanical and architectural knowledge to have charge of so great an interest and competent to determine questions of construction, the looseness and latitudes that have too much prevailed in San Francisco would be at an end, and the public generally could rest satisfied that buildings passing the scrutiny of such a board would be safe against all earthquakes and electric commotions that would not cause fear and trembling, if there was not a structure within the city's limits more than one story in height.

There are thousands of the high-story class buildings in the cities east of the Rocky Mountains, and thousands more will be built, notwithstanding that of late years there have been more earthquakes reported east than west of the great mountains, wide and still high buildings are in order.

The remark is common, that there is plenty of room to extend the area of business houses, and that no necessity exists to build such high buildings. That is all very well, so far as it goes, but it is very short and does not go very far, practically; for business men do the very reverse of this and seek to cluster more than spread. Every enterprising man seeks to get as near the center as possible, and will put up with great limitations and inconvenience rather than leave the heart of trade and commerce. This fact is illustrated in every city in the civilized world; nay, more: even the heathen Chinese cling together and hurdle in dens and mere breathing places, although they could relieve the crowding to which they are subjected and find plenty of room for all practical purposes by spreading, but they will not spread. The rule applies with all people and in all cities. Hence it is simply sentiment that feeds fancy upon the spreading idea. Men of all classes prefer centralizing and getting together; and it is useless talk to advocate or argue in favor of segregating and distributing the fibres of business relationships. It never has and never will work that way; and our wise city fathers had as well accept the inevitable and not attempt to check the strong, natural currents of business life, which is bound to flow on and ever, notwithstanding any or all the temporary dams that may be improvised to check the flowing tide.

The necessity for tall structures has not been and is not now very great; but as San Francisco increases in business importance and its boundaries enlarge, this necessity will develop itself with great practical force, as business men will concentrate and keep within the circle, if they have to go twenty stories high to get there.

At present, and for a few years to come, the demands of business for buildings is and will be supplied with less than ten-story edifices; but when the east and west streets of the city shall be cut through to the ocean beach westward, with handsome homes and mansion-like residences along their sides, and cable, electric or other motor cars climb the steep hills back of the Mission, and the leaves of trees growing in homestead gardens in San Francisco county fall across the San Mateo County line, the day will have passed when cavelling at high buildings will be heard. All restrictive notions will then have passed into oblivion, and public opinion and business necessities stand upon the same platform, and buildings be erected, if need be, outtopping the twelve and thirteen storied structures to be seen in New York, Chicago and other great cities of the United States.

Those City Hall Columns.

By the terms of contract between the City Hall Commissioners and O'Connell & Lewis, for the casting of 15 columns to be used in the construction of the great and grand Municipal Tower that is to be, said columns were to have been turned in a lathe after casting. Technically, the contractors are under obligations to perform said turning work, without regard to consequences.

The letter of the obligation says—turn them. As a rule, the requirement should be enforced, being one of the conditions of contract. But the theory that there are exceptions to every rule applies with material force in this case. When the architect incorporated the "turning" feature in the specification, it was under the supposition that the usual and ordinary process of moulding and casting would be adopted, and that the turning was a necessity to smoothness and clean work. The matter of neatness and smoothness was more considered than increased strength, for none more than Mr. Laver understands the fact that the removal by turning or otherwise of the skin of a casting diminishes strength far beyond the sustaining quality of the metal removed. And while the columns might be ample for all the purposes for which they are intended, even after being turned, that amplitude is greatly increased by the retention of that which would be removed by the turning.

The omission of turning is a technical evasion, which furnishes opportunity to those who wish to raise the cry of attempt to defraud the city; and such it might reasonably be considered had not the contractors provided something better in strength and equally as neat in appearance, as a substitute, without in any way tinkering with the architectural design and general effect. O'Connell & Lewis might have disregarded every other consideration and cast the columns in the usual way, and finished them up as required by the specifications, and neither the City Hall Commissioners nor the architect could have objected, or had them otherwise, without due allowance being made to the contractors as to cost. And it is altogether possible that the contractors in this case have allowed an opportunity for them to—using a very common phrase—"fleece" the city a little, in that had they called the attention of the architect and Commission to the method by which the columns were cast, stating the gain in strength that would follow, and guaranteed as to smoothness, they might have secured some extra compensation instead of placing themselves in present position, and opening the door for parties inimical to them from business jealousies or assumed motives of guarding the city's rights, to urge the enforcement of the strict letter of the contract and specifications.

The whole matter resolves itself into a question of equity. The contractors have at extra cost and expense to themselves produced—as is conceded—splendid castings by an unusual method, and practically given the city more than was required of them as far as the carrying capacity of the columns is concerned, without tarnish to appearance, provided the turning is omitted. Hence to charge them with cost of turning would be an ungenerous act, and one calculated to stimulate rather than correct the too prevalent disposition of contractors to take advantage of contract obligations without any equivalent.

TIN ROOFING PLATES.

The accompanying Letter will explain itself fully. The reputation of the Tin Plates furnished by Merchant & Co. is fully established on this Coast, and the offer they make speaks for itself.

Philadelphia, April 25th, 1888.

Editor, California Architect and Building News,
240 Montgomery Street, San Francisco, Cal.

Dear Sir:

In reading the article which appears on your first page, in reference to Roofing Plates, we must express our surprise at the misstatements made therein, and particularly that portion of the article where the parties referred to claim that they were the first to guarantee, and then to stamp plates; while there is any amount of evidence (and we can produce same) to show that the statement as made is not only incorrect but positively untrue, as it is well known (in this section of the country at least) that we ourselves were the first to introduce the very features referred to, and it is only necessary for any one doubting this to look up back files of such papers as "The Metal Worker" to see that we were advertising positive guarantees and stamping the sheets of our brands long before other importers. In order to back up this assertion on our part we will say here that if we cannot prove we were the first to guarantee and stamp roofing plates, we will willingly furnish the roofing tin, free of cost, for the first house built in San Francisco after receipt of this letter. But leaving out entirely the question of guaranteeing and stamping, and quality as well, there is a point of even greater importance which it will pay architects and property owners wanting to specify and use the best plates to consider; and that is that the "Gilbertson's Old Method" and "Camaret" are the only two brands of roofing plates in the market to-day of which no imperfect or waster sheets are imported, and consequently the only brands that thoroughly protect the architects and property owner. On the other hand, the plates of the house referred to in your article do not protect the architect in his specifications, for the reason that the wasters of their plates are imported and can be bought by any one wanting them. Please understand we do not mean to say that a good roof cannot be made with the old style plates, providing the primes alone are used; but when we assert that ninety-seven per cent of the roofers (as far as our own city is concerned) who upon receiving a contract will buy and put on wasters instead of primes, we state only a fact, and the advantage in specifying our brands will readily be seen by those wanting to secure only the best; for when they see the stamp on the sheet they can at once feel satisfied that they have secured but one kind *and that the best*. To prove the correctness of our assertion, that the wasters are imported and sold by the sellers of "Old Style," we stand ready to give our check for one thousand dollars to any charitable institution if we cannot prove that within the last ten days the sellers of Old Style in this city have offered roofers the wasters of their brand, and they would not dare to put up their check for one-tenth of this amount to prove anything to the contrary.

With the facts so clearly against the house referred to, we can hardly understand how they can make statements in the columns of first class journals and newspapers when the same can so easily be proved to be false. We write you in this way simply because, under the circumstances, we feel it our duty to do so, and particularly because of the great distance between us and the constant liability of many architects on the coast (without a knowledge of the *standing* of any of the importing houses here) to be misled by the false statements referred to.

We enclose you herewith copy of a letter we wrote to the "Stoves and Hardware" of St. Louis some time ago, which if you carefully read when you get a leisure moment, we think you will find of interest. At the time to which that letter refers, the "Gilbertson's Old Method" was the only brand to which the waster question applied; but since then we also took similar action in regard to "Camaret," and, as said before, these are the only two brands imported into the United States to-day of which no imperfect or waster sheets are imported, or can be had by any one *at any price*.

We have to admit that we have lost profits on account of not selling wasters of these brands, and yet, owing to the increased demand for and sales of the prime plates themselves, we feel that our action is being fully appreciated by architects and property owners desirous of being furnished with every safeguard against the use of wasters or other inferior goods where only the best material is wanted.

To any one doubting that wasters can be had of all other brands but ours, allow us to suggest that they can readily satisfy themselves upon this point by having any roofer or roofers write the different houses for prices for primes and wasters of the various brands. With the above facts before you, we would greatly appreciate any statement you may be pleased to make in our behalf.

Yours very truly,

Merchant & Co.

CHEAP LUMBER.

Reduction of From 35 to 50 Per Cent.

A Texas Syndicate to Ship Fine Yellow Pine Lumber From the Forests of Texas and Louisiana to Southern California.

It is stated on good authority that a heavy syndicate of Texas capitalists completed arrangements for shipping a fine quality of yellow pine lumber, from the heavy forests of Texas and Louisiana, to Southern California, over the Southern Pacific, and that prices will be reduced from 35 to 50 per cent.

The arrangements for shipping the lumber have been completed with the Southern Pacific, and the work of establishing yards has commenced. Orders for lumber are now being taken.

If this movement turns out as reported, it will be a grand thing for Southern California.

The above, taken from the *Riverside Press*, will be good news to those in this city who are anxious to build, but who are deterred from so doing by the high prices of building material, and more especially, lumber. The lumber men claim that owing to the great demand last season in the southern counties for lumber, the "tug men," "ship owners," etc., put up a job and raised their rates so much that of necessity several dollars per thousand had to be added to the price of lumber. Now that the incubus of high freight has been removed, and the building interests of this city nearly flattened, compared with three years ago, we trust that our manufacturers will see that the next "schedule" will tabulate the various kinds of lumber at prices that will cause many owners to have buildings erected, who would otherwise simply leave their money in bank.

A Puget Sound "Trust" that Reduces the Price of Lumber.

The objectionable "*Trust*" is a veritable Hydra and has at length cropped up in the Lumber Trade in a most unexpected manner; in fact it has selected a totally opposite course to that usually followed, by combining not to raise, but to reduce prices for the benefit of the combination. Our contemporary the *Mississippi Valley Lumberman* this week gives a practical illustration of the mode adopted by a Trust on Puget Sound and the name of the first victim to its workings, a Mr. B. F. Corliss of Tacoma, who it appears had towed a boom of logs containing over 322,000 feet to Seattle upon a previous order from Stetson and Post of that city, who alledged that as the bulk of his logs had been sold to the Port Gamble Mill they could not take them without the consent of Port Gamble. To cut the story short, he went thither and got the consent to a sale and returned to Stetson and Post who assented to take the logs but stated they were paying but $6.50 whilst he had been receiving $7.00 and therefore refused to accept it. "Very well" said the firm "we don't want your logs," at the same time handing him a check for $100 for his trouble. The situation now dawned upon Corliss who saw that if he did not sell here he could not hope to find a market elsewhere on Puget Sound and he therefore accepted the terms offered. The combination in question goes by the name of the Puget Sound Brokerage Association and no member is permitted to bid within 25 cents per thousand as much as the first bidder for any state logs. If Port Gamble for instance offers Mr. Corliss six dollars per thousand and he refuses, Port Gamble at once telegraphs the fact to all the other mills and no member of the association may bid more than $5.75. The tendency therefore of the price of logs under this arrangement must always be down, never up. As a measure of defence and retaliation the loggers have arranged to boycott the dealers and to build mills of their own. We need no better illustration of the necessity for legislative measures than that which here presents itself. It is true that such over-reaching methods tend to defeat themselves—but anything in restraint of trade is a curse to society and should be dealt with accordingly. This great nation prides itself upon its commercial activity and success but these can only be maintained when Capital and Labor work hand in hand and profits are fairly divided.

And the Same Will Apply to British Columbia Lumber.

The introduction of Canadian timber either sawed or in log, to the American market, should be a question entirely separated from politics, and become one of more expedient utility.

Do we want the product of Canadian forests over here?

Can our own home supply be lengthened out by thus drawing from outside sources?

How much local injury would result from the free importation of Canadian lumber to our manufacturers?

Would any such presumed local injury be equalized and obviated by the saving of our own pine?

These are the questions demanding an honest reply in the discussion of this question of free timber, and not how it may or may not effect the individual.

A Cheboygan, Mich., man says: "Free lumber is the only hope we have for the preservation of our pine, and even at that is only giving a respite of a few years ere the inevitable will come. As it is, we have been foolish in excluding Canadian lumber from our markets, as we, in so doing, have forced the Canadian article to seek other outlets, and to-day it finds a ready market in the West Indies, and South America. This great American nation has use for every stick of timber that grows upon this continent."—*Timberman*.

An English invention relates to set squares for draftsmen, having one of the edges beveled at various angles. It is just the kind of set square that a draftsman in this country would relegate to his department of curiosities.

To Effectually prevent screws from becoming fixed and rusted, make a mixture of graphite and oil, which will facilitate the tightening of them up, reducing the friction in the sockets, and protecting them for years from rust.

Elevation, Plans and General Specifications of Flats Costing $4,500.

The plans presented are those of convenient, well arranged flats, of five and six rooms, which, according to present values of labor and materials can readily be built for $4,500. The front is very neat, the finishes not being too heavy. The plans are admirably portrayed, the name and size of rooms distinctly marked, and all the conveniences clearly shown. Should any one adopt the general plan and prefer to add, say $500, to the cost, we would suggest cornices in the halls, parlor, dining room and principal chamber. A wash bowl might be added in the latter room. The yard improvements for upper flat would somewhat depend on size of lot.

We have repeatedly in this journal, given specifications of different classes of houses, and those for flats would not materially differ from those of any two-story house.

The principal requirement in flats is to so construct them that parties living down stairs will not be annoyed by those living over head, or vice versa. The "deafening" employed should be of such a character as to preclude all noise from being heard either down or up. Decidedly the most effective way is the following: Let the joist in second story be 2x12. Nail on a strip 5 inches below the upper edge of the joist on both sides. After the joists are in position, fill in between them with short pieces of board. Then have a wet mixture of clay and chopped straw, and fill in between the joist; this should be tamped well; have a scraper made so it will just go in between the joists, and the cutting edge be one inch below the top of joist; rake back and forth until the clay and straw mixture has an even surface just one inch below the top of the joist. Care should be taken to have the surface even. After this mixture has laid a few days to dry out, put pieces of lumber 2x4 inches, by required length, on the clay between the joists. Having scraped the surface of the deafening one inch *below* the top of the joist, there will be one inch of lumber *above* the top of the joists. Fill in with same material as before between these 2x4 pieces. Of course this will give an inch of mud and straw over the joist. Put down your flooring, *nailing only to the 2x4 pieces.* Floors laid this way have no direct communication with the joist, and sound will be effectually prevented from penetrating below. The extra cost of the above is but very little, and owners will find that flats so constructed will retain tenants permanently.

Another way, if cheapness be considered, is to have rope an inch in diameter, pressed between rollers, so as to have two flat sides. This is to be nailed on top of the joist, and floor laid and nailed through the rope. We have seen this method tried, but it does not give satisfaction equal to the first method.

In building flats, the plumbing must be especially considered, and care taken to arrange everything so as not to disturb the occupants of either flat. This part of the arrangements should absolutely be placed under the control of the architect. Let his reputation be at stake regarding every matter connected with the sewerage and plumbing, and our word for it, there will be less growling from owners in the sweet hereafter about defective plumbing work. Say to the architect very plainly, "Mr.——, I know nothing whatever in regard to plumbing. I want my house as perfect in that line as it is possible to have it, and I won't consider the few extra dollars it may require in order that your ideas may be fully carried out."

More attention should be paid to the stairs. We have been in flats where the noise made by people going up or down the stairs is simply unendurable to those living on the first floor. Good workmanship and careful construction will obviate this difficulty. As mentioned before, these flats can readily be constructed for the amount quoted, $4,500, at the present ruling prices of matreials.

FRONT ELEVATION OF SAN FRANCISCO "FLATS," COSTING ABOUT $4,500.

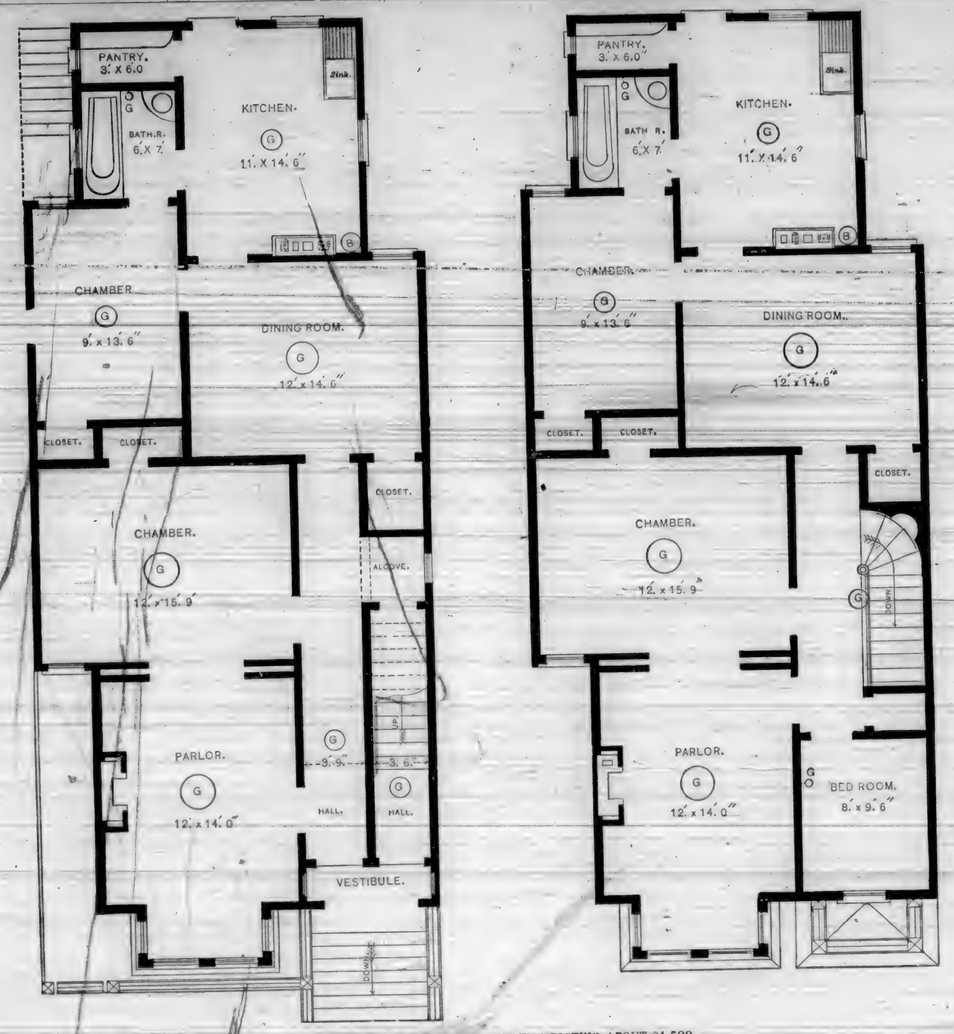
Will Lumber be Cheaper?

This is a question often asked us by owners, and to which we have to give an equivocal answer. Some contractors have informed us that certain inducements are held out to them in the way of discounts, by which they can figure a little lower than those who "know it not." The manufacturers claim that no change will occur.

Are the causes which led to the raise in lumber prices still existing? Last year the demand for San Diego and the adjacent towns was simply enormous. Mushroom cities sprung up in every direction. Los Angeles had great hopes of soon catching up to San Francisco; but the blow has come, and San Diego's building interests have completely become quiescent. Brick foundations were started, but left to mark the intentions of the owners, the joists not being placed on the walls. The break is a bad one, and it will take years to get over the sudden inflation. Of course, the almost complete cessation of building operations in the principal city, and the sudden halt of speculation completely puts a quietus on the starting of any more mushroom towns. So we can regard the whole country around San Diego as almost completely closed against large orders for building materials for the present.

While Los Angeles has not flattened quite so much as her sister city, still the boom there has come to a complete standstill, and the amount of lumber to be used this year will be very small, compared to last year's orders. Practically, the whole southern part of the state will send but few orders of any magnitude.

North of Los Angeles, the country between Modesto and Fresno is the only part in which much building material will be required, and the demand for that section will be determined, in a great measure, by the magnitude of the crops. Between Modesto and this city there are no present indications of any more than the usual or normal amount of work to be done, incident to a sparsely settled country.



PLANS OF SAN FRANCISCO "FLATS," COSTING ABOUT $4,500.

In this city there is nothing like the amount of work going ahead that should be at this time of the year. The average amount of business buildings are in course of erection, but there is a dearth of small houses in the suburbs, that prove, almost better than any other criterion, that the city is progressing and its mechanics prospering. From present appearances there will be fully 400 buildings less this year, than there was in 1885; and this, in face of the fact that thousands of permanent residents have been added to our population.

As far as this city is concerned, we can positively assert that the small number of buildings under way is owing, more than to any other cause, to the high price of lumber. The greatest raise has been in the clear lumber, and of course this seriously affects "mill bids," as the mills necessarily use the better class of lumber.

The question simply resolves itself into this—is the present high prices of lumber warranted by a *legitimate* demand for lumber? To which we unhesitatingly answer, "No!"

"Straws show which way the wind blows." A prominent contractor of this city was approached by one of the lumber ring with an offer to place lumber on the cars at Schedule price. The job was in the country. This is a virtual deduction of about $1 10 per M.

Another contractor who erected over $200,000 worth of buildings last year has made an arrangement by which he gets lumber at $20 per M. This is a reduction of $2 50 from schedule.

We have it direct from a lumber dealer, that if a certain kind of lumber was used in a building the owner would save $2 50 per M.

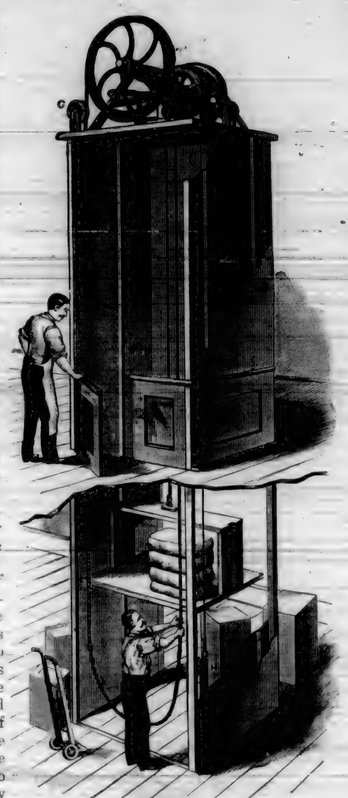
Everything at present tends to show that the market is weakening, and that in a short time mill men will not have to pay $10 per M for lumber used by them, more than the same is worth.

The whole question hinges upon the reports of the Combination, and what they can maintain, and the contractors and what they really can do. If one contractor can obtain a concession, it will soon become general along the whole line. We confidently expect that in a short time prices for lumber will be much more favorable for those desiring to build.

To effectually prevent screws from becoming fixed and rusted make a mixture of graphite and oil, which will facilitate the tightening of them up, reducing the friction in the sockets, and protecting them for years from rust.

It is all well enough to say that thirteen is an unlucky number, but this country started in business with thirteen states, and seemed to be holding her own up to going to press.

The Humphrey Pony Hand Elevator.



The Edward Storm Spring Company, Limited, Poughkeepsie, N. Y., are directing special attention to the Humphrey Pony Hand Elevator, as shown, which has just been brought out by this company, and are having a large demand for them. The engraving very clearly shows the features of the article, which is adapted for use in various places. It is intended for light store and factory work, hospitals and public buildings, for carrying flour, coal, ashes and other heavy substances in tenements, flats and private dwellings, and many other uses, which are met by its capacity. *The Low Price of this Elevator* permitting it to be used in many places instead of the dumb waiter, as it has many times the lifting capacity, and its simplicity of construction are points which are made in regard to it. The company sends them out already adjusted on a shelf, ready to place on top of well hole, if requested, by giving dimensions of well. One of the many valuable features of this elevator is it can be adjusted to any size well hole, or opening from 24 inches to four feet wide, and can be set up by any carpenter; no complicated parts to get out of order, and made strong and servicable. The weight can be made to run on either right or left side, as wanted. The circular of the company, relating to this elevator, illustrates fully its use, and explains in detail the brake attachment to the efficiency of which they call attention.

The First Razor.

The earliest reference to shaving is found in Genesis xii., 14, where we read that Joseph, on being summoned before the King, shaved himself. There are several directions as to shaving in Leviticus, and the practice is alluded to in many other parts of Scripture. Egypt is the only country mentioned in the Bible where shaving was practiced. In all other countries such an act would have been ignominus. Herodotus mentioned that the Egyptians allowed their beard to grow when in mourning. So particular were they as to shaving at other times that to have neglected it was a subject of reproach and ridicule, and whenever they intend to convey the idea of a man of low condition and slovenly habits the artists represent him with a beard. Unlike the Romans of a later age, the Egyptians did not confine the privilege of shaving to free citizens, but obliged their slaves to shave both beard and head. The priests also shaved the head. Shaving the head became customary among the Romans about 300 B. C. According to Pliny, Scripio Africanus was the first Roman who shaved daily. In France the custom of shaving arose when Louis XIII came to the throne young and beardless. The Anglo-Saxons wore their beards, until, at the conquest they were compelled to follow the example of the Normans, who shaved. From the time of Edward III to Charles I, beards were universally worn. In the reign of Charles II the mustache and whiskers only were worn, and soon after this the practice of shaving became general throughout Europe. The revival of the custom of wearing the beard dates from the time of the Crimea, 1854–55.

Corrosion of Mortar.

The fact that mortar of old chimneys suffers greatly from the corrosive effect of the creosote of wood soot, says an exchange, was pointed out years ago. The creosote formed from the slow combustion of wood contains a large proportion of pyroligneous vinegar or erude acetic acid. This acid is formed in large quantities, when the combustion of wood is slow, and many quarts will be condensed in cold weather where a large wood fire is very much checked. The time required for such a condensation is bu a few hours. The acid dissolves lime readily, carrying it away in solution. In this way the mortar is frequently entirely removed from the tops of chimneys in the country. New chimneys suffer in the same way. Cases might be instanced where the top courses of brick in chimneys but two years old are entirely without support, other than that afforded by the sand, with which the lime was mixed. Usually bricks can be lifted from the top courses of chimneys with the fingers, if the chimney is more than eighteen months old.

At Home and Abroad for News.

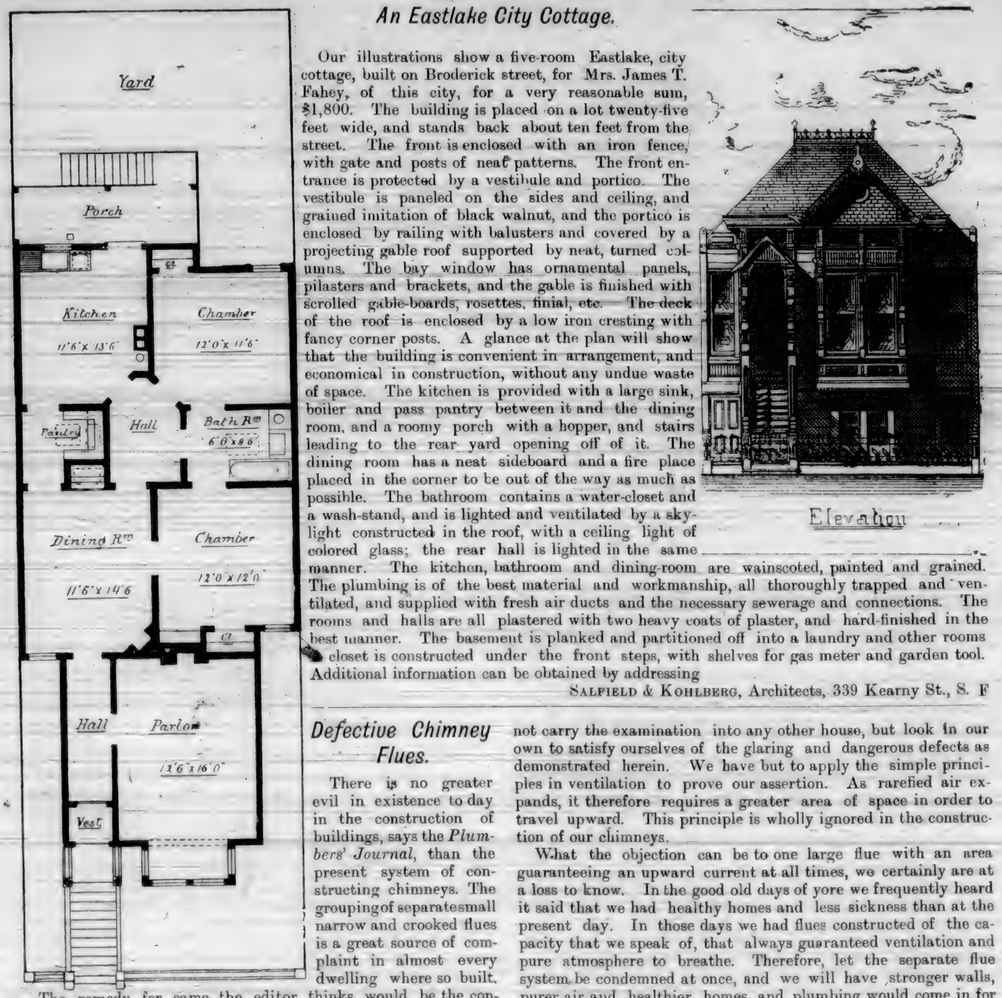
The stories which are told of great resources of mahogany and primitive methods of getting out and handling it are generally corroborative. They suggest that the time must come when enterprise and progress will turn the habitat of that wood into scenes of active industry, which will revolutionize methods and results in mahoganv getting. The San Francisco *Examiner* contains the following from a correspondent: "The high hills of San Domingo are vast forests of mahogany. Some of the hills are 3,000 feet high, but there being no snow, owing to the tropical location, and not a railroad in the republic, they cannot get the mahogany down. So there it is, untold quantities of it, worth big money, but bringing nothing. These fine forests of mahogany are dirt cheap. I suppose they can be bought from the government for $25 an acre. The time must come ere long when no money can buy them. From other islands of the West Indies a great deal of mahogany is exported at a big profit. Three-fourths of it goes to Europe, principally London, while the other fourth goes to New York. It is largely shipped in the log in sailing vessels. There isn't a single sawmill in all San Domingo. The lumber they do manage to get out is manufactured by the hand, by the slow whip-saw process."

How Paints are Obtained.

Every quarter of the globe is ransacked for the materials—animal, vegetable and mineral—employed in the manufacture of the colors one finds in a paint box. From the cochineal insect is obtained the gorgeous carmines, as well as the crimson, scarlet and purple lakes. Sepia is the inky fluid discharged by the cuttle fish, to render the water opaque for its own concealment when attacked. Indian yellow is from the urine of the camel. Ivory black and bone black are made out of ivory chips. The exquisite Prussian blue is got by fusing horses' hoofs and other refuse animal matter with impure potassium carbonate. It was discovered by an accident. In the vegetable kingdom are included the lakes, derived from roots, barks and gums. Blue black is from the charcoal of the vine stalk. Lampblack is soot from certain resinous substances. From the madder plant, which grows in Hindoostan, is manufactured turkey red. Gamboge comes from the yellow sap of a tree, which the natives of Siam catch in cocoanut shells. Raw sienna is the natural earth from the neighborhood of Sienna, Italy. When burned it is burned sienna. Raw umber is an earth from Umbria, and is also burned.

To these vegetable pigments may probably be added Indian ink, which is said to be made from burnt camphor. The Chinese who alone can produce it, will not reveal the secret of its composition. Mastic, the base of the varnish so called—is from the gum of the mastic tree, indigenous to the Grecian archipelago. Blister is the soot of wood ashes. Of real ultramarine but little is found in the market. It is obtained from the precious lapis lazuli, and commands a fabulous price. Chinese white is zinc. Scarlet is iodide of mercury, and cinnabar, or native vermillion, is from quicksilver ore.

An Eastlake City Cottage.



Elevation

Our illustrations show a five-room Eastlake, city cottage, built on Broderick street, for Mrs. James T. Fahey, of this city, for a very reasonable sum, $1,800. The building is placed on a lot twenty-five feet wide, and stands back about ten feet from the street. The front is enclosed with an iron fence, with gate and posts of neat patterns. The front entrance is protected by a vestibule and portico. The vestibule is paneled on the sides and ceiling, and grained imitation of black walnut, and the portico is enclosed by railing with balusters and covered by a projecting gable roof supported by neat, turned columns. The bay window has ornamental panels, pilasters and brackets, and the gable is finished with scrolled gable-boards, rosettes, finial, etc. The deck of the roof is enclosed by a low iron cresting with fancy corner posts. A glance at the plan will show that the building is convenient in arrangement, and economical in construction, without any undue waste of space. The kitchen is provided with a large sink, boiler and pass pantry between it and the dining room, and a roomy porch with a hopper, and stairs leading to the rear yard opening off of it. The dining room has a neat sideboard and a fire place placed in the corner to be out of the way as much as possible. The bathroom contains a water-closet and a wash-stand, and is lighted and ventilated by a skylight constructed in the roof, with a ceiling light of colored glass; the rear hall is lighted in the same manner. The kitchen, bathroom and dining-room are wainscoted, painted and grained. The plumbing is of the best material and workmanship, all thoroughly trapped and ventilated, and supplied with fresh air ducts and the necessary sewerage and connections. The rooms and halls are all plastered with two heavy coats of plaster, and hard-finished in the best manner. The basement is planked and partitioned off into a laundry and other rooms a closet is constructed under the front steps, with shelves for gas meter and garden tool. Additional information can be obtained by addressing

Salfield & Kohlberg, Architects, 339 Kearny St., S. F

Defective Chimney Flues.

There is no greater evil in existence to day in the construction of buildings, says the *Plumbers' Journal*, than the present system of constructing chimneys. The grouping of separate small narrow and crooked flues is a great source of complaint in almost every dwelling where so built. The remedy for same, the editor thinks, would be the construction of one large flue extending from cellar to the highest available point, with branches from each floor running up and connecting at the ceiling of the floor above, or direct at each floor to the main flue. In this manner a guaranteed upward draught at all times would be assured.

Go into any dwelling to-day, and what do you find? For instance, light a fire in the rear parlor, and the draught will be down the front parlor flue, through the hall and room, and up through the rear parlor flue, or *vice versa*, down the rear parlor flue and up the front parlor flue. When that is not the case, on the opening of a window or door, an immediate counter current is the consequence, all which certainly and clearly demonstrates that our method in house construction of chimneys is far from perfection. We calculate by the building of one large main flue, into which all branches should be carried direct from each floor or apartment, is the only safe and true method by which the evil now complained of can be overcome, and the lungs be spared from the poisonous gasses they are forced to inhale, as it is a well known fact that no gasses are more poisonous than those of sulphureted hydrogen or coal gas that permeates our dwellings.

From whence the barbarous practice of constructing our chimney flues in the separate system emanated, we know not; but whoever instituted that system, if held responsible for the deaths caused by it, would have a great deal to answer for.

We trust and hope our remarks on this subject will not go unheeded, as a careful observation of any one in their own house will go to prove and substantiate whatever we claim. We need not carry the examination into any other house, but look in our own to satisfy ourselves of the glaring and dangerous defects as demonstrated herein. We have but to apply the simple principles in ventilation to prove our assertion. As rarefied air expands, it therefore requires a greater area of space in order to travel upward. This principle is wholly ignored in the construction of our chimneys.

What the objection can be to one large flue with an area guaranteeing an upward current at all times, we certainly are at a loss to know. In the good old days of yore we frequently heard it said that we had healthy homes and less sickness than at the present day. In those days we had flues constructed of the capacity that we speak of, that always guaranteed ventilation and pure atmosphere to breathe. Therefore, let the separate flue system be condemned at once, and we will have stronger walls, purer air and healthier homes, and plumbing would come in for less misapplied complaints, when in reality the cause emanates from the defects we speak of.

Tin Sash Weights.

The goats of Harlem, it seems, are not to have undisputed rights to the tin cans, for the Italians will certainly delve in the dust heaps for them when it is known that they are marketable. From the Boston *Commercial Bulletin* we learn that tin cans and tin chips have been converted into sash weights with more or less success during the past ten years. In Chelsea there is a large furnace, having the capacity of ten tons a day, and the largest of the kind in the country. The material melted comes from junk shops; also from tin manufacturers in the shape of chips. Old sheet iron is also used. This material has to be transformed into cast-iron, and a very high degree of heat must be secured. There is no secret about the process; the only thing is to have a proper sized furnace and and to get a sufficient heat. The business has developed of late, but the manufacturers say the margin of profit is small. It costs more to melt the scraps than common iron. Chips ready for the furnace cost seven dollars a ton. The sash-weights produced are of a superior quality.

EVERYBODY'S COLUMN.

It heing our desire to make this column of the greatest practical use, our readers are cordially invited to ask questions on any subject within the scope of this journal.

P. L. Writes: "Will you please tell me how to mix cement, so that it will not crack or chip off?

Answer:—The cause of cement cracking is generally in consequence of its poor quality. You should test it by mixing a small quantity without sand and putting it in a bottle. If this be left in water for a few days, and the cement shrinks, it will be apparent by a small space between it and the side of the bottle. When this occurs the cement is almost sure to crack. The fact is often overlooked, that cement to set properly must be kept damp. We have seen some of excellent quality, which was allowed to be exposed to a hot sun, with the result that the moisture evaporated before the cement could set. In such cases water should be constantly thrown over the surface until a proper hardness is reached.

John R. W. asks us to explain the cause of dry-rot in lumber, and to suggest a cure.

Answer:—Dry-rot is a fungus which is generally supposed to be produced by a want of ventilation. Where timber is confined it is subject to attacks and especially where the wood is somewhat green. It is for this reason that it is advisable to provide openings through foundation walls so that the air may have free access to joists. To eradicate dry-rot is often somewhat difficult. The surest plan is to remove every piece of lumber affected and then to apply the following mixture to the whole of the wood: Equal portions of common train oil, wood, tar and oil of cassia.

J. S. T. asks: "What is the strongest form of brick arch?",

Answer:—That known as the horseshoe or moorish arch, the curve of which is more than one-half of a circle. This arch is very useful for heavy tunnel work, and properly constructed will bear very heavy weights.

Student writes: "Will you give me some rule to follow for the proper provision of ventilation in ordinary rooms. What amount of air space should be allowed?"

Answer:—It has been stated that every person requires at least three cubic feet of air per minute, and sometimes as much as five. An ordinary window allows about eight cubic feet of air to pass in a minute. It will be seen, therefore, that where a room is to be occupied by a number of persons, an independent inlet and outlet for the air should be provided.

P. B. O. wants to know how to make cements, of red and black colors respectively.

Answer:—To the mixture of cement and sand add Indian red in sufficient quantity to produce the desired tint. A black cement is produced by adding about half a pound of lamp black to a bushel of cement and sand.

MAY BE USEFUL.

The average weight of anthracite coal is 9.35 pounds per cubic foot.

Coke (loose) weighs 23 to 32 pounds per cubic foot.

Bituminous coal weighs, per heaped bushel, loose, 75 pounds; one ton occupies 48 cubic feet.

Cast iron weighs, per cubic inch, .2616 pounds; in round numbers, one-fourth of a pound to the cubic inch.

Green sand castings are six per cent. stronger than dry sand castings.

Cast iron will expand and contract between extreme ranges of temperature in this country with a force equal to 4¾ tons per square inch of surface exposed.

Wrought iron expands and contracts between extreme ranges of temperature equal to nine to one per square inch of section.

One gallon U. S. standard, contains 231 cubic inches, weight of water in same, 8,331 pounds; one cubic foot contains 7.4805 gallons of water.

The velocity of steam, of atmospheric pressure, flowing into a vacuum is 1,660 feet per second; into air, 650 feet per second.

To find the pressure, in square inches, of a column of water, multiply the height of the column in feet by 434.

The proper safe working load for wire rope is as follows: One-half an inch in diameter, 1,005 pounds; five-eights inch, 1,500 pounds; three-fourths inch, 3,500 pounds; one inch, 6,000 pounds. This is for nineteen wires to the strand, hemp centers.

To find the diameter, when the circumference is known, multiply the circumference by .3183.

To find the area of a triangle, multiply the base by one-half of the height.

ELASTICA FINISHES.

The Rosenberg Elastica Finishes which have been introduced on the Pacific Coast over three years ago, have had a marvelous success. Their non-marring properties and resistance to alkai make them peculiarly adapted for the wants of the coast.

Redwood, for instance, which was formerly painted owing to the want of a sufficiently elastic article to produce a natural wood finish, can now be finished with Elastica, so as to produce a durable finish. There are many instances which prove the superior qualities of the Rosenberg Elastica Finishes for the various wants of the Pacific Coast, amongst which, we mention a few.

The woodwork of the steamer Santa Rosa, to which it was applied both outside and inside, stood the weather for nearly two years, after being exposed to the hot sun and salt water, and when last seen was in good order. At El Paso baths, Elastica Finish was submerged in the sulphur water of the springs in competition with others for seven months, and finally proved the only finish, which would stand the test, and was then adopted for finishing the new bath-house. The El Coronada Beach Hotel, as well as the principal buildings, which have been, and are being erected, such as Crocker's house, have been and are being finished with the Elastica Finishes.

These few instances show that it supplies a much needed want. The success of Elastica Finishes is not alone confined to the Pacific Coast, but all portions of the world where it is being used largely, and with great favor.

BUILDING INTELLIGENCE.

Only reliable news will be found in this column. Our custom has been for the past eight years, to furnish only data which could be relied upon. We will not publish rumors of "THIS AND THAT IS GOING ON" unless we are reasonably assured that such is truly the case. In all cases we will file our authority for any statements made in this column. No doubt mistakes will sometimes occur, but these we intend to be a rare exception to our rule of reliable news.

We desire the co-operation of country editors and mechanics to this department of this journal. By spreading the news of building engagement in your part of the country, you enhance the value of your section by proclaiming it a go-ahead community.

Architects should also notify us of "plans to figure on;" we do not charge anything for the insertion of such notices.

Remember this journal is in the TENTH YEAR of its existence, and is the only journal published this side of the Rocky Mountains in the interest of Architects, Contractors, and Material Men.

CITY BUILDING NEWS.

Birch Avenue, near Larkin, four two-story frames. Owner, Sharon estate; contractors, Moar & Thompson; architect, Wm. F. Smith; cost, $9,000.

Broadway, No. 1906, additions. Owner Eliz. Nelson; contractor, J. H. Shepley, cost, $1,500.

Buchanan, between Bush and Pine, frame dwelling; owner, J. W. Smith; architect, T. J. Welsh; contractor, J. Walsh; amount, $7,350; sureties, B. Joost, W. Shyarks, $5,000; filed, April 11; time, 80 days;

Payments, when frame is up, $1360; brown mortar on, $1360; white coat finished, $1360; completed $1370; balance, $1900, 35 days after completion.

Bush, bet Franklin and Gough, frame dwelling. Owner, B. Kearns; architect, J. J. Clarke; contractor, W. Linden; amount, $4,716; sureties, P. Swift, F. P. Latson, $4,000; time, Aug. 16th; filed April 18th.

Frame up, $1,300; all enclosed, $1,200; brown mortar on, $1,100; balance, $1,116, usual 35 days.

California nr. Leavenworth, two-story additions; cost, $1,000.

California and Battery, alterations. Owner, Grangers' Bank; architects, Townsend & Wyneken; contractor, A. Elroy; cost, $2,500.

Dale Place near Golden Gate Ave, 2 two-story frame. Owner, Mr. Della; builder, C. N. Smith; cost, $6,000.

Davis and Market, four-story brick building. Excavation, side walk, etc., in connection with same, cost, $8,000. Owner, Maria Coleman; architects, Schmidt & Shea; contractor, C. H. Ackerson; 75 per cent. as work progresses; balance in 35 days.

Davis, bet Pine and California. Owner, H. Ackerman; architect, T. J. Welsh; contractor, Jas. Geary; amount; $7,280; sureties, W. A. Meeker, J. Murphy, $5,000; time, July 18th; filed April 19th.

All framed, $1,100; extra finishes completed, $1,100; brown mortar on, $1,100; white mortar on, $1,100; completed, $1,060; balance, $1,820, usual 35 days.

Devisadero and Page, two-story frame and basement. Owner, L. Friedlander; contractor, F. V. Steinman; architect, P. S. Barber; cost, $5,000.

Devisadero and Oak, two-story frame and basement. Owner, W. Stemka; contractor, J. Droga; cost, $5,000.

Ellis, bet Taylor and Jones, two-story frame. Owner, W. Wolf; architects, Salfield & Kohlberg; contractor, H. Ruhling; cost, $7,115; sureties, B. Joost and J. J. McKinnon; filed, April 25th; limit, 90 days. Seventy-five per ct. paid every three weeks as work progresses and balance 35 days.

Ellis, bet Octavia and Laguna, 2 three-story frame. Owner, Mrs. J. Zoel; architects, John & Zimmerman; contractor, Adam Miller; cost, $17,000.

Fourth, cor Welsh, repairs. Owner, G. G. Burnett; architect, J. E. Wolfe; contractor, C. S. Waterbury; total cost, $800.

Filmore and Waller, frame dwelling. Owner, Kate B. Proctor; contractor, J. P. Chadwick; cost, $1800.

Plastering finished, $700, and balance, 35 days after completion.

Franklin and Ellis. Masons contract, other contracts not yet let. Owner, Academy of Sacred Heart; architect, Chas. J. Devlin; contractors, McGowan & Butler; cost, $12,500; signed, April 7th; filed, April 12th; sureties, Jno. C. Roberts and J. Mahoney; bond, $8,000.

Payments of 75 per cent. as work progresses and balance 35 days after completion.

Geary and Kearny, alterations. Owner, J. J. Farley; architect, T. J. Lynch; contractor, Mahoney Bros; cost, $5,850; limit, 30 days; filed, May 3.

When iron work is in position, $2,150; when completed, $2,275; balance, 1,$425, 36 days after.

Geary, near Octavia, excavations. Owner, I. J. Federlein; architect, J. E. Wolfe; contractor, N. McDonald; cost, $1,800. finished ten weeks from commencement. Pay according to amount of work done each two weeks.

Geary, bet Scott and Devisadero, two-story frame. Owner, John McGown; architects, Schmidt & Shea; contractor, J. Irwin; cost, $4,670.

Greenwich, near Mason, two frame flats; owner, Geo. McCloskey; architect and builder, G. M. Salsbury; cost, $2,850; sureties, W. H. Jordan, F. P. Bull $2,800; time, July 1st; gled, April 6th.

Payments, frame all up, $750; roof and rustic on, $700; brown mortar on, $650; balance, $750, 35 days after completion.

Geary, bet Hyde and Larkin, 5 three-story frame and 5 one-story frame in rear. Owner, F. V. Merle; architects, Schmidt & Shea; contractor, H. A Conrad; cost, $37,476; sureties, C. G. Berson, F. H. Rosenbaum, Blyth and Trott, filed, May 4th; limit, Oct. 1st.

When the rear buildings are framed and first story up of front, $4,600; rear buildings ready to lath and front ones enclosed, $4700; brown mortar on rear, and front ready to lath, $4,700; hard finished, $4,700; ready for painting, $4,700; all completed, $4,700: balance, $9,376; 35 days.

Page near Webster, two-story frame. Owner, Eliz. Grosh; contractor, H. Keenan; cost, $3,500.

Golden Gate Ave. nr Lyon St. A frame building. Owner, Lavinia A. Kenarke; architect, R. H. Daly; contractor, Ivory Wells; cost, $2,085; limit, July 1st; signed, April 3rd; filed, April 12th; sureties, J. J. Cooney and M. H. Witkins; bond $2,085.

1st payment, when frame is enclosed and roof on, $390.93; 2nd, when brown mortar is on, $390.93; 3rd, when putty coat is on and outside work done, $390.93; 4th, when completed, $390.93; 5th, 35 days after completion, $521.30.

Guerrero, near 18th two-story frame; owner; J. I. Adcock; architect, A. J. Barnett, contractor, Wm. Little; cost, $5,400; surety, E. N. Fritz $3,000; time, July 15th; filed, April 7th.

Payments, frame up and roof on $1350; outside finishes all up and plastering completed, $1350; when finished, $1350; balance, $1350, 35 days after completion.

Hayes, bet Buchanan and Webster, two-story frame. Owner, M. Greenwood; architect, Chas. Geddes; contractor, W. I. Commary; cost, $4,971; filed May 3d; limit, July 20th.

Roof on and enclosed, $500; brown mortar on, $1,250; white coat on, inside finish done, $1,000; completed, 979; balance $1,242; 35 days.

Howard and 18th, a frame building Owner Cath. Murphy; architect, Wm. Hoagland-contractors, Jno. Martin and Jas. McGuire; cost, $4,848; limit, July 15th signed, April, 14th, filed, April 16th surety, J. W. Wesson; bond, $2,500.

1st payment, when frame and chimneys are up, $900; 2nd, when enclosed and roof on, 900; 3rd, when completed, $937.50. 4th, 35 days after completion, $1211.50.

Hayes and Webster, frame building. Owner, O. Christensen; architects, Salfield & Kohlberg; contractor, A. Klahn; amount, $7,200; sureties, C. S. Holmes, B. Joost, $7,000; time, 90 days; filed, April 17th.

Frame up, $1,500; partitions set, $1,300; plastering finished, $1,300; balance, $1,800, usual 35 days.

Hampshire near Solano, one-story frame; Owner, Mary C. Hongaard; contractor, C. E. Dunshee ; cost, $1,900.

Julian Avenue, No. 126, repairs, etc. Owner, B. E. Tittel; contractor, M. C. Lynch; amount, $1,620.

Plastering finished, $800, and balance 35 days after completion.

Leavenworth nr. Pine, additional story. Owner, Mr. Smith; contractor, Mr. Pleace; $1,500.

Leavenworth nr. Sacramento, additions; cost, $800.

Larkin, bet. Clay and Washington, two-story frame residence. Owner, Jane Smith; architect, C. J. I. Devlin; contractor, A. McDonald; sureties, J. J. McKinnon and F. P. Latson, $5,000; am't of contract, $6,985; filed, May 7th; limit, 90 days.

Frame up, $600; enclosed and roof on, $800; brown coat of mortar on, $900, plastering finished, $1,200; when ready for painting, $1,000; when completed, $730; balance, $1,755; usual, 35 days.

Lombard, near Jones, frame dwelling; owner, Caroline G. Jacques and husband; architect and builder, A. W. Pattiani; cost, $7,800; filed, April 9th; time, August 1st.

Payments; first-story joists on, $800; enclosed, roof on and chimneys built, $1,800; mortar on, doors and windows in and building primed; $1,800; when completed, $1450; balance, $1,950, 35 days after completion.

Main and Mission. Excavation and Brick work. Owner, D. B. Hinckley; architect, Percy & Hamilton; contractor, Robt. Mitchell; cost, $5,850; limit, July 1st; signed, April 12th; filed, April 13th.

Payments, 75 per cent. as work progresses on 1st Saturday of each month and balance 35 days after.

$5,000, when floors are all laid; $5,000 when carpenter work is finished; $5,500 when building is all completed; balance, $19,500, 35 days after completion.

Michigan, between Shasta and Napa, three-story frame; owner, A. Schultz; architect, A. J. Barnett; contractor, F. J. Williams; carpenter work only contracted for; $200, when 1st story joists in, $200 when 3rd story joistz on, $250 when ready for plastering, $175 when completed, and balance, $275, 35 days after completion; total amount, $1100; surety, J. Ramos, $500. time, June 20th.

Market, bet 6th and 7th, six-story brick building. Owner, Jos. Rosenthal; architects, Salfield & Kohlberg; masons, Riley & Loane; carpenters, Moore Bros; cost, $110,000.

Mission, bet 9th and 10th, in rear, two-story frame. Owner, F. Knebeler; architects, John & Zimmerman; contractor, F. Klatt; cost, $2,000.

Minna near 4th, two-story frame. Owner, Adolph Schwimm; contractor, C. Zwierlein; cost, $3,885; limit, 80 days; filed, May 7th.

When framed, 600; roof on and enclosed, $800; plastering finished, $1,285; when completed, $1,000.

McAllister and Broderick, brick, carpenter work, etc. Owner, Wm. Cradock; architect, H. Geilfus; contractors, Schutt & Krecker; cost, $4,240; limit, July 15th; signed, April 11th; filed, April 13th; sureties, T. C. Jensen and C. W. Gerke; bond, $3,000.

Mason near Eddy, two-story brick. Owner and builder, J. K. Prior; cost, about $5,000.

Mission, near 9th, frame building. Owner, J. Smith and wife; architects, Armitage & Wilson; contractor, J. Foster; cost, $5,250; sureties, P. Swift, J. W. Gray, $3,000.

Enclosed, $1,312 50; brown mortar on, $1,312 50; completed, $1,350; balance, $1,312 50, usual 35 days.

Manitoba, near Yasoo, one-story frame. Owner, Eugene Legallet; architect, J. J. Clark; contractor, C. E. Dunshee; cost, $2,550; filed, April 17th.

Frame up and rustic on, $910; brown mortar on, $500; plastering finished, $500; balance, $640, 35 days after acceptance.

Market, corner Davis, a three-story brick. Owner, Maria Coleman; architects, Schmidt & Shea; contractor, C. H. Ackerson; amount, $39,863; sureties, C. Hansen, R. Mitchel, $39,863; filed, April 19th.

75 per cent progress payments, balance, usual 35.

Market and Sixth, alterations. Owner, Mr. Hughes; contractor, G. McCann; cost, $1,000.

Main and Mission. Carpenter work, plumbing, etc. Owner, D. B. Hinkley; architects, Percy & Hamilton; contractor, B. F. Ellis; cost, $5,970; signed, April 12th; filed, April 13.

Payments, 75 per cent. as work progresses on 1st Saturday of each month and balance 35 days after.

Post, bet Larkin and Polk, two-story flat. Owner, Mrs. A. Brady; architects, John & Zimmerman; contractor, F. W. Kern; cost, $7,000.

Prospect Place, between Pine and California, two-story frame. Owner, Thomas McDonough; architect, Chas. J. Havens; contractor, Wm. Pluns; cost, $2865; limit, 75 days from date; signed, April 11th; filed, April 11th; sureties, F. Joost and A. D. Moore; bond, $2865.

1st payment, when frame is up and enclosed, $500; 2nd, when brown mortar is on, $500; 3rd, when plastering and outside finish is completed, $500. 4th when completed, $600; 5th, 35 days after, $765.

Post, near Pierce, two-story frame; owner, Eva M. Carter; architect and builder, J. B. Gonyeau, cost, $4,400; filed, April 11th; time, 90 days.

Payments, frame up all inclosed and sheathering on $1,100; brown mortar on, $1,100; when completed, $1,100; balance, $1,100, 35 days after completion.

Polk and Bonita, frame dwelling. Owner, J. Coakley; architect, J. P. Chadwick, contractor, C. E. Dunshee; cost, $3,625; limit, 80 days; signed, April 11th; filed, April 13th; aureties, G. T. Shaw and D. C. W. Hodgkin; bond, $3,000.

1st payment, when enclosed and roof on, $900; 2nd, when brown mortar is on, $900; 3rd, when outside is finished, $900; 4th, when building is completed and accepted, $925.

Pine and Devisadero, additions to building. Owner, Ed. Platz; architect, G. G. Gillespie; contractor, A. Jackson; amount, $2,500; filed, May 7th.

Framed, $800; enclosed, $800; plaster on, $1,285; $1,000 when completed.

Ridley, near Stevenson, two three-story frame flats; owner, C. P. Kuencke and wife; architect and builder, B. Dryer; cost, $7,495; sureties, F. Joost, W. Shyarks, $7,000; limit, 80 days.

Payments, enclosed and roof on, 2,000; plastered, $3,495; balance, $2,000 when building is finished, if all bills are paid.

Shasta, bet Michigan and Illinois, frame dwelling. Owner, G. A. Castner; architect, M. J. Welsh; contractor, M. Ryan; amount, $1,455; surety, J. W. Hodgkins, $1,455; time, 60 days; filed April 17th. Roof on, $300; brown mortar on, $400; finished, $300; balance, $455, 35 days.

Sacramento, near Broderick, two-story frame. Owner, H. Hansen; architects, Armitage & Wilson; contractor, F. V. Steinman; amount, $4,715; sureties, J. Stande, H. Weisman, $2,500; time, July 17th; filed April 19th.

Enclosed, $1,215; brown mortar on, $1,140; complete, $1,160; balance, $1,200, usual 35 days.

Stuart nr. Howard, one-story frame; cost, $800.

Sacramento, Nos. 822, 822½, alternations. Owner, Mme. T. de St. German; architect, B. E. Henricksen; contractor, C. H. Norton; amount, $1,200; time, 25 days; filed, April 21; 75 per cent paid, progress payments and balance usual 35 days.

Stevenson, near Seventh, frame dwelling, Owner, John Sullivan; architects, Armitage & Wilson; contractor, Timothy Sullivan; amount, $5,329; time, July 16th, filed, April 17th; surety, B. Joost, $3000.

Building enclosed, $995; brown mortar on, $995; white mortar on, $995; completed, $995; balance, $1,345, usual 35 days.

Spofford Alley near Clay, brick building. Owners, Chee, Tung, Kong & Co., Chinese Free Masons Society; architect, Clinton Day; contractor, W. E. B. Stiles; cost, $13,300; filed, April 25th; sureties, G. E. Williams, E. Phillips, J. D. Kanary; limit, Aug 15th.

Second floor joist on, $3,000; third floor joist on, $2,500; roof and mortar finished, $3,000; balance, $4,800; 35 days.

Sub contract on above for brick work let to G. W. Kneedler; am't $5,245. Payments made according to above in ratio to am't of contract.

Third, bet Brannan and Townsend, three story brick building, engine house etc. Owners, Kohler & Van Bargen; architect, H. Geilfuss; contractors, J. Haa & Son; sureties, J. V. Davis, H. W. Wife land; cost, $78,100; limit, Oct. 1st.

18th St. bet Mission and Howard. Owner, Bertha J. Fischer; architect, Chas. I. Havens; contractors, R. Doyle & Sons; cost, $2,035; limited, 80 days; signed, April 10th; filed, April 11th; sureties Jno. McCarthy & Thos. Winters

Payment, when brown mortar is on, $500; 2nd, when hard finished and outside primed, $500; 3rd, when completed, $500; 4th, 35 days after completion, $525.

Lower Prices for Lumber.

A careful observation of the reports in this Journal will convince any one that the number of new buildings in progress is not by any means, as large as the general prosperity of the city would seem to warrant. The Extortionate price demanded for lumber is primarily, the princial cause of scores of owners quietly shelving plans after they have been figured on. We know of dozens of conitracts that would have been let provided owners secured a reasonable return for their outlay. With lumber fully $8.00 on an average above what it should be, lath much higher than circumstances warrant, is it any wonder that contractors, plasterers, etc., should charge for their work according to the standard set up by the lumber manufacturers. In the Bonanza year of 1885, there were erected in this City 1544 buildings; in 1886, the number dwindled to 1236; in 1887 the aggregate had decreased to 1131; and the present year—so far—shows a still further falling off from its predecessors. With the thousand of new people coming here, many of them to permanently reside among us, still the number of new buildings is steadily on the decline.

A remedy for this state of affairs is soon to be applied. There is much talk of an English company with an abundant capital, soon to start an active opposition to the present unjust rates of lumber.

While we are in favor of a protective tariff generally, still we hope the duty on lumber will be placed at merely a nominal figure, and thus encourage those holding large tracts of timber land in British Columbia, to at once commence operations necessary to place lumber in this market. By so doing, we not only relieve ourselves from the operations of an outrageous lumber trust, but we also save own forests for the benefit of those who may succeed us.

COUNTRY BUILDING NEWS.

More New Buildings in San Bernardino.

Messrs. Jones & Griffith yesterday received an order from Father Stockman to prepare plans for a three-story building to be erected on the southwest corner of D and Fourth streets. The building is to be of brick, stone and iron, 50x110 feet, and to be supplied with all the modern appliances. It will cost, when completed, in the neighborhood of $40,000.

The above named firm of architects also received an order yesterday from Mr. Ancker, to prepare sketches for a half dozen semi-detatched villas. When the plans are accepted Mr. Ancker will begin the work of construction at once. They will be built on C street.—*Index.*

Alhambra.

The contract for the Presbyterian church has been let to F. S. Glover.

Fresno.

C. F. Riggs is endeavoring to raise subscriptions to build a $50,000 theater building.

The contract for building the new hospital on the county poor farm was let by the supervisors to J. L. Smith, the contract being a little over $25,000. The board of supervisors went out to the county poor farm to select a site for the proposed new hospital building. Work on the latter will be commenced at once.

Gridley.

A contract has been let to build a $12,000 brick hotel. R. M. Beebee & W. Brown are owners.

Healdsburg.

T. S. Merchant is making preparations for building a large cannery.

Klinknerville.

It is proposed to build a school-house to cost about $15,000. Wm. Kirke is the Architect.

Livermore.

Contract Let.—Bids for the construction of the Chapin block on Second street, Seattle, directly north of the Boston block, were opened in Architect Boone's office on Monday, and the contract was awarded to Mr. S, E. Clough on his bid of $12,500. The block will be of wood, two stories high.

A New Building in Los Angeles.

The tearing down of one of the old land marks on South Spring street was commenced yesterday. The old South Methodist Church stood here for many years, but in 1884 the congregation selected new quarters, and the building was turned into a concert garden and afterwards changed into a variety theatre, and finally into a general market restaurant and real estate offices. E. B. Miller, the owner, has decided to erect a five story brick block, the plans of which have been accepted. The work will be pushed forward as rapidly as possible, and by December 1st it is expected the building will be complete.

OLYMPIA, W. T.

Architect B. F. Hartsock can be addressed for particulars iu regard to a new hall for the I. O. O. F.

PETALUMA.

Ed. D. Hedges, the architect and builder, is having a boom in his business. He is putting up a neat residence for George N. Smith, on B street; also one for Thomas Gray on the grounds of the Real Estate Association, Higbee's addition, and one for David Smith, on Keller street. He is also preparing plants for several other houses.

PASADENA.

E. S. Frost has laid the foundation of a new brick block on East Colorado street. This will be the third brick block erected by Mr. Frost in the last two years.

A $15,000 hotel will be erected in the town of Traver.

PACIFIC GROVE.

Maudlin B others are erecting a cottage for Mrs. P. Kilburn.

PENDLETON, OR.

G. W. Babcock has finished the plans for a $70,000 Court House. The Pauly Jail Co. of St. Louis have the contract.

PLEASANTON.

C. H. Dall will erect a building to cover his lot 54 x 150 feet in size.

RED BLUFF.

Sidney Charles will make large additions to the Tremont Hotel. Holt & Gregg have the contract. Amt. $4,000.

SAN BERNARDINO.

Mr. Willard Wilson will commence the erection of a new two story brick block on Court sreet, adjoining Dr. Bogart's building on the east. It will be twenty-six feet front and eighty feet in depth.

Mr. Jack Ruffen will also commence the erection soon of a three story block on Third street, near the block now owned by him.

Messrs. Otis & Waycott have ordered plans and specifications for a new two story block to be erected beside the Swing block on Fourth street.

Work will be commenced soon on Mr. J. W. Swing's new three story block, corner of Fourth and D. streets.

A. L Ancker has had plans drawn for three semi-detached villas to de erected near his present residence.

Ike Lenjamin has had plans and specifications drawn for a two-story house, which he will erect on Seventh Street.

Architects Jones and Griffith yesterday closed a contract with the Los Angeles Granite and Brown Stone Company for the Ventura brown stone to be used in the front elevation of the new Farmers' Exchange bank building. It calls for the delivery of the stone on the premises for $2,881, and to begin this week.

A contract was also let to Willian Carmichael for the cutting and setting of all the stone to be used in the street front of the building for $4,000. The work of cutting and dressing this beautiful Ventura brown stone will be done in the rear of the building, and will begin immediately on receipt of the first shipment.

Mr. Austin Chute is to build an elegant residence on Fifth Street, near Mount Vernon. Work will begin soon.—*Index.*

Anspachu Bros. are building a warehouse D. Schneider is erecting a cottage on Rincon Av. E. F. Thomas is putting up a house about a mile from town. The machinery for I. E. Rickey's new planing mill has arrived and it will soon be placed in position. N. Dimond will make improvements on his 4th St. property. I. Easterday has the contract for a dwelling for E. Denison.

The bids on the building of Mr. I. Benjamin's new residence to be erected on Seventh street, near F. street, in the immediate vicinity of the home of Judge Willis, were opened this afternoon in the office of Jones & Griffith. The bids of the different contractors were as follows: S. A. Howe, $5,110; Oscar Jacobs, $5,225; W. J. Hastings, $5,675; W. G. Pearce, $4,652; A. L. Beach, $4,237; —Needham, $5,650; Kelly & Stevens, $6,380; W. H. Young, $4,449; and J. C. Actings, $4,756.72.—*Index.*

The contract for building the new two story brick building, 52 by 80 feet, to be erected for Oakdale Lodge No. 228, I. O. O. F., has been let to Julian Mourot, of Modesto, and the contract papers were signed yesterday. Work will be commenced upon the building as soon as the material can be obtained. The contract price of the building is between $9,000 and $10,000.

San Jacinto is to have a Congregational church building this summer. It will be of brick, 36 x 56 feet.

THE STANFORD MAUSOLEUM.

The Magnificent Tomb to be Built at Palo Alto.

In style of architecture, the simple but effective methods of the ancient Egyptians will be followed. Massive, imperishable granite of a light shade of gray, with an interior lining of the finest Italian marble, will be employed. The item of expense has not been considered, the designers being given carte blanche as to cost, and directed to secure the best of material and workmanship to be had. The total outlay necessary to complete the tomb and to prepare the surroundings will reach $100,000, and may considerably exceed that amount. The item of transportation alone will be a large one, as the granite will be shipped from Vermont and the marble from Italy.

The site selected is a beautiful four-acre plot in the Senator's grounds just outside of San Francisco. It already contains handsome shrubbery, and occupies an altitude commanding a magnificent view of the bay. A driveway sixty feet wide will be made, circling around a slight elevation, on the brow of which will be the tomb. The art of the landscape gardener will be employed to beautify the approaches and render even more effective the vistas of the park.

The structure will be in the form of a temple and will be twenty-five feet square. There will be a double row of massive granite columns supporting the roof of the portico at the front. On each side of the entrance will be a majestic sphinx carved from a single block of granite. Heavy bronze gates close the entrance, and within are solid doors of polished granite. The roof and sides are also of granite and are to be built in the most substantial manner. The stone employed is the Barre granite, from Barre, Vt. It has a slight bluish gray tint, which shows delicate carving to advantage and retains its color without change. Each block was cut the requisited shape at the quarry and marked to designate its position. They were then boxed, to prevent injury, and shipped to San Francisco. All the main portions of the structure have been sent on, and work on excavations for the tomb has been commenced.

The carving of sphinxes and the more delicate portions of the stonework, have been done in this city under the direction of Caterson & Clark, the designers of the tomb. The two majestic sphinxes are admirably done, and as worthy guardians of the ashes of an American money king as their prototypes were of the remains of the ancient Ptolemies.

The interior of the mausoleum will be done in white marble. The ceiling will be a single arch of marble with a span of twenty-five feet. There will be no crypts or vaults, and provision will be made for the remains of only three persons—those of the Senator and Mrs. Stanford and the son. These will occupy sarcophagi placed on the three sides of the chamber. The body of her son, over which Dr. Newman preached the funeral oration nearly two years ago, is now in a receiving fault in San Francisco awaiting the completion of the tomb. The sarcophagi are being made in Italy; each one will be hewn from a single block of the purest white marble. The lid will be made of a separate piece, and the exterior ornamented with the most exquisite carving. The caskets containing the bodies will be inclosed in a leaden casing before being placed in the sarcophagus. Each receptacle will contain an appropriate inscription, and the name of "Stanford" will appear over the entrance.

The mausoleum will be completed during the coming summer, and, when completed, will be a fitting abode for the remains of one of the most successful men of the day; a railroad magnate, a millionaire and a philanthropist, who is building a university that will cost between $15,000,000 to $20,000,000; a man who lives magnificently, with wealth and friends, and everything that makes life worth living, yet who has had the great sorrow of losing his son, his only child, and when he and his wife are called to another world and their remains occupy their stately tomb the family history will end.

VISALIA.

Mr. Harrell will soon commence the erection of a three-story brick building.

Dr. King is having an office building erected.

Ground at South Riverside will be shortly broken for an elegant new opera house to be completed by next winter. The opera house is to be three stories high and of pure Romanesque architecture. The front will be of Colton marble. The main auditorium will have a seating capacity of 750 people. In the building on the first floor will be three stores, each 125x25. The second story will be broken up into offices. The third floor will be used for club rooms. The opera house will be erected on the corner opposite the bank building. A syndicate of Kansas City capitalists have hold of the enterprise. The estimated cost of the opera house is $75,000. A. C. Willard is the architect.

C. M. Loring has offered to build a $50,000 opera house at Riverside, providing the lot now occupied by the Citrus Fair Association is given as a site.

SUTTER CITY.

Quite a number of buildings are in course of construction in this place. Chief among them are 11 buildings erected by the Sutter City Building Association at a cost of $20,000. Salfield & Kohlberg are the architects. A $15,000 school building is also under way; plans by the same parties. The Sutter Co. Building Association are erecting an $11,000 hotel, Salfield & Kohlberg being the architects. P. D. Sardemeyer is building an $8,000 residence, plans by same parties as above. The Sutter Co. Reclamation and Improvement Co. are having a $2,000 residence bnilt.

MODESTO.

Julian Mourot has secured the contract for I. E Gilbert's two story brick builbing.

RIVERSIDE.

Myron Alguire is having plans drawn for an $8,000 residence—E. L. Allen is building on his Ninth street property—C. A. Whitman and F. DeVine are each building.

SAN JACINTO.

H. B. Smith will, in a short time, erect a handsome dwelling. R. L. Wardrobe has donated a large lot to the Baptist Church Society, and the latter are taking active steps towards erecting a fine church. The Congregational Society intend to build a $4,000 church.

J. R. Messerly is having a dwelling erected by Stice & Burns.

Mr. Winters is having a handsome residence erected.

A new church building will soon be erected on the lot of the Union Church, in San Andreas. The new building will be dedicated as a Congressional Church, and will cost about $1,200.

PORTLAND, OREGON.

Architect W. F. McCaw have plans finished for a $6,000 residence for Captain W. Young. Garrett & Co., have secure l the contract.

BANK BUILDING.

The Kern Valley Bank at Bakersfield, will soo n erect a two-story brick building.

TACOMA.

Wm. Bradley will erect a $15,000 brick building from plans prepared by Goddard & Robertson.

Farrel & Darmer have let to Dongan & Bringham the contract for 2 three-story brick buildings. Owners M. Kaufman & W. Wolff. Cost $14,000.

In White Oaks, New Mexico, M. Whiteman is having erected a two-story brick building.

E. B. Hamilton of Auburn will erect a dwelling house. It will be octagon shape with plate glass windows on every side.

M. A. Berg is building a $3,000 dwelling on Pacific Ave. in Alameda.

CHURCH AT TURLOCK.

J. P. Allen of Modesto has been awarded the contract to build the Methodist Church. Cost, $4,250.

SAN GABRIEL.

Miss Chase will soon have erected a two-story building.

A General Growl in Californa in Regard to Exorbitant Lumber Rates.

The California papers are continuing to fight high prices, for lumber, and the Pasadena *Star* has been boycotted by the local lumbermen. The Gladstone *Exponent* states that a real estate company offers to furnish lumber to those who build on its lots at from $25 to $30 under the prices charged by local yards, which is thought to be good proof that there is a big leeway between actual cost to the dealers and their selling prices. The latter are called extortionate and monopolistic. The San Francisco *Post* scores the "lumber trust" which it denominates the coast combination, and claims that freight rates have not advanced sufficiently to justify the price charged for lumber, to any material degree. It also mentions that the coast has a demand annually for about 1,000,000 orange boxes, 750,000 fresh fruit boxes, 3,000,000 for canned fruits and over 1,000,000 for vegetables, making a total of 5,600,000, which are costing about twice as much as during the season of 1885–86. A Chicago contractor is quoted by the San Diego *Post* as saying a house which could be built for $1,300 in this city would cost $2,200 if built in California. It goes on to say that when a land company can furnish its customers with lumber for several dollars under the prices charged by dealers, and prices in San Francisco are so much less, it is apparent there is something wrong. There has been an exhaustive expose of facts and figures, much newspaper oratory and charges of robbery, and underneath all the agitation and criticism lies the fear that the boom will subside.—*N. W. Lumberman.*

A REAL live mechanic is a thinker. He can think to some purpose. With strange jobs those men are never at a loss, be they experienced or not, for they think; they know how to think, and they think to the point.

Concave Ceilings.

Were concave ceilings introduced into parlor, dining and reception rooms, better opportunities for their decoration would be afforded. A concave sky, although the curv is all but imperceptible, is certainly more pleasing than a flat sky. With such a ceiling the cove could be dispensed with, and with it angular molded lines, forming border of celing, would disappear, giving place to flower, leaf and branch designs reaching upward and outward. To a lofty room such a ceiling would impart increased stateliness. Where the ceiling is structually flat convering ribbed arches with central pendant or base might be carried out in papier mache. Rooms present so many angles, mantles and furniture contributing a considerable share, in additions to walls that curvilinear forms are welcome variations. Even deep coffers, polychromatically decorated, are enhanced in beauty by a curved ground, which carries the eye naturally from one side to the other of the ceiling surface, thus causing it to take in the whole.

"MANTLES AND SIDE WALLS."

BY E. PRIGNOT AND OTHER ARCHITECTS AND DESIGNERS.

32 LARGE PLATES.

The designs represented are in the Cheminee, Louis XIII, and Louis XVI. styles. The engravings are very fine, and artistically represent the various fine details.

DIPLOMA OF MERIT

IS AWARDED TO

THEO. W. PETERSEN & CO.

★ OF SAN JOSE, CAL. ★

In acknowledgement of meritorious display of PRESSED BRICK, in the Collective Exhibit of California.

In acknowledgement of which the Signature of the proper Officials and the seal of the North Central and South American Expositions are hereto attached.

[ATTEST]
CHARLES TURRILL,
Commissioner.

I. M. W. COMICO,
President.

B. D. WOOD.
Director General.

THOS. WOODWARD,
Chairman Committee on Awards

SAN DIEGO, CAL., FEBRUARY, 18, 1888.

T. W. PETERSEN & CO.

DEAR SIRS:

I send you by mail, Diploma awarded you by the North, Central and South American Exposition, for your display under my charge.

Kindly acknowledge receipt in enclosed envelope.

Very Respectfully

CHAS. B. TURRILL.

Commissioner for California, North, Central and South American Exposition, an Manager Southern Pacific Company's Display.

The above diploma was given to the firm mentioned, for the best display of PRESSED BRICK, at an Exhibition that attracted world wide attention. Mr. PETERSEN has made a special study of Kiln burning, so as to have all the bricks of an even color. We have seen car-loads of bricks, delivered in this City, and the uniform color pervading the entire lot, was such as to attract more than ordinary attention from those around. MR. PETERSEN absolutely guarantees that every brick is perfect. If edges or conrers are broken, he does not allow them to leave the depot. Any one ordering brick from above firm, can rest as that they will obtain the very best Brick there is made in California. San Francisco address is Townsend St. between 6th and 7th. San Jose, P. O. Box 187.

CARPENTRY MADE EASY.

By Wm. E. Bell, a practical mechanic, who fully appreciates, from personal experience, that there are many things perplexing to understand and difficult to do until they are fully explained and tested. It is designed to make the science and art of carpentry clear and comparatively easy to all who require information on the subject. Price, $5.00 by mail, prepaid.

SAN FRANCISCO, JUNE 15, 1888.

Competition Plans.

The Academy of Science and the Olympic Club have issued invitations to local architects generally, to compete for the plans for buildings contemplated by the respective organizations named. The conditions are in the main, conventional, including the little joker so important in all such cases, to render award No. one to the *right man* possible, within the letter of the invitation. The gentlemen composing the respective committees are men of acknowledged repute for integrity in all personal transactions, and either would resent any imputation shadowing reflection upon the *intended* fairness, and the impartiality of their propositions. But the best of men may err in judgment, and the wisest be misled in arriving at conclusions; but it seems strange that in all such cases—the two in question not excepted— there should be a plank or condition incorporated in the invitations placing numbers one, two and three at the mercy of the adjudging parties, and rendering it easy to manipulate and award number three by actual merit, first premium and 5 per cent. upon the cost of construction; while the total of the premiums offered, will not pay one-tenth of the actual cost to architects to prepare the plans, to say nothing of the professional skill required. provided a reasonable number engage in the competition. A large amount of labor will be wasted.

Lumbermen's Committee Meeting in the Office of this Journal.

On the 23d of May, gentlemen representing the Pine Lumber Association, the Redwood Lumber Association, and the Retail Dealers' Association met in the office of this Journal. They had been appointed as a Committee to confer with the Editor in regard to the articles published on the high prices of lumber. The Chairman of the meeting gave the following facts in regard to the present situation. The owner of a large mill have a great many expenses of which the general public are not aware. It is a benefit to the mill owner to have married men in preference to bachelors. The owners erect houses and to each one gives from one-half to two acres of ground to cultivate, etc., charging the nominal rent of $10 per month. A school is provided for the children—secular and spiritual. On stated occasions, a minister preaches the gospel. In fact, it is the mill owner's pride to surround the little colony with all the benefits of civilization. Having done so, he manifestly cannot at a minutes notice, discharge such a class of he'p, and therefore must keep them going whether lumber is worth $12 or $25 per M.

Owing to the large demand for skillful labor in the woods, the price for the same has greatly inoreased; consequently the cost for logging is much more than it has been for years. Freights are also much above the prices usually paid.

The gentleman quoted one of our largest firms who had lost $75,000 last year in the lumber business. The firm, however, owned the store at the mills, in which last year they made a clean profit of $40,000, thus reducing the loss to $35,000. This fact was quoted merely to show that at prices of "Schedule," the lumbermen were not making the large amounts of money generally credited to them.

All the facts necessary were presented to us to show that at the quotations given, the lumber manufacturers were not making anything but a fair profit.

The Committee offered us free access to their books, and gave us a cordial invitation to call upon them individually and obtain any information we desired.

The gentlemen were very earnest in their endeavors to present all the facts to us, laying particular stress that our articles were extensively copied in Eastern Journals. From facts that had come under their observation, they were satisfied that our articles were hurting the general prosperity of the State, by keeping away those who would come here but for the generally conceived Eastern opinion, that the LUMBER TRUST was so anacondish in its tenacity to squeeze on the pockets of the dear public, that building was almost out of the question owing to the cost of materials.

We are well aware that our articles are extensively copied and that is the reason we have been very careful in their insertion. We have from time to time, called attention to the high prices of lumber, because we were satisfied that it was merely a little manipulation on the part of the manufacturers. ONE of the little jokers can be shown as follows:—

The receipts of Lumber at San Francisco for the first five months of the year compare as follows:—

	1888	1887
Pine, ft.	94,368,031	77 071,672
Redwood, ft.	46,989,688	42,245,214
Shingles, No	55,541,150	14,689,900
R. R. Ties, No.	534,631	192,472

According to the above summary 141,357,739 feet of lumber alone have been received. Five firms may be said to have been the manufacturers of nine-tenths the above total, and of this total, TWO THIRDS WAS SHIPPED ON VESSELS BELONGING TO THE MANUFACTURERS. Thus, virtually, those who produced the lumber, made their own terms for frieght. At $6.00 per M. the frieght on above amount for proportion owned by the manufacturers, would be in round figures about $560,000.

Now, the lumbermen, controlling as they do the ships engaged in the carrying trade, can with a stroke of the pen raise frieghts $1.00 a thousand. By so doing, although the price of lumber has not been raised, they add the neat sum of $140,000 to their bank account.

The above is only one of the little jokers by which high prices of lumber are maintained.

We thank the gentlemen of the committee for their friendly call, and will assure them that we will use our best endeavors to be just in all our statements, and do all we can to further the interests of those intending to build.

The Sidewalks in San Francisco.

The sidewalks of this city have from time to time been the subject of newspaper comment, and never complimentary, except in special cases of individual liberality in laying down some durable device; and the criticisms of visitors as published, have rated them as among the very worst features of the city's improvements. But the facts of the case, as a rule—if ever—have not been stated.

The primative, plank sidewalks were never more than an apology, and never did more than serve a temporary purpose, lasting in fair condition but a limited period of time, and decaying so rapidly that in a little while after being laid, the spikes would loose their hold in the sleepers, and protrude the surface of the planking, forming annoying obstructions—often termed "sidewalk hooks" to catch and tear ladies dresses, and furnishing the cause for many a round oath, particularly from persons with more corns on their feet than dollars in their pockets.

But in the early times, lumber was the only available material for the purpose, and necessity forced its use, not only for side walks, but also for the street roadways, until by custom, plank was recognized as the only alternative. But the hard wear and tear upon the road ways soon demonstrated the worthlessness of lumber, and the first substitute resorted to—was the semi-barberous cobble stones, which in turn was to some extent substituted by the "Nicholson pavement"—once considered the great desideratum, only to meet its fate as a worthless experiment, yielding place to the basalt blocks bituminous rock, etc. Thus from wood to indestructable stone for the streets, except the few blocks still encumbered by dilapidated planking, and the parts of the city where rotten, soft rock is spread to make clouds of red dust in summer, and rosy-hued mud during the rainy seasons, denominated "Macadam," exists.

So in side walks. Planking has long since ceased to be considered a permanent thing, and is only resorted to as a temporary improvement, or on the score of cheapness. Among the expedients following the early use of lumber, was asphaltum which at one time was accepted as a good thing, and some brick sidewalks were lain, the late James Lick even going to the extra expense of sending East for press brick to lay in front of the Lick house; but both the asphaltum and brick pavements failed to meet expectations—the asphaltum disintegrating and perishing after a year or two's exposure to the atmosphere, sun's rays and wear and tear, and the bricks less vitrfied than others wearing away and forming pot holes, until walking upon them became a punishment. This too in a very short space of time, while in other cities the same materials—bricks—have been in use for generations, and are still considered acceptable for sidewalk purposes. This fact suggests the inquiry as to the reason why that in Baltimore, Philadelphia, Boston, New York and othes cities bricks should prove a good sidewalk material, and in San Francisco fail to maintain a like reputation. The answer is, that the sharp sand blown everywhere by the summer winds, grind off the surface ten-fold more rapidly than in cities where sand is scarce, and the winds less in force and duration. Hence any material that can be easily effected by the grit of sharp sand, is unsuitable for sidewalk purposes in San Francisco.

But during the past ten years the patent stone device has accomplished its triumphs over all others, proving itself not only a competitor with nature's stone, but for regularity and smoothness of surface and durability, it is equal, if not superior to the large slab, natural formations. True, there are examples which argue against the merits of the made stone, but these are but evidences that pretenders, who have not understood the science of manipulating cement ingredients, have done the work, or that owners have played the fool's part in seeking cheap men, rather than pay fair value and secure satisfactory and durable work. But when properly laid by skilled operators, the best sidewalks that can be put down are the patent stone device; and their excellence never fail, and never will fail, and so far as quality is sacrificed to avarice, the pennywise and pound foolish principles apply.

Within the past year or two every one able to afford the small additional present outlay over wood have adopted the patent stone, and to old citizens it is pleasing to notice the thousands of feet now in use, and the growing tendency and wise prudence of owners to make these the universally used sidewalk. And when, less than another decade, one-half, or more, of the sidewalks of San Francisco shall, as they will be, laid of patent stone, no city in the Union will be better provided with splendid street walk ways.

During our recent visit east, special attention was attracted to the sidewalks, and in many of the cities visited, our observations were none to the discredit of San Francisco—barring its sidewalks of wood. In Cincinnati, Chicago, Washington, Baltimore, Philadelphia, New York, Boston and other cities we found miles of sidewalks lain of brick, and many of them anything but smooth and even, and others of large flag stone, with ungainly joints and rough surfaces, compared with which the good class of patent stone in San Francisco were infinitely superior, so that in honest fact, people who visit San Francisco cannot but admit that excepting those of wood, the sidewalks in San Francisco are good, and it is only a matter of short time when the sidewalks of every prominent street in the metropolis of the Pacific will equal any sister city in the Union, and surpass those who still countenance brick and inferior natural stone for sidewalks.

Semi-Annual Building Summary for 1888.

The number of new buildings, and the value of the same, for each month of the present year, is clearly shown in the accompanying table:

	Frame		Brick		Repairs	Total	Total
	No Build'gs,	Value.	No Build'gs,	Value.	Value	No	Cost.
January	60	$ 190,200	43	279,000	29,100	77	$498,300
February	51	186,500	2	258,000	18,200	61	462,700
March	36	147,200	1	10,000	31,600	45	188,800
April	56	284,950	5	44,300	29,100	74	358,350
May	55	269,600	10	331,500	37,300	79	638,400
June	72	396,750	9	84,420	92,100	101	573,270
Total	330	1,475,200	31	1,007,220	237,400	437	2,719,820

For the first 6 months of the past 3 years, the record stands:

1885—754	building engagements,	value	$4,267,375
1886—670	"	"	3,486,633
1887—516	"	"	3,269,914
1888—437	"	"	2,719,820

A decided falling off is noticeable both in number and value. This is owing altogether to the high prices of building materials. A large number of those who have buildings erected must borrow a portion of the cost of same, and when the rents returned will not enable the owner to meet his interest without loss, the erection of that class of buildings is almost completely stopped. It was all very well for our lumber manufacturers to supply the great Southern demand at the expense of stopping building in this city, but we think regrets will soon follow. Already the order has gone forth to take off $1.50 FROM EACH QUOTATION ON THE LIST, and from what we can learn a further shading of prices will soon be made. Many mills are being run on three quarter time now, in order to keep down the production: and the prospects look much brighter for those who desire to build small houses. We feel our efforts have been justly appreciated, as the few subscribers we have lost among those who feel themselves and their interests abused by our practical endeavors to secure lower rates of lumber, have been counterbalanced TEN TO ONE by property owners and builders who have applauded our editorials on the subject of high prices of lumber.

JUST RECEIVED.

The Carpenter's Steel Square and its Uses.

We have just received a large number of the above named books. A copy will be sent to any address upon receipt of ONE DOLLAR It contains a full treatise on the Carpenter's Steel Square and the numerous uses to which it may be applied.

The Plumbing Law.

Numerous requests have been sent to us to give the decision against the Plumbing Law in full and we herewith present it, together with the facts of the case.

One, Charles Friermuth was requested by Plumbing Inspector Sweeny to modify certain work and have same conform to the Plumbing Law. This he refused to do and was arrested and fined. A lawyer agreed to get him out of his snap for $15. We believe that Mr. Friermuth had to put up five different times as that number of complaints were filed. The lawyer seeing a job for himself, agreed to defeat the whole law for a specified sum. The amount was raised, or partly so, and the following decision tells the story.

We can not possibly see what good was accomplished in the endeavors made to overturn a law that sought nothing but benefits to the whole community. Mr. Friermuth and his lawyer may think they were smart but a new law will soon be in force that will be more stringent than the old one.

In the Superior Court of the City and County of San Francisco, State of California: Dept. No. 6. Hon. Wm. T. Wallace, Judge. Ex parte Friermuth on habeas corpus.

POINTS DECIDED.

1. The Act of March 3, 1885, conferring certain authority upon Health Officers in Cities and Counties, is unconstitutional.
2. Classification must be made upon the basis of actual population.
3. Where the Statute is a palpable violation of the Constitution, it is the duty of the Courts to interfere.

The petitioner, Charles Friermuth, is held in custody upon a conviction of violation of one of the provisions of the Act of March 3, 1885, entitled "An Act to grant the boards of health or health officers in *Cities* and *Cities and Counties* the power to regulate the plumbing and drainage of buildings" etc. The particular provision violated by him is the one found in the third section of the Act providing that the drainage and plumbing of private buildings in any City or City and County must be constructed in accordance with plans previously submitted to and approved by the Board of Health of such City or City and County. The plan adopted by the petitioner in constructing his house in the City and County of San Francisco was not a plan which had been so approved and he was accordingly held guilty of a misdemeanor under the sanction in the seventh section of the Act to the effect that any person violating any of its provisions should be deemed guilty of misdemeanor and, upon conviction, punished accordingly. The proper disposition of the case, as will be presently seen, requires a consideration of several important questions of constitutional law; the case was here on a recent occasion when the petitioner was remained *pro forma*, as it was deemed preferable that these questions should be determined by the Supreme Court: upon a renewed application made to that tribunal for a writ of habeas corpus the case was, however, a second time sent here for decision and I now proceed to its consideration.

1. The Act is plainly an emanation of the general police power—the existence of which power, as observed by Mr. Chief Justice Shaw grows out of the nature of well ordered civil society that every holder of property, however absolute and unqualified be his title, holds it under the implied obligation that his use of it shall not be injurious to the equal enjoyment of others having a corresponding right to the enjoyment of their property nor injurious to the rights of the community.

The existence of the police power of the State is not questioned: the proper mode of its legislative exercise is the point now in controversy; the power cannot be exercised through the agency of a local law if a general law can be made applicable, for the Constitution declares that no local law shall be enacted in *any* case "where a general law can be made applicable." (Art. 4. Sec, 25, Clause 33.) The word "local," considered in an etymological sense, imports restriction to a designated place: considered in a legal sense, and as applied to legislation, a local law may be said to be a law which has for its exclusive object the interest of some particular locality or localities, and is not designed to operate elsewhere than in places pointed out in the law itself.

The Statute now under consideration is obviously local in both those senses, for its purports to spend its entire operative force within designated localities. But that circumstance will not of itself constitute it a local law within the inhibition of that Constitution, if there be a proper classification of the localities in which it is to operate: such classification, however, must proceed upon the basis of *population*: it "cannot be made on any other basis than that of population" is the language of the Court in *Desmond v. Dunn* (55. 251). The classification here attempted is not upon that basis, but upon the mere denomination of "Cities" and "Cities and Counties" regardless of the population of either and to the utter exclusion of other municipal organizations, recognized by the Constitution and laws, called "Towns" containing in some instances, as was proven in this case, a larger population than is to be found in some "Cities." It results then that if a general law could have been made applicable in this case the Statute in question was not one within the Constitutional authority of the Legislature to enact. And I have no doubt that a general law could have been made applicable. It has been said in the Supreme Court that it may not be an easy matter to define with precision the distinction between a general law and one that is local (55. 490), while in the Supreme Court in Kansas it has been remarked that it is difficult to conceive of a case in which a general law could not be made to apply: the best definition of a general law perhaps is that given in the concurring opinion in ex parte *Westerfield* (55. 522). "A general law must include within its sanction all who come within its purpose and scope. It must be as broad as its object." The Statute here in question might have been made "as broad as its object:" that object was health: sanitary rules were prescribed for designated localities more stringent in character than those to be observed elsewhere: the Act proceeds upon the idea—no doubt correct in itself—that disease and contagion are to be especially anticipated and therefore more carefully guarded against in thickly settled communities rather than in those of comparatively sparse population. The vice of the legislation is in assuming the density of population to be necessarily greater in each locality called a "City" or "City and County" than could be found in any other locality or municipal cognizance, for instance, a "Town." That a general law—that is a law based upon classification of municipal localities by reference to actual respective populations—might have been enacted would seem too plain to require argument or illustration. The conclusion reached is that the Act in question being a local law enacted in a case in which a general law might have been made applicable for that reason unconstitutional, and the petitioner is entitled to be discharged from custody.

In delivering this judgment it is proper to remark that the reasoning indulged in assumes that the inquiry as to whether a general law might be made applicable in this case is one which may be entertained by the Courts: that it is not, as held in Indiana, Missouri and Kansas, one exclusively for the Legislative Department of the State. This question, though adverted to in *Earle v. S. F. Board of Education* (55. 491), has never so far as I am advised, been decided in this State. I have thoroughly examined the question for myself, and am satisfied that the inquiry is not one solely for legislative determination, but that, as in other cases in which a palpable violation of the Constitution has occurred, it becomes the duty of the Courts to interfere. An examination of the authorities and a presentation of the reasoning by which I am led to this decision would, however, too much prolong this opinion.

The petitioner is discharged from custody.

SEWER POISON—How shall one know when he is poisoned by sewer gas? is a question frequently asked. Dr. Hun, in the *Medical News*, says that he has carefully studied twenty-nine cases, and thinks it probable that the following condition may result from sewer gas poisoning: Vomiting and purging, either separately or combined; a form of kidney trouble; debility, in some cases in which the heart is especially involved; fever which is frequently accompanied by chills; sorethroat, which is frequently of a diphtheritic character; neuralgia. These conditions may occur separately, but are frequently combined, and it is especially common for the fever to be associated with the other forms of sewer gas poisoning. Finally, in cases of sewer gas poisoning, there is one group of symptoms which is almost always prominent, and these symtoms are loss of appetite, drowsiness, extreme prostration, and a dull, unpleasant feeling in the head and whenever this group of symptoms occurs; not as a result of an attack of acute disease, but as a chronic condition, a suspicion is justified that the patient is exposed to sewer gas, infection.

JUST RECEIVED: THE CARPENTER'S STEEL SQUARE AND ITS USES.

We have just received a large number of the above named books. A copy will be sent to any address on receipt of ONE DOLLAR. It contains a full treatise on the Carpenter's Steel Square and the numerous uses to which it may be applied.

THE NORRIS PULLEY.

Various attempts have been made to introduce a pully, the different sizes of which would be suitable for all kinds of sash. Some of the patents answered very well for light sash, but proved unsuccessful for those which contained large lights of French plate glass. Again, some kinds made especially for the latter would not answer for the first mentioned. The great requirements for perfect sash pulleys, that are absolutely required, consist first in having the wearing parts composed of such material that they are but little affected by wear, and second that the moving parts operate without noise. In these two essentials the Norris Pulley stands without an equal. As much care is taken in the manufacture of those costing but $1 10 a dozen as the fine bronze metal case and wheel costing $22 60 per dozen.

It will be noticed from the cut that these pulleys are inserted in the frame in a totally different manner from those of any other pattern. It is at once apparent that for strength there is no comparison between the above and the old fashioned way of a screw in the lower end. A great saving in time and labor is gained by having only one screw to insert. In a large house this saving amounts to considerable. Carpenters can put in this pulley by hand ten times faster than they can any other style, which to them in labor and screws is more than cost of pulley.

We have used the Norris Pulley in houses which we have constructed, and can confidently recommend them as superior to any other with which we are acquainted. The cheapest pulleys are made first-class, with large size hard pin, deep groove, the hub of wheel extending through to bear on the case, wheels run true, no burrs on the wheels to cut the rope. If, by mistake, at any time a pulley in a new lot should not meet the above requirements, Messrs. Norris & Co. will cheerfully take them back.

There is a splendid line of samples of above pulley in this office, and those about to use pulleys of any kind are invited to call and examine the same. Those in the country who can not call can either send here for information or write directly to the manufacturer, C. Sydney Norris & Co., Baltimore, Md.

JUST RECEIVED.

The Carpenter's Steel Square and its Uses.

We have just received a large number of the above named books. A copy will be sent to any address upon receipt of ONE DOLLAR. It contains a full treatise on the Carpenter's Steel Square and the nnmerous uses to which it may be applied:

NOTICE TO ARCHITECTS.

Plans and specifications will be received up to 2 o'clock P. M., of July 5, 1888, by the Board of Trustees, of the Free Public Library, for a library building to be erected on the north half of lots 2 and 4 in block 12, east of Center street, in the city of Stockton, State of California. The dimensions of said building to be 50 feet front by 80 feet deep; the building to be two stories high, and to be connected by a capacious and easy stairway of not less than 10 feet in width. Said building to be constructed mainly of brick, of which the South wall of the Eureka engine house shall constitute one wall. The upper story to be lighted from above, in connection with capacious windows at both ends of the building. A premium of $150 will be given for such one plan as may be accepted, if any, by the board. The cost of said building not to exceed $12,000, for which the estimate under the plan accepted must show that the construction is possible at that figure, and for which the architect whose plans may be accepted shall assume the contingent responsibility under the statutes of the state. It being understood that the plan accepted shall be the property of the Board of Trustees, to be used in any manner they may please. and the acceptance of the premium by the architect shall be the purchase price for the same. The board reserves the right to reject any or all plans and specifications. By order Board of Trustees Stockton Free Public Library.

W. F. CLOWDSLEY, Secretary.

San Francisco Chapter American Institute of Architects.

The regular meeting of the Chapter was held on June 1st. Owing to the absence of the President—he being in New York—Vice President W. P. Moore presided.

M. J. Lyon was elected a student member. At present, he is in the office of Macy Jordan.

Various members reported as a Committee of the Whole, in regard to procuring suitable rooms for the use of the Chapter Propositions were received in regard to the Murphy Building, the Howard Building, the Phelan Building and others. Definite action was postponed until next meeting.

The Chairman of the Committee on "Competitions" reported that he had called two meetings, but their conclusions were not as yet, sufficiently matured to place them before the Chapter. One months further time was granted for a written report.

An informal discussion was indulged in relative to the best manner of conducting the affairs of the Chapter so as to make them more interesting. All members present gave their views on the subject, and it is likely at next meeting more definite action will be taken.

A Gentle Hint to the Lumber Trust.

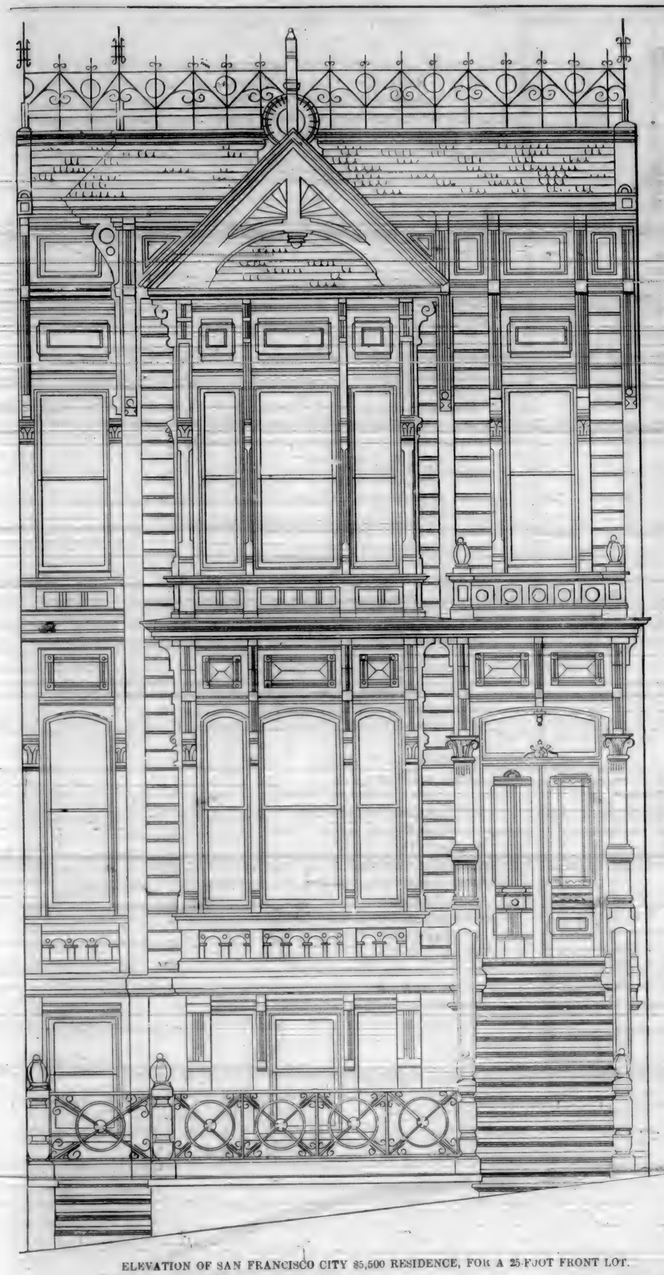
A CONTRACT FOR THE GENERAL RESTRAINT OF TRADE IS AGAINST PUBLIC POLICY.

AN IMPORTANT DECISION.

The Supreme Court has affirmed the decision of the lower court in the case of the Santa Clara Valley Mill and Lumber Company, against Isaac N. Hayes et al.

This was an action to recover $10,000 for a breach of contract between the parties, who were all engaged in the manufacture of lumber in the county of Santa Cruz, by the terms of which defendants agreed not to manufacture any lumber to be sold during 1881 in the counties of Monterey, San Benito, Santa Cruz or Santa Clara, except under the contract. Defendants failed to comply with the agreement, and the action was brought.

The court found that the sole object of the contract was to form a combination among all the manufacturers at or near Felton, for the purpose of increasing the price of lumber, limiting the amount to be manufactured, and giving plaintiff control of the entire supply of lumber for that year in the counties named. The effect was that no wholesale market existed at Felton during that year, and dealers could not purchase lumber in any quantity during the year 1881. The Court further found that the contract was against public policy, and gave judgment for defendants.



ELEVATION OF SAN FRANCISCO CITY $5,500 RESIDENCE, FOR A 25-FOOT FRONT LOT.

$5,500.

City Dwelling for a Lot Twenty-Five Feet Front

In this city a building lot has generally 25 feet frontage; the depth varies from 85 feet to 137½ feet. It is this average width that causes so many strangers to say that so many of our houses are quite similar in appearance. When it is taken into consideration that lots are 25 feet frontage, and that light way must be had to rear rooms, thus cutting off the frontage about four feet, it must be confessed that where owners *will have the universally used bay window*, our architects have almost exhausted the whole range of original fronts, and there is a sameness about houses built on a regular size lot. When the width is greater, however, there is no city in the world of the size of San Francisco, can lay claim to possessing so many examples of fine dwelling architecture as can be found by those perambulating our beautiful hills and valleys.

The example given in this issue is for a house possessing many conveniences, and specially adapted to a 25-foot lot. The front is somewhat different from the usual style, and if finished according to plan will present a very neat appearance.

The plans have been carefully studied, and we think the arrangement of the rooms is such that any one following the plan will be perfectly pleased with the house when built. At present prices of materials, the building represented can be built for about $5,500.

Sack's Automatic Water Closet.

This closet has been introduced several years in this city, and the general verdict of those using the same is that they are superior to any other AUTOMATIC CLOSET now in use. We know of some that have been in use for years, without requiring repairs of any kind. A company has lately been formed, whose intention is to thoroughly introduce this closet in every portion of the Pacific Slope. See the new ad. on page IX.

The wooden parts of tools, such as the stocks of planes and handles of chisels are often made to have a nice appearance by French polishing; but this adds nothing to their durability. A much better plan is to let them soak in linseed oil for a week, and rub with a new cloth for a few minutes every day for a week or two. This produces a beautiful surface, and has a solidifying effect on the wood.

Steel Square and its Uses.

We have just received a large number of the above named books. A copy will be sent to any address upon receipt of ONE DOLLAR. It contains a full treatise on the Carpenter's Steel Square and the numerous uses to which it may be applied.

Weather Strips.

A great improvement is observable in the mode of insertion and the quality of the material used in the weather strips, as produced by Bradstreet, of this city. Samples may be seen at this office, with prices affixed. By sending a note to the manufactory, 1326 Ellis, an agent will call on you and explain thoroughly how to stop your windows from rattling, and to prevent dust from coming in the cracks.

Our City and Country Building News.

We call especial attention to the Building News given in this Journal. There is no journal printed in California but the *California Architect*, which can be depended on for reliable building news. We have special correspondents in the principal sections of the State. As for city news, we are so far ahead of any other publication, that no comparison can be made.

PLANS FOR SAN FRANCISCO CITY $5,500 RESIDENCE, FOR A 25-FOOT FRONT LOT"

Last year, Frank L. Smith of Boston. issued a very entertaining little work entitled a "Cosy Home and how it was built". This year the same gentleman sends us another work called "Homes of to-day." It contains 30 pages of designs of buildings and is sent to any address for the sum of 25 cents.

The Art of Estimating.

If in each trade itself there should spring up by the proper evolution of study and experience, one man or many men, who were perfectly competent to give a correct estimate of the cost of any given piece of work in this particular trade in any or many of the states of the United States, such men would find themselves amply rewarded for their particular knowledge, and such knowledge would be of the utmost value, not only to architects, but to engineers, builders and contractors, and the public at large. We do not believe there are many men in this country who, in any trade connected with building operations, can give correctly the cost, for example, of one square foot of any piece of work with which he is familiar in all the counties of any state in this country, where building is going on, not even within the limit of three per cent. excess or deficit of the actual cost. That one could become so expert upon such work in this country that a remark of this kind could not be truthfully made, no one will deny, and that it can be made forcibly illustrates the chaotic condition of estimating in this country. Architects in New York accept commissions from Portland, Me., to Los Angeles, and contractors cover an equally large territory. Even within much smaller limits the same assertion is almost equally true. To become expert upon estimating, what must a man do and know? In his chosen field he must first know every material that is used, its methods of manufacture, its quality, its market value, and the reason for its use. He must know the kind of labor employed upon such material, a fair knowledge of the skill required to perform such labor and the amount of labor required to perform a certain unvarying unit of the work to be done, viz., a square foot, a lineal foot, a cubic yard, or other established measure. This work must be thoroughly done, but it can be well done, as the writer has seen demonstrated again and again. He must have tabulated sheets of the value of labor per hour in every known labor center in this country, and keep his lists up to date. He must be an omniverous reader of the published lists of bidders figures on contracts, that so many of our valuable technical journals now make a feature of, and to which the writer feels an indebtedness he knows he can never repay. He must, if he can, keep a general track of the rise and fall of values. If he has had the training of an engineer he can do this to the best possible advantage by keeping a series of profiles of the value of labor per hour in various localities. This will give him a graphic map, which will enable him to intelligently estimate at a moment's notice in any locality in this country. The value of material could be mapped in the same way. It is also somewhat singular that the opinions as to what constitutes a fair return on the money invested by the contractor vary so largely in different parts of the country. In order to arrive at this element in the calculations, an estimator must keep the run of the loanable value of money. Where rates are low, percentages are lower, and conversely. The fairest criteria, we think, may be based upon the interest on bond and mortgaged real estate. This kind of investment has permanence, and is free from the manipulated fluctuations of railway securities. The resulting estimate will be safe and conservative.

The preliminary work to be done to prepare the way for an accurate estimate of cost of any building is:

1. The gathering of the facts in regard to material of every kind and nature that enters into a building.

2. The kind of labor and its amount in the execution of the work to be done.

3. The establishment of a system of reference tables or profiles, which will be an epitome of the estimator's information in the field he desires to cover. In regard to aids in obtaining this information, we have space only to mention a few.

The most important information to be obtained, because it is of the sort that is generally unknown, is the amount of work a man can and ought to do in an hour's time. The best method we have found to obtain this kind of information is to question the workman himself. It sometimes needs considerable tact and shrewdness, in order to obtain from the workman himself what he considers a fair estimate of an average man's work for an hour. It is also a kind of work that needs a spirit of patient inquiry, a comparison of replies, and a collation of results, in order to deduce from them all a fairly average result. This may seem at first sight a slow and tedious process, but it is essentially the only one that is safe and conservative.

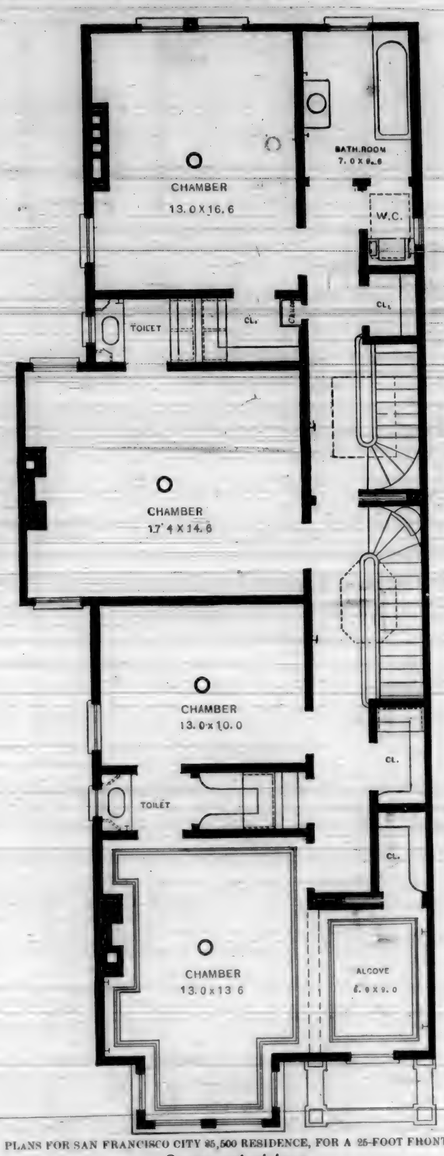
To obtain informaton in regard to materials the estimator must industriously collect from manufacturers and dealers in supplies their business circulars, catalogus, priee lists and advertisements of their wares, and, above all, do not forget their discount

sheet. Arrange and classify their contents according to the trades they refer to, and index them in some systematic manner, so that a reference to anything they contain may be had without a moment's delay.

To keep posted on novelties, new but meritorious inventions, constant reference must be had to the various trade and technical journals. The same journals will contain summaries of bids on important work, which must occasionally be analyzed and referred to items as a check upon the estimator's standard of values. It must be constantly borne in mind that it is the actual value which is wanted of a piece of work, not merely the skeleton representitive which is embodied in the word price; many a piece of work may have several prices to different men, but it can only have one value, and that value is the amount of labor done upon or with a given material in a certain unit of time. To reduce his work to an admirable system, a man must have an orderly mind, and be possessed of methodical habits. Much will depend upon the system to be adopted; each individual must work out for himself a system of reference that will be to himself, individually, the most serviceable. His work and methods must be logical, his results accurate and obtainable. The most authoritative sources of the price of labor (we do not say its value) is to be found at the rooms of the various associations of builders and manufacturers in all of the large cities of the country. Many trades journals are in the habit of publishing at various intervels the prices paid per day to different sorts of skilled labor, and many a missing link can be obtained from such tables.

The evidence presented here is somewhat *ex parte*. The answers to the queries propounded cannot be deduced from any series of arguments. What we have pointed out is something to be done in the future, and will, we believe, shape itself to the current needs of our building art. In older countries than ours, confessedly behind us in push and progress, the tendency is to a more systematic division of labor in the high art of design and construction, and the ends to be attained are more the outgrowths of experience than a change in the nature of reforms, and is is because of our lack of experience in the development of all phases of art that we are in our present chaotic conditions as to the estimation of the cost of buildings.

In France, the *Soiete Centrale des Architects Francase* publishes the *Serie de Prix*, or official price list of building materials, which is used by every contractor in making his estimates. We have nothing approaching such a list in this country, and probably never can have, owing to our geographical magnitude; but, if we had, there would be no opportunity for a man to become proficient in the art of estimating. In England Laxton's annual price list, now a volume of more than 600 pages, is so complete as to be used constantly by contractors in compiling their estimates for all large tenders; and we learn that it is now proposed to erect a large building in London for a reference museum of building materials. The general scheme of this museum is, in addition to other desirable ends, to present a classified arran ement of such materials, and will contain a complete set of catalogues, price lists, etc., of all manufacturers and dealers in the kingdom, kept up to date. If such museums could be established in, say, Boston, New York, Philadelphia Cincinnati, Chicago, St. Louis, Omaha, Denver and San Francisco as centers of information, the task of estimati g would soon be resolved into its proper shape, and become what it should be, a well established art.—C. Powell Karr, in *Carpentry and Building*.



PLANS FOR SAN FRANCISCO CITY $5,500 RESIDENCE, FOR A 25-FOOT FRONT LOT

Lower Prices for Lumber.

Prices for lumber have been reduced $1.50 per thousand *"all through the list"*. At least, that is the way a prominent lumber firm notified us. The reduction noted would be much greater only as same authority says, "we have to make an allowance for those that don't pay. If all contractors promptly settle we could now afford reasonable rates." So it seems there is a good profit in lumber at $20 per M. provided all those purchasing the same would only settle their bills. We have contended all along that $18 was ample for rough lumber, and $20 was a very high price And the lumber manufacturers finding out that the progress of the City has been materially checked by the extraordinary high prices of $22.50 for rough and $40 for flooring, have come down the magnficient tumble of $1.50 per M.

Corrugated Iron.

Turn to page x of this issue and note particularly the add of Cincinnatti Roofing Co. For roofs and sides of warehouses, nothing is better than Corrugated Iron. One great danger to which our grain warehouses are exposed, is the liability to take fire from sparks issuing from the stack of the passing locomotive. In California, all the warehouses are built close to the main line of a railroad and are peculiarly liable to catch fire. Write to to the Cincinnati Corrugating Co. and get a catalogue; after reading same, you no doubt, will at once take pains to make your exposed buildings absolutely fire proof.

STAIR BUILDING,

IN ITS VARIOUS FORMS AND

THE NEW ONE - PLANE METHOD

OF

HAND RAILING,

BY JAMES H. MONCKTON.

A PERFECTLY NEW BOOK, PRINTED IN 1888.

The author presents in this work *for the first time*,—as applied to hand railing—the *one plane method* of drawing face-molds, a method in which only one plan of projection is required. By the plane process of drawing a face mould, a center line of wreath may also be unfolded, and fixed in its relation to the elevation of tread and rise; thus determining the length of each baluster on the curved plan and gaining a knowledge and control of the wreath's exact position not before attainable.

The experienced stair-builder will learn that this one-plane method of drawing all face moulds—and also the manner of finding the angles with which to square wreathe prices—is simple, uniform and rapid. The student or apprentice will find that the elementary study of hand railing in the practical and novel way presented is easily acquired; he will also see that the detail instruction given in stair building from a step ladder to expensive and difficult staircases is presented in a manner to be clearly understood and quickly learned.

The Architect will find the best examples yet printed of Newells, Rails and Balusters, some of them being of exqusite design. The book is elegantly bound, printed on good paper, with illustrations far in advance of any similar publication.

The Bancroft Company have the above book for sale and orders sent to them—721 Market street, will receive prompt attention. Any order sent to this office will be immediately attended to, and the books promptly forwarded on receipt of the price, six dollars.

Eastern Opinion of the Subject.

"We are informed that the Lumberman' Association of the Pacific Coast is taking steps to maintain the position it has gained in the past few months with regard to prices in lumber. Nearly all the mill owners of Callfornia and the far northwest join hands to maintain values. Their association has been somewhat of a success and now we are informed that they have ordered that the mills in Mendocino and Humboldt counties, California working under its dictation, shall run three weeks each during the months of May, June, July and August or three quarter time it is the purpose of this organization to keep the supply of lumber entirely within the range of the demand. It appears that the extraordinary call for lumber during the past season has begun to fall off. Perhaps the collapse of the southern California speculative boom is responsible for this temporary disarrangement of the lumber mills. At any rate the association's edict has gone forth, and manufacturers have adjusted their affairs to meet the already strongly felt decline in the demand for lumber on the lower coast."

Some lectures have been recently given at the British Museum upon the art of ancient Babylonia, which are reported in the *Builder*. It is hardly necessary to say that since the discovery of several subterranean stores of cuneiform inscriptions, made upon cones of clay, our knowledge of Babylonian ways has become greatly enlarged, and it may not be long before as much is known of the history of Mesopotamia as of ancient Egypt, where, as some one says, the events which occurred in the fifteen and sixteenth centuries B. C. are recorded with greater precision and in more minute details, than the history of any European State in comparatively modern times. It is not long since a great number, some forty thousand, we believe, of inscribed cones were discovered, and sent to the British Museum to be deciphered, and a few months ago, while hardly more than a beginning had been made in translating the first consignment, two hundred thousand more were dug out of a subterranean chamber under the mound of Tel Ibrahim. This chamber is supposed to have been one of the "stack rooms" of a great public library of which five are known, from inscriptions, to have existed, in what we should call the five university towns of the Empire, Borsippa, Kutha, Larsa, or Larissa, as some maps call it, Eridu, and Babylon. Not only is the existence of these centers of learning well attested by the inscriptions, but we know the character of the sciences principally cultivated in each, Eridu and Kutha having been the seats of theological knowledge, while Borsippa was the center of technical instruction, and Larsa of mathematics; and the library attached to each was mainly devoted to books, or rather tablets, of apappropriate chacter. Not only were these libraries well stocked, but the books were arranged and catalogued with such skill that authorities of the British and the Continental museums have adopted the ancient system as being still the best for the sort of material with which it dealt. Most people will remark the similarity between this sort of literary, or rather educational enthusiasm, and the passion for scholarship which still exists among the educated Chinese, and it is not very surprising to find that it is now regarded as certain that the Chinese writing is intimately related to the cuneiform character, as if the people of Mesopotamia has diffused civilization eastward to the Chinese valleys, as well as westward to Asia Minor, and indirectly to Greece and Rome.

Artistic Homes.

A new work containing 44 plates of Residences, Churches, School-houses, etc.

Some of the designs are very good. No dependence can be placed however on the figures given as the cost of each plan; that is, to those who build on this coast. In many cases the figures are not one-half of what they should be if applied to buildings here, and in several instances not even one-third.

The publishers claim a copyright on every plan presented, and warn persons from copying *any portion* of plans represented. As an almost fac-simile of several of the plans appeared years before the book was printed, we fail to see where the copyright comes in. In the *California Architect* of the past 9 years will be found nine-tenths of the features presented in the plans contained in *Artistic Homes*.

Price 25 cents each, post paid.

CITY BUILDING NEWS.

Bartlett, near Twenty-Second, 2-story frame. Owner, Munson; cost $1,200.

Bluxome bet 4th and 5th, one-story brick building. Owners, Overland Freight Transfer Co. Architects Schulze & Meeker; contractors, Mahoney Bros. Cost $3650; filed May 18; limit Aug. 1.

Payments; roof tinned $1,700; completed $1,035; balance $915, 35 days.,

Bluxome nr 5th. Repairs. cost $600.

Bush cor. Stockton. Alterations to Beresford House. Owners, Coleman Bros; Architect, J. E. Wolfe. Cost $8,000.

Bush, bet Dupont and Stockton, additions to Catholic church. Owner, O. Renandier; architects, Huerne & Everett; contractor, J. L. Binet; filed June 2; limit 100 days; securities, F. H. Rosenbaum; F. G. Norman, $10,208; total cost, $10,208.

Payments: brickwork finished, $2,552; brown mortar on, $2,552; completed $2,552; balance, $2,552; 35 days.

Buchanan, cor Laguna, one 3-story frame and one 2-story frame. Owner, N. T. Franklin; contractors, Kincaid & Thompson; cost of 2-story, $4,400; 3-story, $5,325; filed June 4; limit 100 days.

When framed, $1,000 for 3-story, $825 for 2-story; ready to lath, $1,000 for 3-story; $825 for 2-story; plastered, $1,000 for 3-story, $825 for 2-story; balance, $1,327 for 3-story, $1,100 for 2-story; usual 35 days.

Columbia bet 23d and 24th. 1-story frame. Owner Hannah Mahoney. Architect and builder, Geo. Houston. Cost $2,650. Filed May 11, limit 90 days.

Payments; enclosed and roof on $655; brown mortar $665; plastering furnished and windows hung $665; balance $665, 35 days.

Columbia bet 23d and 24th. Owner, Mary Quirm. Cost $2,650.

All the condltions are same as above.

Clay cor Jones. Brick foundations for 3 dwellings. Owner Magdalena Ils; Architect W. C. Jordan; contractor Geo. D. Nagle; filed May 24. Limit June 18.

Payment, 75 per cent. as work progresses. 25 per cent. stands for 35 days after completion.

Clay nr Mason. Repairs $600.

Castro nr Sixteenth, two-story and basement, owner, Robert C. Clarke; contractor, Kincaid and Thompson; architect, Armitage and Wilson cost $5000, limit, 90 working days; signed, June 5, 1888, filed June 6, 1888; amount of bond, $3000; sureties J. F. Kennedy and F. S. Satson.

1st, when frame is up and enclosed, $1250, 2nd, when brown coat of mortar is on, $1250, 3rd, when completed and accepted, $1250, 4th, 35 days after completion and acceptance, $1250.

Ellis bet. Taylor and Jones. Plumbing work on H. Rohling's house, let to Ickelheimer & Bros. Amount $1,120.

Payments to be 75 per cent. as work progresses and balance on acceptance by the architects, Salfield & Kolberg.

Eddy cor Buchanan. 2-story frame. Owner Isaac Jacobs; architects Townsend & Wyneken; contractors H. & O. W. Townsend; cost $6,500. Sureties A. D. Moore, A. Kendall $4,000; filed May 26; limit 130 days.

Payment; basement walls up, $200; frame up $800; roof on and chimneys up $1,100; brown mortar on $1,300; white mortar on $1,475; balance $1,625, 35 days.

Ellis bet Stockton and Powell. Additional brick story. Owner Samuel Kellett; architects T. J. Welsh; contractor A. A. Willis. Cost $6,000.

Eddy nr Mason. 2-story brick. Owner J. K. Prior. Cost $4,500.

Ellis nr Jones. Additions. Cost $600.

Ford between Sanchez and Noe. Frame building. Owner, Martin O'Brien; architect, J. J. and T. D. Newson, contractor, Jas. Finn; cost, $1,850, signed, May 31, 1888; filed June 5 1888: limit, September 1, 1888.

1st, when building is framed and roof on $300; 2d, when enclosed, windows in and prime coat on, $500; 3d, when last coat of plaster is on, front and rear steps built and all the outside of building is completed $250; 4th, the payment when completed and accepted, $300; 5th. 35 days after completion and acceptance, $500.

Fillmore near McAllister, two-story frame biulding; owner, Henry Goetze; contractor, A. Elmann; cost, $5825; limit Sept. 26, 1888; signed June 1888; filed, June 7, 1888.

1st, building enclosed, $1000; 2nd, brown coat on, $1000; 3rd hard finished, $1000; 4th, when completed $1200 5th, 35 days after completion, $1625.

Fifth cor Folsom. 3-story frame. Owner D. B. Murphy; architect T. J. Welsh. Contractor, J. McInerney; amount $16,157; sureties J. J. McKinnon, O. J. Preston; $12,000; Filed May 10th; limit Oct 1.

Payments; foundations laid $1,200; all framed $1,223,55; ready for lathing $2,423,55; brown mortar on $2,423,55; white mortar on and building primed, $2,423,55; completed $2,423,55; balance $4,039,25, 35 days.

Fell and Devisadero. 2-story frame, store and flats. Owner Theo. Green; architects I. Newson; contractor J. J. Dunn. Filed May 19; limit 72 days. Surety B. Joost $2,000.

Payments; when framed $726; ready to lath $726; plastered $726; outside primed $726; completed $726; balance $1,265, 35 days.

First Ave. nr Point Lobos road. Frame school building. Owner City of S. F. Architect T. J. Welsh. Contractor G. W. Hansbrough. Cost $15,000.

Fourth cor Townsend. Additional story. Owners S. P. R. R. Cost about $20,000.

Fell and Devisadero. Mill work on J. J. Dunn's contract; contractor A. Kendall; cost $1,160.

Payments to be made according to Dunn's payments.

Filbert, nr Taylor, 2 story frame. Owner Konrad Peter; contractor, Henry Jansen; architect, Geo. Miller; cost, $3,400; limit, 65 working days; signed, May 12, 1888; filed, June 4, 1888, amount of bond, $2,500; sureties, Veinkohl Bros. and H. Fietjen.

1st, when frame is up, $850; 2d when building is enclosed, $850; 3d, when white coated, $850. 4th, 35 days after completion $850.

Geary and Jones. 3-story frame. Owner, Heincken; architect, Townsend and Wyneken, contractor, M. C. Lynch; cost, $6704; limit, October, 1st, 1888, signed, June 8, 1888; filed, June 8, 1888; amount of bond, $6,704; sureties, M. C. Lynch, and P. Swift.

1st, when frame is up, $1000; 2d, when brown coated, $1,700; 3d, when hard finished and shash in, $1,700; 4th, when all is finished, $628; 5th, 35 days after completion, $1676.

Geary, bet Hyde and Larkin. Painting contract on P. V. Merle's houses, let to J. St. Denis & Co.; amount, $2,850.

Outside primed and 2d coat on inside, $700; 2d coat on outside and inside, work ready for graining, $700; completed, $700; balance, $750; 35 days.

Greenwich bet Mason and Taylor. 2 flats and store. Owner Geo. McCluskey; contractor G. M. Salsbury; cost $3,950. Securities F. P. Buell, Lyman Green $3,950; filed May 17; limit July 12.

Payments; framed $1,025; enclosed $975; brown mortar on $925; balance $1,035, 35 days.

Golden Gate between Lyon and Scott. 2-story frame. Owner Martin Heberger; architect L. Hippely; contractor R. Parker; cost $2,330; security C. S. Holmes; filed May 26. Limit Aug. 25.

Payments; framed $582,50; plastered $582,50: completed $582,50; balance $582,50, 35 days.

Geary bet Hyde and Larkin. Plumbing contract on P. V. Merle's house. Architects Schmidt & Shea; contractor R. A. Vance; surety R W. Snow; cost $4,550 Filed May 22.

Payments; rough pipes in $1,650; completed $1,700; balance $1,200, 35 days.

Golden Gate Park. Music Stand. Owners, City of S. F. Architects Percy & Hamilton. Contractors Gray & Stover. Cost $2,700.

Haight bet Steiner and Fillmore. 2-story frame dwelling. Owner Andrew Burke. Architect A. J. Barnett. Contractor Chas. A. Laherty. Cost $3,800; surety M. Hansen $2,000; filed May 9th; limit Aug. 15.

Payments; building enclosed $950; brown mortar on $950; completed $950; balance $950, 35 days.

Hayes cor Steiner. 2-story building. Owner P A. Morbié; architect G. V. Capelletti; contractor J. J. Dunn; cost $8,250. Security C. S. Holmes $4,000; filed May 12; limit 100 days.

Payments; building framed $1,500; floor laid $1,500; brown mortar on and outside finishes up $1,500; when completed $1,500; balance $2,250, 35 days.

Haight nr Stanyan. 2-story frame. Owner Wm. Merz; architects, John & Zimmerman; contractor Benedict Pfarrer. amount $3,600; securities Blyth & Trott $3,600; filed May 23; limit Sept. 8th.

Payments; roof on and floored $600; rough mortar on $900; white mortar on $900; balance $1,200, 35 days.

Hayes and Baker. Frame stable. Owner F. Heywood; architect C. I. Havens; contractors Mahoney Bros; cost $3,650. Sureties Oscar Lewis, Robert Mitchell; filed May 23; limit 75 days.

Payments; 75 per cent. as work progresses and balance on completion.

Kate and Fillmore, frame school building. Owners, City of San Francisco; architect, T. J. Welch; contractor, J. H. McKay; cost $20,000.

Kearny cor Sacramento. Improvements. Cost $1,500.

King bet 4th and 5th. Freight sheds for S. P. R. R. Cost about $25,000.

Larkin nr Turk. 3-story frame. Owner W. Wynn; architects, Armitage & Wilson; contractor H. Thom Wohrden. Cost $4,000 Sureties, J. W. Fritsch. H. M. G. Dahler; limit 75 days.

Payments; enclosed $1,000; brown mortar on $1,000; completed $1,000, balance $1,000, 35 days.

Lyon bet Post and Sutter. 1-story frame. Owner Henry Schwarz; architect and builder, G. G. Gillespie; cost $2,035. Filed May 17; limit 75 days,

Payments; framed $500; brown mortar on and outside finish up $500; completed $525; balance $510, 35 days.

Larkin nr Clay. 2-story frame. Owner Mr. Smith; architect C. J. Devlin. Cost $6,500.

Lafayette nr Mission. 1-story frame Cost $3,000.

Market, Junction and Geary. Alterations. Owner J. T. Farley; architect T. J. Welsh; contractor Mahoney Bros; cost $2,350; filed May 10.

Payments; 75 per cent. as work progresses.

Mission bet 9th and 10th. 2-story frame in rear. Owner F. Kenerbeber; architects John & Zimmerman; contractor F. Klatt; cost $1,780; security J. F. Kennedy, $1,800; filed May 10; limit June 30.

Payments; enclosed and partitions set $500; rough mortar on, outside finishes up $350; ready for painting $480; balance $450, 35 days.

Marquesas nr Yazoo. 2 frame cottages. Owners Chas. and Jerome Milby; architect Geo. E. Voelkel; contractor, A. Jackson. Cost $5,100; sureties. C. F. & F. P. Doe, $5,000; filed May 23; limit 15 days.

Payments; rafters on $400; ready to lath $600; brown mortar on $780; white mortar on $1,200; balance $1,275, 35 days.

Mission nr Atnhony. Alterations $500.

Market nr Powell. Additions to Baldwin Theatre. Owner E. J. Baldwin. Cost $30,000.

Market nr Castro, one-story frame, owner, P. Rothermal; contractor, O. E. White; architect, Jas. H. Humphreys; cost, $2220, signed June 7, 1888; filed, June 7, 1888; limit, 75 days from time of signing contract.

1st, when frame is up and building is enclosed, $500; 2nd, when brown coat is on, $600. 3rd, when accepted by owner, $550, 4th, 35 days after completion, $570.

Mission, nr Main, additional story; cost, $1,500.

Main, nr Mission, repairs, cost, $1,000.

Morton, nr Kearny, alterations; cost, $800.

Mission, nr Twelfth, 4 4-story frame. Owner, Jas. Palmer; contractor, M. Chisholm; Architect, C I. Havens; cost, $10,628. Limit, 90 days; signed, June 5 1888; filed June 5 1888; sureties, Frank P. Latson and J. J. McKinnon.

1st, when frame is up building is enclosed, $1,878; 2d, brown coated and principal part of outside finish is on, $2,000, 3d, when hard finished outside mill work is on, $2,000; 4th, when completed and accepted by architect, $2,000; 5th, 35 days after completion and acceptance, $2750.

Noe, Ridley, Castro and 14th. Additional building to the German Hospital. Architect H. Geilfuss; contractor F. W. Kern; amount $10,340; filed May 9; limit Sept. 1.

Payments; when framed $1,550; roof on partitions set $1,550; brown mortar on $1,555; plastering finished and outside trim completed $1,550; building completed $1,550; balance $2,585, 35 days.

Plumbing in connection with above let to Fritz & Kean; amount $1,673; 75 per cent. as work progresses and balance 35 days.

Nineteenth nr Guerrero. 1-story frame. Cost $2,500.

O'Farrell nr Franklin. Three-story frame dwellings. Owner A. Gross; architects, Pissis & Moore; contractors R. Doyle & Son. amount $12,389; securities, A. Sbarboro, J. McCarthy; filed May 8th, limit 100 days.

Payments, when foundation is laid $800; when buildings are framed $2,100; brown mortar on $2,100; plastering finished $2,000; when ready to paint $2,000; when finished, $289; balance $3,100, 35 days.

O'Farrell nr Franklin Same as above; plumbing work W. S. Snook & Son; amount $1,094; rough work and sewers in $420; all completed $400; balance $274, 35 days.

Post nr Octavia, repairs, owner, Issaacs; architect, J. E. Wolfe; cost $700.

Pine nr Battery, additional story to brick building. Days work, J. J. & T. D. Newsom, architects: cost, $8000.

Plumbing contract, house on Mission near Twelfth. Owner, Jas. Palmer; contractor, Fritz and Keane, architect, C. I. Haven, cost, $1,200; limit, as fast as required by architect; signed, June 5, 1888; filed, June 5, 1888; surety, Wm. Little.

1st when all rough and gas and water pipes are in $600; 2nd, when entire work is finished and accepted by architect $6.00

Post bet Larkin and Polk. 2-story frame; owner Mrs. A. Brady; architects John & Zimmerman; contractor F. W. Kern; sureties O. W. Nordwell, B. Joost $4,000; filed May 10, limit Sept. 1.

Payments, frame up and partitions set $1,500; brown mortar on $1,000; white mortar on and ready for painting $1,040; balance $1,200, 35 days.

Polk nr Turk. 3-story frome; owner J. H. Von Ahnden; architect C. I. Havens; contractor J. Bruce; cost $6,700; sureties; J. S. Morgan, F. P. Latson; filed May 23; limit 90 days.

Payments, enclosed $1,250; brown mortar on $1,250; white mortar on finished $1,250; completed $1,250; balance $1,700, 35 days, filed, June 6, 1888; limit, August 11, 1888.

1st, when frame is up $300; 2d, when the building is enclosed and brown coated, $300; 3d, when the interior is finished and second coat of painting done, $300; 4th, pay, when the entire contract is completed finished and accepted, pay delivered, $202; 6th, 53 days after final completion, $368.

Pacific nr Fillmore. 2-story frame; owner Eva A. Haxe; architect S. Newson; contractor J. H. McKay; cost $5,900; filed May 25; limit 100 days.

Payments, framed $885; ready to paint $885; brown mortar on $885; white mortar on $885; completed $885; balance $1,475, 35 days.

Pacific cor Buchanan. 2-story frame; owner S Sweet; architects Copeland & Banks; contractor O. E. White; cost $19,630; securities C. F. Doe, S. W. Fuller; filed May 26; limit 8 months.

Payments, first-story joists on $3,000; enclosed $3,000; brown mortar on $4,630; completed $4,000; balance $5,000, 35 days.

Painting on above. Contractor J. F. Sullivan; amount $1,125.

Plumbing on above. Contractors, Ickelheimer & Bro. Cost $2,330.

Post cor Pierce. 3-story frame. owner Philip Siebel; architects John & Zimmerman; contractor Theo. Von Borstel; cost $8,620; surety J. F. Plageman $8,000; filed May 23; limit Sept. 1st.

Payments, framed $1,500; partitions set $1,500; rough mortar on $1,000; white mortar on $2,420; balance $2,200, 35 days.

Post nr Octavia. Repairs; owner Isaacs. architect J. E. Wolfe; cost $700.

Paraguay cor Yazoo. 2-story brick building; owners Masonic Hall Association; architect H. Geilfuss; contractor W. A. Dunshee $10,000; filed May 23; limit 130 days.

Payments; on 1st of each month, 75 per cent. of value of work done; balance 35 days after completion.

Post nr Mason. 4-story brick building; owner W. S. Hobart; architects Percy & Hamilton; mason J. McCarthy; carpenters Gray & Stover; cost $25,000.

Sixteenth, near Castro 1-story frame. Owner, Geo. M. Cummings; contractor, Alex. A. Willis. cost, $1,470, signed, June 4, 1888; filed, June 6, 1888; limit, August 11, 1888.

1st, when frame is up $300; 2d, when the building is enclosed and brown coated, $300; 3d, when the interior is finished and second coat of painting done, $300; 4th, pay, when the entire contract is completed. finished and accepted, pay delivered, $202; 6th, 53 days after final completion, $368.

San Jose Avenue nr Twenty-fifth; additious; cost, $2500.

Sutter nr Scott. 2 dwellings and repairs to old builbing; owner Jessica M. Davis; architects Copeland & Banks; contractor O. E. White; cost $8,830; sureties F. P. Latson, C. F. Doe; filed May 26; limit 4 months.

Payments, roof on $2,000; brown mortar on $2,500; completed $2,030; balance $2,300, 35 days.

Same as above, plumbing work. Contractors Fritz & Kean; amount $1,225; rough work done $450; completed $450; balance $325, 35 days.

Sacramento nr Baker. 2-story frame; owner H. C. Holmes; architects Armitage & Wilson; contractor C. B. Green; cost $3,225; filed May 21; amount 60 days

Payments, when enclosed $800. brown mortar on $800; completed $800; balance $825, 35 days.

Second cor Stevenson. Grading contract preparatory to erection of a 5-story brick building; architects Percy & Hamilton; contractor L. B. Sibley; cost $2,000.

San Jose Ave. nr 24th. Additions. Day's work cost $3,500.

York bet 22d and 23d. 1-story frame; owner H. Nelson; contractor H. Munster; cost $1,160; filed May 16; limit 60 days.

Payments, brown mortar on $600; completed $560.

COUNTRY BUILDING NEWS.

HAMMERING AWAY IN SAN JOSE.

New Buildings Now Going Up in Different Parts of Town.

[Special to the California Architect.]

The Independent Mill and Lumber Company is furnishing material for the following new buildings in San Jose:

Three modern cottages on the corner of Sixth and Empire streets, which Mr. Hill, the contractor, is putting up for M. Madden after designs by J. O. McKee.

A cottage in the Willows for Moses Wingate, for which A. Kelsey is contractor.

J. A. Boulware's modern cottage on St. James street, near Seventh; T. P. Ownby, contractor.

Improvements and additions which Mr. Shrimplin is having done to his residence on South Fifth street, under the direction of P. Pigot, the contractor.

The Alameda Mill reports among the new buildings of the week Mrs. Ingles' modern cottage near the Willows, for which F. Newhall is the contractor.

Wm. Wallace's cottage on St. John near Tenth street, W. S. Boyles, contractor. This mill is also furnishing a large smount of lumber to E. B. Saunders, who is engaged in making tanks for wineries.

The Garden City Lumber Company is furnishing material for Baltz' Hotel, a large two-story building with twenty-five bedrooms, for which J. D. Stewart is contractor.

The Stock store on First street, Mr. McIlvain contractor, in which a new front is being put with large plate glass windows.

James Hurler—A cottage on Orchard street, A. Kelsey contractor.

A cottage for L. Jacobus on Colfax streer which is being put up by day work undet the supervision of the owner.

Two cottages on Delmas avenue for T. J. Gillespie by day work.

A two-story mansion near the Infirmary for W. E. Lewis, erected by day work.

Also, near the Infirmary, a two-story residence for A. W. Elliott, which is building by day work.

A cottage on Park avenue, for which W. B. Mitchell is the contractor.

A residence on Balbach street, near Orchard, for Mr. Dulton, the butcher, S. Folsom, contractor.

A modern cottage on Fifth street for Mrs. Palmer, which is being erected by day work with J. D. Stevens as superintendent of construction.

The mill is also furnishing the matetial for a handsome barn at Los Gatos, of which J. W. Lyndon is the owner, and Mr. Carhart the contractor.

The Santa Clara Valley Mill and Lumber Company is furnishing the material for the following new buildings:

A two-story Queen Anne cottage designed by Jacob Lenzen, architect, for J. W. Kimberlin of Santa Clara. Fuller & Ashbrook are the contractors, and the cost is estimated at $6,000.

An East Lake cottage at Los Gatos for W. H. D. Trantham, which will cost about $1,600. Mr. Lobdell is the architect of this building, and the contract was awarded to B. L. Wallace.

A cottage on San Carlos street between Second and Third, which is being put up by William Curtis, the contractor. The cost of the building is estimated at $3,000.—*S. J. Herald.*

FRESNO IMPROVEMENTS.

[Special to the California Architect.]

No person can estimate the rapid develpment of Fresno unless they take a walk or a drive, around town and the suburbs. There are no less than 250 mechanics and assistants now busily engaged in erecting buildings of various dimensions. Brick-layers $4 to $4.50 per day. Capenters, $3 to $3.50 per day and hod-carriers and mortarers $2.50. None are idle and times are good. Give the laborer plenty of work and good wages and the retailers are at once happy and the wholesaler has his bills promptly met.

There are three fine residences in course of construction in the northeast part of the city. The Fresno bank will build at the corner of J and Tulare street as soon as the specifications are complete. Mr. Thompson is erecting a two story house for two stores and offices, next to the *Expositor* on J street. The new building opposite the new hotel, corner I and Tulare street and a second story is being added to the stores on I street. All denotes prosperity and a demand for more room. The plans for the hotel on I street have been rejected and it is believed that a premium will be offered for competitive plans. The hotel will cost $75,000 and will be under the I street Improvement Company.

PETALUMA.

A. B. Hill has commenced the erection of a handsome cottage on Seventh street. E. D. Hedges has the contract.

NEW HOTEL.

The hotel at Bakersfield, the contract for the erection of which was secured by W. H. Doherty, of Tulare, will be an imposing affair, costing $75,250. Mr. Doherty also secured the contract for building the new and and elegant hotel at Visalia.—*Tulare Standard.*

A NEW JAIL FOR SANTA ROSA.

Last Friday the Board of Supervisors passed an order anthorizing the Clerk to advertise for three weeks according to law the intention of the Board to purchase for public use the lot on the corner of Third street and Hinton avenue of A. B. Ware for $10,250. The purposes of the purchase are to secure land upon which to erect a county jail. The situation of the jail at present proving very damaging to the remainder of the court house building on account of the offensive odors necessarily arising from such an institution, and the demand for a larger room for the Hall of Records have caused the Board to take this action. It is the intention to tear out the old jail and fit up an office there for the County Recorder. The Board has been considering the proposition for some time, and with $160,000 in the treasury can afford to erect a substantial building.

Work has commenced on the Santa Rosa depot of the Santa Rosa and Carquinez railroad. About twenty carpenters are employed.

PUGET SOUND.

Seattle, W. T.—In speaking of the new mill about to be built at Point Defiance near Tacoma, the other day, J. R. McDonald, president of the Satsop Railroad Company, and one of the prime movers in the new concern, said that the Satsop Railroad Company has not by any means given up its idea of building a mill of its own. Ever since the owners of the Satsop Railroad Company became extensive timber owners they have been figuring on the proposition of building a mill as fine as any on Puget Sound. They have procured one site, and are now nogotiating for the purchase of another near this city. The reason why the building of the mill has been delayed from time to time is that the company has always found quick sale for its logs at good prices. It felt that it did not need a mill as long as those conditions prevailed. Mr. McDonald thinks that the company will surely build within a year. A large exporting mill would add very materially to the business activity of this city.

The Hon. Matthew J. McElroy, member of the late legislature for Skagit county, has been selected by the Puget Sound Loggers' Association to serve them in the capacity of assistant secretary, which means that he is to do all the work connected with the office and let some other fellow have the glory. It is generally conceded that the loggers could not have selected a man better equipped to fill that office. Mr. McElroy is already at work collecting information for the use of the loggers.

Waldo Avery, of East Saginaw, Mich., was in this city about a week ago. He came in one day and vanished on the following night, so that only one of the colony of Saginaw people in this city caught a glimpse of him. He explained his sudden departure in a subsequent letter, and added that he would return in the course of another month. It is said that Mr. Avery is on a search for good timber lands, both for himself and other Michigan people.

Very similar is the object of the visit of two lumber men from LaCrosse, Wis., who are now in this city. They are W. D. Fox and A. Gile, and it is safe to say that they will carry home with them the deeds to a few sections of Puget sound timber lands.

The Hon. R. A. Case, member of the late legislature from Asotin county, has purchased a little island at the mouth of the Puyallup river, near Tacoma. The tide about covers the island at high water, but Mr. Case is about to have the Blue Mountain Lumber Company, of Asotin, to move its saw mill to the island. In that case the lovely little island will be transformed into one of the lively spots on the sound.

James W. Currie, the logger, said last Wednesday that he thought the organization of the Puget Sound Loggers' Association was the most opportune thing that has occurred in lumber circles on the sound for a long time. The loggers, he says, do not propose to be aggressive, but they are now in shape to be firm, and to insist upon justice being done them.

The long delay in starting the actual work of construction on the Seattle & West Coast Railroad has been a source of great disappointment to the Seattle people especially, and to the people of the territory at large. But that disappointment is all dissipated now. The Seattle, Lake Shore & Eastern people have taken hold of the new road, and construction will be pushed immediately. The road will be completed to Snohomish, 13 miles distant, by May 15th. The grading is nearly finished that far, and the rails are now on hand, as are also funds in sufficient quantities. No one class of people is more pleased at this prospect than the lumbermen, who realize the full value of such a road running through valuable timber lands.

The Gig Harbor Lumber Company has filed articles of incorporation with the territorial secretary, at Olympia. The principal place of business for the new concern is at Tacoma. The capital stock is placed at $100,000, and the objects set forth are to carry on a general lumber and logging business. The incorporators are Francis Hall, Ozro Fobes and Ira A. Town, of Tacoma, W. T.; and E. S. Prentice and J. H Parker, of Albert Lea, Minn.

The Oregon Improvement Company is fast completing its long wharf to deep water when it can begin in better shape the exportation of lumber on a large scale.—*N. W. Lumberman.*

BUILDING PROGRESS IN LOS ANGELES.

(Special to the California Architect.)

The activity in the construction of buildings in this city has given rise to much comment, and is constantly surprising visitors who come expecting to find the progress of the city as effectually stopped, as it is in other sections of the country. It is considered as one of the most promising and encouraging signs of the prosperity of the future that so much money is being placed in improvements, which, for the most part, are substantial and solid. It is a sign that the crisis, upon which the city wavered when it was uncertain whether it would remain an interior town or to become a great metropolis, has passed, and that the people have decided in favor of the latter, and are making haste to supply the want created by their delay. For a long time building was confined to residences and these spread rapidly in every direction until it became evident that the business interests of the city demanded proper accommodation. The stores which were sufficient for the city two years ago were found to be inadequate for the increased population, and there was a demand for more than double the number then in existence. Professional men could not find offices, and private dwellings were impressed into service, and even then there was not a sufficient supply for the demand. It was at this time that property owners decided that the tide of immigration had been turned Los Angelesward never to be stayed and that they were perfectly justified in investigating their money in permanent improvements in the shape of business block. The start was made and one after another followed the leader until to-day there is not a block in the business portion of the city but which contains new and handsome buildings, either just erected or in the course of construction. Millions of dollars have been spent and many millions more have been placed in bank to pay for these improvements, and the end is not yet, nor will it be until Los Angles has become entirely transformed, until all of the old one and two story buildings have been torn down and replaced by structures of five or more stories, until Los Angles, Main, Spring and Fort streets from one end to the other are lined with as costly architecture as graces any metropolis in the United States, and at the present rate of progress, this state of affairs will exist inside of the next half decade.

The building of business blocks does not interfere with the erection of dwelling-houses, and every day the vacant spaces between residences are being filled with cottages and houses of pleasing and picturesque design; and yet when another season rolls around the demand for more will be as great as it is at present.

There are so many improvements in progress that it is almost impossible, without the employment of an army of men, to give a complete list, but the following will give an idea of what is going on in the building line:

BUSINESS BLOCKS.

Hotel Splendid, corner of Tenth and Main area covered, 300 by 332 feet; 7 stories, brick and stone; to cost when complete, $1,000,000.

County Court House, corner Fort and Temple; to cost $500,000.

City Hall, Fort street, near Third; to cost $250,000.

Government Building, corner Main and Winston; to cost, when complete, $300,000.

Southern Pacific Railroad Depot, Fifth and Alameda streets ;to cost $200,000.

Atchinson, Topeka and Santa Fe Depot, First and Sante Fe streets, $100,000

Los Angeles Cable Road, 3 engine-houses and twenty miles of track; $1,500,000.

Temple Street Cable Road extension; $65 000.

Los Angeles Water Company, improvements in service; $75,000.

Philips Block, corner of Franklin and Spring; $250,000.

Newark Block, corner Spring and First; $100,000.

Bryon & Bonebrake Block, corner Spring and Second streets: $225,000.

Burdick Block, corner Second and Spring Sts.; $150,000.

Young Men's Christian Association Block; Fort near Second; $150,000

J. M. Griffith Block; Fort street near Second; $200,000.

E. B. Millar, Spring street; near Second; $100,000.

Burbank Opera House, Main street; between Fifth and Sixth; $150,000.

Addition to Grand Opera House; $30,000.

O'Neal Opera House, Spring street between Second and Third streets; $65,000.

Lan Franco Block, Main street near Requena; $75,000.

Vickery Block, corner of Main and Sonora streets; $70,000.

I. N. Van Muys Block, Main street between Third and Fourth street; $50,000.

Lankershim Block, Maine, corner Winston; $40,000.

Crocker Block, Fort street between Second and Third streets; $60,000.

Spence Block, Fort, street, near First street; $15,000.

Post Office, Fort street between Sixth and Seventh; $55,000.

Freeman Block, corner Sixth and Spring streets; $75,000.

Panorama, Main street, near Mayo; $30-000.

W. C. T. U. Block, Temple street, corner Fort; $50,000.

Foy Block, Spring street, between Second and Third; $8,000.

Brown Block' Spring street, between Seventh and Eighth; $15,000.

Barker Block, Spring street, between Fourth and Fifth; $30,000.

Jadoby Block, corner Second and Main (Temporary); $15,000.

Macy Block, corner Macy and Upper Main; $25,000.

Tononi Block, corner Upper Main and Water; $57,000.

Weid Block, corner Eighth and Main; $20,000.

Norton Block corner Seventh and Bill; 5,000.

Pease Block, 535 North Main street; $20-000.

McGarvin & White Block, Spring street, between Second and Third; $18,000.

Jones Block, between Third and Fourth, on Sprinig; $15,000.

City Water Company, corner Marchessault and Alemeda, $12,000.

Philips Block, Los Angeles street, near First; $95,000.

Celestine Block, Los Angeles street, near First; $30,000.

Orphans' Home cor. Virgin and Yale; $60,000.

J. J. Smith, Olive, between Fifth and Sixth; $15,000.

Abstract Title Co. corner New High and Franklin; $54,000.

Simpson Tabernacle, Hope street; $50,000.

Wm. Lacy, Downey Avenue, near bridge; $25,000.

Fullerton Bros.; Fourth near Hill; $10,-000.

Dr. Spinks, Hill and Fifth streets, $15,-000.

Total business construction, $9,454,000.

A visit to sixteen architects resulted in ascertaining that residences and private dwellings now in process of building in the city amount to about $2,500,000.

Besides these the plans are being drawn for about as many more, and the total summed up is as follows:

Business improvements,	$6,454,000
Residences, "	2,500,000
Improvements projected,	2,250,000
—*L. A. Herald*	$11,200,000

THE RAILROAD OFFICES.

Progress of Important Work at Fourth and Townsend Streets.

Information was imparted to a *Call* reporter yesterday, which, to a certain extent, settles the question of the possible removal of the general offices of the Central Pacific and the Southern Pacific Railroad Companies, or the Southern Pacific Company at Fourth and Townsend streets. The company does not appear anxious for a change of location, for during some weeks past work has quietly but steadily progressed on plans for the remodeling of the general offices at Fourth and Townsend streets, and yesterday morning work was actually commenced on the contemplated alterations.

The plans, so far as could be learned yesterday, call for the raising of the roof of the entire building and the construction of another story, which is to be finished on the same style as the other floors of the building. Some time must be spent on the preparation of stages for the removal of the heavy cornices and the determination of the number of frames, screws and other appliances needed to raise the roof without damage, and this preliminary work was commenced yesterday morning. The company owns the block or all except a very small portion of the block bounded by Fourth, Fifth King and Berry streets, which it now proposed to cover with immense freight sheds.

There are now two brick warehouses on the block, one used by an oil company for the storage of petroleum, the other being the King-street grain warehouse, covering about a quarter of the block, which now contains about 7000 or 8000 tons of grain. The lease of the grain warehouse people expires shortly, and this great brick structure, with the oil warehouse, will be torn down to make room for the new freight sheds.

One of the sheds is now well under way. A force of fifty men is engaged on it. The surfaced floor has been laid for the entire length of the shed, the stanchions and roof timbers are all in place, and the corrugated-iron sheeting is being put up on the sides. The ends of the sheds and the roof will be of corrugated iron. The shed now going on to completion is 60 feet wide and 640 feet long. The second shed on the other side of the block, upon which work has also been commenced, will be 75 feet wide and 680 feet long. Between these two sheds four lines of track will be laid. One of the sheds will be used as a freight-receiving depot, and the other for discharging. On one corner of the block a derrick platform is being constructed for the receipt of heavy machinery. All of this work it is proposed to complete as speedily as possible, and from present indications it all will be finished before the beginning of the winter season.

NEW SCHOOL HOUSE AT RIVERSIDE.

Yesterday the contract was let for the Building of Riverside's new school house on the corner of Fourteenth and Walnut. The carpenter work was let for $10,350, and the masonry fo 25,298. The entire structure, when completed, will cost in the neighood of $65,000.

S. B. Robinson has the contract for the carpenter work, and Alguire & Downs for the masonery. There are to be eight study rooms, recitation rooms, assembly rooms, basement, gymnasium, office etc., and will have accommodations for 500 pupils. It will have all the modern appliances, being connected with the sewer system of the city, and when fully finished will no doubt be one of the most complete school edifices in the State.

NEW SCHOOL HOUSE AT PETALUMA.

The bids for building the new schoolhouse were as follows: Ed. D. Hedges, $13,189; A. Walker, $13,041; Wm. Camm $12,925; James Kill, $12,900. As the school Directors have but $12,000; in available funds to be used at present, it will be necessary to alter the plans or in some other way reduce the cost of their limit.

Ed. Building News:—Mr. Lowell is putting up two more handsome cottages on his block on M street. One good feature of them, which we hope to see generally adopted in dwellings that may hereafter be built, is a brick foundation. The usual wooden supports under the buildings have nothing to commend them. The upper part of a redwood tree has no durability whatever, and it quickly rots in situations the least exposed to dampness. And of such is about one-fourth of the redwood lumber in the market. The proportion of this used under buildings soon gives way with troublesome consequences. Better have a foundation, the permanecy of which is unquestionable, at once.—*K. C. Cal.*

MINTURN.

Architect La Romer, of Stockton, is drafting plans for a winery building to be put up at Minturn, Fresno county, by the Sierra Vista Vineyard Company. The structure is to be erected by James Brown. It will be 90x250 feet in ground dimensions and two stories high in the center. It will have a capacity of 500,000 gallons. There will be two crushers. Besides the main winery building there will be an engine room, a distillery and a storage warehouse for brandies. The sum of $25,000 is to be expended this year at Minturn.

SAN BERNARDINO.

Messrs. Jones & Griffith are preparing plans for a building 50x80, for E. Somers, to be erected on the corner of E and Second, will be two stories high, and to cost about $12,000.

Mr. T. H. Goff, one of this city's best architects, is engaged in drawing plans and specifications for a fine new residence, to cost about $8,000, for Judge Rowell. It will be built on the west side of E street, between Fifth and Sixth.

SEATTLE, W. T.

Wm. Gross is about building four residences on Sixth and James streets.

A new saw mill is being erected at Edmund's, fifteen miles north of this city, on the Sound. It will be supplied with the best and latest machinery, including band-saws and a 100-horse power Corliss engine, the only one on the Sound. The capacity of the mill will be about 50,000 feet daily.

DIPLOMA OF MERIT

IS AWARDED TO

THEO. W. PETERSEN & CO.

★ OF SAN JOSE, CAL. ★

In acknowledgement of meritorious display of PRESSED BRICK, in the Collective Exhibit of California.

In acknowledgement of which the Signature of the proper Officials and the seal of the North Central and South American Expositions are hereto attached.

[ATTEST] CHARLES TURRILL, Commissioner.

I. M. W. COMICO, President.

B. D. WOOD. Director General.

THOS. WOODWARD, Chairman Committee on Awards

SAN DIEGO, CAL., FEBRUARY, 18, 1888.

T. W. PETERSEN & CO.

DEAR SIRS:

I send you by mail, Diploma awarded you by the North, Central and South American Exposition, for your display under my charge.

Kindly acknowledge receipt in enclosed envelope.

Very Respectfully

CHAS. B. TURRILL.

Commissioner for California; North, Central and South American Exposition, and Manager Southern Pacific Company's Display.

The above diploma was given to the firm mentioned, for the best display of PRESSED BRICK, at an Exhibition that attracted world wide attention. Mr. PETERSEN has made a special study of Kiln burning, so as to have all the bricks of an even color. We have seen car-loads of bricks, delivered in this City, and the uniform color pervading the entire lot was such as to attract more than ordinary attention from those around. MR. PETERSEN absolutely guarantees that every brick is perfect. If edges or corners are broken, he doe not allow them to leave the depot. Any one ordering brick from above firm, can rest a that they will obtain the very best Brick there is made in California. San Francisco address is Townsend St. between 6th and 7th. San Jose, P. O. Box 187.

CARPENTRY MADE EASY.

By Wm. E. Bell, a practical mechanic, who fully appreciates, from personal experience, that there are many things perplexing to understand and difficult to do until they are fully explained and tested. It is designed to make the science and art of carpentry clear and comparatively easy to all who require information on the subject. Price, $5.00 by mail, prepaid.

SAN FRANCISCO, JULY 15, 1888.

Weekly Building News.

Having received a great many letters in regard to the establishment of the WEEKLY BUILDING NEWS, we desire to make the following statement: When the design was first formulated to give to those interested a weekly digest of building news from every portion of the coast, it was supposed that enough subscribers could be obtained to support the same without the necessity of inserting advertisements. The management was satisfied if expenses were cleared for the first year. The encouragement received was not such as to warrant its publication, unless advertisements were inserted. So the management determined to withhold publication for a while, and in the meantime secure a competent corps of canvassers, through whose aid at least four pages of advertisements will be obtained. It is the intention to have the Weekly eight pages instead of four as it at first appeared, one half of the space to be devoted strictly to building news, and the other half to advertisements connected with the building interests. It will be enlarged from time to time as building activities will warrant. We make this full explanation in behalf of the management, as some parties have ungenerously endeavored to disparage the undertaking and have made remarks utterly beneath those who aspire to be in the front ranks of journalism. Over 1500 copies will be printed and distributed each week and special arrangements will be made to have them delivered where they will do the most good.

The Chapter Meeting.

The proceedings of the last Chapter meeting, given elsewhere in this issue, should be read by every one connected with the building interests.

Subdivisions of the House.

The manner in which the interior of the human dwelling has been evolved or set apart to different uses forms a curious department in the history of civilization. When man has felt a need he has endeavored in some way to supply it. Even while he was still half wild beast he was obliged to have a shelter from the elements. This satisfied, he lived for unnumbered ages with his family or tribe crowded in a single room like animals gathered in a pen or fold. A sense of delicacy, with a longing for comfort, caused the construction of the bedchamber, a desire for convenience of the kitchen, the need of quiet and retirement of the study and the disinclination to admit occasional guests to the intimacy of the household, or the wish to have a chamber where friends might be assembled and which might represent the elegance of the mansion, of the parlor, or as the French now call it, the salon. The word "parloir," (room for speaking or conversation) from which we get the English word "parlor," is still found in French dictionaries, but has been banished from Paris and other large French cities to the most rural part of the provinces.

The word "chamber" was by the French originally applied to nearly every subdivision of the house, the parlor and dining-room included. Now they use it merely to indicate the sleeping-room. Its original usage survives in the phrases, "Chamber of Deputies," "Chambers of Commerce," and some formal modes of speech. The word "apartment," used in English to express the different rooms of a house, means in France an assemblage of rooms sufficient for the need of a family.

Of all the rooms of a family mansion the bed chamber has the most interesting history, not mearly that it has been the ordinary scene of births and deaths, but for social and political reasons. Let us take France for instance as the most pertinent illustrations of the subject. Three hundred years ago all occupations of life were performed in a single large room which formed a great part of the mansion. Here were found the master of the house, his family and the servants engaged in their various occupations. Here the head of the family carried on his literary labors if he was a man of learning, while the woman of the household spun and wove, and the male domestic cooked or performed other menial duties. This was the rule, to which sometimes, in the case of kings and noblemen, there were exceptions. But even a king's bedchamber was not kept private. The monarch generally had two, one where he could take, if he insisted on it, a good honest sleep, and which was of moderate dimensions, and the other a state bedchamber where he held audience, where his rising in the morning and his going to bed at night were in the presence of a crowd of lackeys and courtiers. He was not allowed to die in his private bedchamber, although he could pass there a part of his fatal illness. When his end was evidently at hand he was carried into the large chamber called "chamber of parade," placed in its magnificent bed and permitted there to draw his last breath in the midst of as many of his courtiers and aristocratic subjects as could gain admission. It was because the bedchamber was so public during the Middle Ages that it was so handsomely decorated and that the bedstead became a work of art, many specimens of which are preserved in European museums. In old engraving the king is represented attending to affairs of state in a bed surrounded by his Ministers and parsons of the Court, and great queens partaking of their meals in their chambers, as was the custom, the bed on one side of the room, the table on the other.

It was while the Bourbons were on the throne that the bed and bedchamber achieved their greatness. Here Louis XIII used to receive and converse affectionately with those whom he intended to turn over to the tender mercies of his Minister Richelieu. Here Anne of Austria, when regent, received her Ministers and her distinguished guests. During the reign of Louis XIV the cerimonial attending his getting up and going to bed became ridiculous. To be permitted to assist at the making of the King's toilet in the morning was considered one of the greatest honors that could be accorded to a courtier; to be allowed to take part in the adjustment of the royal shirt, a distinction to be handed down as a tradition to one's own posterity.

As late as 1750 princes and even honest burghers received in their bedchambers. It was during this epoch that the queens of society received in bed. Mme. De Maintenon received the court before she was out of bed in the morning. Women connected with the French Kings by less honorable ties received the homage of their numberless flatteries in the same manner without shame or without seeming ridiculous in the eyes of those who sought to profit by their influence near the throne.

The first salons in French houses only date back to the end of the seventeenth century—that is, to about 1680 or 1690—and the first dining rooms only to 1750. Up to that period the rich had eaten habitually in the rooms where they slept. As for those in moderate circumstances and the poor, they still lived, cooked, slept and received their friends in the same apartment, or if they had a separate bedroom it was no more than a closet or a hole in the wall into which they forced themselves with difficulty.

In England as on the Continent the bedchamber was evolved in much the same manner. There was originally the central hall occupying the body of the castle or mansion, where everybody lived in common and every household office was performed, except perhaps the cooking, which might have been relegated to an outhouse. After the evening meal, which was taken with copious libations, the greater part of those present fell to the floor dead drunk and slept in the straw or rushes that covered it till morning. What bedrooms there were were made by hanging pieces of tapestry or other drapery across the corner of the room or over some alcove or recess in the wall. In time these transient screens became permanent partitions. In houses where the architecture became later more elaborate the alcove in which the bed was placed might be flanked by pillars which served as the support of rich curtains. All this refers to the sleeping-rooms of the Middle Ages, and a period comparatively modern. The Greeks and Romans slept, as any one can see at Pompeii, in little stone rooms that were no larger and not nearly so well ventilated as the cells of an American penitentiary.

In the seventeenth and during a greater part of the eighteenth century no parts of a palace were well warmed, least of all the doors and windows were not well made, and the magnificient fireplaces, of which many specimens are extant, served only to grill one side of the person, while the other was benumbed with cold. This is, perhaps, one reason why so many of the fine ladies of the early part of the last century received in bed. It was quite as convenient and far more comfortable for themselves, while as for their guests, who were often persistent and annoying, they would become tired and leave the sooner.

From this account of the gradual division of the dwelling into rooms it will seen that there was little delicacy and scarcely any comfort, either in England or on the Continent, till the latter part of the last century, or a little more than 100 years ago. There was not much receiving in bed, either of kings or their subjects, after Louis XIV the house existed with all, or nearly all, its modern appointments. There was a separate room for every household function—the parlor, library, dining room, bedchambers, nursery and rooms for servants. It is a king to whom civilization owes much, and whose memory, considering the interest he took in the achievement of our independence should be cherished in America. From the first hut made by the savage man by drawing down the branches of a small tree on all sides and plastering it over, with mud there is, let us say, to the house of the American gentleman of to-day, what a distance! It represents the whole sum of human achievement, the entire development of man's faculties of his intellectual needs, his refinement, his self respect, in short, the best that is in him in sentiment, in moral aspiration. There is in the American house—let us say palace—an excess of luxury that may not always be desirable, and apartments, such as smoking and billiard rooms, which were unknown even in the mansions of France in the epoch of Louis XVI. This princely residence has been evolved from the colonial period, when there was a bed in the front room, another bed in the "keeping room," where the family table was spread, and beds also in other rooms, if by good fortune the house was further subdivided. The enlargement of the house came first in the Northern States. In the Northern States the bed is still a conspicuous object in all houses except those of the rich, the peculiarity being due in part to the absence of an entrance hall, which represents in its scanty dimensions the hall of the castle in which the old baron held wine and wassail.

The houses are built so close together in Atlanta City, that women can borrow kettles and flat irons through the windows without going out-doors.

San Francisco Chapter, American Institute of Architects.

The regular monthly meeting of the Chapter was held in the rooms of the Art Association on July 6th. W. P. Moore, vice-President, was in the chair. The following members were present: W. P. Moore, G. H. Wolfe, J. J. Clark, A. Pissis, J. E. Wolfe, W. J. Cuthbertson, R. H. Daley, H. T. Bestor, M. J. Lyon.

After the routine business was disposed of, the special committee on Competitions reported that as yet they had come to no definite conclusion. The whole matter in regard to Competitions was then thoroughly discussed by every Fellow present. It was thought that the present was the most opportune time for discussion, owing to the fact that there were two large competitions on hand.

The "Olympic Club Competition" was the one principally discussed, as the remuneration offered for plans was totally inconsistent with the amount of work expected.

(It is generally understood that a certain architect had been selected in the first place to prepare the plans; but on the representations made by three other architects, who are members of the Association, that, being members, they were entitled to have an equal show, it was decided to have competition plans.—Ed. Architect.)

Great stress was laid on the propositions that the main point to be considered was the appointment of a Professional Referee to decide upon the best plan, and, secondly, the successful competitor to be the superintendent, with compensation at full professional, percentage. It was remarked that a committee had been appointed to make the selection. The members of the committee were human, and liable to err, and that was the point most to be feared, as the committee's decision, even if palpably wrong, was nothing but an error of judgment.

One member was very emphatic in regard to the liability of committees erring. (The best name to call it is *beforehand fixing.—Ed. Architect.*) The public should be taught the right idea in regard to to the value of an architect's services. Examples in the past show conclusively that the whole system of competitions is a fraud. In fully 90 per cent of the competitions in California, a committee will, through a circular, invite architects to prepare plans, knowing *beforehand* in their minds, that the choice of architects has been decided upon. Reference was made to the Competition in regard to a large public building in this state. Eleven competitors offered plans. Each one presented seven sheets of double elephant paper, representing all the points to be shown, thus making seventy-seven sheets in all to be examined IN ONE HOUR after plans were received by the committee, the award was made, showing conclusively that the successful party had been selected beforehand. No *honest* set of men could have unrolled seventy seven sheets of paper and laid them out on a table ready for a thorough examination in the short space of one hour.

In another case of a church in this city, one of the trustees of the church came to the speaker and told him it was no use for him to send in his plans, as the selection had been made. It is not to be presumed that a church trustee would steal directly money from your pocket, but here was a clear case of robbery in permitting architects to take their time and the money necessary for draughtsmen's services, paper, etc., knowing full well he was throwing away the same.

Another case, where the church committee wanted it distinctly understood that under no circumstances would any plan be considered, the cost of which exceeded $60,000. Some of the competitors, since dead, religiously prepared their plans, keeping that figure in view. The plan adopted by the committee was evidently selected beforehand. The building, when finished, cost $115,000. The speaker inquired by what right had a committee selected the plan, knowing it could not be built for the amount called for, thus, virtually telling several parties who had honestly striven to comply with the requirements of the printed circulars calling for a competition, that they had been asked to present plans merely for a show of fairness, the architect having been decided upon beforehand.

One member thought that the only way to prevent the abuse referred to was for architects not to engage in competitions. This was answered by another member, saying in that case eastern architects would be invited. Another member facetitiously remarked that Stockton has a dose of good eastern architect, and he for one was not afraid of eastern competition.

Another point was brought out in the discussion. Committees would be in a great rush for plans. They *must* be in by the time prescribed, and in many cases, notably the Lick Trust Statuary, keep plans after receiving them for months before giving a decision. This was unjust to the architect who had paid out his money for help and given his own time towards striving for a premium. The architect had a right to know if he was to receive any of the advertised premiums.

The committee was granted further time to make a full report.

One of the members of the committee on the "Registry Book" reported adversely to the proposition made. The matter was postponed until next meeting, in order to hear from the other side of the question.

Adjourned.

A Fair View of the Situation.

While the prosperities in California are no less inflated than they have been, viewed from a building stand-point, they are far from discouraging. The cooling down from a boom condition, to one of natural, permanent and regular character, cannot but produce a changed appearance, and to some extent modify hopes and expectations that had run wild in outreachings after results, that should be waited for with some degree of patience. Eagerness and haste to attain and accomplish ends more rapidly than circumstances warrant, as often end in disappointment as success. The natural laws that govern and control human affairs, will regulate and equalize things; and when pressures beyond the requirements of communities are brought to be enforced, the stimulated and inflated must yield to the resistance that fixes limitations at which human calculation, ingenuity and persistenc must halt.

That overreachings have influenced transactions in the offerings and sales of building lots and lands in the cities and county districts of the state, and their values; and that fortunes have been realized, both by sale and purchse, cannot be denied; but many will have to abide their time when they will be able to obtain present and recent par-investment prices; still the state is solid in every part, with a grand future in prospect. That which has been forced is simply anticipating that which was destined to come to pass in due time. The only question being as to whether it is always, or at any time prudent to attempt to forestall the inevitable, by force of vigorous and shrewd efforts, or to go a little slower, and be patient until the times come when the demand shall equal the supply, and necessities call for an advance.

By all this the building business has been materially affected in several ways. In the inflated localities it has caused vigorous building activities, and large demand for building materials. This has led to advance in prices, not only as to the special localities in which such activities existed, but in all parts of the state. The expansion of market for materials so far enlarged the field of demand, that manufacturers had it all their own way in dictating prices; and so long as this demand continued active prices, however exhorbitant, had to be submitted to because there was no need for competition, as between manufacturers, each and all being able to dispose of their products at ruling rates; hence improvements everywhere, both in the commercial and older cities, and in all the newer portions of the state, have, for a year or two past, cost more than they would have cost when lumber was free on the market, at from three to ten dollars, or more, per thousand less than the prices at which it is now held, and has been for the period named. And while a few dollars per thousand upon the item of lumber alone is not a material factor in the general result of cost of a building, it is nevertheless of sufficient importance and magnitude to deter those who deem ruling prices an extortion, from undertaking building improvements.

The lumber manufacturers of the Pacific Coast complain that their product should be made the obstacle to any improvement, and assert that present rates are none too high: that the cost of production fully warrant, and equity of profits not only fully justify even present prices, but that a still greater advance would be reasonable.

Be this as it may, the manufacturers are themselves to blame for the adverse opinions held by the community, as they—by their uncertain standards, varying rates from time to time, according to the spirit of competition in exercise among themselves, sometimes supplying the market at rates which no informed person would consider near remunerative, yet impressing the public mind that if rough lumber could at any time be sold for twelve or thirteen dollars per thousand, why should it be worth much more at any time, or under any circumstances.

The fact that the manufacturers were at war among themselves was no affair of consumers, and the misfortunes of a "broken market" that unquestionably did, during the great competition eras, result in loss to the lumbermen, is a matter that the public disregard; and owners of real estate have been and are unwilling to recognize fair dealing in prices of lumber of the same kind and quality, at one time twelve, and at other times twenty-two dollars per thousand.

Another feature of the case is, that building improvements in the larger cities have been retarded by reason of the very many land and town lot booms that have been offered in nearly every portion of the state, with every device known to the shrewd and active minded men who have managed them, to induce investments; and hundreds of thousands and millions of dollars in the shape of speculative purchases have been drawn away from the commercial centers, that would have been spent in building improvements under a less inflated rate of things.

But reactions under their circumstances do not by any means indicate failure in any extended sense; but a mere checking up in the heated race, to acquire wealth speedily, a cooling down from fever heat to a normal condition, and an equalizing of transactions, with the necessities of the times.

Interesting Lawsuit against a Firm of Builders.

A case was recently tried in England involving the responsibility of contractors, which we find reported in the *Builder*. The Messrs. Peto Brothers, very eminent builders in London, had a contract for the erection of a hotel in Covent Garden. In carrying out their contract, they were obliged to excavate about nine feet below the foundation of the wall, between the hotel and the adjoining house and underpin the wall. In doing so the wall was cracked from top to bottom. The owner of the adjoining estate sued the Messrs. Peto for damage to his wall. The contractors resisted on the ground that the work which they had done was carried out under the provisions of the Metropolitan act, and that the settlement and cracking of the superstructure was an inevitable consequence of the underpining, and they urged that the work having been done in accordance with the statue, no one could be held liable for the result of it; that if any one could be held liable, it was the owner of the building they had constructed and not themselves, and finally, that the work had been carried out with the utmost care, and that, as the cracking was avoidable under any circumstance, there had been no negligence involving anybody's responsibility. The defendants did not call any witness to prove their assertion that the cracking of the wall was the necessary consequence of underpinning it, and his lordship, the judge, remarked that if all the builders in London had come and said so he should not believe them. In his opinion there had been very considerable negligence. He was sure that the settlement was not the inevitable result of the work done, because he had himself seen a wall underpinned without producing any cracks, so that the damage not being the necessary consequence of work done according to the statue, the defendants could not use that for avoiding their responsibility, and for much the same reason, the burden could not be shifted on the shoulders of their employer. No one remained to bear it except the builders and the judge condemned them to pay the assessed damage to the wall, about two hundred dollars, with two hundred and fifty more as consolation to the owner of the injured house, and the costs of the suit.—*American Architect.*

The Mechanics' Institute Fair.

The annual Fair of the Mechanics' Institute will be held in the usual place, commencing next month. It is now about time that our Carpenters and Joiners made a display. Every other branch of industry has been represented, but, with the exception of a large shaving or two, nothing has been exhibited as the handiwork of a large portion of our wage workers. Perhaps this notice to the Builders' Association may cause some of our skilled carpenters to prepare articles for the next Fair.

STEEL SQUARE AND ITS USES.

We have just received a large number of the above named books. A copy will be sent to any address upon receipt of ONE DOLLAR. It contains a full treatise on the Carpenter's Steel Square and the numerous uses to which it may be applied.

A widow with a brown-stone house is as attractive as a building and loan association.

The cross-cut saw gets dull in spite of its teeth.

A Very Interesting Letter From Messrs. N. & G. Taylor Co. of Philadelphia on the Subject of Roofing Tin.

PHILADELPHIA, June 30th, 1888.

EDITOR, CALIFORNIA ARCHITECT AND BUILDING NEWS, San Francisco, Cal.

Dear Sir: Our attention has just been called to a letter which appeared in your issue of May 15th, signed by Messrs. Merchant & Co. of our city. It is so full of errors and mis-statements, and its tone is so unjust, that were it not substantiated by appearing under your own sanction, we should very much doubt it authenticity, and would pass it in silence.

In fact, no reply from our House would be necessary in any *Eastern* paper, but some explanation is due to *your* readers, accompanied with a few *facts*.

Messrs Merchant & Co. appear to forget that when they went into the tin plate business not many years ago, they found our firm selling guaranteed and stamped brands of tinplates. They know that it was our custom at that time to stamp the brand and our name on various plates, and they also know that very many years before they introduced the Gilbertson's Old Method in imitation of the Genuine OLD STYLE brand, we had always stamped the top and bottom sheet in each box of the Genuine OLD STYLE with the brand and our name. Those of your readers who are fortunate enough to have some of our old circulars or catalogues of that time can confirm us in these statements. It was on account of imitations being used that we were compelled to have *every* sheet of the Genuine OLD STYLE brand stamped with the brand and trade mark, as well as our name as guarantor. While we have been followed by others in the matter of stamping the brand on Roofing Tin, they fail to follow us as far as having their own name added, without which what redress has an architect or property owner!

We cannot conceive how any one can have the presumption to appropriate to themselves novelties which clearly originated with ourselves, and while we *regret* the tone of their article, and the necessity of a reply on our part, still misstatements must be corrected.

We fail to see the cause of this outburst of feeling against the Eastern Importers and tin roofers (who, as every body knows, are well acquainted with the *real value* of all brands imported) unless it be their failure to confirm the estimate which Messrs Merchant & Co. wish to place on certain brands of tin. Messrs. Merchant & Co. attack the tin roofers of Philadelphia, using this language: "But when we assert that ninety-seven per cent. of the roofers (as far as our own city is concerned) who upon receiving a contract will buy and put on wasters instead of primes, we state only a fact." This is a sad reflection upon the integrity of our roofers, that "ninety-seven per cent. of them are entirely devoid of all business honor."

We fail to see how our friends, Messrs. Merchant & Co., can possibly substantiate this assertion, unless the contract should call for one of their own brands, and they should sell the wasters bearing the same stamp as the prime. It could not occur in any other way, and probably not in this, at the present time, as it was through the Philadelphia roofers that it became known that Messrs. Merchant & Co. were selling the *wasters or imperfect* sheets of so-called guaranteed plates *stamped exactly like the primes*; The tin roofers of Philadelphia, as a class, bear the highest reputation for their quality of their work, and the knowledge of the relative value of material We have customers in this city who have been buying of us continuously for over *forty years*; others whose parents and grand-parents bought of us—old and reliable mechanics who learned their trade before the time of labor-saving machinery, and who not only know a good article of roofing tin, but also how to put it on a roof. We have been closely identified with all these men too long to imagine that such a charge could be made against them. If an architect should be deceived, and the roofer comply with the sepcification, the fault should not fall upon the roofer, but upon the one who has deceived the architect.

The celebrated OLD STYLE brand is now so well established upon the Pacific Coast that it needs no defense nor encomium at our hands. It has been sold a great many years with perfect satisfaction unaffected by any competition. Messrs. Harper, Reynolds & Co of Los Angeles handle car-loads of it; the John Stock's Sons of San Jose have used it in large quantities, and the fact that the large house of Messrs W. W. Montague & Co. of San Francisco have allowed us the use of their name as headquarters for the sale of the brand in San Francisco is of itself sufficient evidence of popularity and confidence.

Many years ago the first sale was made in California, if we recollect aright, to Mr. G. H. Swinerton of Sacramento city, and a large lot was sent to Walla Walla, Washington Territory, thus inaugurating on the Pacific Coast the use of a high grade guaranteed roofing tin. We simply insert these facts here to show your reader that our OLD STYLE brand is the original brand—the pioneer in the field—and that all other plates made by the manner of hand dipping have simply sprung into being *imitation of our brand*, but, of course, without its characteristics. There is no occasion to enter into an elaborate array of facts and dates; it is simply sufficient for us to say that we have always guaranteed the OLD STYLE brand of ternes, in fact, a *guarantee* accompaning this brand of the *original intention in introducing it*. It has always been made and sold to the trade with this distinct understanding by our House. To guard against imitations when we introduced the brand we took special precautions to have every top and bottom sheet of it stamped with the brand, as we have already stated above, and this was done many years before any rival appeared in the field at all. Later on we found it was imperative to have every sheet stamped, not only with the brand and thickness, but also with the trade mark of target and arrow, and at the same time, the brand was duly registered in the English courts.

We wish to introduce some collateral evidence here as to who were the first to stamp tin plates or roofing tin. The first selection is from the London *Ironmonger* of May 14th, 1887, and reads as follows:

ROOFING PLATES.

To the Editor of the "Ironmonger."

SIR.—N. & G. Taylor Co., Philadelphia having called our attention to the injustice of an article which lately appeared in your journal, we feel sure that you will give us an opportunity for explanation upon their behalf.

We desire to state for the information of your readers that the "system" of stamping and branding each sheet separately, which is claimed as a novelty by a competing firms is simply a gross imitation of an idea which originated with N. & G. Taylor Co. and has been carried out at their request for their "Old Style" brand of terne-plates over many years.

We have reason to suppose that the new mode of branding became necessary for the better protection of Messrs. Taylor's purchasers against the numerous attempts to imitate and counterfeit the well-known and successful "Old Style" brand, as employed for terne plates of the highest quality.

Yours obediently,

THE COPPERMINERS' TIN PLATE CO., L'td.

P. W. FLOWER.

Cwm Avon Tinworks, Port Talbot, South Wales, May 9.

The second selection is from a letter to us under date of March 30th, 1887, from the Cookley Tin Plate Works, which letter is in our possession. Many of your readers may recollect the photographic reproduction of it which we issued last year, and we extract from it simply the followlng paragragh bearing on the matter in question:

"As others have followed you in stamping the brands on plates, it is no more than *justice* to yourselves that the fact should be made public that we have followed this custom *for you* at our works for at least fifteen years, having without interruption during that time so stamped, at your request COOKLEY K Tinned Sheets."

The elaborate catalogue issued by our House in the year 1872 will be found to contain the distinct guarantee made by us on hand dipped plates, for which we received the only award of merit given at the Centennial Exposition held in Philadelphia 1876. The diploma and medal we have at our office here for inspection.

At the commencement of their article Messrs. Merchant & Co. say: "The Gilbertson's Old Method and Camaret are the only two brands of roofing plates in the market to-day of which no imperfect or waster sheets are imported." *This is not true*, and the claim is probably made with a view of counteracting the effect of our circular of May 24, 1887, an *original* copy of which we enclose for insertion elsewhere in your present issue. At that time the *Camaret Wasters were stamped exactly the same as primes*, and there was no security at all in the use of this brand.

As already stated above, importers are well acquainted with the value of all brands imported, and each one knows whether the wasters of his plates are passed through the patent rolls and shipped to America, and sold under another brand as *prime*, or are sold for consumption in Europe.

Now there have never been any wasters of Cookley K at all, and we again bring in as a witness the following additional extract from the same letter of the Cookley Tin Plate Works, a follows:

"The home trade are only too glad to secure the wasters at a very slight reduction, *and these are not shipped to America*."

Is anything more conclusive wanted as proof that Cookley K Wasters have never been imported?

In conclusion, we have to state that there are no Wasters of the OLD STYLE. We have had them, but they were *never* stamped, and they could not conflict in any way with the use of this brand in prime. We discontinued the importation of them some time *since*, and if there are any to be had to day, they must be some very old stock indeed. Architects and property owners have always been fully and amply protected in the use of the OLD STYLE, by the fact that no Roofing Tin is the Genuine OLD STYLE brand unless it bears the stamp. Even if the roofer could obtain Wasters he could not use them, as they would not be stamped. Any one could detect such a substitution, just the same as if any brand at all were put on in place of the Genuine OLD STYLE. We don't see how we could more thoroughly protect architects and property owners in the use of the OLD STYLE brand.

We thank you for the space you kindly grant us for the insertion of this article. We have tried to make it as brief as possible. We have stated our position, and fortified it by facts beyond dispute, and we further strengthen it by evidence from two of the largest, most prominent and reliable makers of Roofing Tin in Great Britain.

Very truly yours,

N. & G. TAYLOR CO.

Wood, Plaster and Concrete.

The respective merits of these materials in the construction of buildings have recently been reviewed in their relation to the acoustics of theaters, and the general gist of opinion is that concrete has proved a success. It is obviously difficult to compare two materials like wood and concrete, so different in their phisical properties. But for the inflamable nature of wood, it must be admitted to be the most desirable acoustically for the lining of rooms and halls adapted for music. The Italian congress of architects, in 1880, laid down certain rules respecting the form and materials desirable for halls of music and theaters, one of which was that wood was the proper material to augment the energy of sound, and giving preference to fir; they also recommended that the room should be lined with wood, isolated as much as possible from the fabric of the building; that the soffit of the theater (ceiling) and the fronts of the boxes should have their surfaces composed of thin planks, fitted together like boxes, and the columns should be of wood, also hollow,

These recommendations, obviously intended to promote resonance, are opposed to all our ideas of incombustibility, and, in fact, would promote the spread of flames. No better prescription for an inflammable interior could be given than that the hall should be lined with wood isolated, and that the boxes should be separate boxes of wood.

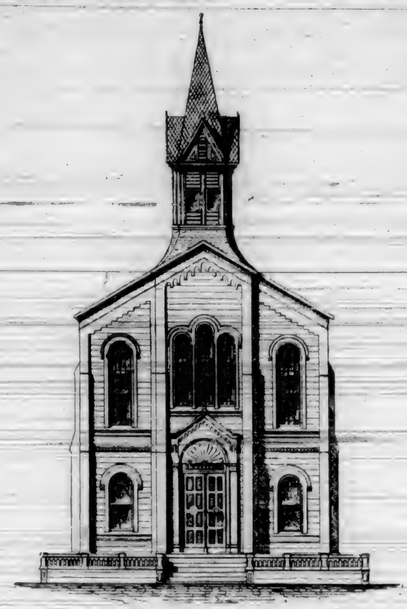
From acoustic considerations, then wood is preferable to all other materials as a wall lining, but its inflammable nature renders it undesirable in the construction of the auditorium of a theater. For the re-enforcement of sound, it stands foremost: in other respects its presence adds materially to the risks of fire. The employment of plaster or cement is undoubtedly inferior as an acoustic surface; it has none of the vibrating properties of wood; the sound waves recoil and produce confused sounds.

STEEL SQUARE AND ITS USES.

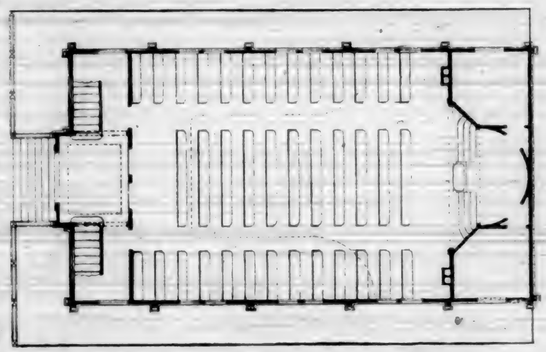
We have just received a large number of the above named books. A copy will be sent to any address upon receipt of ONE DOLLAR. It contains a full treatise on the Carpenter's Steel Square and the numerous uses to which it may he applied.

A prominent architect of this city has recently given up business and retired to the country. He is young, talented, energetic, and a master of his profession; but the question plugged to him by a female client was too much for him. She asked him why he didn't divulge his plans.

"Where are ye livin' now, Moike? "In Donegal Street, No. 11. Come and see me." "Faith, I will. Ought I to come in be the airy, or be the front dure?" "I dont care; but as I'm occupyin' the garret, it would be more convanient for ye to come in be the skylight.



Elevation



VILLAGE CHURCH.—The plan illustrates a design for a small, plain neat church, in the modern American style of church architecture

The pulpit is placed in the rear, with a room on each side, to be used for a choir, trustees and studio.

The building is well lighted by high double windows, glazed with different pieces of colored glass, separated by small sashes and two bars across the center. On each side of the vestibule is a wide flight of stairs leading to hall above, which communicates with a large, spacious gallery. The recess containing the pulpit has a large proscenium arch in front, with ornamental brackets.

The foundation is faced with pressed red bricks, laid neat and close, with white mortar joints. The rafters, purtins, studs, etc., can be dressed, chamfered, oiled and varnished, making a very nice inside finish, and sufficiently broken to form a good acoustic.

The inside is neatly finished with capped, grained and varnished wainscoting. The floor has a gradual fall toward the pulpit, thus affording a nicer arrangement of the seats, and a better view of the pulpit, as one pew rises slightly above the other.

The church is entered by a wide flight of stairs, through large, double-paneled doors, with a semi-circular rosette, and a small, fancy, projecting gable above The sides and front have large, heavy projecting buttresses, running nearly up to eaves, which gives the church a heavy, rich appearance. The steeple is a very striking feature of the building; the small windows, with louvers above and below, thoroughly ventilate the building. The fancy shingling, gables, pilasters etc., are all pretty in design and form a neat, unique and inexpensive spire.

Any further information in regard to construction, painting location, etc. will be promptly forwarded on application. Address,

SALFIELD & KOHLBERG, 339 Kearny St., S. F.

How to build the House.—Some things one ought not to do.

By Edward W. Blakely.

That there are architects and architects, and that their work ranges from very good to indifferent and extremely bad, is a fact that no observant person will for a moment question. As it must moreover be admitted that the number of really first class architects is quite limited, it follows as a matter of course that there must be a great deal of questionable work done in the way of planning our dwellings and business buildings, especially in our large cities and towns. While recognizing the really excellent result produced by many of our practical architects, and the magnificent buildings that adorn our own and other cities, it must be said that there are many residences where the flagrant disregard for everything but effect is so evident, that one might well wonder if ever an architect designed them, or if like Topsey they "growed."

I have in mind a house where it is almost impossible to use any article that is of what might be called regular size. Without exception every room is some inches out of the regular width for a carpet, and in order to cover the floors a fraction of a width must be on one edge, and in the length, the carpet wastes in cutting according to the number of figures in the yard. Some of the rooms are quite large, and in selecting an elegant carpet for one of them it was found that as the desired style had one pattern to the yard, and there were eight length required, the waste on account of the awkward size of the room would be a trifle less than half a yard on every length of carpet. Two inches over a width must be added to the sides, which necessitated the purchase of an entire length in addition. The trifle more of width, while very little advantage to a room of that size, made six yards of carpet necessary in order to fill a few inches of space, and instead of calculating with any idea of economy the architect entailed a cost in carpet alone of nearly $30 to cover a space two or three inches wide on two sides of a room. Whenever it became necessary to purchase or refit carpets for the floor in that house there was an amount of grumbling, and when at last it passed into other hands and was offered for rent, several persons refused it because of the enormous waste of carpets, the useless pieces alone costing more than enough to cover the floor of one good sized room.

The casings of all the best rooms are elaborate and project some distance into the apartment, and it is necessary to cut out not less than four inches from the edges of the carpets in order to fit them around the moldings. In this way the borders are almost destroyed, and it would be impossible to change them about or put them down in other than the original way.

The windows are about three inches wider than the ordinary, and shades must be made to order, a trifling item for the original owner, but of a great deal of importance when the house came to the renting stage. They are too narrow for fine effects with ordinary lace curtains, and could not well be used with more, and the curtain poles used in other houses will not fit at all. The spaces between the windows or doors are too narrow for ordinary articles of furniture, the hall is an eccentricity; and so all over the house; there appears to be a sort of vicious disregard for established usages, and it is as though the designer had been seized with a desire to make every item of fitting up and furnishing as expensive as possible, without in any way givin an adequate return either in comfort or convenience, or even in beauty of detail or general effect. It really is quite as easy to build a house properly, as to construct one which is so conveniently shaped and badly fitted that nothing one may have will suit it.

There is need of a great deal more practical common sense than is ordinary shown in the planning of houses. Between the traditions of conservatives and the technical knowledge of some of our professional architects the housekeeper fares very badly. Economy of space, which in city residences especially is of the highest importance, is apparently quite disregarded, and angles and corners are left vacant when they might be used to the greatest advantage, while the spaces occupied by cupboards and closets could be left free to the manifest convenience of those who perform the household service.

In beginning the plans for the building of a dwelling, special consideration for health, convenience and comfort should be the leading ideas. Architectural beauty is a minor matter, and where the choice must be made between beauty and convenience the former should always be sacrified. This is not, however, the plan followed by the average architect, who is quite likely to ignore every principle that conflicts with the beauty of symmetry of his design.

There is an urgent demand for plans in which economy of space and simplicity of design are the leading features. Country people of moderate means have little time and less money to spend on architectural ornamentation or effect. Given a neat, comfortable dwelling at a moderate cost and they are quite content to dispense with angles, gables, and oriel windows until such time as the farm or the business is paid for, and the income will warrant their indulgences in some of the decorations and luxuries of life.

There is more useless room in the ordinary kitchen than in any other portion of the modern house. The idea seems to have come down through the years that a kitchen must be wide and roomy, and with a big throated chimney. Other points have not attached to the plans for this apartment, and upon this skeleton of a suggestion each architect hangs whatever convenience may, according to his conception of the needs of the place, be required. As a result we have for country houses great barn-like rooms bitterly cold in winter, and exposed to the beating sun of summer, a wide doorstep, and a flue that is large enough to carry all the warm air out of the place in winter, and so wide that the draft of the stove is more by grace and the weather, than because of any rational arrangement to accord with the principles of ventilation.

Anyone who will take the trouble to go through a ship's kitchen will see at a glance what are the possibilities of economy of space. The entire stores for hundreds of persons may be prepared in a room fifteen feet square. It costs but little when building a house to provide sensible, practical conveniences in the way of pantries, cupboards and lockers, and the most trifling outlay may save any amount of hard work and time, which may be turned to valuable account.

Not many years since I heard a farmer's wife say that she had spent weeks of time carrying every drop of waste water through the kitchen and over an entire length of a long porch to throw it into a drain. It would have cost three or four dollars to run a pipe from the kitchen sink, under the porch to the drain, but this was deemed an unnecessary expense, and so this woman had walked a distance of over thirty feet and back from the kitchen sink to drain on an average of eighteen times every day, and in summer weather even much more than this.

Her China closet is situated on the side of the dining-room opposite to the kitchen, and every dish must be carried across the dining-room to be put away. To get to the cellar she must cross kitchen and dining-room and go down the cellar under the main stairway, or else go half way around the house and enter by the outside cellar stairs. The milk is kept in a spring house at least one hundred feet from the door, and as there is no convenience there for washing the pans, all of the milk things must be brought to the house and washed.

The water for all of this work is drawn from a well with buckets and heated in a kettle or boiler on an ordinary stove. On the evening before washing day the wearisome task of getting the water ready must be gone through with. Bucketful after bucketful is drawn and poured into a barrel, and into this is thrown a little wood ashes, just how much the housewife is able to tell exactly by tasting it. Then all must be carried to the kitchen, and the work of washing may begin.

And yet these people are economical of everything except time and strength, or at least they think they are. But the cupola on the top of the house cost more than a set of stationary tubs would have done, with all of the drainage pipes and fittings to carry the waste water down a hill and into a small stream at the back of the house. The extra filligree work on the porches cost more than a well arranged cistern, and the outlay for a set of brackets under the edge of the roof would have built a cellar stairway twice over.

But under those unfavorable and laborious condition an intelligent American family lived and toiled. That they prospered and grew wealthy was no doubt due to their energy and persistence, but when one takes into account how much more time there would have been for even necessary work, the thousand and one things that are always to be done in a farm house, it seems a poor comment on the good sense of the average individual to pay out money for architectural frivolities and unnecessaries, and let the wife and daughters wear themselves out for lack of a few conveniences.

The china closet should be built in the wall between kitchen and dining-room, or in such a location that it is accessible from both rooms. Every house of any pretentions should have drain sink from the kitchen or some point near the kitchen door, and pipes to carry water away. If the house stands on an elevation this is a very easy matter. A well or pump should be so arranged that the task of drawing water will be as light as possible. A cistern should be built with every house, no matter how unpretentious. A few hours of work and a very small amount of material will be sufficent to provide a place for enough ice to last nearly all summer.

A couple of ingenious boys once made a most admirable arrangement of this sort at an almost nominal cost. They lived on a bit of table land at the foot of a hill. There was a spring in the side of the hill and a spring house for milk and butter. The boys dug a deep hole in the side of the hill above the spring house smoothed the floor, slooped it slightly downward on the outer edge, and coated the bottom and sides with water-lime cement. There was a slight depression in the floor near the front, and from this a few feet of iron pipe led down into the ground and connected with a trough or a spout made of the trunks of small saplings. These the energetic lads had contrived to split in two pieces, the middle was cut out by a gouge and hard work, and the too pieces of the sapling were then nailed together and connected with the iron pipe leading thence through three or four feet of earth to the spring house, where it ended over a trough. The bottom of the pit in the hill side was repeatedly washed and allowed to remain uncovered until snow fell. A large bundle of clean oat straw was placed over the pipe and carefully packed down. The floor of the pit then had about a foot deep of clean sawdust from the neighboring mill. This the mill owner was glad to get rid of and the boys to get it in large loads. A store of sawdust was laid by for future use.

The pit was about twelve feet square by fifteen feet deep, and when the first snow fell the work began.

Every leisure moment was occupied in filling the pit with snow, packing it closely and pouring on just enough water to make it solid. As fast as the pit filled up the boys filled in the sides with a foot or more of sawdust. Long before spring the pit was full. Then a great mound of sawdust was piled over the ice and the earth was thrown over it. Above this were bundles of straw over which sawdust was sifted until it formed an almost solid mass, then more earth was piled on and a double row of Maderia roots was planted just at one edge.

In the case of this family other improvements followed this beginning, until the house had its own system of water-works, and by the time they had so prospered that a new house was to be built, the ingenious boys had perfected a plan by which not only their dwellings, but all of the farm buildings were abundantly supplied with water.

The cost of materials used for the first snow pit was less than five dollars, and it was estimated that the gain on its account in dairy products alone was not less than fifty dollars for the season.

This is economy, and it is a kind that is much less common than it ought to be.—*Decorator and Furnisher.*

LUMBER INTERESTS.

Unpleasant Charges against the Mills by the Loggers.

"I have reduced the output of my camp at Stuck Junction fully 25 per cent," said Terrence O'Brien, Thursday, "and will shut it down altogether after the Fourth of July, unless the railroad company shows a disposition to be more accommodating in the way of furnishing cars. I shall also

REDUCE THE OUTPUT

Of my camp on the Seattle, Lake Shore & Eastern about one-third. While the mills are cutting down our scales, and also cutting down the price of logs, they fail to reduce the price of lumber one cent on the thousand. The excuse for their conduct is that the bottom has fallen out of the California market, but I notice that the mills run night and day, just the same, and turn out as much lumber as they can. The whole trouble now threatening is brought about by an over supply of logs. This spring prices were good, and every man who could get hold of a piece of timber started a camp, which he had a perfect right to do. About this time the Port Blakely mill burned down, thus

REDUCING THE CONSUMPTION

About 200,000 feet per day. Notwithstanding this new camps were opened, and as soon as the mills discovered the large surplus of logs on hand and the increased production over the consumption they at once commenced hammering down the price on logs. The men in the logging business who had made their business a study saw just what this over production of logs would lead to, and for the purpose of

AVERTING THE GREAT CALAMITY,

The Loggers' Association of Puget Sound was formed. It is the desire of the association to regulate the production of logs so that the logger will get a fair price for his labor and interest on the capital he has invested in the business."

"What did you mean when you said the mills were cutting down the scale as well as reducing the price of logs?"

"When a man sells a boom of logs to a mill company the logs are towed to the mill and there scaled and the logger paid for his timber according to the mill scale. At the same time every intelligent man engaged in the business

SCALES HIS OWN LOGS

Before they leave the camp, so as to know about what he is going to receive for his boom. The other day my friend Curry sold a boom, and the mill knocked 125,000 feet off his scale in a boom of something like 425,000 feet."

"Why did he submit?"

"What could he do! He must accept the scale they give him or take his logs back to camp at his own expense. You see, the

MILLS ARE ALL BANDED TOGETHER

Under what is known as the Puget Sound Brokerage Association, and when a fellow offers his logs to one mill that settles it, for he must sell his logs at that place or not at all. If Curry had towed his logs to another mill he could not have sold them at any price, so he submitted to what any fair-minded man would call a piece of highway robbery."

"Has there been a falling off in the price paid for logs?"

"Yes, and there is

NO USE DISGUISING IT.

But there has been no reduction in the price of lumber. Logs that brought $7.50 per thousand readily, six weeks ago, now only bring $6, and shorter logs, which brought $7 per thousand, now only bring $6 and $6.50."

"What remedy would you suggest?"

"Simply a common sense remedy. There is a good foreign as well as good domestic demand for lumber, and the mills must have logs to supply these markets. My idea would be

TO REDUCE THE PRODUCTION.

Of logs to allow the mills to consume the surplus on hand at present, and then only cut and put into the water sufficient timber to keep the mills running. By pursuing that course the logger would always be enabled to command a good fair price for his timber, and the mills at the same time be making money."—*Seattle Post Intelligencer.*

THE IDEAL SASH PULLEY.

We illustrate herewith a new Sash Pulley just completed and now ready for the market. It is known as the "Ideal" and is manufactured by the Stover Manufacturing Co., Free Port Ill., who claim it is the cheapest and best ever offered to the trade, and the easiest and quickest put in place. It requires the boring of two seven-eight inch hole to make a place in the frame for the Pulley which makes its own mortise by simply driving it in, insuring a perfect fit in every instance. A little Marking Guage, also illustrated, is used to make the prick marks for boring the holes. The Guage is laid in the groove in the frame and, struck a light blow with a hammer, and the marks are accurately laid out for boring. No chisels or screws are used in applying the Ideal Pulley, and there is no possibility of their becoming loose or getting out of place. The saving of time in putting them in the frame is a great advantage.

EVERYBODY'S COLUMN.

The drawing instruments used by draughtsmen are very susceptible of rust. To remove the same without injury to the instruments, mix 10 parts of tin putty, 8 parts of prepared buck's-horn and 25 parts of Spirits of Wine, to a paste. Cleanse the articles with this, and finally rub with soft blotting paper.

Ed. Architect—Kindly inform us of some method by which grease spots on wall-paper caused by people leaning their heads against same, may be removed without injury to paper?

M. C.

Oil spots on wall-paper caused by persons leaning their heads against walls may be removed by making a paste of Fuller's earth and cold water and laying some gently on the surface to be cleaned, leaving it until dry, when it may be brushed off and the spot will have disappeared. It works best on plain paper but it does not succeed so well on thoroughly colored.

To Cure a Door in Wind.

Philadelphia, May 25, 1888.

To the Editors of the American Architect:

Dear Sirs,—Can any of your readers suggest, or inform me if they are cognizant of any method by which a twisted door can be made straight? In considering an answer to the above query I apprehended that correspondents will conjecture the kind and situation of the doors. The doors I have in mind when asking the question are veneered with the same kind of wood upon both sides, and have, since first they were hung, been subject to the same temperature upon each side, if there is such a thing as the possible straightening of a door out of "wind" I have no doubt it will interest a great many of your readers to know of it.

Architect.

[A door may often be taken out of wind, temporarily at least, by clamping in a frame and allowing it to remain for a time.—Eds. American Architect.]

The possibility of the prosecution of negligent plumbers for bad work leads to the inquiry, what protection have good plumbers from bad ones in the matter of competition? The bad plumber can under-bid the good one, and if complaints are well founded, there is a good deal of bad work and cheap work going on. The trade ought to have some sort of control over its members in this respect. The rigid legislation of a year or two ago has not produced all the good results then looked for. The attention of local medical and sanitary authorities has been recently called to unscientific work, and the matter will probably not be allowed to rest until some better system is devised. The plumbers themselves have as much at stake as anybody else, and the organization could wisely investigate the charges made as to inferior work done in utter disregard of sanitary requirements

Grindstones.

A correspondent of an Eastern paper gives a description of a visit to the Bay of Fundy and along the shores, where the grindstone quarries are located. The superintendent of the quarry says when the tide is out his men go down on the rocky shore and work out near the water. At low tide the men on the shore drill some holes in the ledge, put in powder ond blast out great pieces o f rock When the tide rises again they float out some big logs and empty barrels over where the loosened rocks are. When the water goes down again they fasten a big rock to the raft with heavy chains, so when the tide again rises it lifts up the raft and the rock with it. Then they tow it as near the shore as they can. If it is the right kind and size for a millstone, sometimes it is allowed to lie there until the workmen, with stone chisel and hammer work it into the proper shape. At other times, by means of a derrick, it is drawn out on the wharf. Then it is rolled on a track and hauled to the factory.

At the great stone factory the large piece of rock is placed on a carriage with a saw similar to the up and down saw in a mill, the rock is sawed into great slabs of the right thickness for the grindstone. The saw does not have teeth, but wears its way through the rock with the aid of sand and water, which are continually pouring on. Then the slabs are taken, a hole made in the center the edges trimmed off with a chisel, and the whole placed on a kind of lathe, turning it until it is true and the edges smooth. The rock from which the grindstones are made is a kind of sandstone, and there is a great difference in the "grit," some being coarse and some fine. Often several different degrees of "grit" are found in the same quarry. There are many quarries along the shores of the Bay of Fundy. The reason stone is taken from under water, when there are many quarries a little distance from the shore, is because the best stone comes from the bottom of the bay, where it is covered at high tide.

Deafening Floors.

Various expedients have been used and suggestions given for "deafning" floors, as it is called. We have all heard, says the *Building News*, of mortar mixed with chopped hay or straw—a kind of pugging laid on rough boards, carried, by fillets fixed to the sides of joists. This sort of pugging has stood well for centuries, and is found to answer well as a deafning material. Among other substances used are dry lime rubbish, sand, lime, hair, and dry ashes, sawdust, and even cockle shells and cork chippings have been found in the floors of old houses. Any of these materials in layers of 1½ inches to 2 inches will suffice to deaden sound. Recent suggestions have been thrown out in our own journal by correspondents. One of these is use thick felt laid below the floor boards. A French journal throws out another suggestion attributed to General Loyre, who proposes, instead of loading the floor with plaster, to fill in the space between the boarding and the plastering of ceiling with shavings which have been rendered incombustible by dipping them in a tub of thick whitewash. As it is known that soft substances inclosing air spaces form an excellent non conducting material to sound, it is thought that the shavings so treated will be found of great service, and it is said they are so incombustible as to add considerably to the fire-resisting properties of the building. Where it is desired to disinfect the space between the floor and ceiling the shavings may be saturated with chloride of zinc, or the latter may be added to the lime wash. The shavings have at least the merit of being light, which some of the materials we have named are not, and if they can be rendered non-combustible—a very essential condition—we do not doubt that this kind of deafning, so cheap and easily procured, will be largely used. Slag wool made in the form of tiles or bricks is a good material to prevent the transmission of sound, and any fibrous material formed into cellular slabs answers the purpose.

STAIR BUILDING,

AND IN ITS VARIOUS FORMS AND

THE NEW ONE-PLANE METHOD.

OF

HAND RAILING

BY JAMES H. MONCKTON.

A PERFECTLY NEW BOOK, PRINTED IN 1888.

The author presents in this work *for the first time*,—as applied to hand railing—the *one plane method* of drawing face-molds, a method in which only one plan of projection is required. By the plane process of drawing a face-mold, a center line of wreath may also be infolded, and fixed in its relation to the elevation of tread and rise; thus determining the length of each baluster on the curved plan and gaining a knowledge and control of the wreath's exact position not being attainable.

The experienced stair-builder will learn that this one-plane method of drawing all face-moulds—and also the manner of finding of angles with which to square wreathe prices—is simple, uniform and rapid. The student or apprentice will find that the elementary study of hand railing in the practical and novel way presented is easily acquired; he will also see that the detail instruction given in stair building from a step ladder to expensive and difficult staircases is presented in a manner to be clearly understood and quickly learned.

The Architect will find the best examples yet printed of Newells, Rails and Balusters, some of them being of exquisite design. The book is elegantly bound, printed on good paper, with illustrations far in advance of any similar publication.

Any order sent to this office will be immediately attended to and the book promptly forwarded on receipt of the price **$6.00**

A Suburban Home.

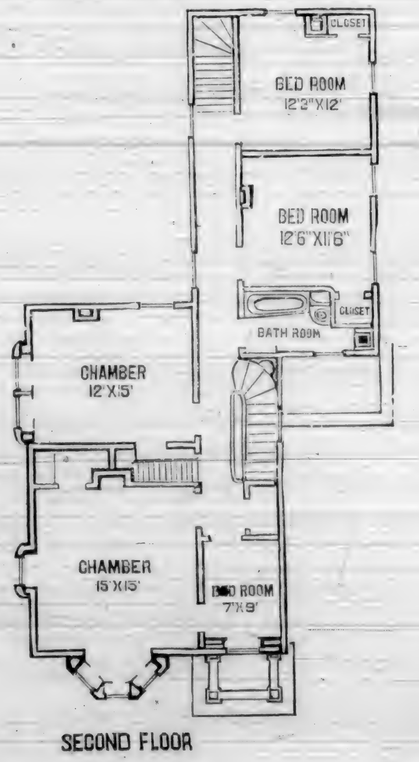
For real comfort the accompanying plans are just suited for those requiring a house containing commodious rooms with corresponding necessities. The first thing especially noticeable in the arrangement is the ease with which access can be obtained to every portion of the house. There are five entrances on the first floor, thus peculiarly adapting itself to those who may desire a convenient suburban home. Especially if the house be placed on a large lot will this feature recommend itself. The sizes of the rooms are very plainly given. The plans as presented are well worth a careful study. With a neat elevation the house can be built anywhere between $5,000 and $7,000. Any of the architects connected with the *San Francisco Chapter* can furnish the full plans, details and elevation to those pleased with the general design shown.

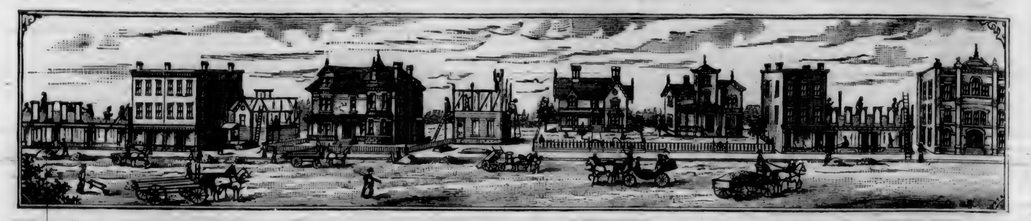
Weather Strips.

A great improvement is observable in the mode of insertion and the quality of the material used in the weather strips, as produced by Bradstreet, of this city Samples may be seen at this office, with prices affixed. By sending a note to the manufactory, 1326 Ellis, an agent will call on you and explain thoroughly how to stop your windows from rattling, and to prevent dust from coming in the cracks.

Messrs. E. C. Stearns & Co., of Syracuse, N. Y., report a very gratifying increase in their export trade during the past four months, and mention that the outlook for the balance of the year is very favorable.

Among others, they mention recent shipments of the celebrated 'Silent" saw vises, wood clamps, etc., to Glasgow. Bench drills to Northampton, England, and Aspinwall, Panama, and to the United States of Colombia.





CITY BUILDING NEWS.

Battery, No. 915, additions in rear. Cost, $2,000.

Birch bet. Octavia and Laguna; 2-story frame. Owner, F. B. Schonstein; architect D. M. Stanley; contractor, Jacob Klein; cost, $2,325

Payments; 1st when frame is up, $580; 2nd, when brown coated, $580; 3rd, when white coated, $580; 4th, 35 days after completion, $585; signed, May 8th; filed, June 11th; limit, August 15.

Broderick bet. Eddy and Turk, Frame building. Owner, G. Dagenais; architect, J. J. Clark; contractor, R. O. Chandler; cost $2,200.

1st payment when frame is up $500; 2nd, when brown coat of mortar is on $500; 3rd, when inside finish is done $600; 4th, usual 35 days, $600.

Broadway bet. Webster and Fillmore, 2-story frame basement and attic. Owner, Mrs. O. Mau; architect, Schmidt & Shea; contractor, Wm. Pluns; cost, $17,050.

1st payment, when 1st story floor joists are laid $2,500; 2nd, when floors are laid, $2,500; 3rd, when brown coat of mortar is on and inside finish on, $2,500; 4th, when hard finished $2,500; 5th, when completed, $2,700; 6th, usual 35 days $4,350; limit, 182 days; signed, June 26th, filed, June 27th.

Broadway bet. Webster and Fillmore. Plumbing contract. Owner, Mrs. O. Mau; architect, Schmidt & Shea; contractor R. Rice; cost, $1,985.

1st payment, when rough pipes are in, $700; 2nd, when completed, $785; 3rd, usual 35 days, $500; signed, June 27th filed, June 28th.

California and Kearney, Improvements. Owner, Wm. Kleeman; architect, J. J. and T. D. Newsom; contractor, Grey & Stover; cost, $5,425.

1st payment, when wall arches are in on Kearney St. $1,000; 2nd, when wall arches are in on California St. $1,000; 3rd, when completed, $1,318; 4th, usual 35 days, $1,357; limit, 70 days; signed, June 7th; filed, June 28th; sureties, J. Wagner and T. Anderson; amount of bond, $6,000.

Capp, near 20th, 2-story frame. Owner, Abby J. Judkins; architect and contractor, W. T. Veitch; cost, $7,350.

Payments as follows: 1st, when frame is up, $1,837; 2nd, when building is enclosed, $1,837; 3rd, when white coat or hard finish is on, $1,837 4th, 35 days after completion; $1839; limit, October 1st; signed, June 4th, filed, June 15th.

Capp, nr 25th, two 2-story frames; cost, $5,000.

Clay and Mason, frame building. Owner, Claus Wreden; architect, Henry Guilfuss; contractors, Victor Hoffman; cost, $6,600; signed July 2d; filed July 5th; limit, Oct. 1st.

1st payment, when frame is up, $1,000; 2d, when building is enclosed, $1,000; 3d, when the brown coat of plastering is on and all outside yard and basement work is done, $1,000; 4th, when hard finished and inside finish is on, $1,000; 5th, completed and accepted, $950; 6th, 35 days after completion, $1,650.

Clay and Laguna, 2-story frame dwelling. Owner, John Hooper, architect, J. C. Matthews & Son; contractor, Burpee & Judson; cost, $18,280; signed, June 25th; filed, July 9th; limit, 5 months and 5 days. Payments made at rate of 75 per cent. as work progresses; balance 35 days after completion.

Clay, nr Montgomery, additions; cost, $800.

Dehon, bet Dolores and Sanchez, 2-story frame. Owner, Mrs. L. Petsch; architect, J. Behrnds; contractor, G. Gerish; cost, $2,500.

Devisadero and Haight, frame building. Owner, Jas. J. Groom; architect, Cope, land & Banks; contractor, O. E. White; cost, $3,360.

1st payment, when brown coat of mortar is on, $2,000; 2nd payment; when building is finished; 3rd payment, 35 days after completion; limit, 94 days; signed, June 12th; filed, June, 16th; sureties, F. R. Latson; Jos. W. Beane.

Eighteenth near Dolores, frame building; Owner, Theresa Flood; architect, J. Marquis; contractor, Rountree Bros; cost, $3,423.

1st payment, when roof is on, $600; 2nd, when ready for lathers, $600; 3rd, when brown coat is on and sashes hung, $600; 4th, when hard finished and carpenter work completed, $623; 5th, usual 35 days, $1,000.

Fell St. (724) Alterations. Owner, Miss Annie McDermott; contractor F. A. Williams cost, $2,125; signed, July 5th; filed, July 5th; limit, 60 days.

When building is enclosed, $531.25, 2d, when the building is rough coated, $531.25; 3d, when completed outside and trimmed inside $531.25. 4th, when completed and accepted, $531.25

Fourth, cor Bryant, repairs to West Coast Furniture Company. Cost, $4,000.

Fourth bet. Harrison and Byrant. 3-story frame. Owner, D. Cutter and Wm. Casar; architect, M. J. Welch; contractor, Taubnan & Armstrong; cost, $8,640.

1st payment, when frame is up and rafters on, $1729; 2d, when first coat is on, $1729, 3d, when exterior finish is on, $1729, 4th, when finished and accepted $1729, 5th, 35 days after acceptance, $1729.

Limit, 90 working days; signed, July 3, 1888; filed, July 9, 1888, sureties, Geo. Watson and R. L. Taylor; amount of bonds, $8,645.

Franklin, nr Market, 2-story frame. Owner, M. J. Gorman; architect, T. J. Welsh; contractor, P. Sullivan; cost. $4,500.

Fremont nr. Market. 5-story brick building. Owners, Huntington, Hopkins & Co.; architects, Wright & Sanders; carpenter, C. C. Jerrill; cast iron work, O'Connell & Lewis; granite and stone work, Knowles & Co·; total cost, about $150.000.

Geary, 1200, grading and brickwork. Owner, A. Cahn; architect, J. Marquis; contractor, J. O'Sullivan; cost, $2,100.

1st payment, when brickwork and grading are finished and refuse removed from 1208, $750; 2d, when brick and grading work is finished and refuse removed from 1204 and 12, $750; 3d, 35 days after completion and acceptance, $600; signed, July 5th; filed July 6th; limit, 46 days.

Geary nr. Octavia. Church; owner, 1st English Evangelical Lutheran Church; architect, Samuel Newson. carpenters, Moore Bros.; cost, $10,160. Signed, July 2, 1888; filed, July 9, 1888; limit, 100 working days. 1st, when Moore Bros. get their 1st payment, $1,000; 2d, when Moore Bros. get their 2d payments, $2,500; 3d, when Moore Bros. get their 3 d payment, $1,600; 4th, when Moore Bros. get their 4th payment, $900; 5th, when Moore Bros. get their 5th payment, $800: 6th, when Moore Bros. get their 6th payment, $800; 7th, 35 days after completion and acceptance, $2,560.

Geary near Octavia, 1st English Evangelical Luthern Church; architect, Samuel Newson; contractor, J. J. Conrad, bricklayer; cost, $16,500.

1st payment when J. J. Conrad gets his 2d day, $2,000; 2nd, when J. J. Conrad gets his 3p pay, $1,100; 3d, when J. J. Conrad gets his 4th pay, $500; 4th, when J. J. Conrad gets his 5th pay; $500; 5th, when J. J. Conrad gets his 6th pay, $500; 7th, 35 days after all the building is completed, $1,900; signed, July 2d, filed, July 9th; limit, 100 working days. surety, T. E. Knowles; amount of bond $3,000

Geary bet. Laguna and Buchanan, 3-story frame. Owner, David Stang; architect, John & Zimmerman; contractor, Schutt & Krecker; cost, $7,865.

Payments as follows: 1st, when frame is up, $1,500; 2nd, when floors are laid and partitions set, $1,500; 3rd, when outside finish and brown coat is on, $1,000; 4th, when hard finished and rear building completed, and inside ready for painters, $1,865; 5th; usual 35 days after completion and acceptance; limit, September 15th; signed, June 7th; filed, June 15th; sureties, A. W. Bode and C. W. Grecker.

Grove and Taylor, 2-story building. Owner, Frank Deckelman; architect, W. W Winterhalter; contractor, A. N. Nelson; cost, $2,105.

Payments; 1st, when building is enclosed, $526.25; 2nd, when brown coated, $526.25; 3rd, when the building is prime coated, $263.37; 4th; 35 days after completion. $789.38; signed, June 20th; filed, June 22d.

Golden Gate Avenue, nr Lott, 1-story frame; cost, $1,500.

Hyde and Washington, 2 story cottage. Owner, A. M. Burns; architect, J. C. Matthews & Son; contractor Knight & Littlefield; cost, 7,494;

1st payment, 75 per cent as work progresses; balance, 35 days after completion; limit, October 10th; signed, June 22nd; filed, June 25th.

Hartford, and 19th, alterations. Owner, Capt. Dahler; cost, $1,000.

Haight near Steiner, two 2-story frames. Owner, John H. Effinger; architect, H. Geilfus; contractor, T. Van Brostel; cost, $7,936,

1st payment, when frame is up, $1,000; 2nd, when floors are laid and partitions set, $1,100; 3rd, when brown coat of mortar is on, $1·100; 4th, when white coat or hard finish is on, $1,100; 5th, when completed and accepted $1,136; 6th, 35 days after completion and acceptance, $2,500; signed, June 11th; filed, June 13th; limit, September 15th; sureties,——

Howard near 11th, frame building. Owner, Ellis Hughes; architect, A. J. Barnett; contractor, Thomas Morris; cost, $5,300.

1st payment, 75 per cent. as work progresses; balance, 35 days after completion; signed, 16th of June, filed, June 18th; sureties, Reese Llewellyn; amount, $3,000.

Howard bet 16th and 17th, 3-story frame. Owner, Rev. D C. Crowley; architect, Chas. Devlin; contractor, J. W. Smith; cost, $13,945.

1st payment, when first story joists are set, $750; 2nd, when roofed exclusive of tower $1,250; 3rd, when building is enclosed $1,200; 4th, when rough coat of mortar is on, $1,500; 5th, when hard finished, $2,500 6th, when ready for painting, $2,000; 7th, when completed; 8th, usual 35 days, $3,495; signed, June 19th; filed, June 20th; limit Nov. 1st; sureties, J. Coop, B. Joost; amount $10,000

Howard, bet 23d and 24th, 2-story frame. Owner, F. C. Hornung; architect, Smith & Shea; contractors, Martin & McGuire; cost, $1,292.

1st payment, when frame is up, $792; 2d payment, when rough coat of mortar is on, rough plumbing work done and outside primed, $800; 3d, when completed and accepted, $800; 4th, usual 35 days; limit, 80 days; signed June 28, 1888; filed, June 29, 1888.

Jackson near Scott, 1-story frame and basement brick. Owner, Jos. Haber; architect, Pississ and Moore; contractor, A. McElroy; cost, $10,300.

Payments as follows 1st, when brick work is done, $1,200; 2nd, when frame is up, $1,500; 3rd, when first coat of mortar is on, $1,500; 4th, when hard finish is on, $1,500; 5th, when ready for painters, $1,500; 6th, when complete and accepted, $500; 7th, 35 days after completion, $2,000; limit, 120 working days: signed, June 15th, filed, June 16th; sureties, B. Joost and B. Thyarks.

Jackson nr. Pierce. Frame dwelling; owner, R. Bruce, architect, W. F. Smith; contractor, Kern; cost, $14,000.

Jackson nr. Pierce. Frame dwelling; owner, Mrs. H. Van Wyck; architect, W. F. Smith; contractor, Kern; cost, $15,000.

Jessie, cor Ecker, 4-story brick. Owner, O. D. Baldwin; architect, S. Newsom; day work; cost, $20,000.

Kearny, cor Jackson, brick additions to hotel building. Cost, $3,000.

Lyon bet. Sutter and Post, 1-story frame. Owner, C. H. Hildebrand; architect and builder, G. G. Gelispie; cost, $1,815.

1st payment, when frame is up, $450; 2nd, when brown coat of mortar is on, $450; 3rd, when completed, $450; 4th, usual 35 days, $465; limit, 75 days; signed, June 21st; filed, June 21st.

Mission, No. 556, additions. Owners, Dalziel & Moller; cost, $1,000.

Market bet. 6th and 7th, 5-story brick. Owner, Jos. Rosenthal; architect, Salfield & Kohlberg; carpenter contractor, T. H. Day; cost, $23,950.

1st payment, 75 per cent. as work progresses each month; balance, 35 days after completion; limit, 3 months; signed, June 18th; filed, June, 18, 1888; sureties, C. S. Holmes and B. Joost: amount, $8,000.

Market bet. 6th and 7th, 5-story brick. Owner, Jos. Rosenthal; architect, Salfield & Kohlberg; contractor, Riley & Loane; brick mason; cost, $38,000.

1st payment. when ready for 1st floor joists, $5,000; 2nd, when ready for 2nd joists $6,000; 3rd, when ready for 4th story floor joist, $8,000; 4th when ready for 6th story floor joist, $7,000; 5th, when completed and accepted, $2,500; 6th, 35 days after completion, $9,500; limit, April 1, 1889; signed, June 14th; filed, June 18th; sureties, H. S. Loane and M. O'Connell; amount, $1,500.

Market bet. 6th and 7th 5-story brick. Owner, Jos. Rosenthal; architect, Salfield & Kohlberg; contractor, Albert Weinert; statuary; cost, $3,654.

1st payment, when clay models for portico accepted, $250; 2nd, all models completed, $500; 3rd, when Atlas is completed, $500; 4th, when models in plaster Paris, $300; 5th, side figures of portico done, $500; 6th, when all are in place $634; 7th, 35 days as usual, $950; signed March 8th; filed, June 18th.

Market bet. 6th and 7th, Wrought Iron Work. Owner, Jos. Rosenthal; architect, Salfield & Kohlberg; contractor, Sims & Morris; cost, 4,150.

75 per cent. as work progresses at end of each month; balance, 35 days as usual; signed, June 10th; filed June 18th.

Market bet. 6th and 7th, Cast Iron Work. Jos. Rosenthal; architect, Salfield & Kohlberg; contractor, Reese Llewellyn; cost, $2,750.

1st payment, when basement columns are accepted, $600; 2nd, when 1st story columns are accepted $1,400; balance $750, usual 35 days; signed, June 10th; filed, June 18th

Market and Davis, additions. Owner, Mrs. M. Coleman; architects, Smith & Shea; contractor, Chas. H. Ackerson; cost, $3,808.

Payments are made at the rate of 75 per cent as work progresses; balance, usual 35 days; signed June 28, 1888; filed June 29, 1888.

Market, bet 16th and 17th, 1-story frame. Owner, Rothermel; contractor, O. E. White; cost, $3,000.

Market, bet 16th and 17th, 3-story frame. Owner and builder, W. Kahn; cost $7,000.

Mission bet 18th and 19th, 3-story frame. Owner, John Haman; architect, Wm. Schrof; contractor, George Gale and J. C. Mires; cost, $6,330; limit, October 20th; signed, June 25th filed, July 5th.

1st payment, when frame is up, rustic and roof boards on and chimneys built, $1,630; 2d, when all window frames are set, the brown coat of mortar on and main portion of the outside finish and roof is on, $1,535; 3d, when hard finish is on, the interior and exterior finish is all up, sashes hung and 1st coat of paint is on, $1,535; 4th, balance 35 days after completion and acceptance; sureties, John Gale and A. Powell.

McAllister and Gough, alterations. Owner, Aaron Gorfinkel; architect, Salfield & Kohlberg; contractor, Fuchs and Bucher cost, $3,238.

1st payment, when raised and studding set, $800; 2d, when brown coat is on, $838; 3d, when completed, $800; 4th, 35 days after completion, $800; limit, 65 days; signed, June 18th; filed, June 21st.

Natoma bet. 1st and 2nd, alterations. Owner, J. M. McElroy, Jr; architect, J. J. Clark; contractor, J. D. McDonald; cost, $1,195.

1st payment, when building is raised and enclosed, $250; 2d payment, when rough coat of mortar is on, $250; 3d, when inside finish is on, $250; balance, 35 days, $445; limit, 30 days; signed, June 20th; filed, June 21st.

Nineteenth, nr Hartford, alterations to two buildings. Owner, Mrs. Ward; cost, $1,500.

Pacific, bet Buchannan and Webster, frame building. Owner, Henry Falkenstein and wife; architect, S. Newsom; contractor S. C. Buzelle; cost, $7,300; signed, July 3d; filed July 5th; limit, 120 working days.

1st payment, when graded and foundation is in, $600; 2d, when frame is up and chimneys built, $800; 3d, when inside is ready for lathing and cornice and roof is on, $1,200; 4th, when outside is finished and primed and brown mortar is on, $1,000; 5th, when hard finished, $900; 6th, when works are all done, $975; 7th, 35 days after completion, $1,825; sureties, S. C. Buzelle and J. F. Kennedy; amount of bond, $2,000.

Post near Octavia, 2-story frame. Owner S. G. Mish and wife; architect, B. McDougall and son; contractor, J. R. McLean; cost $5,755; signed, June 30th; filed, July 5th; limit, October, 15th.

1st when the grading is finished, brick walls for the house and area walls are laid and chimneys to top of them $500; 2nd, frame up roof boarded and rustic on, $800; 3rd, when roof is tinned, floor laid, gas and water pipe laid and window frames set and brown coat of mortar is on the walls and ceiling $955; 4th, when hard finished, the door jamb set, sash glazed and hung, inside stairs up front fence wall built front steps up, outside mill work complete and the outside primed, $1,000; 5th, when completed and accepted, $1,000, 6th, 35 days after completion and acceptance, $1,500; amount of bond, $4,000; sureties, J. S. Doe and John T. Grant.

Prospect Ave., junction with Lundy's Lane, five 1-story frame. Contractor, Frichette; cost, $6,000:

Prospect Ave., nr California Ave., 1-story frame. Cost, $1,500.

Sutter and Lyon, 2-story frame; Owner, Catharine Brady; architect, Schmidt & Shea; contractor, A. Norton; cost, $3,551.

1st payment when building is enclosed, $600; 2d, when brown coat is on, $665; 3d, when white coat is on, $665; 4th when accepted and completed $730; 5th, usual 35 days, $891.25; limit, 100 days; signed, June 20th; filed, June 23d.

Scott near Walla, frame building. Owner, H. H. W. Stroecker; architect, H. Geilfuss; contractor, Fraser & Foster; cost, $4973.

1st payment, when frame is up, $800; 2d, when floors are laid and partitions set, $700; 3d, when rough or brown coat is on, $800; 4th, when inside finish is on, $728; 5th, when completed, $700; 6th, usual 35 days, $1,245; limit 1st October; signed, June 12th, filed, June 19th.

Second, cor Stevenson, 5-story brick. Owner, T. E. Cunningham; architects, Percy & Hamilton; contractor, J. R. Wilcox; brick, McGowin & Butler; cast iron, McCormick Bros.; concrete, E. L. Ransome; plumbing, Duffy Bros.; plastering, Fisher; total cost, $100,000.

Sacramento and Pierce, two 2-story frame building. Owner, C. J. Wingerter, architects, Schmidt and Shea; contractor, Wm. Pluns; cost, $12,720.

1st payment, when rough frame is up, $2,320; 2d, when brown coated, $2,400; 3d, when hard finished, $2,400; 4th, when completed and accepted, $2,400; 5th, 35 days after completion, $3,200; signed July 6th; filed July 7th; limit, Oct. 20th; surety, B. Joost.

Seventeenth, nr Collinswood, additions Owner, J. R. Drew; cost, $1,500.

Seventeenth, nr Diamond, additions. Owner, G. Monroe; cost, $2,500.

Seventeenth, nr Sanchez, 1-story and basement frame. Owner, Gilfoy; contractor, A. A. Willins; cost, $3,000.

Twenty-Fifth, nr Treat Ave., 1-story frame. cost, $1,860.

Turk, No. 116, alterations. Owner, R. Finking; contractor, A. Miller; cost, $1,200.

Thirteenth bet Isis and Folsom, 2-story frame. Owner, Mrs. Mary T. Campbell; architect, M. J. Welsh; contractor, C. Coady; cost, $2,650.

$600 when frame is up; 2d, $600 when 1st coat of mortar is on; 3d, $600 when completed; 4th, usual 35 days; limit, 70 days; signed, June 20th; filed June 22nd.

Twentieth, bet Guerrero and Dolores, millwork contract. Owner, J. A. Anderson; architects, Pierce & Kidd; contractors, Towle & Broadwell; cost, $1,017.

1st payment, when exterior millwork is done and delivered on premises, $381.00; 2d, when entire millwork is finished, completed and accepted, $381 00; 3d, balance, 35 days after completion; signed May 5th; filed July 6th.

Turk, near Larkin, a frame building. Owner, Mrs. A. Baily; architect, F. J. Welsh; contractor, R. O. Davis; cost, $4,134.

1st payment, when frame is up, $1,000; 2d, when brown mortar is on, $1,000; 3d, when finished and accepted, $1,000; 4th, balance, 35 days after acceptance, $1,134. Limit, 90 days; signed July 2d; filed July 7th; surety, W. C. Meeker; amount of bond, $4,000.

Union and Leavenworth, Plumbing contract. Owner, G. Rocca; architect, Wm. Mooser; contractor, Samuel Eckleheimer and Bro. cost, $1,625

1st payment, 75 per cent. as work progresses; 2nd and balance, 35 days after completion; limit, 90 days; signed, June 5th; filed, June 20th.

Van Ness Ave. and Jackson St. owner, F. A. Frank; architect, C. Day; contractor, Jas. Kelly; cost, $22,900

1st payment, when frame is built, sheathed and roof ready for shingles, $4,000; 2d, when chimneys built and brown coat of mortar is on all walls and ceilings, $5,000; 3d, when hard finished, $3,500; 4th, when the stairs are built and doors and windows hung, and inside ready for painters, $4,675; balance usual 35 days after final completion; signed, June 20th; filed, July 9th; limit, Feb. 25, 1889.

Valencia, bet 25th and 26th, improvements. Cost. $6,000.

Webster, bet Waller Hermann, 1-story and basement frame. Owner, Henry Smith; architect, John & Zimmerman; contractors, Rountree Bros; cost, $1,950.

1st payment when framed, $500; 2d payment, when rough coat of mortar is on, $500; 3d, when completed, $450; 4th, the usual 35 days, $500; limit, September 8, 1888; signed June 25, 1888; filed June 30, 1888; surety, W. A. Meeker.

COUNTRY BUILDING NEWS.

LOS ANGELES.

The erection of buildings in Los Angeles is still one of the things which attracts the visitor's notice when he takes a tour of the city, and there seems to be no cessation to the activity in this respect, which has been so marked during the past year. Scarcely a day goes past but workmen commence on new contracts. Excavating work has been begun on the site of Brodie's store, and a new edifice will go up thereon. This is another addition to a large list hitherto published. The demolition of the one-story brick, southeast corner of Fort and First, makes way for a three-story brick by Judge Reddick, which will be an ornament to that part of the city. The W. C. T. U. Temple, on the corner of Fort and Temple streets is beginning to show the people that the ladies are providing an ornament to our city. The terra-cotta finish is a distinctive feature of the edifice, and it speaks well for the taste of the architect.

The court house is going ahead more rapidly. It will have a main frontage on Fort street of 180 feet, with the same dimensions on New High. The Temple street front is 150 feet, and the south end, which comes to within a few feet of the jail, 140 feet also. The main entrance will be from Fort street, but access is had from Temple and New High also. The south end entrance will be for convenience of communication with the jail. The building is two stories and a 17-foot basement; the basement being all above the surface. The basement is to be of granite, quarried near Riverside. The upper stories will be of marble from a quarry near Victor station, San Bernardino county, trimmed with a reddish sandstone from Flagstaff, Arizona. The trimmings will be largely ornamented by the hand of skill.

The Crocker block, on Fort street, is going ahead rapidly, and will be ready for occupancy before the rain commence. The Y. M. C. A. building, on the opposite side of the street, is now being pushed forward rapidly.

The Simpson Tabernacle is progressing quite rapidly, and will be an ornament to the corner of Hope and Seventh streets. The site of the tabernacle is on Hope near Seventh, and the lot fronts 134 feet on Hope street and is 162 feet deep. Bricks to the number of 600,000 will be on the ground in the course of three weeks, and all other building material will soon be ready for pushing the splendid work forward to completion. The church will be furnished with a pipe-organ twice as large as any now in the city, and will cost about $8000. The total cost of the building and lot will be near $70,000. Adjoining the church is to be a handsome brick parsonage.

LOS BERROS.

The following are some of the improvements: Mr. Eale, a fine residence, cost from from $1000 to $1200; Mr. Persing's, another fine residence, cost from $1200 to $1500; Mr. Binkley's, a neat cottage, cost about $1000; Mr. Barrot, a fine two-story building, intended for a hotel, cost $1500, Mr. Waterman contractor; Mr. Strowbridge, a story and a half house, cost about $408; Mr. Kenny, a two-story building for store and post office, costing from $1500 to $2000; Mr. Robinson has just laid the foundation of a house to cost about $1200.—*A. G. Herald.*

SAN JOSE.

The Southern Pacific Company is building a second story to the central part of their main warehouse at the San Pedro street depot to be used as a general freight office. The new office will be directly over the old one, and will be a model of convenience and comfort.

Plans have also been prepared for an elegant depot at San Carlos, bet. Belmont and Redwood City, which is to be built from sand-stone from the Goodrich quarry.

SAN BERNARDINO.

I. R. Brunz will erect a brick building.

OAKLAND AND ALAMEDA.

G. M. Flick has contracted with M. A. Lent to build for the latter a residence on the south side of East Sixteenth street, 100 feet east of Eighth avenue, for $4,000. It is to be two-story frame building. Payments are to be made in installments of $1,000.

W. W. Wilkens is having a residence built in North Oakland. Nelson & Nickerson are the contractors. The cost will be $2,860. The building is to be finished July 17th. W. Kirk is the architect.

A. W. Pattiani & Co. are building for E. C. Sessions a cottage on Twenty-fourth avenue, near East Twentieth street, in the Sessions tracts, East Oakland. The contract price was $1040. The building is a modern Queen Anne cottage.

The Swedish church on West street, near Twelfth, has been completed.

Stephen Watts has just completed for his own use a very handsome cottage on Delger street, near San Pablo avenue. It cost $4000.

ALAMEDA BUILDING.

G. Laver is building for C. Winter a one-story cottage on Pacific avenue, Alameda. The cost will be $1230, and the building will be completed by August 1. A. R. Denke is the architect.

J. J. Denschl is building a frame house on Charles street, near Railroad avenue. The contract price is $3250. The architects are F. X. Fisher and V. L. Fortin.

G. A. Flash, an artist of considerable fame, is building on Regent street, south of San Jose avenue. The building is being arranged so as to allow for a large studio and art gallery for the artistic owner.

On Madison and Ninth streets Walter Mathews is remodeling the residence of Col. L. L. Bromwell, and putting $8,000 worth of new work into an already handsome house. This work is nearly completed.

The residence of Everett Grimes on East Fourteenth street near Sixth avenue, has been completed, at a cost of $12,000.

Plans have been drawn for a residence for F. W. Henshaw, on the corner of Fifth avenue and East Twentieth street, to cost the same amount of money, The contract will be let very soon.

Mr. Gale's residence at the corner of Central avenue and Regent street, Alameda, is about completed.

Pattiani & Co. have begun for M. E. and E. Schieffeln two frame cottages on Alameda avenue and Lafayette avenue, Alameda. The cost will be about $1300 each. They will be very pretty, comfortable little buildings.

Bids for the construction of the Chapin block, on Second street, Livermore, directly north of the Boston block, were opened in Architect Boone's office on Monday, and the contract was awarded to S. E. Clough on his bid of $12,500. The block will be of wood, two stories high.

It is proposed to build a school-house, to cost about $15,000, at Golden Gate, otherwise known as Klinknerville. William Kirke is the architect.

W. H. Wellbye will build for N. J. Ashton a handsome two-story frame residence on Magnolia street, near Fourteenth street, Oakland. The house will be Queen Anne style in architecture, and will cost $2,200. A stable will be built in the rear, and when completed this will be one of the finest residences in the neighborhood.

RIVERSIDE.

F. W. Haskell is building a two-story residence on Ninth street in White's addition. It will have ten rooms, is built of good brick and will cost $2000.

LUMBER TAKES A TUMBLE.

A Reduction of $2 Per M All Along the Line.

The lumber firms in Sacramento have reduced the price of lumber on an average about $2 per thousand feet. This will be good news to all desiring to build houses, as there is no doubt but that the great increase in the prices of lumber retarded materially the building boom in this city. The reduction is mainly in Oregon pine and redwood, and when Frederick Knox of Richards & Knox was interrogated to-day by a *Bee* reporter in reference to the reduction he said that the decline in prices was due solely and wholly to a reduction of freights. He did not believe the reduction an unmixed blessing, so far as this portion of the State is concerned, and stated that the price of Oregon pine and redwood had created a demand for California mountain lumber which had set all the mills going to their utmost capacity. Furthermore, he said, when lumber was cheap carpenters' wages were about $2 per day, whereas they are now $3 and $3 50.

Mr. Knox scouted the idea that there had been any "trust" broken, or anything of that kind. The decline was in accordance with the rules of trade—nothing more.

It is understood that the only loss to dealers in this city will be on the stock on hand—amounting to from $24,000 to $30,000.

Notwithstanding all this, it is well known that the high price of lumber has deterred many from building in this city, and cheap lumber would mean hundreds of additional happy homes in Sacramento.—*Sacramento Bee, Aug. 2nd.*

Bids are wanted for the erection of a brick building in the town of Newman. Inquire either at Cahen & Son, Hill's Ferry, or of James E. Wolfe, architect, 240 Montgomery St., this city.

Our Stand on the Lumber Question.

Several of our contempories have taken this Journal to task for the stand we have taken in regard to the high schedule of rates for lumber adopted by the Manufacturers Association. This Journal has now been established nearly TEN YEARS. and during that period we have steadfastly proclaimed for fair prices for building materials. Our friend on California street has the following in a late issue:

"There seems to be a combination among certain newspapers of both high and low degree, in this city, that has decided to ruin if possible the lumber trade of the Coast. They don't hesitate to misstate facts, misrepresent the position of affairs, and brand as greedy cormorants all engaged in the manufacture of lumber. They have kept up their howls until the retail trade has been seriously affected, and people are beginning to believe that they are paying an exorbitant price for their lumber. This persecution—and we can call it by no other name—injures not only this section but the whole Coast, retards it, developement, prevents honest labor from being utilized, and will set our whole Coast back several years. We cannot see the object of it. The cost of manufacturing lumber is well known, the cost of transportation is known, and it is well known that there is not a large profit in the business. Because at one time when there was a controversy between certain millmen lumber was sold far below even the cost of manufacturing, and when the firms engaged in the controversy lost thousands and thousands of dollars, that is no reason why the manufacturers now should not have a reasonable profit, and that is all they ask.

In looking over the advertising pages of the Journal referred to we find a goodly portion of its patronage comes from those it would seek to help, viz., the lumber dealers, and naturally its editorals would not be against those who give it such a generous support. We are sorry, however, to have Friend Everett make so many naughty statements in such a short space.

In another article in the same issue from which above is taken he says, "there is no Trust on this Coast. The Pine Association is composed of several of the large mills etc." That is, there is no "Trust," only the large mills have an "Association."

It will be noticed that "we have kept up our howl until the retail trade has been seriously affected." Of course this is from the standpoint of the lumbermen. The TRUTH however, is simply this. During the existence of this City as a city, whenever the chance offered, the lumber manufacturers have raised the price of lumber until building operations have almost stopped, and only when forced, by the absolute dearth of orders, have they reduced the price.

Look at the year 1883. A combination of 12 of the largest firms *compacted* together to squeze those intending to build. A "BONE YARD" was established in the Southern part of the city. Small mills outside of the ring sent lumber then—as well as at the present time—to the city. The cargo was immediately bought by the "Ring" and transferred to the "Bone Yard." Millions of feet of lumber were piled up, until the load became too great. Shipments were made to Sandwich Islands, Central America etc., merely to relieve the strain. The price in the city remained at the same exhorbitant figures, but people living a thousand miles away could get lumber almost at their own figures.

Still the lumber to be bought by the "Boners" came into market. Some of our bright contractors conceived the happy plan of also buying by the cargo. A large scow was handily moored, and a scow cargo taken on. Rates for this kind of a cargo were lessened. It was the beginng of the end. Scow cargoes could soon be had by any one. Lumber took a tumble and in a short time could be had for $13 per M. At that time—as records will prove—we complained the rates were too low, arguing that $18 was a fair price and manufacturers should endeavor to maintain that figure.

Gradually a recovery was had and another combination formed. This time those composing the same were required to put up the *cash*, which was to be forfeited on certain conditions. This in turn gave way to the present corner, Trust, Combination, or whatever term you choose to apply.

The great demand for the Soutern Counties opened the way. The money holders of the Trust discovered a nice plum. They bought or controlled nine-tenth of the lumber carrying ships. Freights began to advance, and as they did, of course, lumber also advanced. It was given out that owing to the great advance *in freights*, say $2 per M, that amount must be added to the price of lumber. It was the old "Contract and Finance Committee" over again. To ship 5,000,000 feet a month from one company was nothing unusual, but the extra freight on same was just $10,000, which amount went in the pocket of the "greedy cormorants," as brother E—expresses. It has always been so in this city. Lumber would be placed at too cheap a figure. Buildings would start up in every direction. The screws would be

gradually applied, until the building operations nearly ceased, and then down lumber would come. No thought is taken of the demand for this city. If, to-morrow, an unexpected demand should spring up from any outside section, no hesitancy would be used by the lumber manufacturers in restoring the price from which they were compelled to recede. Having caused building operations to almost cease in this city, they are merely willing to give owners a little breathing spell to get them to renew building, when, if the demand warrants, away goes up the price of lumber and a general dullness ensues. Surely our manufacturers are sagacious enough to know that our people will not always stand this battledore and shuttlecock way of fixing the value of lumber.

We merely look at FACTS. Owing to the extortionate prices charged for lumber, building engagements are very limited in number for this season of the year. For the first 6 months of the present year, compared with those of last year, there is a falling off in number of 75 improvements, and $550,094 in values. And this in face of the fact that the city is steadily growing. Ask 100 property holders in regard to improving their property and 90 of them will say "Lumber is too high."

It is not alone that rough lumber is too high, but the price of surfaced lumber has been advanced in a 2 to 1 ratio compared with the production of each. And this fact has enabled the mill men to so raise their bids that a fair rate of interest was not returned on the money invested, to those building.

At present the general tendency of the market is downward. Two reductions have been made and the price may be set down as $20 for rough lumber.

Several other items could be given in regard to an analysis of the "extract" but we have said enough to convince the many who take this Journal, that the position we have assumed all along in regard to the extortionate prices heretofore charged for lumber, is the correct one. We are pleased that our efforts have met with success and trust soon that the fair price to manufacturers and dealers and consumers of $18 per M. will be recognized as the legitimate value to be placed on rough lumber.

Cheap Plans a Bad Investment.

HERE is a tale of two buildings in one city: A and B were shoe merchants, who bought lots about the same time in a growing section of their town, and erected thereon stores of about equal value for their own use. So far the course and experience of the two were alike. But A employed an architect of good standing and paid him $500 for his services, while B hunted up an obliging builder who generously furnished the plans for nothing. At this stage of our narrative B was financially $500 ahead of A, and took much satiafaction in contemplating his own superior shrewdness.

Fortunately for B, but quite as much by chance as cuteness, he fell into the hands of an honest and competent builder, who gave him as good a building as he knew how to construct. Each merchant moved into his new store, the two being but a few blocks apart, and set about working up trade. A's store while costing the same as B's, was unique in design, a well proportioned novelty, which attracted much notice when building, and was widely talked of. This talk advertised A's business as well as A himself. Then he had a handsome engraving made of his store and published it in the papers and printed it on his letterheads and envelopes. It attracted attention, and custom grew. This also enhanced in value adjacent real estate, and having built on only half his lot, A was able in a year to sell the other half for an advance of a $1,000 on cost. This put him abreast of B and $500 better.

Moreover, the purchaser employed the same architect and erected another taking front adjoining A's, and this also was talked of and drew trade, which drew other trade, and again property advanced in value. Then a fine store, to correspond with this improving locality, was erected opposite and shortly two more of the same sort. The locality became choice for business, and after a few years A sold outstore and business at a profit which amounted to a comfortable fortune.

B's complacency over the $500 he had saved on his plans soon vanished as he compared his monotonous box-like front with the other store. No one talked about his store, there being absolutely nothing in it to talk about. In time other equally monotonous fronts were erected opposite and adjacent to his. The street has its character fixed as of inferior grade; no enterprising party who wants to erect a fine improvement thinks of going to that vicinity now though land continues cheap there. B does about the same business every year, and considers his property worth about the same now as when he bought and built. He would gladly sell for a moderate advance, but the location not being popular, he has few offers and is still holding on waiting for better times.

The moral is that parsimonious economy may begin almost anywhere more safely than in the selection of an architect to draw one's plans.—*Inland Architect.*

The Reason Why.

THE life of California as a State is brilliant in a thousand ways, but far less so than it would have been, had more of those whohave become millionaires and rich men through her prolific bounties and innumerable resources, and the opportunity so lavishly opened up to them on every hand by the inherent richness and wealth of the Golden State, from which they have amassed—in numerous instances—Collossal fortunes and individual prominence, many of whom being raised from humble life and conditions, to possessions and rank among the money honored of earth, been true and kind in return to the great benefactress to whom they are so largely indebted for what they possess and enjoy of this world's goods.

It may be claimed that genius, thrift etc. smartness has brought these fortunes to the favored ones, who within short periods of time—a generation or less have become rich. This in its way may be true, but all the smartness and genius possible, would fail in individual exploits after riches, if the field of operation was sterile and barren and the golden fountains dry. Men who get more than others, where the chances are equal and even to all, are to be accredited with superior money-making abilities, and entitled to pre-eminence as wealth gatherer. But that is not the direct point in present issue. The fact that most of those who have grown rich in California have reached that happy condition by reason of, and through the manifold—easy and available opportunity special to this state should imposes a moral obligation which to disregard is at least ingratitude toward the source from whence so much has been received. Yet this ingratitude is distinctly stamped upon the acts of every one—the hundreds who have gained the grand object and purpose of human existence and left the State which to them has been so generous and kind, to enjoy the luxuries, invest and spend in other cities and communities having no part nor lot in at least the preliminary accumulations of the wealth gained in California and which should be employed and utilized in weaving garments of prosperity to adorn and beautify the Golden Goddess that opened the doors and unlocked the vaults of hidden treasures for ages concealed from human eye and hand and scattered them so freely at the feet and in the path way of those who have so successfully participated in gathering in that flow of gold which has never ceased to pour forth from the secret recesses of California's store house of precious metals and her fields fruitful and prolific in all that is necessary for the wants and comforts of human life. Had only a portion of the millions of gold that have been carried from this State and invested elsewhere; been retained within her borders and used and employed in devloping the possibilities of the Pacific Coast, a vastly different condition of things would exist at the present time and population number thousands where only hundreds are now to be counted.

Had enterprise and love of State more than selfish and personal ambitions for ease, notoriety, and the allurements of life in the older great commercial and business centers of the U. S. been the controlling purpose of our California made rich men, instead of being as now, in bondage to a single inefficient R. R. the whistles of competing lines would be heard from San Diego to Washington Territory—thousands of acres now in grass would be yielding golden grain and luscious fruits, millions of tons of precious deposits as yet untouched would have seen the light and thousands of men, women, boys ane girls would be earning bread in manufactories and industrial pursuits and a greatly increased prosperity rule the hour. Hence the less grand position of California and her cities, towns and country places among the sister states and cities of the Union than might have been is more the fault of those, who the State by her recourses have made rich, than any lack of natural available possibilities.

STEEL SQUARE AND ITS USES.

We have just received a large number of the above named books. A copy will be sent to any address upon receipt of ONE DOLLAR. It contains a full treatise on the Carpenter's Steel Square and the umerous uses t, which it may be applied.

BOTH SIDES OF THE QUESTION.

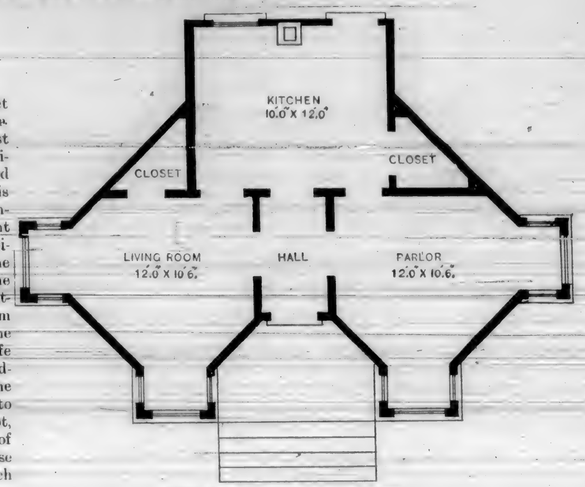
The Most Important Factor.

ONE of the most extraordinary statements we have lately met with is to be found in the current monthly number of a Chicago periodical. It asks the question "Who is the most important factor in the construction of modern edifices—the architect or the builder? and says: "The *National Builder* is disposed to give due honor to both, as distinct professionals, each in his own line capable of performing good work but not necessarily intruding upon each other's especial domain. The intelligent builder as the actual constructor of buildings, if of long experience, holds a title in fee simple to public consideration, as one who ought to be able to design a building, as he is to start at the foundation and complete it. If he has superintended the erection of a large number of buildings, purchased material for them and studied their method of construction, he should soon become familiar with those principles which enter into good and safe construction and hence become capable, from a practical standpoint, to compute the strength of material, to understand the adaptability of certain parts one with the other, and in fact, to compete with his architectural brother. Such a man, no doubt, could, in many instances, undertake the professional duties of the architect with success and credit, and would, in the course of a general business, be able to meet the many questions which daily perplex the practicing architect."

How any one can pretend to promulgate the idea that a builder is a professional man is beyond ordinary comprehension. Why a man who pays mechanics and laborers their wages for laying brick and mortar, as shown in an architect's plans and specifications, should be dubbed an "architectural brother" would puzzle a Philadelphia lawyer. We do not believe that any reputable builder will appreciate such an attempt to put him in a false light. A good builder is one who sees that his workmen carry out the ideas of the "author" of the building, giving the quality and brand of materials specified by the architect, and endeavoring, by systematical control of the work to earn a fair per cent. of profit on the contract. An inferior builder is one who indeavors to cheat the owner by using cheap material and evading the strict letter of the specifications in order to save money on his work. But no builder wishes to answer the responsibility of the architect on whom lays the odium in case his structure will not carry the required load. The builder's responsibility is only to erect such a building as the plans call for, not to figure out the strains.

It is owing to such statements as those of the *National Builder* that architects are so little thought of by the unthinking public. In answer to the question we would therefore say, the prime "factor in the construction of modern edifices" is the architect. The builder is as the instrument in the hand of a skilled surgeon; if the knife should be blunt the operation would be bungled, and if a builder is incompetent or tricky the edifice designed by the architect will suffer in so far as his ideas have not been carried out. We have advocated the licencing of builders; and believe that they should understand thoroughly the practicible rules of mechanical construction, but the artistic education so absolutely necessary in the profession of architecture is not demanded by the builders' trade; but what is required is that thorough technical knowledge and skill in execution which enables him to comprehend the drawing furnished by the architect and to carry out the work in a manner to give credit to himself as a builder, realizing the conception of its author. In making this statement we do it with no feeling derogatory to the builders, believing that they, as we do, recognize the importance of a strong line being drawn between the architect in his profession and the builder in his trade. As it is inadvisable for the architect to usurp the position of a contractor, it is equally so for the builder to attempt to be his own architect.—*Building.*

AN ingenious New York builder of down-town flats was struck recently by an idea which he has put into effect with great success in his latest building. He noticed that one of the first things his tenants did when they went into a house was to hang portieres in every available doorway. He has saved them some trouble and himself the expense of doors by putting a simple rod for the curtain instead of the door in each of the inner doorways in his latest flats. The idea was novel enough to catch the house hunting mind, and he gets more rent from the flats than though they were fitted with doors, and has no lack of tenants.



A Cozy Home for a Family of Two

Oil Holes.

The early history of oil holes is clouded in mystery. Some historian states that Noah used oil holes in the machinery of the ark, while others claim that the hinges of the gate of the garden of Eden had holes in them, and that Adam went around every Monday morning with a tenpenny nail to clean them out. However that may be, since oil has been used on machinery oil holes have been in vogue.

For the benefit of those who do not know what an oil hole is, I will state that it is a small canal to conduct oil to the working surface of machinery. Sometimes it fails to conduct it, then a tenpenny nail is the thing to use.

I have read in the History of Grease about some kind of a patent oil hole for loose pulleys. I have never seen any of them; in fact all that I have ever seen were straight holes—regular centrifugal pumps, throwing out all the oil that does not happen to soak into the joints before the wheels start.

When I oiled line shafts I used to carry a lot of pine plugs in my pocket, and when one was missing I replaced it with a new one, not because I was ambitious to do a good thing, but because I had to do it. A plug in the oil hole of a loose pulley is a good thing. How much machinery comes to us into which we can not get oil; if we are fortunate enough to find the place, we oil it once. You have a machine in the shop with oil holes for every stud and gear except one or two. When you put up the machine notice those places and resolve to keep them oiled, so you make a tin eave-spout to run oil into them, and hold in one hand and pour oil into it with the other. That is all right, but after a while you put a new hand on the machine who never saw that make before. He knows that some machines have hidden oil holes, thinks he will oil all the places he can see, and trust to Providence until he learns the machine better. He finds out at the end of two or three weeks that Providence is not in the oil hole business.

Farmers in general do not find the oil holes in their machinery. If I were making agricultural machinery, I think I would paint oil cans all over the machine; then they might take the hint if they did think that it meant that they were self oiling. Do not counter-bore oil holes unless you do it on the other end, for it makes a bigger place to catch dirt and dust.

If you cannot get oil into machinery without a funnel, use a portable tin one. Messers. Brown & Sharpe have a good dodge on oil holes. They stamp OIL HOLE around the hole, and if the machine is clean and the men can read he knows where to oil and does not oil the pin holes, and let the oil holes go.

In shops where they use axle grease, oil holes must be big enough to let it down. Whoever saw an oil hole stopped up because it was too big? When grooves are made in boxes they should be large. It is a good practice to counter-bore oil holes on the inside if it can be done, as in the case of half-boxes, oil-holes through studs and the like.—*John Coffin, in Wood Worker.*

FRONT ELEVATION OF "SANTA ROSA" COUNTRY DWELLING.

Country Residence.—The "Santa Rosa."

WE present the full plans and elevations, and accompany the same with a general set of specifications for a very convenient and cozy country home to which we have given the name of "Santa Rosa." The plan was designed for a gentleman in the beautiful town of that name, and we are indebted to the architect, Mr. S. C. Newsom, for the privilege of producing the same, and also for the general specifications.

For a country summer residence the plans will bear a careful scrutiny. You pass from a spacious verandah into a commodious hall, from which easy access is had to every part of the house. The usual doors leading to the parlor and dining room are done away with, their places being filled by large archways, designed for portieres. The parlor is quite large, being 14 feet 6 inches by 17 feet 6 inches, with ample windows on five sides of the room. A hallway 6 feet in width connects with the dining room, which is 17 feet six inches square. A commodious pantry is connected with this room, having close connection with the kitchen by the aid of a dumb waiter, made by the Ed. Storm Spring Co., of Poughkeepsie, N. Y. By this arrangement all smell of cooking is confined to its proper place. A large butler's pantry is at the other end of the dining room, fitted up with a sink, etc., and connected by a stairway with the basement. On either side of the front door is a small closet, which will be found very handy for the repository of parasols, umbrellas, etc. In a summer resort the parasols used are as large as umbrellas, and hence we name these closets as a proper receptacle for same.

The library is not only large and well lighted, but due regard to beauty has also been exercised in the construction of the windows. There is also ample wall space for book cases and pictures.

Passing up an easy flight of stairs to the second story, we find 4 commodious bedrooms, and a large bathroom containing all the modern conveniences. Each room is provided with an ample number of windows, thus securing—during hot weather—means for thorough ventilation.

The plans of the basement are well defined, with sizes of various rooms clearly shown.

The front and side elevations give an adequate representation of the building, and the various features presented will bear careful study.

COST.

The cost of the building, as per plans shown, with materials at prices at which they now are, will be between five and six thousand dollars. This amount can be greatly increased according to the finishes used, or can be lessened if the owner so determines.

We present a general set of specifications for the consideration of those who want to erect such a building, but we urge those who so intend to at once employ a competent architect, and not be misled by contractors furnishing plans for nothing. Select an architect in whom you have confidence, and be guided solely by his judgment.

SPECIFICATIONS.

For the Labor, Material and Mechanical Workmanship Required for the Erection and Completion of a "Santa Rosa Unique Dwelling."

To be situated on the corner of Contract and Building streets in the town of Santa Rosa for Richard Heavypurse.

The drawings are to be considered with and are made a part of these specifications.

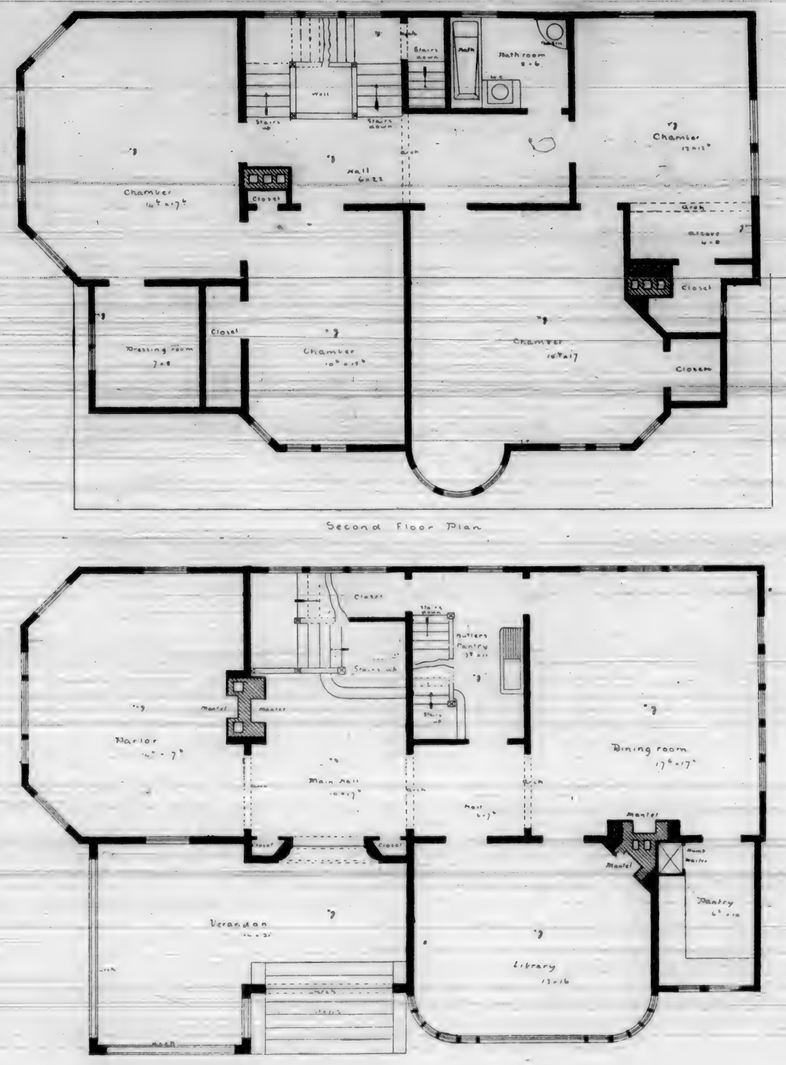
MATERIALS ETC.

All timber to be Oregon Pine (unless otherwise specified) and to be best quality.

All lumber to be Red Wood (unless otherwise specified) and to be well seasoned.

All Doors and Sash to be of Sugar Pine, thoroughly seasoned, made in best manner

All materials to be of the best quality; the work to be done in the most thorough and workmanlike manner, in accordance with the plan and these specifications.



FLOOR PLANS.—"SANTA ROSA" COUNTRY DWELLING.

Buildings to be thoroughly cleaned and swep out, and the premises cleared of rubbish. Windows to be cleaned after building is cleared.

All material to be as specified; otherwise they will not be accepted.

No part of the work to be sublet unless by the consent of the architect and owner.

DRAINS.

To be iron stone, 6 inches diameter; branches 5 inches; joints to be well cemented with best Portland cement; not less than ¼inch to the foot fall; to connect with the sewer or a cess pool according to circumstances.

EXCAVATIONS.

All necessary dirt or rock to be cleared away from intended site; excavations for footings (as for drainings) down to firm ground. Dig bank well away from walls and leave the same open until the walls are dry. After walls are dry, bank the earth against them. The ground to be sloped away from the building—all around—and all surplus earth to be removed.

CHIMNEYS

To be built to correspond with drainings. All flumes to be 8x8. Partitions in chimneys to be not more than 4 inches in thickness. Top out above roofings using pard burned picked brick, laid in white mortar, in accordance with the design and detail drainings.

Ash pit dump grates of iron where ash pits are provided for, Furnish an iron frame, properly walled in place to each ash pit. there to have iron doors hung and secured in appropriate manner as directed.

Thimbles in chimney where required; also provide the neces sary bricks, mortar etc., for setting mantels and grates.

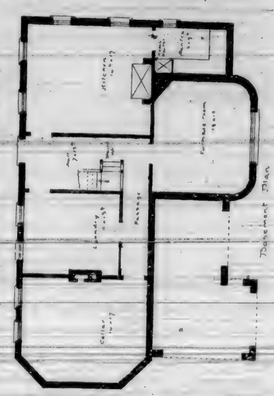
INSIDE FINISH.

Door jambs of Oregon Pine: 1½ inches thick and to be of proper width to receive lath and brown mortar.

SASH STOPS

Or beads, inside at the sides of all the windows, to be fastened with raised head silver-headed screws.

SIDE ELEVATION. "SANTA ROSA."



BASEMENT PLAN.—"SANTA ROSA."

All doors to be hung with loose joint butts of sufficient size to clear the architraves. To be of enameled iron or bronze as owners may select.

Every window—where necessary—to be hung with Ive's Patent Sash Lock. All doors to have same make door bolts.

All necessary hardware to be selected by the architect; to be paid for by the contractor as part of his contract.

BRICK WORK.

Use good, hard burned brick throughout, which are to be well wet before being laid. Best Santa Cruz lime and clean sharp sand to be used in making mortar. All brick walls to be made perfectly level and straight to the proper and exact hight and to a true line from one end to the other.

Piers to be built as per drawings. Turn trimmer arches for the support of all hearths at the time chimneys are to be built.

Underpin all sills with suitable mortar after the walls are up.

HEIGHT OF STORIES.

Basement	8 feet 0 inches
First Story	12 " 0 "
Second "	as per plans.

SIZE OF TIMBERS ETC.

Wall Caps	2 inches	x	8	inches.	Redwood
Main Sills and Trimmers	6 "	x	6	"	Pine.
Plates	2 "	x	4	"	"
Underpinning	4 "	x	4	"	Redwood
Corner Posts	4 "	x	6	"	"
Joists—basement floors	2 "	x	6	"	"
Joists—first inches	2 inches	x	10	inches.	Pine
" —second "	2 "	x	12	"	"
Ceiling Joists	2 "	x	6	"	"
Rafters	2 "	x	6	"	"
Studs	2 "	x	4	"	"
" (corners, door and windows) doubled	4 "	x	4	"	"
Bridging	2 "	x	4	"	"
Studs and joists	16 inches between centres				
Rafters	32 "	"	"	"	

Main sills and trimmers to be halved together; the main sills to run across the building as well as lengthwise.

The entire frame to be thoroughly braced and strongly nailed.

Joists around stairs, fire places, chimneys, etc., to be doubled and framed together in the best manner. Both tiers of joists to have two rows of herring bone bridging well nailed. All partitions to be well braced. Double headers to all doors and windows. All corners to be studded or furred solid before lathing

ROOF.

To have gutters arranged to carry off the water as per directions of the architect. Roof sheating 1x6 Oregon pine, well nailed into each rafter. Use best sawed red-wood shingles laid 4 inches to weather. Fancy Shingles—Where and as shown.

RUSTIC.

Enclose the outside with $\frac{7}{8}$x8 inches red-wood and rustic Same to be hauled to the ground when building is commenced, and properly stacked; laps to be painted before rustic is put on; every butt joint to be painted, and behind each place a strip of tin 3x11 inches.

FLOORS

Will be laid of first quality T. & G. Oregon pine, 1x4 inches; to be stacked on premises at same time as rustic; joints to be smoothed off after nailing; one blind nail and one through nail in each course at each nailing; nails to be well set; no floors to be laid until roof is on.

SASH ETC.

To be made of best clear sapless, dry sugar pine with acorn mold sash bar and weather-lipped meeting rails; to be hung with best Silver Lake braided cord and iron weights; sash 1½ inches thick. Single sash in basement to be hung with butts, and to have necessary fixtures to securely lock same.

DOORS, ETC.

All doors, unless otherwise provided for, to be made of clear, dry sugar pine, free from sap; raised panels and raised mouldings on each side, and must be made in strict accordance with the drawings.

STEP LADDER.

Of Oregon Pine, neatly made, dressed, and painted to be placed where directed—to be used for access to roof.

FRONT STEPS.

To be substantially and neatly built; risers of inch red-wood; treads of $1\frac{3}{8}$ inch Oregon Pine, to have a pitch of not less than $\frac{1}{2}$ inch, to carry off water;

ANGLE BEADS.

Of white pine for all fire-places and chimney corners and all other corners similarly exposed.

FACE CASINGS.

To be 6 inches wide, rosewood, $1\frac{1}{2}$ inches thick; plinths and corner blocks as per details.

BASE.

In all rooms and halls; 10 inches wide, with $2\frac{1}{2}$ inch moulding on top of same. Follow details.

NOTICE.

No inside finish to be put on until the plastering is entirely completed,

All interior wood work to be finished up perfectly clean to be hand smoothed and sand-papered, and at completion, to be properly cleaned, and all stains and finger marks removed or such work as may require finishing in a natural manner.

WASH BASINS.

Will be enclosed underneath with inch I and G redwood, no piece over $2\frac{1}{2}$ inches wide; to have a neat panel door, hung and trimmed with fastenings etc., to correspond to other hardware

WAINSCOTING

Dining room and library to be wainscoted to a heighth of 3 feet; panelled as per details; kitchen to be wainscoted to a heighth of 3 ft. all around, T. and G beaded redwood; capped with nosing and scotia. Butlers pantry same as kitchen, Bath room same 5 ft. high. All wainscoting $3\frac{1}{2}$ inches wide.

Sink in Butler's pantry to be neatly enclosed, properly capped, fluted drain board. Door underneath, well hung and to have proper fastenings.

CLOSETS.

All closets to be fitted up with shelves and hooks complete as directed by the architect.

STAIRS, ETC.

To be built as shown by the plans, in the most substantia manner, to be properly supported and rough bracketed. Risers of Red wood, $1\frac{3}{8}$ inch Oregon Pine treads, tongued and grooved together and both housed into wall string. Treads to have nosings, with fillet and cave under; the finish work of stairs to to be put up after the plastering is thoroughly finished and dry; wall strings $1\frac{1}{8}$ inch, top edge moulded to correspond to base. Front string and landing facias to be finished with Oregon Pine and Red wood, worded and moulded as per drawings.

Newels to be of Black Walnut—thoroughly seasoned—and to be of pattern as per details, Hand rail of walnut, closely bolted at the joints, add to all ports, newells etc.; Newells 8x8 inches.

Rear stairs as shown, with hand rail hung to wall.

MANTLES.

To be of wood, L. & E. Emmanuel's best make, in accordance with the details To cost $100 each.

BATH ROOM.

To be wainscoted all around to a hight of 5 feet. The tub to be neately capped with walnut and the front to be panelled. Water closet is to have seat and flap, hinged, all the work to be put together with screws. Wash basins to have door underneath. Shelves and hooks to be placed where directed.

WASH TUBS.

To be placed in laundry. They are to be made of sugar pine, 2 inch thick for bottom, side and ends, and $1\frac{1}{2}$ inches thick for division 3 divisions, each one having a separate lid hung with brass hinges. To be put together with white lead. Hot and cold water in each division.

LATHING.

Lath to be put on $\frac{3}{8}$ of an inch apart; joints broken every 12 inches, and each lath to have 4 nails; no lath to be put on vertically to finish out to corners and angles; no lath must run through angles and behind studding from one room to another. Carpenter is to personally attend to all the angles and corners and see they are *solid* before lath are put on.

PLASTERING.

All walls, partitions ceilings, throughout the building to be plastered with one coat of brown mortar, and one coat of hard finish. Brown mortar to be made of pure, unslacked lime, and clean, sharp sand free from loam. A bountiful supply of best cattle hair to be used and thoroughly mixed in; to be made at least 8 days before being used. Brown coat to be floated and true.

CENTRES.

Owner to select all centres and brackets. $40 will be allowed to cover the cost of those selected; which amount is to be included in Contractors Contract.

PAINTING etc.

All materials to be the best of their respective kinds. All wood work to be puttied where necessary after priming coat is on. The exterior to have 3 coats of best lead and linseed oil in colors, selected by the owner.

All doors to be painted 3 coats and grained in imitation of black walnut.

Roof to be painted 2 coats Prince's Metallic.

All tin work and leaders same as roof.

Stair Rail, balusters and newells to be filled with Wheeler's Wood Filler and to be finished with 2 coats of shellac and rubbed down with pummice and oil to an even surface.

All wood work must be perfectly clean before filling; care must be taken that the nail holes and other defects, are filled with putty, colored to match the finish of woods where used. Before the second coat is applied on finish work inside, the primed work is to be thoroughly sand papered.

All grained work to be finished with a heavy coat of best varnish.

GAS FITTING.

Gas pipes are to be run in every room as marked on plans. They are to be placed in accordance with the rules and regulations of the Gas Company. The certificate from the Gas Inspector is to be furnished the owner.

PLUMBING.

Water pipes to be $\frac{3}{4}$ inch, nothing less about the building, To be of galvanized iron. All fittings to be of same material. 4 hose cocks to be placed on outside of building where directed by owner.

Tanks to be of 80 gallon capacity, copper made, to have a cover, secured with clasps and staples; 8 inch copper ball, $\frac{3}{4}$ inch cock; $1\frac{1}{2}$ inch standing overflow and plug, and all necessary pipes and connections.

Boiler to be of copper—50 gallon capacity—on an iron stand; sediment cock and all necessary connections.

Sinks to be of galvanized steel; 2 inch waste pipe with Garland Trap under sink; $3\frac{1}{2}$ inch brass strainer; hot and cold water supply, with $\frac{3}{4}$ inch compression cocks. Sinks to be lined up at back of same with zinc, nailed with brass nails.

Two slop hoppers to be placed where directed.

Wash trays to have Garland trap underneath.

Wash Basin—16 inch diameter; $1\frac{1}{2}$ inch waste and overflow; marble top and backs, molded on edge, $1\frac{1}{4}$ inches thick. All the garniture for hot and cold water to be nickel plated.

Bath Tub to be copper lined; $1\frac{1}{2}$ inch waste and overflow, Garland trap; hot and cold water fixtures complete, nickel fixtures.

SACK'S WATER-CLOSET.

To be put in complete according to instructions accompanying each closet.

SAFES.

Of sheet lead under sink, bat-tuinh, wash-basins, water-closets, etc., turned up two inches and well tacked to wood-work all around. To have each $\frac{3}{4}$ inch waste pipes discharging outside. Same under tank.

WASTE PIPES.

The soil pipe to connect direct with sewer. This pipe is to extend up and through the roof. All other wastes are to connect with an open hopper. All wastes to wash basins etc. are to extend up and through the roof. All pipes are to be properly fastened to the walls of ceilings. All joints to be wiped.

TINNING.

All valleys to be tinned, same running up not less than 10 inches under shingles. Tin work in valleys to be rosin soldered.

Put up where marked on detail plan the necessary number of galvanized iron conductors with all necessary curves, bends, etc. to convey the water from the roof to the open hoppers. Conductors to be firmly secured to building with galvanized iron fastenings. Screens over openings in gutters.

Size of conductors, $2\frac{1}{2}$ inches

Window caps, scuttle etc., to be tinned.

Proper flashings in chimneys.

Where tin work of roof comes against the building, the tin must rim up at least 6 inches behind the rustic. All tin flashings to have two coats of paint on under side before being used; also to be painted on top on such portions as wood work or roof covering will lap on; this painting to be done by tinner with metallic roof paint.

SPEAKING TUBES.

One from each pantry off dining room connecting with kitchen. One from upper hall connecting with kitchen.

ELECTRIC BELLS.

One from front door to connect with annunciator in kitchen; one in dining room, main hall on each floor, parlor and two large bed rooms on second floor. Annunciator in kitchen properly secured to wall.

"No adequate idea can be conveyed of the impressions received by a 'tenderfoot' in the center of a forest where such gigantic trees stand in solid phalanx" says a tourist who recently examined some of the redwood trees of northern California. "I was impressed with a sense of fear, loneliness and littleness. Three trees, selected at random in different parts of the forest, measured respectively 80, 76 and 74 feet in circumference, 6 feet above roots, and the first branches to be at least 150 feet above ground, to which point there is no apparent diminution in size. A comparison of those standing with others of equal size and height that had been felled proved to be more than 350 feet to the topmost leaf. To see an isolated tree of such proportions is an interesting spectacle, but to be in a narrow path where they are in such proximity to each other as to momentarily change one's course is a novel experience, yet a strangely pleasurable one."

Filling Contracts.

Fill your contract. If you make a contract, fill it if it "takes a leg." If you get caught in a trap, bleed if it need be, but don't squeal. Bought wit comes high sometimes, but most men must have it. If you sell what you have not got and don't know where to get it, hustle until you find it. The man you sold to sold to another man, and *he* has *got to have it;* there's no let up with him, he has got to have what he bought; and if he don,t get it from the man who sold it to him, there will be a squeezing of the lemon until the oil runs out of the rind. If you are fool enough to make a foolish contract, stand by it like a man, it will save you from doing such a foolish thing in your future transaction. The laws of business demand that each man shall do just as he agrees.—*Chicago Lumber Trade Journal.*

The task of Uncovering the Sphinx.

The last occassion on which the great Sphinx was cleared down to the level on which the paws rest was in honor of the opening of the Suez Canal, in 1864. The over-shifting sands had, however, reburied it almost to the throat when Professor Maspero during his last year of office at Boulak, began again the work of disinterment. This work has now been going on somewhat intermittently for more than twelve months, and is at the present time in active progress under the direction of Professor Maspero's successor M. Grebaut, and is, according to the London *Times* conducted in the following manner. A tramway has been laid down from the Sphinx to the edge of the pyramid plateau, passing close under the west face of the granite building popularly, though incorrectly, called the Temple of Sphinx. Under the tamway light trucks convey the sand to the point of which their contents are discharged, the trucks being loaded by Arabs of both sexes and all ages, who carry the sand upon their heads in large flat baskets, ascending and decending all day long from the excavations below to the tamway above, and vice versa. The means look curiously inadequate, but the results are astonishing. Already the entire forepart of the great stone monster is laid bare, and already the huge chest, the paws, the space between the paws, the altar in front of them, and the platform upon which they rest, are once more open to the light of day. Nor is this all. Between the Sphinx and the edge of the pyramid plateau a vast space has also been cleared, thus bringing to view a fine flight of steps, some forty feet in width. These steps, which are described by Pliny, were uncovered by Caviglia in 1817, but have been entirely lost to sight for nearly seventy years. A second flight of steps and the remains of two Roman buildings were also found by Caviglia, and will again be brought to light if M. Grebaut continues to work in this direction.

THE RIGHT OF THE SPHINX,

That is to say the direction of the granite temple, to the southward—a further excavation is in progress, the result of which will probably confirm the surmises of those who believe the Sphinx to stand in a huge artificial amphitheatre hewn out of the solid rock. This gigantic work would, of cause, be contemporaneous with the Sphinx itself, whice Mariette attributed to the mythic ages before the advent of Mena, the first King of the first dynasty, and which Maspero considers to be, if not actually prehistoric, at all events the oldest monument in Egypt.

From the level of the area below the great flight of steps (which lead down and not up to the Sphinx) one now measures the whole hight of the huge human-headed monster, whose battered countenance stands out against the cloudless sky one hundred feet above. The space between the paws is thirty-five feet long and ten feet wide. This space was anciently converted into a small sanctuary lined with votive tablets, only one of which—the famous stela of Thothmes IV—yet remains in sight. This stela records how the king, when upon one of his hunting expeditions, lay down to rest at mid-day in the shadow of the Sphinx. He there fell asleep and dreamed a dream in which the venerable image conjured him to clear away the sand in which it was nearly buried. Then the Prince awoke and "made silence in his heart," and vowed to do that which the god had commanded.

THE PAWS OF THE SPHINIX,

As they now appear, are a restoration of Roman date, being cased in comparatively small slaps, and to some extent hollow underneath. The breast of the Sphinix has likewise been faced with slabs, apparently in Roman times, and these slabs have again been repaired by cutting away the weathered surface and inserting a fresh facing. Like the legs of the Colossi of the plain and those of the great statue of Aboo Simbel, the paws of the Sphinix are covered with the Greek scrawls of early travelers; but these graffi-ti are mostly of a late period, and so slightly scratched that few are legible. Such as they are, however, Professor Maspero has, it is understood, devoted himself to the ungrateful and difficult task of translating them.

M. Grebaut's elevations are not limited to the clearing of the Sphiuix only. Various interesting tombs have lately been discovered in the vicinity of the great Pyramid, and to the westward the face of the Libyan cliff has been reached, where it forms the natural boundary of the Pyramid plateau. Some good early rock-cut tombs, with built fore courts, have been found in the face of this cliff in two of which the walled-up recesses or secret chambers, called "serdab," which were constructed for the safe-keeping of funerary portrait statues, are yet intact with their contents.

No two men do work exactly alike; every good workman has ideas of his own, and when he attempts to follow out ideas given by the foreman or some one else, he is pretty sure to make a "botch" of it. General principles are the same, but the details should invariably be left to the workman himself, otherwise he not only loses confidence in himself, but becomes a mere machine which requires constant watching.

STEEL SQUARE AND ITS USES.

We have just received a large number of the above named book. A copy will be sent to any address upon receipt of ONE DOLLAR It contains a full treatise on the Carpenter's Steel Square and the numerous uses to which it may be applied.

Fireproof Building Material.

The *Real Estate Record* says that fire ruins show that porous terra cotta bricks and blocks best resist fire, water and frost. Next to these in the order of fire resisting qualities come concretes and burned clay work. In the best work done the iron work is encased in porous terra cotta, tile, or brick work in roof, floor and tile construction. The hollow tiles are faced with vitreous tile slate, or any good weatherproof coating, or with a single thickness of brick. Iron and steel framework incased in fireproof materials gives the best possible results. There is a growing preference for light porous walls of hollow material protecting and iron or wooden framework. Massive and heavy walls of brick or stone will do for architecture, but they are not as much of a mechanical necessity as they were regarded a few years ago.

The McClelland Anti-Siphon Trap Vent.

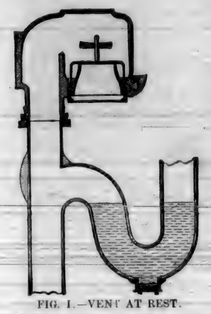

FIG. 1.—VENT AT REST.

This vent fulfills all the conditions sought to be secured by trap vent pipes, and possesses the merit of great simplicity and economy, with absolute security.

It admits a free flow of air into the waste pipe on the sewer side of the trap whenever a slight vacuum pressure occurs, without disturbing its seal. The air enters through an open thimble, extending upward; and the opening is closed by an inverted cup, whose edges dip down into an annular groove containing mercury. (See Fig. 1.)

This cup is very light, so that it is lifted out of the mercury and suspended by the inflowing air whenever a partial vacuum occurs in the pipe, as shown in figure 2; but drops back into the mercury the instant the demand for air ceases. The deep seal thus formed, by the mercury around the edge of the cup, furnishes absolute security any outflow of sewer air.

Practical experience has demonstrated that each trap must be so vented as to receive on its sewer side an instant supply of air sufficient to meet every demand, without disturbing its seal.

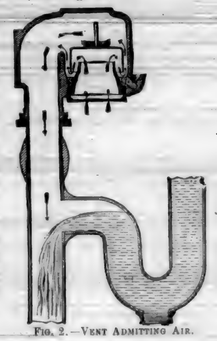

FIG. 2.—VENT ADMITTING AIR.

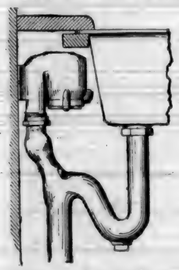
ITS ADVANTAGES ARE:

That it affords *absolute security against siphonage*, in all proper situations; while the same security is *not* furnished by any other means.



That it simplifies the drainage system by discarding long lines of vent pipes, reduces the amount of material and the number of joints to a minimum, and correspondingly reduces the danger of leaks.

That since the vent is in plain view, it can be inspected with convenience and certainty; vent pipes, on the contrary, are usually concealed in the walls and cannot be readily inspected.

That it combines the greatest simplicity, and is easily applied either in new work or repairs; while vent pipes are complex, costly and unreliable, and their introduction is especially annoying and destructive to finished walls.

The Vent should be connected with the crown of the trap, by a short piece of pipe, extending upward to a convenient fastening place as nearly level with the top of the fixture as possible. It is sometimes found convenient to carry the Vent above the fixture, and this is recommended to be done when practicable. It should be put up level and securely fastened.

Manufactured by the DuBois Manufacturing Co., 245 Ninth Avenue, New York City.

Architects Interviewed.

"Interviewing" is all well enough in its way, when truthfully reported, but it is all wrong when the "interviewer" gives to the public, statements of his own concoction, accredited to the "interviewed" who has not been seen at all, and who in fact has said nothing.

An illustration in this connection is found in the reporters interview of several architects and others published in the *Examiner* of July 6th, in regard to the concrete foundation of the Larkin street wing, of the New City Hall, which among others named as "interviewed," James E. Wolfe, architect. This was a decided error on the part of the "interviewer," as Mr. Wolfe was not seen, and did not make any statement whatever upon the uestion in issue.

Self Lubricating or Norris Anti-friction Pulley.

Any of the Norris Pulleys made Self Lubricating or Norris Anti-friction when so ordered.

We particularly desire to call the attention of Architects and Builders to the illustration of the Norris Anti-friction or Self Lubricating Pulley. With this Pulley, Messrs. Norris & Co. have overcome a great difficulty hitherto existing with Sash Pulleys. It is well known when two metals are working together without any lubricant that they become dry and commence to wear. Especially so is this the case with Sash Pulleys; as it is almost impossible to reach them with oil, they soon rattle and become so noisy, that it is disagreeable and unpleasant to raise the windows.

Many attempts have been made to overcome this, some by having pins to revolve around the main pin or axle of the pulley, and various other ways; but none of them give satisfaction, as in a very few years they make more than those having the simple pin or axle.

By examining the illustration, you will see that Norris & Co. have overcome all noise and wear by keeping the Pin or Axle always Lubricated.

All Pulleys near on top of the pin as all the weight is downward. Norris & Co. use a very large size Steel or Gun Metal Pin and on top of pin where the wheel bears on it, they cut a chamber and in that chamber they place a lubricating substance which does not run out or evaporate, thus making it impossible for the wheel or pin ever to wear away or have any friction.

Where there is no wear or friction, you have No Rattle or Noise. Norris & Co. guarantee all their Self Lubricating Pulleys to be perfectly noiseless; they will on application send samples to any Architects, Builders, or Mill Men free of charge.

We have been in Messrs. Norris & Co's warehouse and know they make the largest assortment of Pulleys of any house in the World.

They make over 1600 different qualities, varying in price from 20 cents to $36.00 per dozen. For further particulars, address C. Sidney Norris and Co., Baltimore, Md.

Steel Square and its Uses.

We have just received a large number of the above named book. A copy will be sent to any address upon receipt of ONE DOLLAR. It contains a full treatise on the Carpenter's Steel Square and the numerous uses to which it may be applied.

CITY BUILDING NEWS.

Army, near Dolores, three one-story frame. Owner and builder, J. C. Weir; cost, $6,000.

Bush, cor Montgomery, alterations; cost, $2,500.

Bush and Sansome, six-story stone and brick bank. Owner, First National Bank; architect, Wright and Saunders; contractor, F. E. Knowles & Co.; cost, $47,680; signed July 11, 1888; filed July 30, 1888; limit Feb. 11, 1889.

Payments to be made at the rate of 75 per cent as work progresses on the 1st of each month; balance usual 35 days.

Bush and Sansome, iron contract. Owner, First National Bank; architects, Wright & Saunders; contractors, Bigelow & Little; cost, $10,133; signed, July 11, 1888; filed July 27, 1888; limit, Nov. 1, 1888.

Payments.—Full payments to be made for steel beams and iron girders, when in; 75 per cent as rest of work progresses on 1st of each month; balance, 35 days.

Bluxome bet. 4th and 5th. Alterations. Owner, Mrs. M. F. S. Searles; architects, Schultz and Meeker; contractor, Thos. Day; cost, $1,086; limit, Aug 15, 1888; signed, July 7, 1888; filed, July 13, 1888; sureties, B. Joost and W. Thyarks; amt. of bond $350.

1st payment $811 when completed. Balance usual 35 days $275.

Buchanan bet. Turk and Eddy. Alterations. Owner, Thos. Robinett; architect, G. V. Capeletti; contractor, G. B. Ferrari; cost, $1,250; limit, 40; signed, June 21, 1888; filed July 3, 1888; sureties Blyth & Trott; amount of bond $1,250.

1st payment when frame is up, $300; 2d when completed, $300; 3d, usual 35 days, $650.

Bank nr. Lincoln. Cottage; owner, Lizzie Keller; contractor, B. Pfarrar; cost, $800; signed, July 12, 1888; filed, July 23d, 1888.

1st payment, when shingled, $400; 2d, when brown coated, doors, etc., in, $200; 3d, 200 in $10 monthly installments with 8 per cent. interest.

Bush and Sansome. Carpenter work. Owner, 1st National Bank; architect, Wright and Sanders; contractor, I. H. Day; limit, May 29, 1889; 75 per cent. to be paid on 1st of each month as work progresses. Balance 35 days; filed, Aug. 4, signed, July 25.

Clay and Laguna. 2-story residence. Owner, Jno. A. Hooper; contractor, Burbee & Judson; architect, J. C. Mathews & Son; Cost $18,280; limit, 155 days: signed, June 25, 1888; filed, July 9, 1888.

Payments, 75 per cent. as work progresses; balance usual 35 days.

Cliff House. 6 stores and tenements. Owner A. Sutro; architect Wm. F. Smith; contractor S. H. Kent. cost $11,000; Security F. P. Latson; limit 90 days; signed July 11, filed July 13.

Payments, four payments of $2,000 each, balance 35 days.

Clay and Buchanan. 2-story dwelling; owner, Mrs. E. B. Hopkins; architects, J. C. Matthews; & Son contractors, Knight & Littlefield; cost, 15,995; limit, 6 months; signed July 2, 1888; filed July 21, 1888. 1st payment, 75 per cent. as work proesses; 2d, balance usual 35 days.

Clay and Jones. 3 frame buildings. Owner, Magdalen & Co.; architects, Macy & Jordan; contractors, Bateman Bros.; cost, $14,850; limit, 90 days; signed, July 17, 1888; filed, July 20, 1888; sureties, Moore & Hansen; amount of bond, $8,000.

1st payment, when roofed, $2,500; 2d, when floors are laid, $2,000; 3d, when brown coated, $2,500; 4th, when white coated, and fronts finished $2,000; 5th, when ready to paint; 6th, balance, usual 35 days, $3,850.

Clay bet. Scott and Devisadero. 2 residences. Owner, Geo. C. Brooke; architect, J. M. Curtis; contractor, A. H. Plummer; cost, $4215; limit, Oct. 1st, 1888; signed July 5, 1888; filed July 11, 1888; sureties, F. Kalfleisch, Blyth and Trott.

1st payment when ready to plaster $1053.75; 2d payment when painted $1053.75; 3d payment when; completed $1053.75; 4th usual 35 days $1053.75.

Ellis bet. Polk and Van Ness. 3 story frame. Owner, Wm. John; architects, John & Zimmerman; contractor, F. W. Kern; cost $7050; limit, Oct. 15, 1888; signed, July 7, 1888; filed, July 12, 1888; sureties, B. Joost; and O. W. Nordwell; amount of bond $7000.

1st payment when frame is up $1000; 2d payment when partitions are set $1500; 3d, when outside is done $1000; 4th inside ready to paint $1800; 5th 35 days or releases given, $1750.

Fell and Webster. 2-story frame; owner, G. Trautner; architect, H. Geilfus; contractor, J. F. Logan; cost, $2,669; limit, Oct. 15 1888; signed, July 18, 1888; filed, July 20, 1888.

1st payment when frame is up, $550; 2d, when floors are laid; 3d, when rough coated, $550; 4th, when hard finish and inside finish on, $550; 5th, when completed, $589; 6th, usual 35 days, $919.

Ford bet. Sanchez and Noe. Alterations. Owner P. Hurue; architect, Hurue and Everett; contractor, F. Buckley; cost $1,825; signed, July 9, 1888; filed, July 10, 1888.

1st payment additions completed $912.50; 2d repairs completed $456 25. Balance usual 35 days $456.25.

Franklin and Ellis, plumbing. Owner, Academy of Sacred Heart; architect, C. J. I. Devlin; contractors, Sweeny & Kearns; cost, $4,645.

1st payment, when sewers are set and heating pipes to first floor, $750; 2d, when all pipes are in, $1,500; 3d, when completed, $1,230; 4th and balance, 35 days, $1,165; limit, Oct. 15; signed June 22, 1888; filed June 22; sureties, Hurlbut & Rosslance; amount of bond, $4,000.

Fair Oaks, near 22d, two-story frame and additions in rear. Owner, Lawton; cost, $5,000.

Fifth, near Bluxome, additional story to frame building; cost $900.

Fifth, nr Brannan, two-story frame; cost, $2,200.

Fremont between Market and Mission. Carpenter work to brick building, owners, Huntington, Hopkins & Co; architect Wright & Sanders; contractor C. C. Terrill; cost $25,000; time 6 months; signed June 30; filed Aug. 1.

Payments, 75 per cent. as work progresses on 1st of each month; balance 35 days.

Fourth, between Bryant and Harrison. 3 story frame. Owner Cutter & Casar; architect M. J. Welsh; contractor, Taubman & Armstrong; cost $8,645; limit for carpenter work 90 days; signed July 3d, '88; filed July 9th, '88; sureties Geo. W. Watson and R. L. Taylor; amount of bond $8,645.

1st payment when frame is up $1,729; 2d, when brown coat of mortar is on $1,729; 3d, when exterior is completed $1,729; 4th, when building is entirely completed $1,729; 5th, usual 35 days $1,729.

25 and 627 Front street. 1 story brick and basement. Owner C. Harris; architect P. J. O'Connor; contractor C. B. L. Jones; cost $2,675; limit Aug. 10, '88; signed June 23, '88; filed July 18, '88.

1st payment when west wall is underpinned and first floor joist on $1,200; 2d, payment when completed and all claims paid $1,475.

Filbert, bet Mason and Taylor, additional story and improvements; contractor, Battiste; cost, $2,500.

Green, nr Dupont, repairs; cost $500.

Green, bet Kearny and Dupont, repairs; cost, $500.

Geary and Mason, three-story frame. Owner, M. Meyerhoff; architects, Schmidt & Son; contractor, M. C. Lynch; cost, $7,822; signed, July 24, 1888; filed July 25, 1888, limit, 83 days; sureties, P. Swift and Jno. Lewis.

1st payment, when frame is up, $1,427; 2d payment, when outside finish is on; $1,465; 3d payment, when hard finished, $1,465; 4th payment, when completed, $1,465; 5th payment, balance, usual 35 days, $2,000.

Green nr Laguna, 2 story frame. Owner, W. J. Smith; architect, John & Zimmerman; contractor, Schultz & Krecker; cost $3,555; limit Oct. 15, '88; signed July 14, '88; filed July 17, '88; sureties C. W. Gercke & F. C. Jensen; amount of bond $3,500.

1st payment when building is framed $700; 2d payment when floors are laid $500; 3d, rough mortared and outside finish on $700; 4th, inside ready to paint $755; 5th, when all bills are paid or 35 days $900.

Golden Gate Ave. and Steiner. Grading, owner, T. W. Riordan; architect, C. J. J. Devlin; contractor, McHugh & Kenny; Cost $5,559; signed, July 20, 1888; filed, July 23, 1888; limit, Dec. 18, 1888; surities, Degan P. and Jas. Mahaley; amt. of bond, $5,000.

Payments, 75 per cent. as work progresses, on the first of month; balance, 35 days, as usual.

732 Geary. Alterations; owner, S. Wood; contractor, Wm. Little; cost, $1,950; signed, July 7, 1888; filed, July 19, 1888.

Payments, 75 per cent. as work progresses; balance usual 25 days; no payment less than $400.

Geary and Devisadero addition; owner, D. Hartnett; architect, F. J. Welsh; contractors, Baldeman Bros.; cost, $2,750; signed July 23, 1888; filed July 30, 1888; limit 60 days.

1st payment, when framed, $687; 2d, brown coated, $687; 3d, when completed, $687; 4th, usual 35 days, $689.

Hayes, cor Laguna, additional story; owner, Little; contractor, A. Newbert; cost, $5,000.

Hayes, nr Lott, two additional stories; owner, C. L. Ayers; architect, M. J. Welsh; cost, $3,500.

Hayes, cor Baker, 1½-story stable; cost, $1,800.

Hayes, nr Octavia, additional story; cost, $2,500.

Lombard, bet Stockton and Dupont, 1-story frame; owner, Bellett; contractor, McCracken; cost, $3,000.

Lombard and Kearney. 2-story frame; owner, Jno. McGrath; architect, Jno. T. Kidd; contractor, Wm. Commary; cost $2,452; limit, 70 days; signed, July 20, 1888; filed, July 21, 1888; surety, F. P. Latson.

1st payment, when framed, and flooring on hand, $500; 2d, when partitions are set, $600; 3rd, brown coated and front up, $300; 4th, when completed, $439; 5th, $600 35 days.

Mission and 12th, additional story. Owner, Jas. Palmer; architect, Chas. Havens; contractor, D. Chisholm; cost, $6,020; signed July 28, 1888; filed July 30, 1888; limit 30 days; sureties, Frank P. Latson and J. McKinnon.

1st payment, when partitions are set, $1,000; 2d payment, when outside finish is on, $1,000; 3d payment, standing finish is on, $1,250; 4th payment, completed, $1,250; 5th payment, usual 35 days, $1,520.

Market and Ecker. Alterations; owner D. N. & E. Water; architect, Schultz & Meeker; contractor, Mahoney Bros; cost $43,000.

1st payment 75 per cent. as work progresses on, first of month from Sept. 1st; balance usual 35 days.

Mission and 12th, plumbing; owner, Jas. Palmer; architect, Chas. I. Havens; contractors, Fritz & Kean; cost, $1,000; signed July 28, 1888; filed July 28, 1888.

1st payment, when rough pipes are in, $500; 2d payment, when completed, $500.

Masonic Cemetery. Moseleum. Owner, E. J. Baldwin; architect Pissis & Moore; contractor A. McClennan; cost $6,976; limit 1 year; signed July 17, '88; filed July 18, '88.

1st payment 75 per cent. Feb. 1st, '89 or upon completion; balance usual 35 days.

Mission, No. 548; improvements; cost, $800.

Mission, near 1st, repairs; cost, $2,500.

Montgomery Av., cor Broadway, 1-story brick; cost, $1,000.

Natoma and 7th, three-story frame. Owner, Daniel Sullivan; architect, A. J. Barnett; contractor, Brennan Bros.; cost, $5,194; signed July 16, 1888; filed July 28, 1888; surety, Frank P. Latson; amount of bond $2,500.

1st payment, when roof is on, $1,200; 2d payment, when brown coated, $800; 3d payment, white coated, $600; 4th payment, when completed, $1,294; 5th payment, usual 35 days, $1,300.

New City Hall, contract let for fifteen cast iron columns and two tiers rolled iron joists. Contractors, Risdon Iron Works; cost, $50,000.

Nebraska bet Sonoma and Yolo. 2 story frame. Owner, J. Kenry; architect, M. J. Welsh; contractor, H. I. Bray; cost, $4,500; sureties J. F. Kennedy, P. Donohue; limit, 80 days, signed July 12; filed, Aug. 1.

Payments, framed $900; brown mortar on $900; outside finish on $900; completed $900; balance $900—35 days.

Oak and Cole, one-story frame. Owner, Jno. F. Schroeder; contractor, R. Sinnott; cost, $2,480; signed July 19; filed July 24, 1888; limit, Oct. 1; sureties, R. Warren and B. Joost; amount of bond, $2,000.

1st payment, when building is shingled, $612; 2d, when brown coated and drop frames set, $612; 3d, completed, $612; 4th, balance, 35 days, $614.

Pierce and Oak, two-story frame. Owner and builder, A. H. Bailey; cost, $4,500.

Page, nr Pierce, two two-story frame. Owner and builder, H. Keenan; cost, $6,500.

Post and Lyon, 3 frame buildings; owner J. H. Seeba; architect Wm. Mooser; contractor, R. P. Sanchez; cost $2,350; limit 105 days; signed, July 18, '88; filed July 19, '88; surety, F. P. Latson; amount of bond, $8,000.

1st payment 75 per cent. as work progresses, and balance, 35 days.

Ridley and Elgin Park, three-story frame. Owner, C. F. Scheele; architect, W. Winterhatter; contractor, A. McElroy; cost, $6,445; signed, July 18, 1888; filed July 24, 1888; limit, 80 days; sureties, F. Joost & W. Shyarks; amount of bond, $4,000.

1st payment, when building is roofed, $1,250; 2d payment, when building is brown coated, $1,250; 3d payment when hard finished, $1,250; 4th payment, when building is completed, $1,250; 5th payment, balance, usual 35 days, $1,445.

Ridley bet Scott and Devisadero. Double tenement. Owner Jos. Alex; architect H. I. Bestor; contractor G. A. Nagle; cost $2,970; securities Lewis & Swift, $1,500; limit 65 days; filed July 16, signed 14th. Payments, when framed $500; brown mortar on $600; plastering finished and outside work done $520; balance $750, 35 days.

Shotwell, nr Twenty-Fourth, -story cottage. Owner, P. Donahue. Architects Townsend & Wyneken; contractors, Thompson & Moore; cost, $2,800, limit, Oct. 1, 1888; signed, July 10, 1888; filed, July 13, 1888; surety, B. Joost; amount of bond, $2,000.

1st payment when roof is stripped, $700; 2d, when brown-coated and outside finish is on $700; 3d when hard finished and sash hung $700; 4th payment usual 35 days $700.

Sutter bet Franklin and Gough. Alterations. Owner, M. Haller; architect Schmidt & Shea; contractor, James Irwin; cost, $2,540; limit, 70 days; signed, July 10, 1888, filed July 13, 1888; O. J. Preston and J. J. McKinnon, sureties.

1st payment partitions set $600; 2d payment $600 when brown-coated and outside finish on; 3d payment when completed $700; 4th usual 35 days $640.

Shotwell No. 506 Alterations. Owner, Kate Conville; architect, M. J. Welsh; contractors, Donovan & Williams; cost, $1,650; securities J. J. Green, H. M. Wrede, $1,625; limit, 50 days; filed Aug. 1, signed July 28.

Payments, framed $400; brown mortar on $400; completed $400; balance 450—35 days.

Second nr. Howard. Residence. Owner, W. J. Bryan; architect, J. J. Clark; contractos, R. O. Chandler; cost, $6,600; limit, 60 days; signed, July 3, 1888; filed, July 3, 1888; sureties, B. Joost & F. M. Stevens; amount of bond, $5,000.

1st payment, when frame is up and brick work done, $1,850; 2d payment when partitions areset, $1,550; 3rd, when inside is finished, $1,550; 4th, the usual 35 days, $1,650.

Stevenson nr. Ridley. Additions. Owner, Martin Doyle; architect, P. Lynch; contractor, P. Lynch; cost, $2,869.

1st payment, when frame is up, $800; 2d, when brown coat of mortar is on, $670; 3d, when hard finished $681; 4th, 35 days after completion, $718.35; limit Sept. 14; signed June 26, 1888; filed, July 2, 1888.

Sixth and Jessie. 4-story frame. Owner T. L. Barker; architect, Clinton Day; contractor J. T. Grant; cost $63,666; limit 8 months; signed June 23, '88; filed July 18, '88.

1st payment when 1st floor joists are in $5,000; 2d, when masonry of 1st floor is built $9,000; 3d, when 3d and 4th story joists are set and second and third masonry done $10,000; 4th payment, when roofed and brown coated $10,000; 5th, when doors and windows are hung and inside ready to paint $10,000; 6th payment, balance and 35 days after completion.

Sacramento, nr Webster, (in rear) additional story; cost, $1,500.

Webster, nr Sutter, additions; cost $600.

Treat Av., near 23d, 1-story frame. Owner, J. Granville; contractor, F. Nelson; cost, $1,750.

Twenty-seventh, near Guerrero, 1 story frame; owner, F. Donahue; contractor, M. Loftus; cost, $1,700.

Third, bet Brannan and Townsend, stable and alterations. Owner, Max Popper; architect, A. J. Barnett; contractor, McCann & Riddell; cost 2,500. Limit, 28 days; signed July 2, 1888; filed, July 2, 1888.

1st payment, when completed, $1,538 50; 2d and balance, usual 35 days, $572 50.

133 Twelfth. Alterations. Owner, Catharine Gersing; architect, Geo. E. Voekel; contractor, F. C. Adams. Cost $2,390; signed, July 19, 1888; filed, July 23, 1888; limit, 72 days.

1st payment, foundation in studding up, etc., $200; 2d, brown coated, $200; 3d, when plastered, $200; 4th, when ready to paint, $390; 5th, when accepted, $800; 6th, when accepted, $800; 7th, usual 35 days, $600.

Treat ave nr 25th. Frame building. Owner Jos. Granville; architect F. Nelson; contractor F. Nelson; cost $1,600; limit Sept 3d; signed July 5, '88; filed July 5th.

1st payment when enclosed $400; 2nd, when brown coated $400; 3d when completed $400; 4th usual 35 days $400.

Third nr Brannan. Excavations. Owner, Kohler and Von Bargen; architect, H. Geilfuss; contractor, G. Raisch; Cost $1,100; limit, Sept. 1st. When complete $825; balance $275—35 days.

Union and Leavenworth. Plastering five buildings; owner, G. Rocca; architect, Wm. Mooser; contractor, Alex Mennie; cost $1,900; signed, July 3, 1888; filed, July 21, 1888.

1st payment, when brown coated, $700; 2d, when completed, $700; 3d, according last payment, main contract $500.

Van Ness Ave. and Jackson. Residence. Owner, F. A. Frank; architect, Clinton Day; contractor, Jas. M. Kelly; cost, $22,900; limit, Feb. 25, 1889; signed, June 30, 1888; filed, July 9, 1888.

1st payment, when roof is ready to shingle, 4,000; 2d, when brown mortared, $5,000; 3d, exterior ready to paint; 4th, inside ready to paint, $4,675; balance, usual 35 days.

Van Ness avenue and McAllister. Additions to 3 buildings; owner. J. Du W. Allen; architect G. E. Voelkel, contractor W. H. Elliot: cost $10,837; limit 90 days; signed July 19, filed Aug. 1.

Payments, when brick foundations are in $800; frames up and chimneys built $1,000 ready to plaster $1,200; outside finishes done $1,500; ready for painting $2,000; completed $1,752; balance $2,585, 35 days.

OAKLAND.

Stephen Watts has contracted to build for S. H. Smith a handsome frame cottage on Seventh avenue, to cost $2,280.

B. Spencer has secured the contract for the building of the new residence for Judge W. F. Henshaw, in East Oakland. The contract price was $6,247.

W. K. Weilbye is building for Mary Howard a two-story frame house on Brush street near Seventeenth street, to cost $8,000. It is to be completed by October 25th, and will be paid for in three installments of $2,650 each.

H. Sackville is building for A. J. E. Furbish a two-story frame cottage, to cost $3,500.

The frame work for the second story of the Canning block is up and the building will be completed by September 15th.

W. G. Reese has in course of construction a frame cottage for J. Marchi, an Cypress street, near West Twelfth street. The cost will be $4,363. Pissis & Moore are the architects.

H. E. Hatch is building for M. S. Baker a frame cottage on East Twenty-first street, near Twenty-ninth avenue. The cost will be $2,200.

McLeod & Herbst are building for M. Noonan a store and barn for $3,190.

The Hambleton stables, which were destroyed by fire some weeks ago, are being rebuilt.

A. W. Pattiani & Co. are building for E. C. Sessions a cottage on Twenty-fourth avenue, near East Twentieth street, in the Sessions tracts, East Oakland. The contract price was $1,040. The building is a modern Queen Anne cottage.

W. W. Wilkins is having a residence built in North Oakland. Nelson & Nickerson are the contractors. The cost will be $2,860.

G. M. Flick has contracted with M. A. Lent to build for the latter a residence on the south side of east Sixteenth street, 100 feet east of Eighth avenue, for $4,000. It is to be a two-story frame building. Payments are to be made in installments of $1,000.

Burpee & Judson have contracted with the Seventh avenue Congregational Church to erect a church edifice on the northeast corner of Eighth avenue and East Fifteenth street to cost $10,180.

ALAMEDA.

A considerable amount of building is in progress in Alameda at present, though work has been quiet during the early part of the spring. This is attributed to the high price of lumber. The prices are now beginning to fall, owing to the decreased demand in the south. The activity of the city in improving its streets and sidewalks, constructing sewers and supplying electric lights has attracted the attention of those who wish quiet homes, and the city will undoubtedly increase its population.

The largest house that is now in the course of construction is that of Mrs. Clara A. Bissell wife of the passenger agent of the Atlantic and Pacific railroad, at the corner of Alameda avenue and Union street. When completed it will be a magnificent residence, and one of the largest and most costly that has been erected in Alameda for several years. The foundation has already been laid. It will be two stories in heignt, with a large basement and attic, and will contain fifteen rooms. It will be elegantly fitted up and furnished throughout with all modern improvements. Its style of architecture is of a high order. The cost will be $10,000.

Miss E. Wingate, a music teacher in San Francisco, is building a very handsome cottage on Paru street near Encinal avenue. It will contain six large rooms, and will cost in the neighborhood of $2,000.

B. S. Hill, who is at present residing at 2916 Santa Clara avenue, is building a two story dwelling, containing ten rooms, at the corner of Morton street and Encinal avenue. It is being built by day work, and the estimated cost is $3,000.

G. Laver is building for C. Winter a one story cottage on Pacific avenue. The cost will be $1,230, and the building will be completed by August 1st. A. R. Denke is the architeet.

J. J. Denschl is building a frame house on Charles street, near Railroad avenue. The contract price is $3,250. The architects are F. X. Fisher and V. L. Fortin.

G. A. Flash, an artist of considerable fame, is building on Regent street, south of San Jose. The building is being arranged so as to allow for a large studio and art gallery for the artistic owner.

Mr. Gale's residence at the corner of Central avenue and Regent street, Alameda, is about completed.

Pattiani & Co. have begun for M. E. & E. Schieffein two frame cottages on Alameda avenue and Lafayette avenue, Alameda. The cost will be about $1,300 each. They will be very pretty, comfortable little buildings.

RIVERSIDE.

P. Munroe is building a ten-room house on Hall's addition. When completed it will cost about $4,000.

Work on the new school building is progressing finely. The contractors, Down & Alguire, have a large force of brick masons at work and are pushing the work vigorously. It will require in the construction of the building 1,200,000 bricks.

A. McCrary & Son have just taken a large contract for flume work for Fudickar & Howes', upon which they have already commenced. They are also busy putting in the culverts for the motor road.

IMPROVEMENT CONTEMPLATED IN SANTA ROSA.

The buildings are being removed from the property on the corner of Fourth and A streets, known as the Dr. R. P. Smith residence, and it is the plan of the owners to have a large business block erected upon it. Guy E. Grosse, B. M. Spencer and C. A. Wright purchased the property last fall. There has been a proposition made to erect a two-story wooden building upon the lot, but the owners are desirous of using only brick material. Although nothing definite has been determined, Mr. Spencer says it is the intention to mark the spot by a large business building.

LIVERMORE.

J. Gayetti is building a story-and-a-half side addition to his residence on Junction avenue.

The plans and elevation for Philip Anspacher's proposed new cottage, at the corner of L street and College avenue, are completed, and the contract will soon be let.

A NEW CHURCH.

Over $7,000 have been raised by subscriptions for the building fund of Christ (Episcopal) Church. It is the intention of the vestry to build a church edifice costing in the neighborhood of $18,000, on their recently acquired lot, corner of Santa Clara avenue and Grand street, Alameda, and it is possible that work will be commenced upon it within sixty days. The vestry have not yet positively decided what they will do with the present church building.

BUILDING OPERATIONS IN SEATTLE.

The Seattle Gas Light Company has let a contract to Otto Ranke for the construction of a new gas house, adjoining the old one, which, when completed, will cost in the neighborhood of $30,000. The structure will be of the same width as the present house and 140 feet long. It will have a stone foundation, and will be built of brick and cement, and will be two stories high. The foundation has already been laid, and Mr. Ranke expects to begin laying brick on the superstructure next week. He has one kiln of brick ready for use, and another ready to be burned. When this building is completed the gas company will have the necessary facilities for more than doubling its present supply of gas.

"Work is coming in faster than we can get away with it, said Mr. Steinman, the architect, Saturday. I have just opened bids for Mrs. H. A. Atkins' three-story building, to be erected on Columbia street, between Third and Fourth streets. J. Sogmeister was the lowest bidder, and will undoubtedly get the contract. The bids were as follows; J. Sogmeister, $6,700; W. M. Morse, $7,308; L. Hartwig, $7,960; Hamilton & Ricketson, $8,000; F. G. Mitchell, $8,256; Wilson & Nixon, $8,256; McEachen & Co., $8,815.

"The building will be of wood, three stories and a basement. The three upper floors will contain 11 rooms each, and the basement will have the dining-room, kitchen, laundry, boiler-room, etc. It will be heated with steam and hot air combined throughout."

"What are you working on?"

"We have just completed the plans for a large double house for Mr. L. Kline, the contract for which will be let next week. The building will be 40x52 feet in size, two stories high, with an attic. It will be located on the corner of Third and University streets, contain all the modern conveniences, and cost about $5,500.

TWO DOUBLE RESIEENCES.

The plans have also been furnished for two double houses two be erected on the corner of Fifth and Pike streets by Bailey Gatzert. Each house will contain six rooms and a bath-room. Tne main building will be 38x18 feet in size.

Here also are the plans for a neat residence to be built by Mr. Harper, of the electric light works, in Kinnear's addition. It will cost $3,000.

Mr. McDonald, of the firm of Fisher & McDonald, intends soon to build a neat two-story residence on Tenth and Spring streets. It will cost about $5,000. Here is a letter just received from the board of school directors at Chehalis, announcing the acceptance of my plans for their new school house. The building will cost $7500. By the middle of next week we will have a lot more work ready for the contractors to figure on.

Bids were opened Thursday in the office of H. Steinman, for the construction of a brick building for Mr. Himrich of the Bay View brewery, to be used as a brew house, engine house and boiler room adjoining the brewery. The structure is to be of brick, with a stone foundation. Mr. Lohse was awarded the contract for the brick work, and Mr. Redwood for the carpenter work. The building will cost $8,000.

LIVERRMORE.

Bids for the construction of the Chapin block on Second street, directly north of the Boston block were opened in architect Boone's office on Monday, and the contract was awarded to S. E. Clough on his bid of $12,500. The block will be of wood, two stories high.

C. C. Wilder has moved into his recently completed cottage, corner of Fourth and H streets.

H. W. Farmer is building a stable on his premises, corner of Chestnut and K streets.

Mrs. Hart has completed a very neat addition to her L street cottage and repainted the edifice.

THE BUILDING BOOM IN SAN JOSE.

Contracts Filed for Important Improvements

The following builders' contracts have been filed in the Recorder's office:

L. H. Lewis and Henry Lux for a carriage house and tank with brick foundation in East San Jose, to cost $3,017.

M. Kenny and Owen Leddy with the Fredericksburg Brewing Company, for a three story brick brew-house, at the corner of the Alameda and Cinnibar street, to cost $4,500.

Daniel J. Byron and E. Mc Laughlin for a brick basement at the northwest corner of Seventh and Reed streets, cost $1,287.

M. D. Green and Henry Lux, for a two story dwelling, brick basement, on the Alum Rock road, cost $9,800.

M. Kenny and Owen Leddy with the Fredericksburg Brewing Company for brick improvements to the Brewery for $5,500.

L. H. Lewis with Henry Lux for a carriage and tank house on the Alum Rock road for $3,017.

M. D. Green with Henry Lux for a two story frame house on Alum Rock road for $9,800.

D. J. Byron and E. McLaughlin for a brick basement on the corner of Seventh and Reed streets. $1,287.

E. Barre with R. Summers, for a cottage on Orchard Street for $1,170.

A three story brick building to cost $60,000 will, it is rumored, be erected on the Porter property on the northeast corner of Santa Clara and Second streets; the frontage on the former street is 137½ feet.

MISCELLANEOUS BUILDING NOTES.

C. R. Lord is the contractor for the new Paralta Park hotel. The price is $18,000.

It is proposed to build a schoolhouse, to cost about $15,000, at Golden Gate, otherwise known as Klinknerville. William Kirke is the architeet.

J. G. Pierce has the contract for the new building for W. T. Barnett, on Ashby avenue near Shattuck avenue. The contract price is $1,989. W. W. Goodrich is the architect.

Ingerson & Gore of this city have contracted to build a $9,000 stable for James Adams on Fifth street, between Bryant and Harrison streets. San Francisco. J. J. and T. D. Newsom are the architects.

R. W. Gorrill of Oakland of the Pacific Bridge Company is preparing to open a quarry and go into the business of macadamizing streets.

M. S. Jordan has returned from Auburn, and will stay in Oakland a little while.

William B. Kreger is building a brick wine cellar on the Rancho del Agua de Caliente (Warm Springs), owned by Josiah Stanford. The cost will be $15,900. The building is 100x200 feet, and has outbuildings for various processss in making wine.

At Irvington Charles C. Melver, the well known vineyardist, is building a new brick wine cellar 15x100 feet. The improvement is a substantial one.

A. J. Salazar is having plans drawn for a brick wine cellar to hold 100,000 gallons, to be erected on his Mission San Jose rancho.

Ed. G. Hedges is building a fine barn for Dreese Bros., on western Avenue, Petaluma.

J. D. Stephens will erect a nice cottage at Highland Springs for a resort during the heated portion of the year. W. H. Carson is the architect, Messrs. Stephens and Bean draughtsmen.

DIPLOMA OF MERIT

IS AWARDED TO

THEO. W. PETERSEN & CO.

★ OF SAN JOSE CAL ★

In acknowledgement of meritorious display of PRESSED BRICK, in the Collective Exhibit of California.

In acknowledgement of which the Signature of the proper Officials and the seal of the North Central and South American Expositions are hereto attached.

[ATTEST] CHARLES TURRILL, Commissioner.

I. M. W. COMICO, President.

B. D. WOOD, Director General.

THOS. WOODWARD, Chairman Committee on Awards

SAN DIEGO, CAL., FEBRUARY, 18, 1888.

T. W. PETERSEN & CO.

DEAR SIRS:

I send you by mail, Diploma awarded you by the North, Central and South American Exposition, for your display under my charge.

Kindly acknowledge receipt in enclosed envelope.

Very Respectfully

CHAS. B. TURRILL.

Commissioner for California; North, Central and South American Exposition, and Manager Southern Pacific Company's Display.

The above diploma was given to the firm mentioned, for the best display of PRESSED BRICK, at an Exhibition that attracted world wide attention. Mr. PETERSEN has made a special study of Kiln burning, so as to have all the bricks of an even color. We have seen car-loads of bricks, delivered in this City, and the uniform color pervading the entire lo was such as to attract more than ordinary attention from those around. MR. PETERSEN absolutely guarantees that every brick is perfect. If edges or corners are broken, he does not allow them to leave the depot. Any one ordering brick from above firm, can rest at a t they will obtain the very best Brick there is made in California. San Francisco addres is Townsend St. between 6th and 7th. San Jose, P. O. Box 187.

SAN FRANCISCO, SEPT. 15, 1888.

FOUR EXTRA PAGES!

WE have been compelled to add **FOUR EXTRA PAGES.** It has been evident to any one reading this Journal, that for some time past its columns have been overcrowded. Last issue "ads" were refused, as our arrangements had not been perfected to increase the number of pages, and we would not draw on our reading matter for room. In a measure we have relieved the pressure and with this number we present a Journal that will compare favorably with any printed in the United States.

BUILDING NEWS.

There is no other Journal in this city, that compares with this in the reliability of its Building News.

The Price of Lumber Question.

DURING the current year, the price of lumber in California has been a prominent issue as between owners contemplating building improvements, and the manufacturers of building materials. Our worthy contemporary, *Wood and Iron*, speaking from the lumbermans' stand point, in very kindly terms, says in a late issue, that this journal "still continues off in its views of the price of lumber," etc. We do not think so, and until convinced of error, we shall remain off.

We admit the argument, "that the price of lumber in a building, cuts but a small figure in its total cost." This fact we have times without number, urged when discussing the question personally with owners. There is more apparent than real objection upon this point, as a building requiring 50,000 feet of lumber and costing ten or fifty thousand dollars is increased in total cost but fifty dollars with a rise of one dollar per thousand feet, and no more than two hundred and fifty dollars, with five dollars per 1,000 added to what our lumbermen consider a too low price.

But the difficulty is, that consumers are not convinced that the higher rates prevailing until recently, were a commercial equity or necessity. Owners generally understand that lumber has been sold at rates far below those attained by the increased schedule of prices, and they do not trouble themselves to learn the reason why. Those who have in times past bought at twelve, thirteen and fourteen dollars per 1,000, are thereby led to the conclusion that the very intelligent class of men who handle and produce the great building commodity—lumber, are the parties to know just what lumber is worth in the market; and it being a staple, which should be as steady as a clock dial, owners understand abatements however low, when fixed by those controling the interest, as the true indication of value. They do not look for, nor care anything about the causes of depressed markets, nor whether such depression is the result of dealers slaughtering each other, waging a war of competition among themselves or otherwise. The consumer does not ask why it is so, but accepts the advantages of low prices as a fact possible, and unwillingly submits to a rise, when neither flood, famine, nor any recognized sufficient or feasible event has transpired to make it reasonably clear that advance is legitimate. And to make this view of the case stronger, it must not be overlooked, that when three or four years ago, lumber was sold for ten dollars per thousand less then the figures reached by the high price schedule of recent date, a very large number of buildings were erected, and the demand fully equal, and sometimes in excess of supply, not because lumber was cheap, but from the fact that so many considered it wise policy to build, from a remunerative, paying point of view. There was a steady demand for more buildings of almost any class, and as many would have been erected those years, had the lumber market not been broken all to pieces by the deliberate acts of the lumber interest men in waging a war of business extermination among themselves. Had fair, steady, reasonable prices prevailed, consumers would have been satisfied and accepted the condition as a proper thing. But when those in interest found that the producers of their own will and caprice drove home the steel gad of unwise competition, and toppled prices down to the verge of business ruin—and which did bring financial ruin to some—they accepted the advantage thus offered, and recent clamor about high prices resulted more from the course pursued by the manufacturers than any other.

It is always easier to maintain fair values than to regain and stimulate them after demoralization. And it is right here where the growl comes in. The lumbermen having provided and dished out, at former times and often, rich repasts in cheap lumber, owners have accepted the hospitalities set before them, and naturally feel sore when the door is either by degrees and quietly closed or slammed in their faces, and their fears aggravated by an extra charge for admission.

There was no "flagrant error" in our statement, that the decline in building was attributable to the cost of lumber. We should not have so stated, had we not been fully convinced that it was true. People often "cut off their noses to spite their faces," even in a building sense, but many will submit to almost any amount of loss, rather then consent to what they deem an

over-exaction. It is certainly not extra-wise in owners to allow well located real estate to lie unimproved year after year, because one or two per cent of total cost stands in the way. It seems to us "penny wise and pound foolish" for an owner to incur months or years of loss in rentals and income, simply because to improve may cost an extra sum less than the amount of taxes which must be paid each year on the unimproved property. But still this is the disposition of many, and even wealthy men been heard to say, "I will not improve at present rates of building materials, but wait for another break in prices"—not because the intrinsic value thereof may not be equal to the price demanded, but because there have been breaks, and breaks being possible at any time, they prefer to wait for them, as generous dispensations from the hands of those who have, and alone can inaugurate them. The force of argument comes in this line of thought, and if material producers would make their bullwarks firm against these irregularities, the public would in time accept the conditions as inevitable, and pay fair prices right along. "Supply and demand regulates," is all very well as a theory, but singular as it may appear, it is none the less true, that the price of lumber has at times been raised at periods when a decline in demand was unmistakably evident, and but little work preparing in architects' offices. Demand present, or prospective, in such cases has been anything else but justifying, and if the rule applied always, the natural tendency of prices would be downward and not accumulative.

The "stoppage of mills," "using up forests, etc," are all questions of serious import, but the true cause of outcry is found in the statements contained in this article.

The New City Hall Tower.

THIS important feature of San Francisco—"New City Hall," is and has for months or longer time, been a bone of contention among those directly—officially—concerned in determining its height, style, proportions—and naturally if not necessarily—involving every specialty connected with its design and construction, from foundation to the finial upon its loftiest apex.

The main question in issue, and in reference to which there are diversities of views and opinions, both in the Board of Commissioners, and the mind of the generous public who will be required in due time to furnish the necessary funds, is that of altitude; whether the mythical God—Mercury—with his outstretched wand surmounting the uppermost height of the construction, shall be permitted to stand upon a base 400 feet or more above the heads of the living masses below, or be limited to a standing point 250 feet more or less above the base of the construction.

Beyond such individual consultation and advice as each may have sought, the gentlemen constituting the City Hall Commission, have—until recently handled the questions arising within their official circle—yet neither claiming any special qualifications as scientific, architectural or mechanical experts, to render judgment, or decide the, in fact, most momentous, material and important issues and involvments, essential or contingent, attaching to the construction of the tower that is to be; the consummation of which must and will stand for generations if not for centuries, as a monument to the good and wise, or the mistaken judgment of the men into whose hands as a committee, and upon whom must rest for all times, the responsibility of fixing the height, approving the style and authorizing its construction.

It would be ungenerous to surmise that either of the honorable gentlemen, composing the Commission, have been or are influenced or controlled in their action, by any other motive than the public welfare. While his Honor Mayor Pond, Auditor Strother and Attorney Flournoy may each—as is his personal right and privilege—have preferences as to the parties who shall perform the various required services, especially in the all important matter of preparing the plans and determining principles and qualities of beauty, height, practical construction, and the many features and delineations which are never fully understood until practically executed, it would be terrible indeed, if true, if such individual preferences were allowed for one moment to intervene in a matter so gigantic as the erection of a tower to stand for all time as the city's most conspicuous monument.

An evidence that the Commissioners are both willing and anxious to arrive at the wisest and best conclusion, is exemplified by the fact that they have so far waived their official rights and prerogatives, and the exercise of arbitrary determination of all questions under their control, by inviting the leading civil engineers of the city, and S. F. Chapter of Architects, of the A. I. A., to examine and express judgment as to the various features of the new tower, from a professional, scientific and practical standpoint—all of which, however, is beyond question a very great annoyance to Mr. Laver, the City Hall architect, whose responsibilities unhampered by any extraneous interruption are great, and much more so when fettered by checks and interferences, which prevent the free exercise of his best judgment. Whether the report of the Committee of Architects will remove existing difficulties, remains to be seen.

AN IMPORTANT MEETING.

San Francisco Chapter American Institute of Architects.

THE regular monthly meeting of the Chapter was held in the rooms of the Art Association on September 7th, G. H. Sanders, President, in the chair.

The following members were present: G. H. Sanders, John Wright, J. J. Clark, J. E. Wolfe, W. J. Cuthbertson, O. Everett, H. T. Bestor, J. Gash, J. D. Cebrian, B. E. Henricksen, J. M. Curtis, W. P. Moore, A. Pissis and G. H. Wolfe. Several students were also in attendance.

Edward Kollofrath was unanimously elected a member as Fellow.

Propositions for membership were received from Wm. Patton, G. W. Percy and John Newsom. Referred to Committees.

It being the annual meeting, the election of officers next took place for the ensuing term. The result was as follows:

President, (re-elected) G. H. Sanders.

Vice President, (re-elected) W. P. Moore.

Treasurer, J. M. Curtis.

Secretary, (sixth term) G. H. Wolfe.

TRUSTEES.

A. Laver, J. Wright,
A. Pissis, J. E. Wolfe. B. E. Henricksen.

Secretary presented plans of New City Hall Tower to the Chapter. A general discussion ensued in which every member present took part. The prevailing opinion was that the matter was placed before the Chapter by those in authority, viz., the Board of New City Hall Commissioners, and therefore should be taken hold of in a scientific manner. That in order to do so, certain data and drawings should be in possession of the Chapter. This could best be done by a committee. A motion was made that a committee of five be appointed to take charge of the whole subject matter. After considerable debate, the motion was carried, and the President appointed the following Fellows as such committee: Albert Pissis, James E. Wolfe, B. E. Henricksen, W. J. Cuthbertson, John Wright.

Meeting adjourned subject to the call of the President.

The Redwood Belt.

THE redwood is limited to a strip of country averaging twenty miles in width, extending from the bay of Monterey to the Klamath river, a distance of 350 miles. Redwood lumber is in great demand, and already vast forests of these stately trees have been swept away. The redwood, however, does not grow in poor soil, and in many places where the trees have been cut, young redwood forests are again springing up. Those who imagine that there is any immediate danger of the redwood becoming extinct are certainly drawing upon the very remote future for ills. The tree is of comparative slow growth, but half a century will give to the young growth quite the appearance of a native forest.

TWENTY-THIRD INDUSTRIAL EXPOSITION OF THE MECHANICS' INSTITUTE.

THE Twenty-third Exhibition of the Mechanics' Institute is over, and we may safely say in its general arrangements and the studious efforts made by the Directors to please the public generally, a grand success has been scored for the Institute.

We can simply call attention to those articles directly connected with the building interests. First and foremost in the consideration of architects are the subjects of

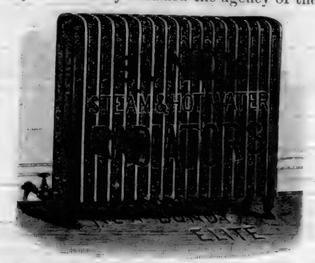
HEATING AND VENTILATION

Scientific men have given much of their time to the consideration of these subjects. The progress made during the past year has been wonderful, and deserves more than a passing notice.

HEATING

A glance at the back numbers of this journal will show to any one the vast improvement made in Heating Apparatus for buildings. For years the Harvey Radiator was illustrated in these columns. Hundreds of houses were supplied with them. They were good *then*, they are good *now;* and Mr. Harvey's countenance o'erspreads with a smile when he says, "they are not so pretty as those now in use, but the heat gets there all the same." The system now used by Mr. Harvey is far superior to that of a few years ago.

Mr. Harvey has recently assumed the agency of the celebrated



This method of artificial heating is recognized as being far superior to grates or hot air furnaces from every point of view. A uniform and spring-like temperature can be maintained throughout the house with but slight attention.

In the exhibit will be found Harvey hot water radiators and boilers, and Bundy's direct steam or hot-water radiators, Bundy's Triumph, for steam or hot water, the Bundy Elite, for hot water or steam, and the Bundy corner direct, column direct, circular direct, angle indirect, horizontal indirect, and Climax indirect radiators. Also, the Bundy hot-closet, dining room radiator, the latter a most useful and highly ornamental contrivance for disseminating warmth throughout the dining room, while at the same time affording a very convenient mode of securing an equable degree of heat for meats, vegetables and other food which may be placed within it. The collection of radiators on exhibition illustrates that decorative art in dwellings is not confined to the adornment of walls, floors, ceilings, or wood work, but is carried into the more utilitarian adjuncts of a wisely ordered household. These radiators are of ornamental design and beautifully decorated in blue and gold, blue and silver, bronze, or bronze and silver, antique bronze, silver embossed, and can be thus decorated to suit the taste of the purchaser. Thus the heating appliances of a room can be made to harmonize in color and design with its wainscottings, panelings and other decorations, and become part and parcel of artistic *ensemble*. A splendid Bundy Vertical Tube Direct Radiator Screen in highly ornamental antique brass (the first yet imported to this coast) occupies a conspicuous place in the center of Mr. Harvey's exhibit, and it is a thing of beauty. These screens, or covers, are made to fit any style or size of radiators. Mr. Harvey is a thoroughly scientific artisan, and a very close yet comprehensive study of the laws of heat and ventilation, united with a practical experience in constructive work, extending over many years, renders him the best qualified man in our midst for the intelligent direction of this most important sanitary work. He offers hundreds of references from those who have had his valuable services on this coast. Mr. Bundy publishes references to well-known people in every State and Territory east of the Rocky Mountains.

By a happy co-incidence, the exhibit of

ABRAHAMSON'S VENTILATORS

Is almost directly over that of the Harvey & Bundy Heaters, showing that these two subjects are inseparably connected. Mr. Abrahamson devotes all his time and attention to his perfect ventilators, and he is fully prepared to explain his system satisfactorily to any one.

The advantages of a perfect system of ventilation, which at the same time obviates a draught, are too palpable to admit of any adverse opinion. Peter Abrahamson has mastered a difficult problem in this direction through a patented invention that meets every requirement and commands the approval of numerous prominent citizens, among whom are Professor J. W. Anderson, Superintendent Public Schools; Peter A. Smith, Superintendent California Sugar Refinery; Harvey Platt, Superintendent Pioneer Woolen Mills; Alfred W. Perry, M. D., Charles F. Crocker, California cor. Jones; Palace Hotel; Mr. Reed, Berkeley; Dr. Gonzales, Fresno, and many others. By this ingenious system a constant circulation of air is secured, which, admitting pure air from out of doors, also expels the heated and poisoned atmosphere from the rooms where it is used. We give Mr. Smith's testimonial, as follows:

Peter Abrahamson, Esq.,—Dear Sir: The ventilators you put in my bedroom work to perfection; they keep the air fresh and cool. I would not be without them for double the cost. I can recommend them as the best and most perfect I have ever seen. Any information will be cheerfully given by calling at 504 Ninth street, San Francisco. Respectfully yours,

Peter A. Smith,
Supt. Cal. Sugar Refinery.

In addition to the above, by consulting the advertising pages of this Journal you will find a long list of those who have adopted Mr. Abrahamson's system. Many of the Architects heartily endorse his views and the general adoption of the Ventilators is but a question of a short time.

FINE ART IN STAINED CLASS.

One of the most attractive displays at the Mechanics' Fair is the exhibition of stained glass from the Pacific Glass Cutting Works of John Mallon, 19 Fremont street. The exhibit is fitted up as a room-interior, one wall of which is covered by an immense plate-mirror and the other three by numerous examples of glass windows and panels through which the light enters the apartments, showing in all their detail the brilliancy and fineness of the coloring and delicacy of the workmanship. The two kinds of glass work—the open mosaic and the painting in oil—are represented by many examples. A memorial window designed for the Presbyterian Church of San Diego is an especially handsome production, and a beautiful window of Moresque pattern composed of 2,500 pieces of brilliantly colored glass, as well as a Longfellow window with a finely painted head of the poet as a center piece, deserve all the admiration that can be bestowed upon them. Fine screens in mosaic abound, which reflect the scintillating light in all the colors of the rainbow. The exhibit is a credit to the industrial interests of the State, and the establishment it represents has almost a monopoly of the home market in its line.

REDWOOD VENEERS

Of all the elegant booths at the Fair few make a more superb appearance than that of Hurlbut Bros., the leading veneer dealers. The redwood veneer work which is used in the ornamentation of their quarters is by far the finest ever seen on the coast. All who see it express the greatest admiration, and it is generally conceded to be as handsome wood as earth can produce.

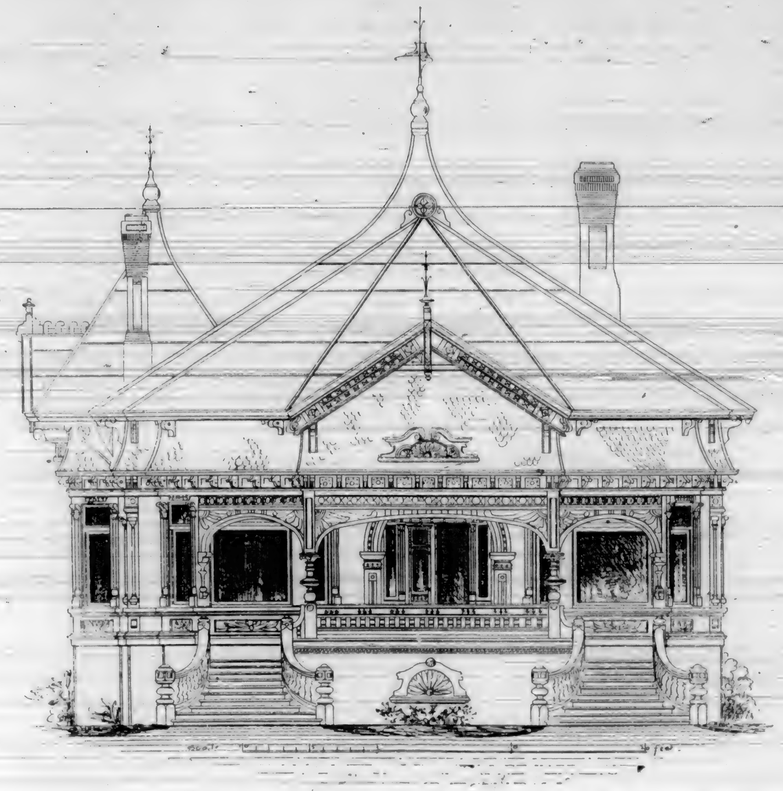
"ELASTICA"

Keefe & Fraser have on exhibition what is perhaps the finest display of California redwood ever seen anywhere. It is hard to imagine anything more beautiful in the way of wood than are many of the specimens of curly and buhrl wood of California's great staple. The specimens are beautifully finished with "elastica"—a new preparation intended to supersede varnishes for such purposes—and colored with stains which are the exclusive property of this firm.

FINE LUMBER, HARRIS & JONES

Starting in a small way, this firm has gradually advanced to the front rank. Their display of lumber is very fine. One board is shown without a check or crack. It is 12 feet long, 44 inches wide and 4 inches thick. They also have beautiful examples of Oregon pine and maple, red and white cedar, spruce, sugar pines, etc. Bryant street, corner Oak Grove avenue is their office.

[Continued on Page 117.]



"Sonoma"—A Beautiful Country Home—Cost $5,500.

The plans illustrating a country home in Sonoma County, Cal., were kindly furnished to us by Mr. Sam'l Newsom. Sizes of the rooms are plainly marked. The various apartments are roomy and every modern convenience has been introduced. As shown, the building can be erected at present price of materials, for the sum named.

PLASTER.

FEW people have any idea what a valuable material plaster of Paris is, and how it enters into the things of every day life about us, from the hard finish on the wall to the lamp collar which is fastened with it.

It is found in raw state in almost every land, and is made of gypsum rock, (a sulphate of lime.) It is quarried, calcined, ground to various degrees of fineness and then recalcined or boiled in huge caldrons, and is then fit for use. The best is made mostly in New York, from rock quarried in Nova Scotia, and is the kind used by dentists for all sorts of fine castings. We get another grade from Michigan, sometimes called by the trade blue plaster, on account of a blue cast in it. This kind is used mostly for hard finishing of walls. Another grade, coarser plaster, comes from Iowa, which has been used extensively for what is called "stucco plastering," in which a mortar is made of one part of plaster to two of sand and enough glue size to keep it from settling too quick. It makes one of the hardest kind of walls, but can be attempted only by the most skilled mechanic.

Plaster in setting can be retarded or accelerated by the use of various ingredients. Glue size is best for retarding, as it makes it materially harder after it is dry. Sugar, molasses and cream of tartar can be used for the same purpose. Cream of tartar is dangerous to use, as a little too much will kill the plaster from settling entirely. Two of the best things to use in making plaster set thick are common salt or alum. Plaster that has been kept a long time and has gathered moisture, or that has been set in a damp place, will also set quick. This can be remedied by removing all lumps that may have formed, and heating it on a stove in some metal vessel. When heated it will appear to boil like a liquid. Ground, uncalcined plaster is used extensively to improve what are called sour lands. Plaster in setting heats slightly, which causes it to expand. An eminent authority claims that this expansion will cause it to fill the crevices of a mold. But this is a mistake, as the expansion does not take place until it is quite hard.

Mortar made in the following manner will stand if used in almost all sorts of weather: One bushel of unslaked lime, three bushels of sharp sand; mix 1 lb. of alum with one pint linseed oil, and thoroughly mix this with the mortar when making it, and use hot. The alum will counteract the action of frost on the mortar.

For seventy yards of surface provide 1,000 pieces of lath, and eleven pounds of lath nails.

For 100 square feet of roof, 1,000 shingles, laid four inches to the weather, and five pounds of shingle-nails, will be necessary.

In estimating amounts of siding and flooring, allow one-fifth more than the surfaces to be covered for the lap in siding and the matching in the flooring.

Experiments with cypress and walnut woods, and also with cypress and cedar, show that they will rot each other while joined together; but on separating them the rot will cease, and both woods then remain perfectly sound for a long time.

An Evidence of Prosperity.

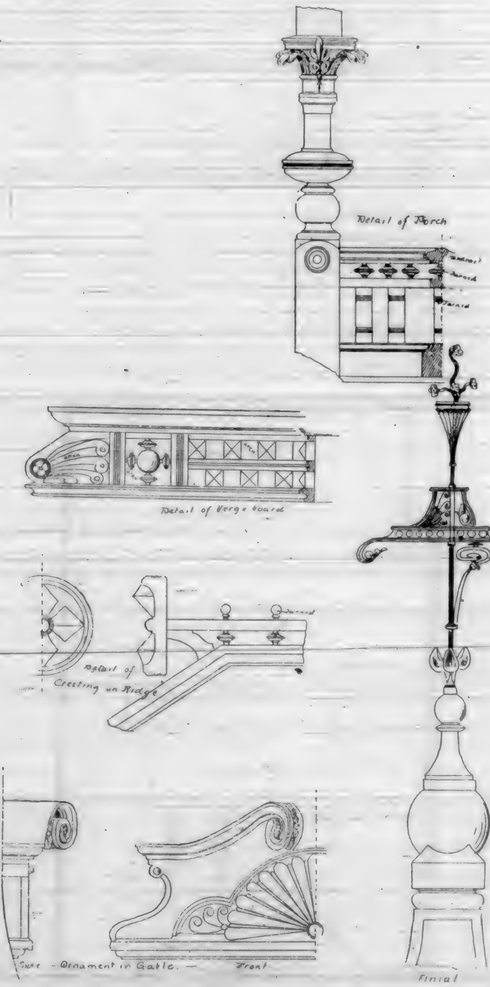
NO journal this side of the Rocky Mountains has ever published as complete an edition of news connected with the building interests as the one we present to our readers this month.

Our illustrations are produced by a new process, and are remarkable for their fine, clean appearance. We are prepared to furnish cuts of the same quality of work to those who may desire the same.

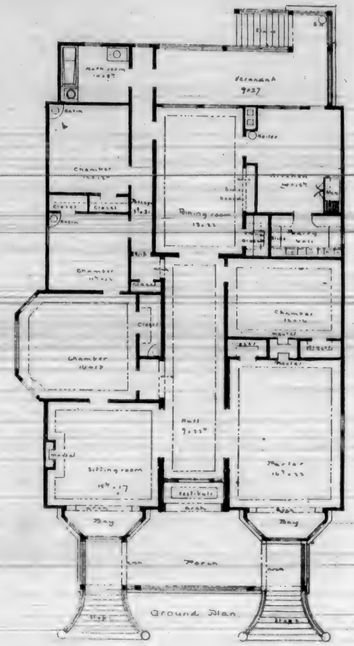
Our building news department will, in a short time, be greatly enlarged. We intend to be more thorough than all the other journals combined.

Subscribe now for 1889.

Remaining numbers of this year free to all new subscribers for 1889.



"Sonoma"—General Details.



"Sonoma"—Floor Plan.

NOW IS

THE TIME TO SUBSCRIBE

FOR 1889.

WE will send the remaining numbers of this year free to all new subscribers for 1889.

WE PROMISE

New and Beautiful Architectural Designs.

With our new process, we are enabled to produce cuts far ahead of anything heretofore presented.

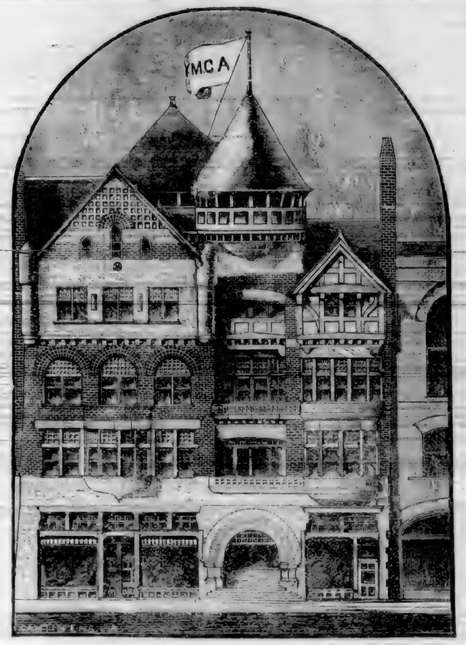
COMPLETE BUILDING REPORTS.

Our corps of building correspondents will be doubled next year. We have also had the city districted and a competent party to take charge of each district. Our city news will, therefore, be perfect.

ARCHITECTS

Have promised, with the new year, to send us each month an article, and, where necessary, illustrations for same.

Subscribe now for 1889.



YOUNG MEN'S CHRISTIAN ASSOCIATION BUILDING, LOS ANGELES, CALIFORNIA.

We give our readers in this issue views of the new Association building now in course of erection at Los Angeles, Cal. The following description of it is sent to us. The site for this important addition to the fine edifices of the "City of Angels" is on the west side of Fort street between Second and Third streets. The lot is 70 feet front by 110 feet deep. The building will cover the whole width of the lot and extend back to within five feet of the rear boundary, thus reserving an alleyway and light for the basement. The plans show a building, four stories in height above the basement, with an attic story. The front portion of the first story is occupied by three stores (two 24x65 feet and one 18x65) and the main entrance to the Association rooms, the latter being 11 feet between the piles of the arch opening into a vestibule 13 feet wide. The rear part of this story is taken up by the upper part of a gymnasium. Having ascended the main staircase, which is eight feet wide, one finds himself in what is really a part of the reception hall, but if desired, can be shut off from the latter and made to serve as a vestibule to the auditorium. To the left is an arcade of three semicircular arches, filled in with bronze scroll work, and supported by graceful columns with sculptured capitals and bases. Beyond this arcade is the reception hall proper, 23x22 feet, situated in the center of the building and having the other rooms arranged around it. Directly opposite the visitor as he enters is the Secretary's office, so placed that the Secretary or his assistant can command a full view of the entrance, and at the same time overlook the reading room and library.

The members' parlor, 18x36 feet, reading room, 22x30, and library, 18x30, occupy the front of the building on this floor. A curtained arch divides the reception hall from the reading room, which is the middle one of these three, separated from the library on the one side by a scroll-work screen and leading into the parlor through an anteroom on the other side. The anteroom can be thrown into either the reading room or the parlor by means of sliding doors. It also opens out into a balcony over the main entrance, where members can enjoy the open air. The parlor is provided with an oriel bay window of stone, having a slight projection over the sidewalk, thus giving larger window surface, as well as adding to the size of the room. Another bay window extends in front of the library and reading room, and forms a connecting lobby between the two rooms. The library will be fitted up with alcoves for books, an open pressed-brick fireplace, and everything made convenient and comfortable for the studious.

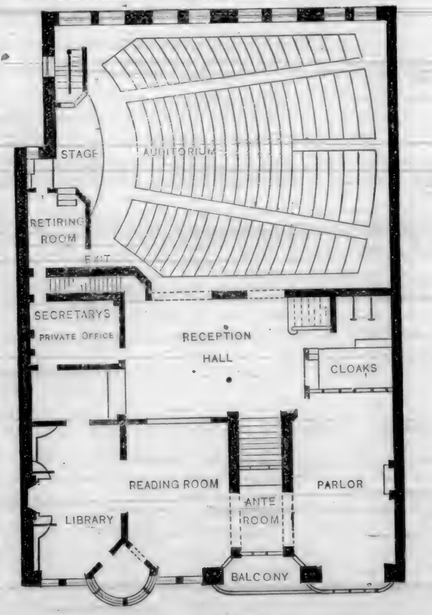
The auditorium, 64x49 feet, occupies the rear of the building, is directly over the gymnasium, and like the latter is two stories in height. It is calculated to seat 525 persons on the lower floor and 250 in the gallery. To the right of the entrance hall or vestibule are the cloak room and toilet room. The members' parlor may also be entered from this side. Next to the Secretary's office is the stairway leading down to the gymnasium. On the third floor are placed the recreation room, 34x28; the boys' room, 16x30; and a class room, 18x32; these rooms being divided one from the other by sliding doors. Another class room is provided in the rear of the one above mentioned, and the two rooms can be thrown together by opening the sliding doors. There is an open court or well on this floor which lights the center of the building and the reception hall which is beneath. The rear of this floor is occupied by the gallery of auditorium, a kitchen, 16x14; toilet rooms, staircases, etc.

On the fourth floor are ten rooms, to be rented for lodgings to young men; these average 12x14 feet and are all outside rooms. Apartments for janitor are also on this floor.

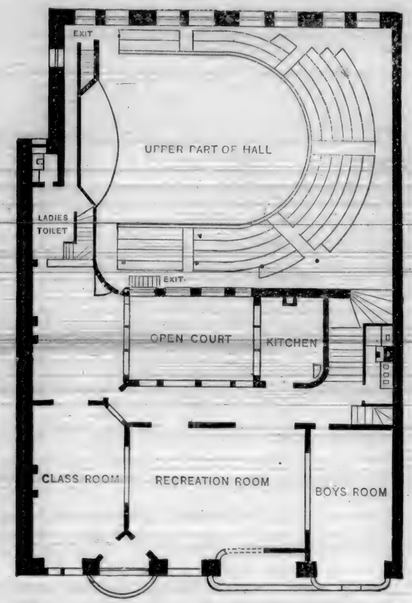
We now turn to the basement, to many the most attractive part of the building—containing the gymnasium and baths. The former occupies the rear of the building and is directly under the large auditorium. A room is set apart at one end for the instructor.

A running track, six feet six inches wide extends around the walls, at about ten feet above the gymnasium floor. Above the running track is a gallery for the convenience of visitors wishing to view the gymnastic exercises. Dividing the gymnasium from the bath rooms are the member's lockers, about 600 in all, with wash bowls and toilet conveniences adjoining. The remainder of the basement is taken up by the swimming bath, 14x44 feet, with diving platform, etc.; eleven sponge baths, five tub baths, shower and needle bath room, two bowling alleys 70 feet long, and the engine and boiler room.

The general style of the building is American Romanesque, although the mullioned and oriel windows and some other features belong, strictly speaking, to the English Gothic style of the fifteenth century, they are made to harmonize with the more severe and impressive style of the three or four centuries earlier. The principal entrance is well-defined and inviting,



Remaining Numbers of this year given free to all new subscribers for 1889.



and may be said to be typical of the characteristic strength of the Association in all parts of the world. The balconies over the entrance open from the principal rooms of the building, and over these balconies is a circular open tower from which a fine view of the city may be obtained. The front of the building will be faced with pressed brick and brown stone trimmings, with terra cotta panels. The first story will be entirely of brownstone, in pitch-faced broken ashlar work. The entrance will be closed at night time by a portcullis of wrought iron or bronze.

The building, when finished, will cost probably $55,000.

"SANITAS" PLUMBING APPLIANCES.

THE superiority of the Sanitas system and appliances is now so widely recognized that the word "Sanitas" has become synonymous with sanitary safety. It suggests scientific and solid construction, and simplicity of form and action, and the use of the Sanitas goods assures these qualities. The fact that their principles of construction are everywhere being imitated by other manufacturers, as far as the Sanitas patents will allow, indicates the reputation they have among the trade.

The extraordinary success which the Sanitas appliances have met with, has, as above indicated, led to a number of imitations and infringements. We are informed that in several instances, even where the Sanitas goods have been called for in specifications for building, portions of the goods furnished under the contract have been such imitations and infringements. We would therefore call the attention of architects, builders and others interested, that every article manufactured by us bears in a conspicuous place, the word SANITAS.

THE "SANITAS" TRAP

(1.) It is sometimes asserted that the seal of the Sanitas trap can never be broken under any conditions. This is erroneous. Its seal can be pumped out by a force-pump, or by a laboratory pumping apparatus, especially devised to destroy the seals of traps by siphonage. But the seal of the unvented Sanitas trap never can be and never has been destroyed by siphonage in good plumbing work. Furthermore, the unvented Sanitas trap will stand a severer test of siphoning action than will the vented S-trap. This has been demonstrated over and over again, and the demonstration can be repeated at any time to the satisfaction of any who are interested, provided care be taken to vent the S-trap in a manner which is practical in plumbing, using a vent-pipe the size, length, and average number of bends found in ordinary practice. The seal of the Sanitas trap will be lowered by severe siphoning action, but it cannot be broken.

(2.) Again, it is sometimes asserted that the Sanitas trap can not be clogged. This is also erroneous. The trap can be clogged by matches or kitchen refuse, if improperly used, just as can any ordinary waste-pipe; but when properly set and used, the Sanitas trap will never become clogged to the point of losing its effectiveness. If improperly used, as when under kitchen sinks the cook takes out the sink strainer and sweeps into the trap bones and refuse never intended for the waste-pipe, the Sanitas trap will be fouled; but it then has the great advantage over all others of providing the easiest and safest means of removing this refuse matter, and that with the aid of an ordinary screw-driver. When used under sinks, the trap should be placed close to the sink outlet, and the sink-strainer should never be removed. The grease will then pass through the trap in a liquid state, and be caught in the suitable grease receptacle beyond.

(3.) It is often thought that where special trap vent-pipes are called for, the Sanitas trap is not needed. The Sanitas trap is so constructed that its seal cannot be injured by evaporation produced by trap venting. Therefore, where trap vent-pipes are called for, the use of the Sanitas trap is particularly necessary. In virtue of the peculiar construction of the Sanitas trap, its outlet-pipe forms its own vent-pipe, which is infinitely better than a special vent-pipe, inasmuch as it is always kept open by the scouring action of its own discharges. But even if it should ever become closed by grease, no harm could come in this case, since the same closure would not only shut off sewer gas and siphonage, but also at once announce itself and be removed.

(4.) Finally, the seal of this trap can never be destroyed by back pressure, in properly arranged plumbing. For with the main soil-pipe vented as it should be, no back pressure can be generated strong enough to do mischief, where ordinary care and intelligence are used in originally laying out the work.

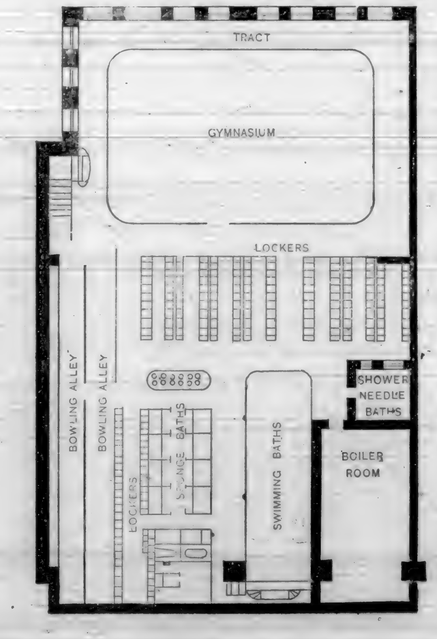
Besides the trap, the Sanitas Manufacturing Company have a full line of bath tubs, pantry sinks, water closets, etc., etc. The latter will be more fully described in next issue.

WILLIAM E. HOYT, C. E., S. B.

Chief Engineer of the Buffalo, Rochester & Pittsburg Railroad, formerly Chief Engineer of the Massachusetts State Board of Health, in his lecture on "Household Sanitation," delivered before the Academy of Sciences, at Rochester, N. Y., in January, 1886, writes: "I know of nothing to compare with the Sanitas appliances in convenience, efficiency and safety. They should be regarded in the same light as valuable discoveries in medical science."

These various appliances are kept in full stock in this city by the agents,

ARNOLD & Co., 40 California Street, San Francisco, Cal.



(Continued from page 112.)

A GRAND REDWOOD PLANK

Perfectly free from knots or checks, there stands against the side of the Pavilion a redwood plank, 13 feet long, 50½ inches wide and 3 inches thick. Where in the world can this be beaten?

CALIFORNIA SLATE

The slate quarry in El Dorado Co. can furnish slate equal to any in the world. The color is a rich blue-black. The grain is very fine and the surface is unusually smooth. The samples in the Fair prove conclusively that those wanting a perfect fire-proof material need not go out of the State to procure the same. J. O. Hanscom is Secretary of the Company, and the office is at 10 California street.

RANSOME'S PATENT CONCRETE MIXER

E. L. Ransome, of 402 Montgomery street, presents one of his celebrated Patent Concrete Mixers. In a late issue of the *Scientific American*, attention was called to their superiority. By their aid any one can prepare material ready for instant use. Mr. Ransome has these machines for sale. He also makes a specialty of renting the same, so that those who only want them for certain work can return the "Mixer" when they have finished the job.

CALIFORNIA WIRE WORKS

The grand display presented by the California Wire Works entitles them to a gold medal. In fact it should be a diamond medal, if truly intrinsic merit was considered. They have a machine in active operation making barbed wire fencing. We have noticed people stand for hours watching the same. Then their French or wire nail machine. How it seems to eat up the coils of wire. The latter is placed in such a position that the machine is fed continuously, and the nails drop in a perfect shower in a large box underneath. It will hardly do for one to pick them up, at least for some little time, as they are hot when they leave the machine. Then, the grand display of wire rope for rigging; the mammoth hawsers for large vessels; the steel wire rope for our cable systems; beautifully designed summer houses, and even down to fine bird cages; wire screenings of every size, from that strong enough for a jail to that in general use for kitchen windows. In fact, everything in the shape of wire ornaments, and for every purpose for which wire can be utilized, this Company presents in its various exhibits the practical results of many years of study and improvements. The office of the Company is at 329 Market.

MANTELS, MIRRORS, AND BRIC-A-BRAC

S. & G. Gump have one of the most exquisite displays in the Fair. The designs in mantels are very artistic. A feature of their display is the beautiful varieties shown in tiles and hearths. Their parlor ornaments attract much attention from their unique styles.

FINE CARPETS

Next to the building of the house comes the furnishing thereof, and the goodly housewife turns her first attention to the carpets. No other place this side of the Rocky mountains can show the assortment of goods exhibited by Sloane & Co. Ravishingly exquisite designs may be seen of the Chehalas and Royal Fereghan (both Persian), Gobelin and Victorian Moquettes, Scotch Axminsters, Afghan, and in fact every kind of patterns to suit the most aristocratic tastes. Besides the carpets, Messrs. Sloane & Co., keep a full assortment of window hangings and adornments. This grand establishment may be found on Market street, near 3d, Nos. 641 to 647.

"MATHUSHEK'S PIANOS."

Geo. F. Wells presents a grand display of "Mathushek" pianos. Of the thousands who stand daily at his booth, but few are there who would not at once award the palm to the "Mathushek." Mr. Wells feels proud in the fact that the last prize ever given at the Mechanics' Fair for an eastern made piano was won by the "Mathushek." One peculiarity of the firm making these grand instruments is, that they never advertise. So that any one reading a notice of these pianos can say that it was to the excellence of the tone and finish that such praise was called forth. Some of the Piano Companies spend thousands of dollars yearly in advertising. This must be charged *pro rata* to each piano. With the "Mathushek." the buyer gets this discount Mr. Wells can be found at 1360 Market street.

LARGE STICK OF TIMBER

Suspended overhead is the largest stick of timber ever sawn at a mill. It is 151 feet long, 20 inches square and contains 5033⅓ feet of lumber. But few knots can be seen in its entire length

WILL & FINCK'S CUTLERY, ETC.

This firm's display proves that skill and energy will surmount al difficulties. Starting many years ago, in a very small way, they have gradually advanced, until to-day, there is not a house this side of the Rocky mountains can compete with them. Their display of home-made cutlery is superb. One of the specialties of this firm is their electric bell system. Many of our largest hotels and other buildings have been furnished with their electric bells and electric lightings. The annunciators furnished by this house are a model of neatness and availability. Their place of business is 818 Market street, in the Phelan building.

Mr. J. B. Kershaw, who represented Messrs. N. and G. Taylor Co., tin plates, metals and tinners' supplies, Philadelphia, from 1879 to 1886 as traveling salesman through the west and northwest, will again fill the same position with this old and reliable house, on and after August 1st. This notice will be acceptable to the trade west of the Mississippi, extending out to the coast, with whom Mr. Kershaw has hosts of friends.

Messrs. N. and G. Taylor Co. are the sole importers of the genuine and guaranteed brand of OLD STYLE Roofing Tin, and the return of Mr. Kershaw to this live and energetic house is not without considerable significance, and it is fair to presume that he finds it more profitable to sell the guaranteed, and what may be called the "original brands" of this house, rather than push the sale of any imitations that may be handled by other parties.

Messrs. N. and G. Taylor Co. carry a full line of all their guaranteed brands in not only their Chicago and New Orleans warehouses in addition to the stocks carried by jobbers who handle their goods, but have also placed their goods in the hands of Messrs. W. W. Montague & Co., of San Francisco; Harper & Reynolds Co., of Los Angeles, and we are now advised, have just established an agency with Messrs. Peters & Miller, galvanized iron cornice and tin plate workers, of Tacoma, Washington Territory. They sell an immense quantity of their guaranteed brands all along the line of the Central and Northern Pacific, in fact, from a circular just issued by this house, we notice in the list nearly all the prominent jobbers and tin plate houses of the United States, which seems to us not only flattering to the brand they represent the sale of, but also creditable to this old and reliable house of Taylor & Co., who established their business as far back as 1810, in the old city of Philadelphia.

SAN FRANCISCO.

The above beautiful design was prepared especially for this Journal, and is peculiarly appropriate for a suburban home.

STANDARD UNIFORM CONTRACT.

Some time ago, special committees from the American Institute of Architects, the Western Association of Architects, and the National Association of Builders, were appointed to draw up a form of contract for general use, all over the United States.

The object sought to be obtained by the Committee was to prepare a Form of Contract which could be received and adopted generally by architects and builders as a Standard Form, and in which the several provisions necessary to constitute an equitable agreement, as between the owner and the builder, would be incorporated. The Joint Committee were empowered by their respective Associations to prepare and adopt such a Form of Contract, and this work, as embodied in the accompanying printed copy, may be said to be the authorized Standard Form of said Association.

A copy of the "Contract" has been forwarded to this office. We present it in full. AS THE "CONTRACT" HAS BEEN COPYRIGHTED, copies can only be obtained through the "Inland Publishing Co." Chicago, Ill. If desired, forward your application to the Company, and your name and address will be printed in the proper places.

We can furnish them complete, with your names, etc., added for $2 00 per hundred or $10 per thousand.

THIS AGREEMENT, made the.....day of .....in the year one thousand....hundred and..... by and between.....
.....
.....
.....part of the first part (hereinafter designated the *Contractor*;) and.....
.....
.....
.....part of the second part (hereinafter designated the *Owner*;).....

WITNESSETH that the Contractor, being the said part of the first part, in consideraton of the covenants and agreements herein contained on the part of the Owner, being the said part of the second part, do covenant, promise and agree with the said Owner, in manner following, that is to say:

1st. The Contractor shall and will well and sufficiently perform and finish, under the direction, and to the satisfaction of .....Architect (acting as Agent of said Owner), all the work included in the.....
.....
.....
.....
.....
.....

agreeably to the drawings and specifications made by the said Architect, and signed by the parties hereto, (copies of which have been delivered to the Contractor), and to the dimensions and explanations thereon, therein and herein contained, accord-

ing to the true intent and meaning of said drawings and specifications, and of these presents, including all labor and materials incident thereto, and shall provide all scaffolding, implements and cartage necessary for the due performance of the said work.

2d. Should it appear that the work hereby intended to be done, or any of the matters relative thereto, and are not sufficiently detailed or explained on the said drawings, or in the said specifications, the Contractor shall apply to the Architect for such further drawings or explanations as may be necessary, and shall conform to the same as part of this contract, so far as they may be consistent with the original drawings, and in event of any doubt or question arising respecting the true meaning of the drawings or specifications, reference shall be made to the Architect, whose decision thereon, being just and impartial, shall be final and conclusive. It is mutually understood and agreed that all drawings, plans and specifications are and remain the property of the Architect.

3d. Should any alterations be required in the work shown or described by the drawings or specifications, a fair and reasonable valuation of the work added or omitted, shall be made by the Architect, and the sum herein agreed to be paid for the work according to the original specification, shall be increased or diminished as the case may be. In case such valuation is not agreed to, the Contractor shall proceed with the alteration, upon the written order of the Architect, and the valuation of the work added or omitted shall be referred to (3) three Arbitrators, (no one of whom shall be personally connected with the work to which these presents refer), to be appointed as follows: one by each of the parties to this contract, and the third by the two thus chosen; the decision of any two of whom shall be final and binding, and each of the parties hereto shall pay one-half of the expense of such reference.

4th. The Contractor shall, within twenty-four hours after receiving written notice from the Architect, to that effect, proceed to remove from the grounds or building, all materials condemned by, whether worked or unworked, or take down all portions of the work which the Architect shall condemn as unsound or improper, or as in any way failing to conform to the drawings and specifications, and to the conditions of this contract. The Contractor shall cover, protect and exercise due diligence to secure the work from injury, and all damage happening to the same by neglect, shall be made good by

5th. The Contractor shall permit the Architect, and all persons appointed by the Architect, to visit and inspect the said work or any part thereof, at all times and places during the progress of the same, and shall provide sufficient, safe and proper facilities for such inspection.

6th. The Contractor shall and will proceed with the said work, and every part and detail thereof, in a prompt and diligent manner, and shall and will wholly finish the said work according to the said drawings and specifications, and this contract, on or before the.....day of .....in the year one thousand....hundred and..... (provided that possession of the premises be given the Contractor, and lines and levels of the building furnished him, on or before the..... ....day of.....in the year one thousand.....hundred and.....), and in default thereof the Contractor shall pay to the Owner.....dollars for every day thereafter that the said work shall remain unfinished, as and for liquidated damages.

.....

.....

7th. Should the Contractor be obstructed or delay in the prosecution or completion of the work by the neglect, delay or default of any other contractor; or by any alteration which may be required in the said work; or by any damage which may happen thereto by fire, or by the unusual action of the elements, or otherwise; or by the abandonment of the work by the employees through no default of the Contractor, then there shall be an allowance of additional time beyond the date set for the completion of the said work; but no such allowance shall be made unless a claim is presented in writing at the time of such obstruction or delay. The Architect shall award and certify the amount of additional time to be allowed; in which case the Contractor shall be released from the payment of the stipulated damages for the additional time so certified and no more. The Contractor may appeal from such award to arbitrators constituted as provided in Article 3d of this contract.

8th. The Contractor shall not let, assign or transfer this contract, or any interest therein, without the written consent of the Architect.

9th. The Contractor shall make no claim for additional work unless the same shall be done in pursuance of an order from the Architect, and notice of all claims shall be made to the Architect in writing within ten days of the beginning of such work.

10th. The Owner agree to provide all labor and materials not included in this contract in such manner as not to delay the material progress of the work, and, in the event of failure so to do thereby causing loss to the Contractor, agree that will reimburse the Contractor for such loss; and the Contractor agree that if shall delay the material progress of the work so as to cause any damage for which the Owner shall become liable (as above stated), then shall make good to the Owner any such damage—over and above any damage for general delay herein otherwise provided; the amount of such loss or damage, in either case, to be fixed and determined by the Architect, or by arbitration, as provided in Article 3d.

11th. The Owner shall effect insurance on said.....work, in his own name and in the name of the Contractor, against loss or damage by fire, in such sums as may from time to time be agreed upon with the Contractor, the policies being made to cover work incorporated in the building, and materials for the same in or about the premises, and made payable to the parties hereto as their interest may appear.

12th. Should the Contractor at any time refuse or neglect to supply a sufficiency of properly skilled workmen, or of materials of the proper quality, or fail in any respect to prosecute the work with promptness and diligence, or fail in the performance of any of the agreements on part herein contained, such refusal, neglect or failure being certified by the Architect, the Owner shall be at liberty, after three days written notice to the Contractor, to provide any such labor or materials, and to deduct the cost thereof from any money then due or thereafter to become due to the Contractor under this contract; and if the Architect shall certify that such refusal, neglect or failure is sufficient ground for such action, the Owner shall also be at liberty to terminate the employment of the Contractor for the said work and to enter upon the premises and take possession of all materials thereon; and to employ any other person or persons to finish the work, and to provide the materials therefor; and in case of such discontinuance of the employment of the Contractor he shall not be entitled to receive any further payment under this contract until the said work shall be wholly finished, at which time, if the unpaid balance of the amount to be paid under this contract shall exceed the expense incurred by the Owner in finishing the work, such excess shall be paid by the Owner to the Contractor, but if such expense shall exceed such unpaid balance, the Contractor shall pay the difference to the Owner. The expense incurred by the Owner as herein provided, either for furnishing materials or for finishing the work and any damage incurred through such default, shall be audited and certified by the Architect whose certificate thereof shall be conclusive upon the parties.

13th. And it is hereby mutually agreed between the parties hereto, that the sum to be paid by the Owner to the Contractor for said work and materials shall be.....

.....

.....

subject to additions or deductions on account of alterations as herein before provided, and that such sum shall be paid in current funds by the Owner to the Contractor in installments, as follows:

.....

.....

.....

.....

It being understood that the final payment shall be made within.....days after this contract is completely finished; provided, that in each of the said cases the Architect shall certify in writing that all the work upon the performance of which the payment is to become due has been done to satisfaction; and provided further, that before each payment, if required, the Contractor shall give the Architect good and sufficient evidence that the premises are free from all liens and claims chargeable to the said Contractor; and further, that if at any time there shall be any lien or claim for which, if established, the Owner or the said premises might be made liable, and which would be chargeable to the said Contractor, the Owner shall have the right to retain out of any payment then due or thereafter to become due, an amount sufficient to completely indemnify against such lien or claim, until the same shall be effectually satisfied, discharged or cancelled. And should there prove to be any such claim after all payments are made, the Contractor shall refund to the Owner all moneys that the latter may be compelled to pay in discharging any lien on said premises, made obligatory in consequence of the former's default.

14th. It is further mutually agreed between the parties hereto, that no certificate given or payment made under this contract, except the final certificate or final payment, shall be conclusive evidence of the performance of this contract, either wholly, or in part, against any claim of the Owner, and no payment shall be construed to be an acceptance of any defective work.

15th. And the said Owner hereby promise and agree with the said Contractor to employ, and hereby employ to provide the materials and to do the said work according to the terms and conditions herein contained and referred to, for the price aforesaid, and hereby contract to pay the same, at the same time, in the manner, and upon the conditions above set forth.

16th. And the said parties for themselves, their heirs, executors, administrators and assigns, do hereby agree to the full performance of the covenants herein contained.

In Witness Whereof, the parties to these presents have hereunto set their hands and seals, the day and year first above written.

Various Designs for Business Buildings.

Great Chances for Three Inventors.

I have often taken occasion to remark that the world is awaiting the appearance of three great inventors, greater than any who have gone before; and to whom it will accord honors and emoluments far exceeding all ever yet received by any of their predecessors. The first is he who will show us how, by the combustion of fuel, directly to produce the electric current; the second is the man who will teach us to reproduce the beautiful light of the glowing-worm and the fire-fly—a light without heat, the production of which means the utilization of energy without that still more serious waste than the thermo-dynamic loss now met with in the attempt to produce light; while the third is the inventor who is to give us the first practically successful air ship. The first two of these problems are set for the electric engineer, and we may be pardoned excess of faith, should it prove to be such, when, contemplating the enormous gain to humanity which must come of such inventions, we look confidently for the genius who is to multiply the wealth of the world to an extent beside which even the boon conferred by the creators of the steam engine and telegraph will not appear overshadowing. When this inventor comes forward, and most probably not till then, it is very likely that we shall see steam superseded by a rival.—*Prof. R. H. Thurston.*

Galvanized Iron for Water Pipes, Tanks, etc.

I had the notion of using galvanized iron pipes, coated inside and out, for the service pipes of my house, but on asking advice on the subject, I have been informed that the material is declared to be unhealthful, and that its uses is forbidden in many places. I happened to notice, also, the accompanying note on the subject, in one of the scientific papers, which is to the same effect (clipping enclosed). Will you please give me the benefit of your opinion?—M. W., Cumberland, Md.

Answer. The clipping enclosed read as follows: "We do not consider galvanized iron to be a safe material for water pipes. Zinc is a metal which is readily attacked and dissolved by certain waters, forming unwholesome and poisonous salts." Replying to the above, we do not share in the opinion conveyed in the quoted item. We have never met with any well-authenticated case of hurtful influence exerted by zinc or galvanized iron when used as the contact surface for service pipes or tanks for water for household use. There is but one salt of zinc that may be said to possess actively poisonous qualities—namely, the chloride; and the likelihood of this salt being formed under any circumstances at least in quantity sufficient to dangerously affect the water is almost infinitely small. The action of portable water on a surface of zinc will be to form an exceedingly thin coating of oxide, and ultimately of carbonate of zinc over the entire surface. And as this salt is very insoluble, it will effectually protect the underlying metal from the further chemical change for an indefinite period. The Massachusetts State Board of Health, some years ago, investigated the subject, and made a report affirming the comparative harmlessness of zinc or galvanized iron for the purpose herein named. An instructive confirmation of this judgment is given by the example of the city of Hartford, Conn. In 1855, at the recommendation of the Water Commissioners of that city, service pipes of iron, galvanized inside and outside, were adopted there, and have been in use ever since. They are used also, to a considerable extent in Philadelphia, and other cities. So far as we are aware, in none of these places has the slightest bad effect been traced to the practice. Such evidence ought to outweigh any amount of condemnation based simply on hypothesis. In writing some time since, in this journal, on system, we took occasion to comment on the immunity, from any specific disease, of the men who work at the galvanizing pots, that could be traceable to the absorption of the metal. The use of sal-ammoniac as a flux to clear the surface of the melted zinc in the pot, causes clouds of the chloride to be carried into the air. Yet the men work at these pots day after day, sometimes when ventilation is bad (as on a damp day), enveloped in clouds of it so as to appear like shadowy figures at a short distance away, without noticeably affecting their general health. It is safe to assert, we believe, that a galvanizer handling iron about a galvanizing pot, takes into his system through the mouth and nostrils, whence it finds its way into the stomach and lungs, more zinc in the course of a single day's work than he would be likely to get from his galvanized water service pipes in a month. In the face of such a fact as this, the denunciation of zinc for water-storage tanks and conduits, out of fear of the consequences of the homœopathic doses of this metal that would be dissolved, is, in our judgment, a bugaboo.—*Mfr. and Builder.*

CALIFORNIA

Architect and Building News.

Ash Ave, between Buchanan and Laguna, residence. Owner Peter Flynn; architect Henry Geilfus; contractor Jas. Finn, cost $2,045; signed Aug. 16th, '88; filed Aug. 18th; limit Oct. 20th.

1st payment when roof is on $500; 2d, when partition and outside work done $500: 3d, when completed $530; 4th usual 35 days $515.

Ashbury and Waller, frame building. Owner, Julia Gascon; architect, Wm. Mooser; contractor, J. J. Plunn; cost, $2,900; signed, Aug. 15, 1888; filed Aug. 16, 1888; sureties, F. Joost and C. S. Holmes; limit, 10 days.

Payments, seventy-five per cent as work progresses; balance 35 days.

Army Ave, near San Jose avenue, additions to two buildings. Cost, $800.

Broderick, between Sutter and Bush, one-story frame Owner, S. Leszynski; architect, W. H. Armitage; cost, $3,000.

Bush between Fillmore and Webster, two-story and basement frame. Owner Rosalie Morris; architect John & Zimmerman; contractor F. W. Kern; cost $4,215; signed Aug. 15th, '88; filed Aug. 17th, '88; sureties O. W. Nordwell and F. Joost; limit Dec. 1st, '88.

1st payment when framed $800; 2d, when partitions are up $800; 3d, rough mortared and outside finish on $800; 4th when the inside is ready to paint $750; 5th and last usual 35 days, $1,062.

Buchanan, near O'Farrell. additions. Owner, W. Pluns; Cost, $1,500.

Bryant ave between 24th and 25th, two-story frame. Owner, Patrick Angler; architect and builder, Geo. Houston; cost, $3,000.

Clinton Park. near Dolores, two-story frame. Owner and builder, J. McBean; cost, $4,500.

Capp, near Twenty-fifth, one-story frame. Owner and builder, Lewis; cost, $3,000.

Clayton between Page and Oak, one-story cottage. Owner, Miss Marie J. Castlen; architect, Jas. E. Wolfe; contractor, J. W. Sims; cost, $1,975; signed, August 30th, filed, September 1st; limit, Nov. 10th; surety, D. Jordan; amount of bond, $1,000.

1st payment, roof sheathing on, $300; 2d, floored, $300; 3d, brown coated, $450; 4th, completed, $431; balance, usual 35 days.

Clay between Central ave and Walnut street, two-story frame. Owner, J. W. Kelly; contractor, S. M. Hills; cost, $2,700

Clay, near Walnut, two-story frame. Owner, W. J. Kelly; architect and builder, S. M. Hills; cost, $2,500; signed Aug. 30, 1888; filed Aug. 31, 1888.

1st payment, when enclosed, $600; 2d, when brown coated, $600; 3d, when completed, $600; 4th, usual 35 days, $700.

Clay and Mason, residence. Owner C. Wreden; architect H. Geilfus; contractor F. W. Kern; cost $3,080; signed Aug. 14th; filed Aug. 18th, '88; limit Nov. 15th, '88.

1st payment when roofed $600; 2d, brown coated $600; 3d, hard finished $600; 4th when completed $510; 5th and balance usual 35 days $770.

Columbia and 24th, improvements. Owner Louis Kahn; architect H. Geilfus; contractor J. W. Sims; cost $1,625; signed Aug. 16th, '88; filed Aug. 18th, '88; limit Oct. 15th, '88.

1st payment when brickwork and planking is done $600; 2d when completed $600; 3d, usual 35 days, $425.

Diamond, near Eighteenth, two-story and basement. Owner, N. Straub; architect, John Zimmerman; contractor, J. Klein, cost, $3,300; signed, Aug. 25, 1888; filed, Aug. 28, 1888; surety, C. S. Holmes; limit, Nov. 1st, 1888.

1st payment, when frame is up, $825; 2d, when partitions are set, $825; 3d, ready to paint, $425; 4th, when completed, $400; 5th, usual 35 days, $825.

Diamond, near 18th, two-story and base, ment. Owner, N. Straub; architects; John & Zimmerman; contractor, J. Klein-cost, $3,300; signed Aug. 25, 1888;

1003 Devisadero, alterations. Owner Anna Callingham; architect Schmidt & Shea; contractor Thos. Elam; cost $1,325; signed Aug. 16th, '88; filed Aug. 17th, '88.

1st payment when building is enclosed on roof $490; 2d, when completed $500; 3d and last usual 35 days $335.

Emma, near Ridley; two-story frame. Owner, J. T. Meyers; contractors, Martin & Maguire; cost, $2,800.

Eddy and Buchanan, two-story frame. Owner-Elizabeth Burns; architect, B. Henrick, sen; contractor, A. G. Fitzpatrick; cost, $4,262; signed Aug. 14th; filed Aug. 16th, sureties, Jas. Pendergast; limit, 70 days; amount of bond, $4,300.

1st payment, when roof is on, $800; 2d, when brown coated and outside finish on, $800; 3d, white coated and sashes hung, $800; 4th, when varnished and trimmed, $800; 5th and balance, 35 days, $1,062.

Emma near Ridley, two-story frame, Owner Jno. F. Meyers; contractor Martin & Maguire; cost $2,550; signed Aug. 6th, '88 filed Aug. 17th, '88; sureties, J. W. Wesson; limit 90 days.

1st payment when framed $500, 2d, when brown coated and pipes in $500; 3d, plumbing done and doors hung $500; 4th, white coated and prime coat of paint $500; 5th, when completed $500.

Eighteenth and Noe, two-story frame. Owner, McQueen; contractors, McCready Bros.; cost $5,000.

Eighteenth, near Collingwood, one-story frame. Owner, Graham; builders, McCann & Schetzer; cost, $2,000.

Eighteenth, near Collingwood, additions; cost, $1,200.

Fell bet Webster and Franklin, two-story frame. Owner, Wm. Olsen; architect, H. D. Mitchell; contractor, R. Sinnott; cost, $2,950; filed, September 5th; limit, Nov. 12th.

Payments—frame up, $900; brown mortar on, $800; white mortar on, $700; balance, $550, 35 days.

Fell between Webster and Franklin, building, W. Olsen; architect, H. D. Mitchell; contractor, R. R. Fraxler; cost, $2,620; signed, August 27th; filed, August, 28th; limit, Nov. 5th, surety, C. A. Malm.

Payments; 1st, when frame is up, $600; 2d, when brown coated, $700; 3d, when building is primed, $700; 4th, usual 35 days, $620.

Fell, betwen Webster and Fillmore, two-story frame. Owner, Catherine Ruhling; architect, John & Zimmerman; contractor, Adam Miller; cost, $6,020; signed Aug. 16th; filed Aug. 30th; limit, Nov. 15th; sureties, Chas. Lackeman and H. Williamson.

1st payment, when framed, $1,000; 2d, when partitions are set, $1,000; 3d, outside finish on, $1,500; 4th, when inside is ready to paint, $1,000; 5th, usual 35 days, or when bills are all paid, $1,520.

Ford, near 17th, two two-story frame. Owner and Builder, I. Sullivan; cost, $4,000.

Fifth, near Mission, additional story. Cost, $2,500.

Folsom near 8th, building. Owner, Mrs. E. Hauser; architect, Saftield & Kohlberg; contractor, Kincaid and Thompson; cost, $4,460; signed, Aug. 16, 1888; filed, Aug. 29. 1888; limit, 65 days.

1st payment, when building is framed, $800; 2d, when building is roofed, $800; 3d, when building is brown coated, $840; 4th, when completed, $900; 5th, balance usual 35 days; sureties, F. P. Latson and John F. Kennedy; amount of bond $4,660.

Fillmore between Golden Gate ave and McAllister street, two-story frame. Owner, E. McEneany; architect, M. J. Welsh; contractor, T. Sullivan (plumbing and gas excepted) cost, $3,487; sureties, F. Joost, W. Thyarks; signed, Sept. 4th; filed, Sept. 5th; limit, 79 days.

Payments; frame all up, $870, brown mortar on, $870; completed, $870; balance, $877, 35 days.

Fillmore between Golden Gate ave and McAllister, two story frame. Owner, E. McEarney; architect, T. J. Welsh; contractor, T. Sullivan; cost, $4,500.

Fifth, near Harrison, two story frame. Owner, Jno. Loffler; architects, John & Zimmerman; contractor, C. Roeber; cost, $1,220; signed Aug. 22, 1888; filed Aug. 30, 1888; limit, 30 days.

1st payment, when frame is up, $400; 2d, when roofed, $400; 3d payment, 35 days, $420.

Franklin and Ellis, stair building. Owner Academy of Sacred Heart, architect C. J. I. Devlin; contractor A. Sanborn; cost $2,100; signed Aug 9th, '88; filed Aug. 17th, '88.

1st payment when the stringers treads and risers of main stairs are in place $1,000; 2d when completed $1,100.

Franklin and Ellis, plastering contract. Owner, Academy of Sacred Heart; architect C. J. I. Devlin; contractor, Martin Carrick; cost $3,550; signed Aug. 8th, '88; filed Aug. 17th, '88; sureties, Flanagan & Mason; amount of bond $3,000; limit Sept. 1st, '88.

1st payment, 1st coat of mortar $900; 2d, hard finish $850; 3d when completed $900; 4th, usual 35 days, $900.

Fulton, No. 426, two-story frame. Owner, Mrs. M. Dowling; architect and builder, G. M. Salsbury; cost, $3,500.

Fulton, near Lyon, two-story frame. Owner, H. Winter; architect, John & Zimmerman; contractor, F. W. Kern; cost, $4,170; signed Aug. 22, 1888; filed Aug. 30, 1888; limit, Dec. 1, 1888; sureties, Joost & Nordwell.

1st payment, when framed, $800; 2d, when brown coated, $1,000; 3d, inside finish ready to paint, $1,300; 4th, usual 35 days, $1,020.

426 Fulton, two-story frame. Owners, Jas. and Mary Dowling; architect, Geo. M. Salsbury; contractor, Geo. M. Salsbury; cost, $3,135; signed Aug. 23d, 1888; filed Aug. 30, 1888; limit, Nov, 22d, 1888.

COUNTRY BUILDING NEWS.

ALAMEDA.

Work has been commenced upon a handsome residence for Charles L. Hermann, on Alameda avenue, between Chestnut and Willow streets. It will be two stories in height, contain eleven rooms, and will be equipped with all modern conveniences. The cost will be about $4 500. J. A. Leonard, of this city, is the architect.

ANAHEIM.

A Goldthwaite will give all information in regard to a $6,000 school building to be erected.

CHEHALIS, W. T.

N. B. Coffman can be addressed in regard to a $7,000 school building.

EUREKA, H. B.

Henry Buhne, the tug owner, will build a $10,000 residence. Jas. Simpson has the contract.

FRESNO.

Architect Praum, formerly a partner with Mr. Daley of this city, has taken Mr. Saffell into partnership.

They have let a contract to G. B. Campbell for $10,000 additions to the building of J. W. Ferguson. Also a $20,000 brick building to same contractor for S. W. Griffith; plans are being prepared for Griffith & Co's $5,000 three-story brick building, also for a $7,000 building for P. Myer.

PASADENA.

H. Ridgeway is preparing plans for Mr. Brockaway. A $2,000 brick building is o ntemplated.

PETALUMA.

Work has been commenced on H. B. Higbee's new residence on the Stanley lot. Ed. Hedges has the contract. It will be a one-story cottage and have all the modern improvements.

PORTLAND, OR.

Architect Kleeman has let a contract to Works & Gilbert for a $1,500 cottage for J. Barbey.

SHELTON, W. T.

A hotel building is being erected by Wm. Shorter.

SAN DIEGO.

Architects Clemments & Co. notify us that a portion of the Hamilton Building will be erected at once. The total cost will be near $400,000.

Henry Timkin will erect a $9,000 residence, he having let the contract for same to Brewster & Whalen.

Comstock & Trotsche send us word that they are preparing plans for improvements to the Consolidated National Bank. Will cost nearly $60,000.

SEATTLE, W. T.

S. Frauenthal will soon build a $10,000 house.

SCARCITY OF MASONS—Contractors complain that brick masons are very scarce in Seattle, while the bricklayers' union claims that there are plenty of masons here to do all the work on hand at the present time. This indicates an unaccountable difference of opinion between the contractors and the masons.

Two large school houses will be built. Total cost over $100,000. Address contractor Jas. Parke, for information.

SAN MIGUEL.

G. W. Spencer will have erected a brick building.

A $1,000 hotel is being contemplated.

W. J. Smith will soon commence a five-room cottage for Amos Whittemore.

Work will soon commence upon a five roomed cottage for Amos Smith. W. J. Smith has the contract.

SAN BERNARDINO.

Architects Jones & Griffith yesterday let a contract to W. G. Hastings to erect two five-room cottages on G, between Second and Third, for Major B. B. Harris.

Wendell Easton, of Easton & Eldridge, the great realty firm of California, has aptly said that in architecture Los Angeles is entering upon the "stone age." The progress is from adobe to frame, from frame to brick, from common brick to pressed brick, from pressed brick to red stone and granite. Our new quarries will soon inaugurate the "marble age"

SANTA CRUZ.

The plans are being figured on for an Odd Fellows' Building. Address D. A. Damkroeger.

SAN JOSE.

S. Ellsworth is having a house built on his Saratoga avenue property.

TACOMA, W. T.

Architects Farrell & Darmer have plans for Birmingham & Hogue's $20,000 three story brick building, and also for an $18,000 brick building for Geo. B. Kandle.

Rev. G. H. Greer will have built for him by H. M. Matheson, a $12,000 brick building.

RIVERSIDE.

Dr. S. R. Magee is building a fine residence on Magnolia avenue.

Work will soon be commenced on a handsome new residence for Mrs. Chalmers, the plans for which have just been prepared by A. C. Willard. The building is to be erected on Magnolia avenue and when completed will cost about $8,000.

A. C. Willard has severed his connections with J. C. Pelton, Jr., and has just opened an office in the Castleman block, where he is prepared to execute plans and drawings for any and classes of buildings.

The plans are out for the building to be erected at the corner of Eighth and Orange streets, and it is expected that work on the building will be commenced within eight or ten days. The building will have a frontage on Eighth street of 75 feet. It will be three stories high, and when completed will be the handsomest block in the city.

The accepted plans for a new residence for R. S. Crombie are now ready. They were drawn by A. C. Willard, and are of the Queen Anne Eastlake style of architecture, and will go into the hands of the contractors the first of the month to make bids. The building is to be erected on Orange street between Thirteenth and Fourteenth and will be a two-story eleven-room house.

Contract was let September 1st to J. L. Woodward for a building for G. N. Reynolds.

Pottinger & Kroonen have commenced building the house for Mrs. J. S. Johnson, on Orange street, opposite the Glenwood. It is to be a two-story eleven-room house.

Work has been commenced on the new building to be erected by A. H. Naftzger, A. Haeberlin and Down & Alguire, at the corner of Eighth and Orange streets. It will be two stories with fifty feet frontage on Eighth street, and running along Orange street ninety feet. It will be an imposing structure, built of pressed brick with red Arizona sandstone trimmings. The plans for the building were drawn by J. C. Pelton, and the contract for the brick and stone work was taken by Down & Alguire.

LIVERMORE.

All the carpenters in town are very busy at present.

John Beck is improving his property by the addition of a large stable.

The contract for the erection of Philip Anspacher's new cottage, corner of L street and College avenue, has been let to Capt. A. J. Palmer, of this place, and ground was broken last week. The work will be pushed rapidly forward. This will be one of the handsomest cottages in our town.

Jos. Fletcher is building an addition to his cottage.

VICTORIA, B. C.

Fisher & Wilson have let contract to Elford & Smith for a two-story brick building.

SAN PEDRO.

A school house to cost $2,500 will be built. A. G. Barton has the contract.

Remaining Numbers of this year given free to all new Subscribers for 1889.

SAN FRANCISCO, OCT. 15, 1888.

But Seldom We Speak of Ourselves.

Without being egotistical we may safely say that this number of the CALIFORNIA ARCHITECT exceeds any of its predecessors in the amount of valuable reading matter furnished to its subscribers. It contains:

An Editorial on the New City Hall Tower.
Proceedings of the Chapter of Architects.
President Sander's masterly Address.
The New Plumbing Law.
A very interesting letter from E. C. Gilbert.
Report in full of the Committee on New City Hall Tower.
A complete summary of City Building News.
Country Building News.
List of members of Builder's Association.
Superb Illustrations.
An instructive article by Arthur Seymour Jennings.
And many other notable features. A steady improvement will be noted in each successive issue.

An Extra Edition.

For the past two months we have largely increased the number of our monthly issue. In December we guarantee to print 5,000 extra copies, which will be sent to parties all over the Coast who are interested in building matters.

SUBSCRIBE NOW FOR 1889.

Weekly Building News.

We are making arrangements to re-establish the WEEKLY BUILDING NEWS. One of our largest real estate dealers will assume control of the department devoted to transactions in real estate. Taken in connection with weekly building reports, we will present a complete record of all transactions benefitting directly those who build and those who furnish materials after dwellings are erected.

The City Hall Tower.

SINCE the first move was made toward the erection of the New City Hall, no one feature of the construction has attracted more general attention, interest and comment, nor provoked more pronounced controversy and disagreement as between the gentlemen composing the Board of Commissioners, than the tower.

To the architect it has been a very hard nut to crack, and the insignificant stipend pocketed by him each month in the shape of salary is a miserable compensation for the numerous annoyances alone encountered, to say nothing of the time, services and skill required of him as an architect. That he has and should have pride and ambition in the matter is both natural and reasonable, and it would be much less than fair to attribute wrong motives to him in striving to carry out and complete, according to his best judgment, so conspicuous and important a part of the work on the City Hall as the tower, which, if he is allowed to proceed with, must stand for all time as a monument to his architectural skill and genius, or stamp upon his name and memory all the ignominy that failure to produce a handsome, well-proportioned and properly-constructed tower will entail. Professionally, it will be life or death to him, as present and future generations will associate his name with praise if good, and reprobation and condemnation if he shall produce an architectural deformity at the expense of the public treasury. All this Mr. Laver undoubtedly well understands, and, as a sensible and intelligent man, has fully weighed and considered in his earnest efforts to have his high-tower plan adopted by the Commissioners and carried into execution; and, if the option was left with him, not a day of the time required in the construction of the tower would be lost. Is Mr. Laver wedded to his high-tower proposition? There can be no question upon that point, as he, with many other competent critics and judges, is satisfied that, if erected, the architectural delineations will be imposing and handsome in detail, and the general effect such as to command admiration from those whose esthetic eye and good judgment are capable of seeing and accepting the products of other minds than their own, upon the real merits of the thing produced, divested of all selfish and prejudiced cavillings, which, when applied, will see nothing except from the limited standpoint of their own individual notions.

It may be charged by some that this style of reasoning is inconsistent on the part of this journal, in view of the facts connecting the writer with a report made to the City Hall Commissioners upon the subject matter of this article. If so, we do not see it in that light. We have taken no decided stand in the matter, nor in any way expressed a fixed opinion in favor of or against any "type" of tower. And it appears to us that the question under review and all others, whether square, round or polygonal, have more than one side, to comprehend which, each must be viewed from a proper standpoint.

Mr. Laver, in his recent defense before the Board of Commissioners, very naturally and reasonably commended and argued the force and value of the reports of the two well-known civil engineers named by him, whose qualifications none will question, as against the report of the Chapter of Architects. Mr. Laver would not have been just to himself had he not done so, as the report of the former fully recommended and sustained the carrying out of the high-tower plans, while the latter simply commended said plans as good in architectural design and possible of construction, and further suggested and recommended a change of "type of tower." But this suggestion was a disturbing and interfering element, which furnished Mr. Laver's opponents a new battle-axe and subjected him to new and increased difficulties. The two reports concur on some of the propositions involved but differ on others—one in nearly every particular sustaining the architect, the other doing so as far as the judgment and opinions of the chapter thought right, with suggestions added which it was hoped would lead to an amicable and intelligent settlement of all differences of opinion, and result in the erection of a tower satisfactory to all parties directly concerned in its construction, and which would meet favor in the eyes of the community, who are to be the payors for whatever may be done.

VERY IMPORTANT PROCEEDINGS, S. F. CHAPTER OF ARCHITECTS.

Inaugural Address of G. H. Sanders, President of the Chapter.

A goodly attendance of members was noted at the last meeting of the Chapter. Among those present were W. J. Cuthbertson, J. B. Whittemore, H. T. Bestor, J. Gash, R. H. Daley, A. Pissis, W. P. Moore, E. Kollofrath, G. H. Sanders, G. H. Wolfe. G. W. Percy, W. Patton and John Newsom were elected members as Fellows.

Proposition received from C. Herbert Hasty to become a Student Member. Referred to Committee.

President read annual address, which was ordered printed in the official organ of the Chapter. (It will be found in full in this issue.—Ed. Architect.)

A vote of thanks was tendered the President for his able address.

A communication was received from the Secretary of the New City Hall Commissioners requesting the Chapter to examine the revised plan of the tower, as prepared by Architect Laver. Plan of same accompanied the communication The same was referred to the committee who had charge of the previous report.

Following is the report in full of the Committee appointed by the Chapter to consider the plans of the New City Hall tower:

To the San Francisco Chapter of the American Institute of Architects:

Your Committee appointed at the last regular meeting to consider the resolutions of the New City Hall Commissioners in reference to the proposed tower, beg leave to report, as follows:

Immediately on their appointment, your Committee made arrangements to prosecute the task imposed upon them, and on the day succeeding their appointment, called for and received the necessary drawings and other data requisite to enable them to proceed.

Having made a thorough and repeated examination of the drawings submitted for their inspection, have unanimously arrived at the following conclusions:

First.—They consider that the design submitted by Mr. Laver for the New City Hall Tower is in itself well adapted in its external architectural features, to complete and adorn the building to which it is to be added. The hight—which has been more or less called in question—is considerable, but is not, in the opinion of the Committee, in excess of the proportions permissable in so vast a structure as that to which it is to be applied. On the contrary, in view of the enormous frontage and other dimensions of the New City Hall, it would be difficult to fix an assignable limit, beyond which it would not be possible to harmonize and proportion a structure of this description under given conditions.

They find, also, that the mansard roof, so called, in both the modified as well as the complete example exhibited in the drawings submitted to the Committee, while serving to fill up and prepare the structure for the reception of the tower, is by no means indispensable; at the same time it establishes the fact that should additional space be at any time required, the same may be obtained by its addition, with advantage, whenever deemed desirable.

They find, however, upon examination of the internal structure of the proposed tower, that on account of the position and nature of the bearings available, it will be necessary to construct it in iron instead of the solid material composing the walls of the completed portions of the building. They also find that in order to perfectly adapt the designs submitted by Mr. Laver to the existing structure, some additions to or modifications of the plans submitted to the Committee seem necessary; but these, considering the comparatively and unnecessarily immature condition of the drawings are probably intended by Mr. Laver in the final execution of the work when determined on. In the mean time your Committee, with this proviso, beg to suggest that in their opinion, to secure the entire stability of the superstructure, the iron beams forming the foundations of the whole should be extended under the projections at the angles of the tower, no provisions for that purpose appearing on the drawings as submitted to the Committee They also think that a broad sill plate composed of wrought iron beams and top and bottom plates should be placed on the circular brick wall surrounding the great circular hall under the tower. This would serve to equalize and distribute all unequal strains and bearings, and rectify any possible defects in the foundations of this part of the building. The Committee deem this provision absolutely necessary, for though the construction of the tower (which is of wrought iron, steel and sheet metal) is of the lightest practical description; the weight of the whole tower will be in the neighborhood of three thousand tons. But dead weight alone is not the only consideration, since the variable strains caused by windage will be very considerable, under even ordinary circumstances, and there are times when, at such a hight, the velocity of the wind will mean several hundred tons added to the ordinary weights at different points of the circle.

Second.—For the above reasons, while the Committee have full confidence in the ability of Mr. Laver to carry to completion the excellent design proposed by him in as satisfactory and substantial a manner as is possible under the circumstances, and with the materials at his command, they feel compelled to say in view of the various objections which may be urged against the erection of any structure of the sort proposed, that they believe some such type as that adopted by the first Commissioners, would be found on the whole, more suitable for the purpose than the new and loftier design, though in the nature of things, less imposing in appearance and less in proportion to the size and importance of the building. The difficulty and expense of keeping such a structure in repair and proof against the destructive effects of climate and season, is a powerful argument, though one of an economical rather than artistic nature, in favor of reducing as much as possible the area, and especially the hight of the exposed surfaces. And here your Committee would suggest that instead of employing materials, such as galvanized iron or steel in the external casing of the tower, which would need the preservative applications of some sort of paint, and would lead, as before stated, to endless repairs, they are of opinion that the use of copper, though of greater prime cost, would in the end prove of much more economical and of vastly greater architectural value, as it is a material beautiful and artistic in its application and effect, and eminently durable and in every way admirably adapted to the work proposed.

Third.—This brings your Committee to their last and final position. While they fully concede the many points of artistic merit as a whole, of both designs exhibited in Architect Laver's projects for the proposed tower of the New City Hall, and while they are quite ready to admit the *possibility* of their construction with safety and substantiability compatible with materials of such a perishable nature as those rendered necessary by the adoption of the peculiar method of construction hitherto submitted, they are not so ready to admit the *advisability* of such a course; and in view of the conditions existing in the present building, consisting as they do, of a great circular chamber, some 80 feet in diameter, surrounded by a massive brick wall, and including a circular peristyle of columns some 60 feet in diameter from centers, they believe that the possibility exists of erecting a perfectly unique structure in the form of a circular tower, or dome tower, which would offer features superior to any square structure yet proposed, and that before either of the designs now before the Commissioners are finally decided upon, it would be advantageous to furnish, as an alternative, such a design—homogeneous in material, with the existing building and equal to it in durability, and as free from necessity for endless protection and renovation.

Such a structure, we believe, would not only redound to the credit of all concerned in its production, but would ultimately be found to be of great economical advantage to the city generally.

It would be of a hight proportioned to its possible diameter, and would compensate in dignity of material for comparative lack in magnitude, though a tower or dome of more than ninety feet in outside diameter, is one out of which it would seem that a very grand and imposing structure could surely be evolved. All of which should be left with confidence to the well-known genius and artistic ability of the architect of the building.

Respectfully submitted,

ALBERT PISSIS,
JAMES E. WOLFE,
B. E. HENRICKSEN,
W. J. CUTHBERTSON,
JOHN WRIGHT,
Committee.

San Francisco, Sept. 17, 1888.

INAUGURAL ADDRESS OF G. H. SANDERS, PRESIDENT OF THE CHAPTER.

Fellows and Associates of the San Francisco Chapter:

Duly recognizing the honor and responsibility of addressing you a second time in an "Inaugural," and acknowledging also the ground of expediency which brought this about, I can only promise to fulfill this, and the succeeding duties of so important an office during the following year, as well as I know how.

It is conceded that an address of this kind should aim at something more than a mere review of a year's progress, seasoned with a few glowing prophecies of future advance in matters architectural.

So far, indeed, as the Chapter and its work and prospects are concerned, it may be said that we have not been altogether standing still, but that some advance has been made towards winning a position of honorable usefulness and gaining the confidence of the public in matters relating to the important province of constructive taste.

Our membership has somewhat increased during the year, and there has been a marked tendency among professional brethren still outside our society, to cast in their lot with the Chapter. This is a movement which should meet with every encouragement on our parts, as every added member widens our influence, increases our means of general utility, and brings us more and more *en rapport* with every portion of the building public and the constructive problems of the day.

It would be easy to tell a long story of our aspirations and our aims, about which indeed, we are apt to talk much and do little.

Perhaps it will be better worth while just at the present time to say a few words about a man who, though leaving but little so far as formal expressions of thought in set phrases is concerned, has left large evidences on every side of having done more to solve the problem of the architecture of the future, at least in America, than any other man of this or any age, for the time in which he lived—I allude of course, to the widely influential name of "Richardson." In some degree, like Phidias among the Greeks, or Michael Angelo among the Moderns, but in a wholly different way, the man, Richardson, lived and worked among us—well known and respected while he lived, but who bids fair to be better known and still more widely respected, nay revered in his works, and the example which those works place before the impressionable minds of the men of this age and nation—I repeat of *this* age and nation, for who can doubt that as the age is made by men, men are also made for each particular age, and by each particular age; in other words, are the outcomes of the times in which they live, and of their peculiar environment.

Now, as to this man, Richardson, I propose in the following remarks to elucidate from his works as well as I am able, some of the principles of design which have made this particular artist and professional man, at this time, so notable a figure in the foreground of architectural art.

In the first place I would say that I do not propose to give anything like a regular review of the man or his works, though an admirable basis is laid for the same in the notable book of Mrs. Van Renssalaer on the life and works of Richardson, lately published, and to which I am indebted for such authentic data as may be found in what I shall read to-night.

Born in 1838, of noble ancestry, (among which, on the mother's side, may be mentioned the well-known philosopher, divine and author, Priestly) educated at Harvard, and professionally trained at the Ecole des Beaux Arts in Paris, the man was undoubtedly broadened out into a very cosmopolitan character, and on that very account was doubtless better fitted than any other man of his day and generation for the life work which fell to his lot. He was constitutionally a large bodied, large hearted, large minded man, who wanted everything about him as "big" as himself, and who, almost immediately throwing off the superficial effect of his education and training, forthwith set to work with stone-axe and gavel, unfettered by rules and untramelled by precedents, to hew out a system—an architecture for himself, for his clients, and for such of his brother architects who would follow in his footsteps, or at least join him in exploring the new fields he had discovered.

It was inevitable with such a character as his, but that the type of his selection, as regards style, if type he must have, should be full, large and capacious as himself, and nothing could better fit his fancy than the massive and ponderous features of the round arched styles of Southern France. But in his hands it assumed a new guise. With him, pillar, arch and lintel seemed to become vitalized into a new existence. Base, shaft and cap seem to be so united and so well fitted for their purpose, that no other shaft, base and cap could by any possibility be devised which could do their work equally well in any other way; the arch becomes a new creation, each vousoir is in its turn the only vousoir in the whole arch, and every lintel would rest quietly under the weight of the whole world and never wake up. Every window becomes in turn the most important window in the structure, and every part of it is so thoroughly adjusted to every other part that it is without a peer among windows in its particular place and station. The wall surface is so carefully studied and adjusted, that it is difficult to find fault with a single stone.

The settled purpose he always had before him was absolute perfection in every part. One notable quality of the man, however, was the devoted zeal which he seemed to inspire in every one around him; they worked for him as they worked for no other man, and as if each was responsible for the whole, and so each and all conspired to carry out his suggestions in the most thorough manner, as the only way of securing the best result in the whole, so that every part of the work on his buildings shows indefatigable industry and zeal in those who have executed it. A piece of carving is wrought as if it was the only carving in the structure, and worked out with a care and minuteness, and such regard for the whole result, as if the artistic effect of the structure depended on it alone.

Every window, door, turret, column, arch, lintel, or feature of whatever kind is carefully designed and laboriously adjusted until each fits into its place like a wheel in a complica ted mass of machinery, and each of which is indispensable to the action of the whole system.

Apply the above remarks to each department and to each material throughout a building, inside and out, and it is easy to see the thorough "technical" quality which would be certain to pervade the structure. But not alone this more strictly utilitarian element with its three subordinate attributes of utility, strength and adaptation or fitness, is to be thought of as entering into the sum total of the design, but considerations definitely ornamental must claim a still larger share of careful study in proportion to their higher artistic value in the domain of art. Every part must be carefully and completely subordinated to every other part and to the whole, so that every design must have entire unity of effect, and not only as to its general forms, but each detail, however unimportant, must be subjected to the same careful scrutiny, consideration and re-consideration—and this as regards color as well as form, even to the veriest shade.

Decoration, both in form and color, must be made truly ornamental. Every particle of ornamentation must be made in its turn as thoroughly a part of the building and as indispensable as any other merely utilitarian feature; it must be properly distributed as regards the whole, as well as within its own limitations. It must be thoroughly satisfying to that sixth sense, as it has been called, the sense which is capable of appreciating the subtile qualities of beauty styled "Æstheticos" by the Greeks (and meaning that which is capable of affording pleasure to the senses), and this as regards both form and color and arrangement of both, and not of individual parts alone, but of the parts in relation to the whole, and the whole to its parts.

Thus again we have a trine, the Æsthetic series of attributes—decoration or ornamentation, symmetrization and beauty. But we must take higher ground still if we would adequately grasp the full meaning and intent of the remarkable work of the remarkable man we are considering. As the swelling undulations of the wide-spreading plains are to the sweeping lines of the rolling hills, even so are these hills to the lofty mountains around whose feet they group themselves in humble yet contented emulation. And so are the exaltations of mere technical utility with such incidental and inseparable pleasure-giving qualities as arise from recognized adaptation of material and purpose, to the vastly greater and more exquisite results of ornamental qualities sought for their own sake and capable of gratifying the yearnings of the human soul for the beautiful; and these again to those pure aspirations of the intellectual faculties of the mind, rising far above the illusions and seductions of sense into the lofty regions and untainted atmosphere of Truth. Under the austere supervision of this high principle, *Nee Vile fanos* becomes a potent and most all-pervading legend, written in effect on each substance, form and subject throughout the whole realm of design, from the lowest foundation stone to the highest finial, from the outermost outline to the innermost recesses of the material temple; all things therein become representative of the designer and embody and incarnate him in his work. Every virtue and every vice, which either strengthens or weakens the creative power of thought, will

find its corresponding impress on the substance and form of every structure which has been evolved out of his consciousness or has obtained the seal of his approval.

And it is manifest that this principle in its turn, will pervade everything which is the subject of the designer's art, from the most utilitarian arrangement of plan to the highest expression of his skill in sculpture and painting. In the first it speaks in mechanical adaptation of means to ends; in the latter it voices itself in distinct symbols—modified by more or less powerful expression, into an utterance of ideas—simple or complex, as the case may be, and capable of telling the most momentous truths, with all the added force of dramatic incident and forcible illustration.

This highest, or "phonetic" phase of the architectural art thus also includes a trine of attributes, viz: Symbolical form, artistic expression, and ideal representation.

It is not claimed that all these particular and more or less complicated expresions of analytic thought found any definite utterance in the words or expressed ideas, or even had a conscious existence in the mind of Richardson. It is only claimed in that so far as the above sentiments and principles, crudely expressed and imperfectly formulated as they are in this paper, may be found embodied in the works and example of this man who was so earnest in his efforts to establish and promulgate true art; he has left an impress on the age, and has aroused a taste for the substantial, the beautiful and the true, which no other man of the present century, or few before him, have succeeded in accomplishing, none indeed in so brief a period as the active portions of Richardson's life really covered. He constantly sought in the evolution of a design, to obtain a single broad and comprehensive idea, and every subordinate part was carefully studied and brought into harmony therewith. In every department of the execution, and in every subordinate feature, truth of form, truth of material, truth of expression, with few and only early exceptions, was sought for with unswerving devotion.

In the often elaborate carvings which adorn his works, this is constantly found to be the case. Not contented with good general forms, authentic detail, graceful curves and some sort of ideal character, every part of even the least important feature is arranged with scrupulous attention to its relative effect in the whole composition. The beauty and grace must be of the right sort and harmoniously adapted to every other bit of grace and beauty found elsewhere in the structure, and the ideality must be expressed in consistent terms. Another notable point was his attention to materials. They must be of the best and carefully selected as to both quality and color. Again they must be properly placed. No degradation of a nobler by subordination to an inferior substance in the general construction is tolerated for a moment—stone, brick, metal, wood, plaster or glass must be of the best attainable quality and placed in the order of their dignity and character.

To convince oneself of the value of these principles, one has only to look about him to find them violated on every side.

Fatal facility of bedizenment in wood, paint and plaster has given us a terribly corrupt heredity, in a love for all sorts of flimsey ornament and useless and meaningless decoration. "Constructed Decoration" instead of "Decorated Construction" being regarded apparently as a cardinal virtue and one of the leading canons of architectural art in San Francisco. Even in many of our recent structures in which the materials partake of a substantial character and the mass and lines have been otherwise treated with dignity and propriety, the superimposition of false bearings and the misuse of materials has been altogether disastrous to all truly artistic values in the composition. But not alone in the houses we live in but in the garments we wear, the pictures we buy, and the books we read, is the regenerating influence of *principle* needed to rectify our taste and improve our moral sense.

The paltry "decoration" of our houses is too often paralleled in the puffing, paint and powder of our female friends and acquaintances and both in the shallow mockery of our religion, which seems in its most notable developments amongst us, for the most part, to glorify the *apparent*, whilst almost utterly ignoring the *real*.

The works of Richardson embraced every variety of structure from the humble cottage and railway side station to the stately church; the massive Court House and Town Hall as well as the ponderous warehouses and in all, in different degrees, his leading principles are found embodied in mechanical adaptation, beauty of design and truthful expression of purpose and appropriate treatment of material.

In the Pittsburg Court House and jail, and the great Marshal Field warehouse of Chicago, Richardson himself thought he had touched the highest point of his ideal, and the latter clearly formulates in its great arches and their horizontal and vertical divisions, the peculiar features of the style which obtains in the most notable of the great structures of the present time devoted to mercantile or commercial purposes. Many will give the palm of excellence to his exquisite library buildings, so many of which were carried into execution, and all of which are unique in their way, and certainly never excelled in their unity, originality and beauty of design and detail, and perfect fitness of adaptation to the purposes for which they are intended.

Trinity Church, Boston, the first example of the peculiar style which at once became the favorite vehicle of his artistic taste should not, in our opinion, be considered, though it often is, the best or greatest example of his genius. Externally, though very fine in conception and execution, it is accompanied by some rather unnecessary adjuncts, which somewhat detract from the more solid and dignified features of the design. Internally it is for the most part simulated construction, and to the true artist unworthy of its reputation and of its designer. It should be said however that Richardson himself defended it as being an intended sham, and to that extent a truthful structure, a logic seemingly worthy of a better cause.

In his dealings with his pupils, Richardson was accustomed to throw as much as possible the burden of the responsibility of design upon them, thus early developing their powers, arousing their ambition and making them feel the importance of the work committed to them; in this way it was that he succeeded in uniting all with whom he came in contact with himself in the effort to improve and to perfect such work as was placed in their hands. A true co-operation of the noblest sort, a co-operation of art workers for art's sake, striving to embody in lasting forms and living principles, the useful, the beautiful and the true.

Note.—The peculiar expressions "technical," "æsthetic" and "phonetic" were first employed, in the particular connections indicated above, by Ferguson, in the revised edition of his "History of Architecture," published about twenty years since. It is intended to further develop the subject in a future paper on another occasion.

Alameda 'Encinal."

We are pleased to record the most convincing evidence upon the prosperity of a town that can be chronicled by any one living outside of the place to be noticed. The *Encinal* has been published for twenty years and the name of its editor is a synonym all over the State for genial character, and also as the exponent *par excellence* of editorial courtesies. Alameda is outgrowing itself and its inhabitants are no longer satisfied with a weekly paper. So our good friend Krauth comes out with the *Semi-Weekly Encinal*. We hope he will soon be able to change it to a daily. As an exponent of bright local news, with not a word but can be read by our children, the *Semi-Weekly Encinal* stands without a peer in the State. The best sign of a go-ahead place is the increase of its newspapers, or having those already established appear oftener than once a week.

Notes on Painting.

The best time to paint the outside of a house is early in the winter, or in spring, when the air is cold and no dust is flying.

Knots in boards may be killed before painting by several methods. The surest and best, in fine work, is to cover the knot with an oil size and lay silver leaf over it. Glue size, mixed with red lead, or gum shellac dissolved in alcohol and mixed with red lead, or gutta percha dissolved in ether, will satisfactorily cover knots not exposed to sunshine. The heat of the sun draws the pitch in the knot to the surface, through the paint.

If woods to be painted are soiled by smoke or grease, those parts are to be washed with a solution of saltpeter in water, or with very thin lime whitewash. If soap-suds are used to wash of the smoke or grease, they should be thoroughly rinsed with clean water, or the paint will not harden.

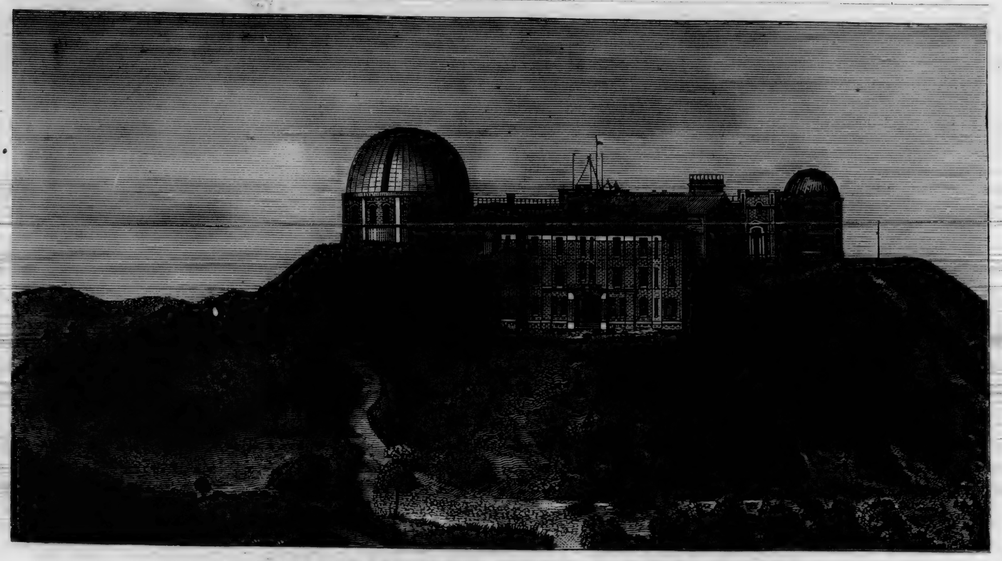
The first, second, and third coats of paint, on the outsides of buildings, should be prepared by mixing the white lead with boiled linseed oil, and allowing each coat to dry hard before applying the next.

PRICE OF LUMBER.

Price of lumber is still on the downward grade. It can be bought for $18 per M for rough lumber.

Shingles have also declined 25 cents per M.

At $18 per M the price is just to the millmen and low enough to consumers.



MT. HAMILTON, SANTA CLARA COUNTY, CALIFORNIA—THE SITE OF THE GREAT LICK TELESCOPE.

Berlin, Sept. 1, 1888.

Editor Architect and Building News.—

Dear Sir: It may be of interest to some of the readers of your valuable journal to know a few observations taken by a Californian while journeying through Europe—of the great variety of buildings and their furnishings, etc. We wrote you last from London, where we took steamer for Christiana (three days' journey). The first thing which pleased us, on our arrival, was the massive stone docks, which are similar to those at Liverpool, but not so extensive; next the streets, which were well-paved with hewn stone and cobbles. Most of the streets are very narrow and crooked, and the sidewalks are so narrow in some places that one is obliged to step into the gutter to allow another to pass. The main thoroughfare leading up to the palace is broad and straight and pleasant to ride upon. Owing to the narrowness of the sidewalks, the people are obliged to walk in the streets. This is not so bad, as the streets are well paved and always kept clean. The first thing which the eye of a mechanic lights upon is the buildings—how they are built and the materials of which they are constructed. One thing impresses itself upon your mind right away, and that is, the Norge people build to stay; all of their buildings have a solid, substantial look, if they are not all of that style which we of the nineteenth century enjoy seeing. Most of the buildings are of brick, then covered with a coat of cement, and subsequently covered in imitation of various stones. Others are built of granite and sandstone, and all the roofs are either slate or tiles, the latter being most used. Among the most conspicuous buildings here which we visited are the Palace, Houses of Parliament, University Buildings, Victoria Apartments, Akers Gaden and the Cathedral, the dome of which was very odd indeed, being a combination of the Gothic and old oriental Mosque. In the afternoon we took a ride down through the Fgords to King Oscar's Castle, a beautiful structure of solid masonry, with twisted tower. We were shown all through the various apartments, and then on top, where we had an extended view of the surrounding country and could see over the land and water for miles and miles. Sometimes, when it is clear, you can see down through the Fgords as far as—the "*moon*." We also visited several buildings in course of construction and found them putting in 14x14 inch hewed pine for sub-sills with 12x12 inch girders framed together strongly with 4x14 inch floor joists, all hewed and mortised and tenoned together—this was for an ordinary dwelling—and the roof put together in the same style, having timbers in the plates and rafters heavier than those which we in California put into foundations. And they go on this principle all the way through; even the locks and keys on the doors are as large as those of St. Peter's, and they still cling to the old brass knockers on the doors in place of our electric bells. We saw men hauling granite for a building coming down a steep hill with no breaks for their wagons. I expected to see the whole business roll on to the horses before they got to the foot.

After spending two delightful days here, we went to Stockholm, which is sometimes called the Venice of the North. It is certainly very beautiful, both for what nature and man have done for it. Mr. Werner Cronquist, Chemist for the Royal Navy, took your correspondent around the city and showed him the sights, which were many, and he took pride in them, I was convinced, as he pointed them out to me. Here we have the solid granite docks and bridges that characterize all these cities which I have visited. We see many long blocks of beautiful buildings, built of brick and stone, which will compare favorably with those of any city in the world. We see here that the later styles prevail, making a striking contrast with the city just left. Such a variety of modern architecture one is surprised and pleased to see. The new St. Johanses Church, now being built, is a monster structure, and will be very beautiful when complete. Architect Moller is a man of large experience and has designed some of the finest buildings here. The Church of the Kings is the first I have ever seen with a cast-iron spire and complete spear scroll work. It looks oriental, indeed.

On Sunday I attended the sacred concert given in the new German church, which is a solid granite edifice. The heavy stone columns through the center are six feet in diameter. Some of the most beautiful stained glass memorial windows made are in this church. The choir and organ loft and also the work around the altar is very richly carved and gilded. The pulpit is black and white marble, and was made in 1660. It was transferred from the old church to the new, and is a very pretty work of art. The largest telephone station in the world is located here—so I am told. Certainly the beautiful building, the immense tower, and the myriads of wires running hither and thither would indicate as much. I see they use here a preparation for coating brick buildings cemented, which makes them look like various kinds of marble. They use a scaffold such as I never saw in America in putting it on. It is a box 5x5 feet that holds two men. This is held in position by an immense pole 8x8 feet and 80 feet long, running through the center like a gauge on end, with a rope and racket attachment to hold it in place. It is certainly a novel scaffold. I notice that women are employed on many of the larger buildings to carry brick and wait on the men. They can run up and down five and six-story scaffolds as nimbly as the men. Among the prominent buildings we visited here are Drottingholm, Royal Castle (Tessin artchitect), Catarina lift building. The Polytechnical High School (Eddsord architect), Grand Hotel, Germania and Reidberg are large and commodious. The Royal Opera House and the Queen's Palace are solid granite structures. But the people must not be overlooked. They are just what they appear to be—kind, gentlemanly and generous-hearted, and know how to entertain strangers. I speak from experience.

Yours truly,

E. C. Gilbert.

Practical, Plane and Solid Geometry.

BY ARTHUR SEYMOUR JENNINGS.

Prepared especially for the ARCHITECT AND BUILDING NEWS. (Copyrighted.)

CONSIDERING that everything made by man is of geometrical form, it would appear that a more or less perfect knowledge of geometry should be possessed by everyone. To the mechanical draftsman, the subject is essential and especially that branch which relates to solid geometry and projection, while to the mechanic a knowledge of it forms, almost invariably, a means to the end of advancement. The artisan in many trades who understands geometry, is he who becomes foreman or superintendent. This is especially the case in the building and engineering industries where the operations from beginning to end depend upon the application of geometrical principles Hence, the civil engineer and the architect find it necessary to gain a knowledge of the subject, while those working under their directions—the builders, carpenters, masons and other mechanics—must be cognizant with it in order that they may be enabled to read the plans and drawings drawn out for their guidance The land surveyor is simply one who is versed in geometry and its application to the measurements of the earth's superficies. Measuration is a science which depends upon a knowledge of geometry and arithmetic for its solution.

The wide usefulness of the subject has had the effect of producing a deal of literature on the subject. For the most part, such books as exist are either too elementary or too advanced for the man of average intelligence; they are either more suitable for the school room than the practical man or else are so far advanced as to be without the scope of a person of ordinary "school education." So far as it is possible within these pages, it is proposed to give a series of articles which shall form the basis of an extended study in this important subject. A solution of the more elementary problems will not be given unless they are not generally known, but sufficient reference to and explanation of them will be made to enable those readers who may not be already familiar with them to obtain their solution from sources. Particularly in connection with projection, it is hoped that architectural draftsmen and others may find the benefit from studying—not merely reading— this series.

At the risk of a charge of advertising, the author will, where occasion requires, make mention of either firms or books which, from his personal knowledge, he deems likely to be of assistance to the reader. The object of the paper is simply to assist the student in acquiring this knowledge, and with that end he invites criticisms or questions addressed to the editor and will always be pleased to render whatever assistance he can in this connection

INSTRUMENTS.

The student of geometry will need a number of instruments in order that he may work out the various problems which are given. These must consist of, at least, a compass with pen and pencil points, a pair of dividers and a right line or drawing pen. Drawing boards, triangles, pencils, paper, rubber and thumb tacks will also be needed. Considering that sets of instruments may be had from 25 cents up to $300, it will be seen that a description of them would occupy too much space to give here. The student is advised to obtain the catalogues of the various firms of mathematical instrument makers which will be sent free of charge to any one who mentions this paper. In most of the large cities are found dealers, or makers, who publish catalogues and it will be useful to give one or two names here for reference. Kauffel & Esser, Fulton street, New York; Queen & Co., Chestnut street, Philadelphia and W. Stanley, Norway Junction, London. Eng., are among the chief firms, each of which will be found of much value and interest.

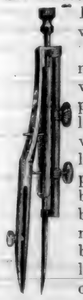


Fig. 1.—Compass for describing minute circles.

Among the less known of mathematical instruments may be mentioned the compass illustrated in Fig. 1 which is employed for describing minute circles. The principle difference between this and other compasses lies in the fact that the pen works on a vertical rod which is held stationery. Pens for making dotted lines up to recent date usually consisted of wheels placed between the nibs of an ordinary right line pen, but they were very far from satisfactory. Probably the best dotting instrument is that shown in Fig. 2 which not only is adaptable to any description of dotted line but does its work clearly and quickly. To change the length or description of the dots, the wheel B is taken out and another one is inserted. It is found of considerable service to have at hand a curve which may be used in describing ornamental work and a large number of different curves are manufactured in paper, hard rubber and wood for the purpose. These however, are to some extent unsatisfactory inasmuch as a great number of them will be required in setting out the work in an ordinary office. To meet the difficulty an instrument has been introduced, consisting of a flexible edge connected by a strip of pure drawn lead and it may be readily adjusted to any curve. One of the most difficult things to do in mechanical drawing is to draw a number of parallel lines at equal distance apart and it is required so often that several instruments for the purpose have formed the subject of patents in recent years. Among these may be mentioned Harden's section liner which is adapted for use on both sections and cylindrical work. Bergen's section liner in Fig. 3 is a very serviceable instrument of the same class while another is the "Universal Ruler," shown in Fig 4. An entirely new description of form in mathematical instruments has lately been introduced into this country from Germany. They are constructed mainly in cylindrical form and in strength and convenience are claimed to exceed those of the old style. Having possessed himself of the suitable instrument the student will now proceed to study scales.

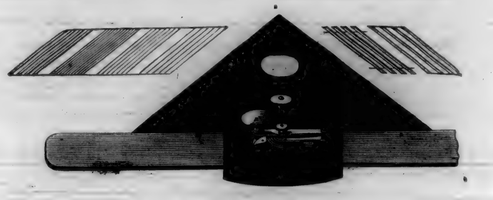

Fig. 3.—Bergen's Section Liner.

SCALES.—A scale drawing intended to represent some object such as part of a portion of mechanism, etc., may be full sized or it may be larger or smaller. In the last two cases it is said to be drawn to scale. In the erection of an ordinary building some drawing (termed details or detail drawings) are full size and the majority on a scale of about a quarter of an inch to one foot. The fraction which exists between a drawing and the object which it represents is termed the representative fraction because it represents the fraction or proportion between the drawing and the object. Thus in a scale of an inch to a foot one inch represents 12 inches and the representative fraction is therefore 1-12. The construction of a plain scale must be very accurate and as it

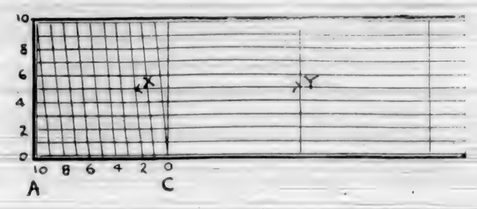

Fig. 5.—The Diagonal Scale.

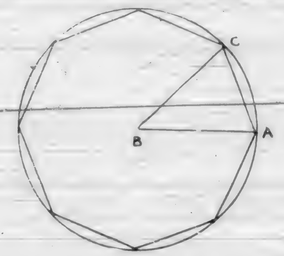

Fig. 6.—Construction of Polygon in circumscribing circle.

involves considerable time and care to make, it is advisable that scales should be purchased ready made. These are made on wood, ivory and paper. The last are not at all reliable. The student will do well to make himself thoroughly acquainted with scales and should make for himself several until he is able to produce a result essentially accurate.

The construction and use of a diagonal scale does not seem to be so generally known as it might be, considering its efficiency. Its use is to give minute measurements such for example as one hundreth part of an inch. The principle upon which it is constructed will be clear on reference to Fig 5. A B is divided into inches the first inch A C is divided into tenths as indicated by the figures placed against the divisions. To obtain the hundreth part of an inch, that is, the tenth part of the smaller divisions, lines are drawn diagonally, being divided up by horizontal lines into ten equal parts. It will be seen that if the diagonal line slope to the left 1 10th of an inch that the horizontal lines will divide that distance up into ten parts, giving the hundreth part of an inch. For example, the distance from X to Y in the figure will be 1.25 inches; that is, one inch, two tenths and five hundreths. It will be obvious that the most minute measurements by this system may be easily obtained and their utility in setting out on a small scale is very considerable.

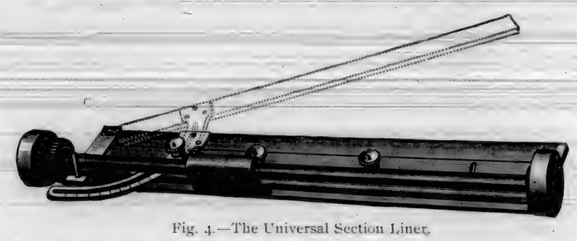

Fig. 4.—The Universal Section Liner.

ELEMENTARY PROBLEMS.

We may here pause to advise the student who is unfamiliar with the methods, to learn how to work out the following problems: Divide a line into equal parts or proportionally, making angles with compass only; bisecting angles and lines; erecting perpendiculars; polygons, triangles, squares and rectangles in circles.

POLYGONS.—The polygon is a figure having more than four sides and angles. When the sides are equal in length it is said to be a regular polygon, and when of unequal length an irregular polygon. The construction of the latter depends upon the length of lines and angles being given. Regular polygons, however may be constructed in a variety of ways. The geometrical methods are given in the books and are not within the scope of these papers. A quick way which is not generally known is by means of the protractor and is as follows: *First.* When the circle is given, divide 360 by the number of sides in the required polygon. Draw the circle shown in fig. 6 and a radius, making an angle with the first equal to that obtained by dividing as just mentioned. Thus suppose that it is required to draw an octagon or eight-sided figure in the circle A B: 360 divided by 8 equals 45, set up for the angle, 45 degrees, A B C, join A C, which is one side of the required polygon. Considering that all the sides are of equal length, the distance A C will step round the circle eight times as required. *Second.* When the length of side is given set out the one side E F fig. 7, then work out the following sum:

$$\frac{(N-2)\times 90}{N}$$

In this formula N equals the number of sides in the required polygon. Now take the angle so obtained and set it up at E and F respectively, and where the two lines meet at G, stick in the compass and with radius G F describe a circle. The line E F will now step round exactly the number of times required. For example, suppose it is required to draw a pentagon or five sided figure, N in this case equals 5, therefore 5 divided by 2 equals 3 times 90 equals 270 divided by 5 equals 54. The angles, of course may be either set up by means of a protractor or by the scale of chords. This method of constructing polygons is an exceptionally quick one, and with a little care is very accurate, Another way to do the same thing is by an instrument known as the sector, an explanation of which will be given in our next paper. *To be continued.*

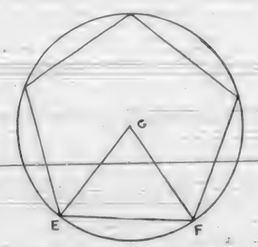

Fig. 7.—Construction of Polygon when one side is given.

Fig. 2.—Patent Dotting Instrument.

ODD FACTS ABOUT BUILDINGS.

The Definitions Used by Insurance Companies.

WHAT is a building, anyhow?

A reporter was securing some facts about insurance, and was surprised to find that a fishing scow comes under that heading, while a shanty does not always.

"That depends upon circumstances. Under the rules governing insurance companies a building is described briefly as follows:

"'A building or 'house' 'is an edifice erected by art, composed of stone, brick, wood or other proper substance, fixed upon or over the soil, and designed for use in the position in which it is fixed.'

"A policy upon a 'building' simply, without qualifications, will cover only the building as therein described. But the insurance will not include the contents, nor extend to the occupancy of the premises beyond that described in the policy.

"If the word building be qualified by additional words, as 'sawmill buildings,' it would then include everything appurtenant and necessary to fit it for occupany as a sawmill, and carry with it the right to be used for such purposes.

"Fishing Scows are Buildings—When it is proved that they are used and occupied during the fishing season as dwellings and places of business, and after the fishing season as residence on land.

"A Shanty Not a Building—When used for storing tools, but not used for a workshop.

"Stories of a Building—Where the several stories of a building were owned by separate parties, it was held that such owners of distinct buildings, the one situated over the others, and the owner of the upper story must keep the roof in repair at his own expense; and he cannot recover from the owners of the stories below any portion of such expense, although the repairs were to protect the property of such owners."

—"Gilbertson's Old Method" Roofing Tin has been specified by the Architect of the new B. & O. Depot at Smithfield street. One thing certain, the coming generation are sure of a good roof from rain and storm while waiting for trains at the B. & O.—*The Builders' Gazette, Pittsburg, Pa.*, Aug. 15, 1888.

PLUMBING AND DRAINAGE.

Rules and Regulations adopted July 19th, 1888, by the Board of Health, City and County of San Francisco, to take effect immediately

ORDER NO. 1,982.

Providing for the protection of the Public health, and requiring Plumbers to register their names and addresses at the Health Office, and comply with regulations of the Board of Health in reference to the drainage and plumbing of buildings.

The People of the City and County of San Francisco do ordain as follows:

[Plumbers to Register at Health Office.]

SECTION 1. Every master and journeyman plumber, carrying on his trade in this city and county, shall, under such regulations and rules as the Board of Health of said city and county shall prescribe (not in conflict with general laws), register his name and address at the Health Office of said city and county. And after the establishment of such rules and regulations, it shall not be lawful for any person to carry on the trade of plumbing either as a master or journeyman plumber, or otherwise, unless his name and address be registered as above provided.

[List of Registered Plumbers to be Published in yearly Report of Health Officer.]

SECTION 2. A list of the registered plumbers shall be published in the yearly report of the Health Officer or Board of Health.

[Penalty.]

SECTION 3. The drainage and plumbing of all buildings, both public and private, hereafter erected in said city and county shall be executed in accordance with plans previously approved in writing by the Board of Health of said city and county; and suitable drawings and descriptions of the said drainage and plumbing shall, in each case, be submitted to the Board of Health and placed on file in the Health Office.

[Drawings of Drainage and Plumbing to be filed.]

The said Board of Health is also authorized to receive and place on file drawings and descriptions of the drainage and plumbing of buildings erected prior to the passage of this Order.

[Penalty.]

SECTION 4. Any person violating any of the provisions of this Order shall be deemed guilty of a misdemeanor and upon conviction shall be punished accordingly.

In Board of Supervisors, San Francisco, May 28, 1888.

After having been published five successive days, according to law, taken up and passed by the following vote:

Ayes—Supervisors Curran, McDonald, Boyd, Pescia, Bush, Burns, Hawkins, Knorp, Heyer, Lambert, Joost, Morton.

JNO. A. RUSSELL, Clerk.

Approved, San Francisco, May 20, 1888.

E. B. POND,

Mayor and ex-officio President Board of Supervisors.

In pursuance of Order 1,982 of the Hon. Board of Supervisors, "providing for the protection of the public health and requiring plumbers to register their names at the Health Office and comply with regulations of the Board of Health in reference to the drainage and plumbing of buildings approved May 29, 1888," the Board of Health for the City and County of San Francisco, have adopted July 19, 1888, the following Rules and Regulations, to take effect immediately:

1. All material must be of good quality and free from defect. The work must be executed in a thorough and workmanlike manner.

2. The arrangement of soil and waste pipes must be as direct as possible.

3. Every house or building must be connected with the street sewer by a cast-iron or iron-stone pipe extending out to the line of the street, and in the case of buildings erected on the line of street, said cast-iron pipe shall extend three feet beyond the front walls or any area wall. From the points above designated to the street sewer, the drain shall be continued either by the above mentioned cast-iron pipe or by a vitrified iron-stone pipe laid at a uniform grade from the street sewer to a point of juncture with the cast-iron pipe. All joints on said iron-stone pipe shall be made with Portland cement, and each joint of pipe when laid must be properly cleaned on the inside by a suitable scraper before the succeeding pipe is put in place. All joints on a cast-iron pipe shall be made with a suitable packing of hemp or oakum, and run full with molten lead and properly caulked.

4. Every house or building hereafter erected must have the house drain constructed of cast-iron where it lies under the building; but when the house drain is outside the building lines, or where there is an open space under the house of four (4) feet clear in hight, it may be of iron-stone pipe. The house drain must have a fall of at least one-quarter of an inch to the foot; it should run along the cellar wall where practicable, or if laid under the lower floor of a building should be hung in iron straps securely fastened to the floor joists; it should be laid in as straight a line as possible. All changes in direction must be made in curved pipes and all connections with Y branches and one-eighth bends, with a trap placed under the sidewalk. The trap must be provided with a fresh-air inlet on the house side of the water-seal, of at least four inches in diameter, leading to the outer air. No brick, sheet metal or earthenware flue shall be used as a sewer ventilator, nor shall any chimney flue be used for this purpose. No T's to be used except in places where otherwise not practicable.

5. Every soil pipe shall be of cast-iron; waste pipe shall be of cast-iron, wrought-iron or lead.

6. All cast or wrought-iron pipe and fittings for waste, vent and soil pipe must be coated both inside and outside with coal-tar pitch, applied hot, or some other equivalent substance.

7. All iron soil or waste pipe, before being coverd up, must have all openings stopped, and filled with water and be allowed to stand until inspected and approved. All connections of lead with iron pipe must be made with a brass ferrule of the same size as the lead pipe, and caulked into the iron pipe and connected to the lead pipe by a wiped joint. All connections of lead pipe should be wiped joints.

8. Every water-closet, sink, basin, bath or set of wash-trays or other vessel connected with the drain pipes, must be separately and effectively trapped. The traps must be placed as near the fixtures as practicable.

9. Traps must be protected from syphonage by special air-pipes of lead, wrought iron or cast iron, not less than the size of waste pipes, and, if to supply air to traps of water closets, not less than two inches in diameter. These pipes must extend two feet above the highest point of roof or coping, or they may be branched into the soil pipe three feet above the highest fixture; they may be combined by branching together those which serve several traps. These air pipes must always have a continuous slope, to avoid collecting water by condensation. When the trap of any fixture is set more than two feet from the vertical line of pipe, a return connection must in all cases be provided.

10. Every safe under a basin, bath, urinal, water-closet, tank or other fixture, must be drained by a special pipe of lead or wrought-iron, not directly connected with any soil, waste-pipe, drain or sewer, but made to discharge outside the house.

11. Rain-water leaders must never be used as soil, waste or vent pipes, nor shall any soil, waste or vent pipes be used as a rain-water leader. All leaders from points below main roof must discharge into open trapped hoppers, on the surface of the ground.

12. No steam exhaust will be allowed to connect with any drain, soil or waste pipe.

13. All waste pipes from all interior plumbing, exclusive of water-closets, shall discharge into an open trapped hopper, except rooms which contain a water-closet, or where a building covers the entire width of the lot of ground.

14. Every line of waste and soil pipe must extend full bore to the ridge of the roof, or two (2) feet above the fire walls. When not more than one water-closet on the basement of first floor of a building connects with a line of soil pipes, an air pipe of cast or wrought-iron two (2) inches in diameter, extending to the ridge of the roof, or two feet above fire-walls, may be used.

15. All leaders, soil, waste, air and drainpipes inside of buildings before being covered up, must have all openings stopped up and be filled with water. The said test shall be made in the presence of the Inspector of Plumbing, and if satisfactory, he shall issue a proper certificate. Notice must be given to the Inspector when the work is sufficiently advanced for inspection.

16. All iron-stone pipe house drains, under houses, shall, after being laid, be filled with water and allowed to remain uncovered until inspected by the Plumbing Inspector of the Board of Health. When cast iron or iron-stone pipe is specified in the foregoing rules and regulations, if desired, wrought-iron pipe of standard steam thickness may be used, provided that the fittings are so constructed as to form a uniform bore with the pipe, without burrs or recesses.

17. No opening shall be provided in the sewer pipe of any building, for the purpose of receiving the surface drainage of the cellar, unless special permission is granted; and any opening so made must be immediately and permanently closed when directed by this department.

18. When a building is moved from one part of the city to another, or when an addition is made to a building, the plumbing rules and regulations adopted by the Board shall be followed.

19. On and after the first day of August, 1888, all plumbers doing business in the City and County of San Francisco, shall register, pursuant to the provision of Order 1,982 of the Board of Supervisors, approved, May 29th, 1888, at the office of the Board of Health.

20. Every master plumber, before he shall be allowed to be registered, shall give a bond to the State of California in the sum of five hundred dollars with two good and sufficient sureties, for the faithful discharge of his duties as plumber; which said bond shall be approved by and filed with the Board of Health.

21. All applications for registration as master or journeyman plumber shall be made by the party desirous of being registered; and said application shall be subscribed and sworn to by the party making the said application, on blanks to be provided by the Secretary of the Board of Health.

22. There shall be appointed by the Board of Health an Inspector of Plumbing and Drainage. He shall take and subscribe to an oath that he will faithfully perform the duties of his office, and shall, before entering upon his duties, execute a bond to the City and County of San Francisco, in the sum of five thousand dollars, with two good and sufficient sureties, conditioned for the faithful performance of the duties of his office, and for the benefit of persons aggrieved by his acts or neglect. Said bond shall be approved by and filed with the Board of Health.

23. The salary of the Inspector shall be fixed at one hundred and twenty-five dollars per month.

24. There shall be appointed by the Board of Health an Assistant Inspector of Plumbing and Drainage, to act under the orders of the Inspector of Plumbing and Drainage, and assist him in the fulfillment of his duties.

"SECTION 25. It shall not be lawful for any person to carry on business or labor as a master or journeyman plumber, in the City and County of San Francisco, until he shall have obtained from the Board of Health of said city and county a license authorizing him to carry on business or labor as such mechanic. A license so to do shall be issued only after a satisfactory examination by the Board of each applicant upon his qualification to conduct such business, or to so labor. All applications for license, and all licenses issued, shall state the name in full, age, nativity, and place of residence of the applicant or person so licensed. It shall be the duty of the Secretary of the Board of Health to keep a record of all such licenses issued, together with an alphabetical index of the same."

DUTIES OF INSPECTOR.

First. He shall be in attendance at the Health Office between the hours of 8.30 and 9.30 A. M. and 4 and 5 P. M., to receive plans of proposed plumbing and drainage, and to make appointments for the inspection of work in the course of construction.

Second. He shall number and file all plans and specifications accepted, and record the names of the owner and architect, and plumber, and location of work.

Third. He shall, upon being notified, examine all plumbing work before the same is covered up and concealed, and, if found to be in accordance with the Rules of the Board of Health, upon presentation of an accurate plan and specification of same by the plumber, shall issue a certificate to that effect. If, on examination of said work, he finds any violation of the rules of the Board of Health, he shall report the same to the Health Officer, with a note explaining the necessary corrections, and have it altered accordingly. Upon completion of any plumbing work he shall examine the same, and, if found to be in accordance with the Rules of the Board of Health, and the plans and specifications filed, he shall issue a final certificate.

Fourth. He must make a monthly report to the Board of Health of the number of plans and specifications received; the number approved and rejected; also stating the number of first and final examinations made, and where and by whom the ruby have been violated, and such other matter as may be requiredles the Board of Health

BOUND VOLUMES FOR 1888.

Owing to the demand for back numbers of this journal, the number of bound volumes we will have for purchasers in December will be very limited. Those desiring the same should engage them in advance. The price will be the same as for preceeding years, $2.50 each.

TENTH VOLUME

OF THE

California Architect and Building News

TERMS,

TWO DOLLARS PER ANNUM.

Office: 240 MONTGOMERY STREET, SAN FRANCISCO, CAL.

Well up Heavenward.—28 Stories.

SCARCELY a day passes that does not bring to light some wonderful or strange proposition or development, and no man knoweth what to morrow may bring forth.

The evolutions in all directions are ceaseless, rapid, and often stupendous and grand. There is to-day before the world of mankind, very many proposed or recently accomplished results which to have been suggested fifty years ago, would have subjected the parties advancing the ideas, to the suspicion of absolute lunacy, or serious mental derangement.

The latest in the building line is a proposition to erect a building in Minneapolis, Minn., *twenty-eight stories high*—four times the number of stories contained in the Palace Hotel in San Francisco, which when built, was considered a monster edifice. But with an addition to the Palace of the character suggested by the latest conceit—twenty-eight stories—the building, which when built, was in fact the largest hotel edifice in the world, would appear as but little more than an annex for kitchen purposes, dormitories for servants, chambermaids, porters and hired help.

Without discussing the merits or feasibility of the projected high edifice, it must be admitted that the designer's notions were very elevated, and that nine-tenths of the people of the United States will at first sight condemn the aspiring latitude of the architect in his attempt to utilize space so high above the level of terra firma. But it is a question whether this latest architectural adventure is any more startling and scare-crowish to the people of the present day than would have been the proposition to erect ten, twelve and thirteen story structures, made to the grandsires of those who have since conceived and completed buildings in New York, Chicago, Boston and others of the older and the newer cities now assuming great commercial and business importance in parts of the continent which, but a generation or two ago, was known as the wild West, and the hunting ground for buffaloes and the home of the red man of the forest—buildings quadrupling the limits of height practiced in the earlier years of our nation's history.

Even the immortal "Father of his country," if at the time he was quartered at the lower end of Broadway, N. Y., within sight of the Battery, opposite Bowling Green, in a building then of the larger type—where he was near being made a prisoner of war—been told that on that very site, before the year 1885, there would be a building erected twelve stories in height, and conveniently and comfortably occupied in all its stories, he would have laughed to scorn the folly of the presumptious man who would have dared to predict such a result. Yet it is to-day an accomplished fact, and the "Washington Building" stands just there, as one of the magnificent structures of the commercial metropolis of America. Arguing from these premises, is it not possible that infants, if not well grown lads, or even young men of the present era, may yet see or participate in the erection of buildings even as high as twenty-eight stories? It is far-reaching toward the clouds, but other things seemingly as unreasonable a quarter of a century ago, are now demonstrated facts, and the science of architecture and building may yet achieve results not yet grasped, and the "mad men's" projects of to-day may be among the recognized utilities of the future.

Newspaper editors and correspondents may dip their pens deep into ink and write up fierce denunciations, nineteen-twentieths of business committees resist for the present, all such mad-architectural libertinism, and laws even be passed prohibiting such construction; still the evolutions will roll on, and in time buildings aproximating if not exceeding twenty-eight stories may no more be a questionable proposition, then are the numerous ten to thirteen story buildings of to-day, which are to be seen in all the progressive and great cities outside of San Francisco.

A SERIES OF "GEM" COTTAGES.

Next issue we will commence in this journal a series of "Gem" cottages. They will be prepared expressly for us by A. W. Putnam, a draughtsman recognized by all who know him, as possessing rare abilities as an original designer.

Now is the time to subscribe. Remaining numbers of this year given free to all new subscriber. for 1889.

COUNTRY BUILDING NEWS.

LOS ANGELES.

TO BE ERECTED IMMEDIATELY.

J. B. Lankershim, three-story brick, Sixth and Front streets; two double houses Sixth and Front street.

J. F. Smith, lodging house, Olive and Fifth streets.

R. H. Leonard, engine house, Pine and Hill streets, and twenty-seven houses to cost when completed about $500,000.

SAN JOSE.

A builder's contract has been filed in the Auditor's office between Jesse J. Hill, contractor, and Mrs. J. C. Martin for the construction of a two-story brick building on the east side of Second street between Santa Clara and San Fernando streets, consideration $25,588.

Another contract has been filed between E. Strauss and Robert Summers, contractor, for the brick addition of a second story to a building on Second street; consideration $5,187; to be completed on the 15th of December.

SAN DIEGO.

The plans of the new Consolidated National bank building are now almost completed in Comstock & Trotsche's office. Two stories will be added to the present building, and the whole structure will be remodeled. When completed it will be 50 x 90 feet in size and four stories in hight, with a basement. Substantial materials will be used throughout, and in appearance the building will be one of the most elaborate and imposing structures in the city. There will be an elevator and all modern improvements. On the Fifth street front there will be a very elaborate ornamentation of terra cotta tiling and other stone. The main entrance, on G street, will be very wide and imposing in appearence. The change in the arrangement of the banking room is almost completed. Bids are now being taken for the excavating and stone and iron work, and orders are being prepared, for such materials as will have to be imported. The work of construction will begin soon.

No bids have been received for the work on the Pauly-Gassen block, to be erected on the corner of Fourth and E streets. The work of preparing bids is necessarily slow becaue of the immense size of the structure. The bids are expected in a few days, however, and shortly hereafter the work of construction will begin.

Comstock & Trotsche have prepared plans for a neat two-story, ten room cottage, to be erected on K street, between Twenty-second and Twenty-third. D. W. Strong is the owner.

The United Presbyterians have had plans prepared for a new church building to be erected in Sherman's addition. Mr. Schroeder is the architect. The design is said to be one of the finest in the city, in some respects the very finest. The entire structure will cost about $15,000. At present it is only proposed to build the lecture-room, at a cost of about $2,500. This will be built so that the main building can be added to it later. Its size will be 27 x 53 feet. Rev. R. G. Wallace is pastor of this congregation.

During the last thirty days Building Inspector Thielen has granted permits for the erection of twenty-eight buildings, the cost of which will be $681,035. The following is a complete list of the permits granted:

BUILDING PERMITS.

E. F. French, two-story frame dwelling, lot K, block 33, Middletown; $2,500.

F. E. Johnson, superintendent of the college of arts of university of Southern California on campus on University Heights; $600,000.

B. Barnes, two-story frame dwelling, Horton's addition; $2,500.

H. E. Fellow, two-story frame dwelling Horton's addition; $3,000.

W. B. Woodward, two-story frame dwelling and barn, Horton's addition; $5,000.

Central Market Company, two story brick store and offices, 50x200 feet, Horton's addition; $16,000.

John Allyn, three-story brick building, 50x100 feet, Horton's addition; $16,000.

Rev. R. G. Wallace, frame church, Sherman's addition; $2,500.

RIVERSIDE.

The contract for building the residence of F. T. Field has been let to L. C. Waldman for $1,219. Work will be commenced at once.

SAN BERNARDINO.

Judge Rolfe will build an $8,000 house. Goff & Leyfe will prepare plans.

SACRAMENTO.

E. A. Bovyer has the contract to erect State Printing office warehouses, $8,464.

TACOMA, W. T.

Architect C. N. Daniels has charge of A. Parker's brick building, W. M. Masterton is the contractor. Cost $11,000.

DISINCORPORATING.

The Pine Manufacturing Company has applied to the Superior Court to be judicially disincorporated. The company dates as a corporation from May 31, 1883. It started with a capital stock of $200,000, in 2,000 shares, of which 1,755 shares have been issued. At a recent meeting of the stockholders, it was resolved by a vote of 1,000 shares to disincorporate. The petition sets forth that all liabilities have been satisfied. The present Directors are: E. B. Dean, W. J. Adams, G. W. Watson, A. D. Moore, C. S. Holmes, E. W. Bushnell, E. M. Harrick, Benjamin Pendleton, J. Knowland, A. A. Jackson and W. H. Talbot.

NOW IS

THE TIME TO SUBSCRIBE

FOR 1889.

WE will send the remaining numbers of this year free to all new subscribers for 1889.

WE PROMISE

NEW AND BEAUTIFUL ARCHITECTURAL DESIGNS.

With our new process, we are enabled to produce cuts far ahead of anything heretofore presented.

COMPLETE BUILDING REPORTS.

Our corps of building correspondents will be doubled next year. We have also had the city districted and a competent party to take charge of each district. Our city news will, therefore, be perfect.

ARCHITECTS

Have promised, with the new year, to send us each month an article, and, where necessary, illustrations for same.

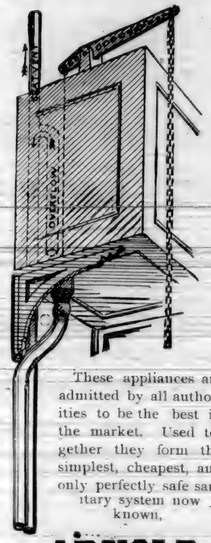
Subscribe now for 1889.

Carpenters of the Bible.

Though the trade is not definitely mentioned in Scripture prior to the time of Noah, yet it is clear that carpentering work had been effected centuries before. Noah could not have constructed the ark of gopher wood and made it so correct as to dimensions; he could not have joined the pieces together; he could not have formed a window and door such as would open and close, without some knowledge of carpentering and some acquaintance with the tools of a carpenter. Moreover the tools must have been in existence and in use prior to this time, which of course suggests that carpentering must have been practiced in the patriarchial times. Amid all the changes which occur in the history of varied handicraft, it is interesting to find that the same trade implements as are used to-day were in full use in the childhood of the world. The carpenter about to begin work selects a piece of timber which he calls a plank, or a slightly thinner piece which he calls a board. Such are the phrases used concerning the tabernacle and the temple. God said, "Thou shalt make boards for the Tabernacle of shittim wood. Ten cubits shall be the length of a board and a cubit and a half shall be the breadth of one board." Then in the first book of Kings we find Solomon built the walls of the temple with "boards of cedar," and covered the floor with "planks of fir." In order to shape the plank or board, the carpenter uses a saw; and such a tool was known to and employed by the workers in the early times, for we read of the "hewed stones" being "sawed with saws" for the foundation of Solomon's temple. To fashion the wood according to the needed purpose, the carpenter must have at hand his rule, his line, his plane and his compass. And so Isaiah the prophet says: "The carpenter stretches out his rule; he fitteth it straight and he marketh it out with a line; he fitteth it with planes and he marketh it out with a compass." Very often the carpenter has to join various pieces of wood by what he terms a mortise and tenon, that is to say, the mortise is a hollow place or socket in one piece of timber, into which the tenon or projecting piece, cut to exact measurement in the other piece, is intended to fit. But those are God-used terms. The Almighty, in giving the Israelites full directions for the contruction of the Tabernacle, said: "Two tenons shall there be in one board, set in order one against another; thus thou shalt make for all the boards of the Tabernacle. And thou shall make forty sockets of silver under the twenty boards, two sockets under one board for its two tenons and two sockets under another board for its two tenons."—*Wood Worker.*

INDUSTRY.

John Richards has started a new journal devoted to science, mechanic art and the industrial interests of the Pacific Coast. Its pages are well illustrated with all the various patterns of machinery, and in this branch it is the only journal published on the coast. All the illustrations are made by an improved process and show very distinctly all the various details. Editorially, it excels in its particular line, any of our contemporaries this side of Chicago. It is published at the low price of $1.50 per annum. Address Industrial Publishing Co., 40 California street.



THE CELEBRATED

SANITAS

PLUMBING

APPLIANCES.

("SANITAS" BATH-TUB and PANTRY-SINK on same principle as Basin.)

"SANITAS" TRAP OPENED.

These appliances are admitted by all authorities to be the best in the market. Used together they form the simplest, cheapest, and only perfectly safe sanitary system now known.

The Sanitas Trap whether vented or unvented, has shown itself when properly set to be capable of resisting indefinitely, siphonage, back-pressure, and all other adverse influences met with in plumbing.

The "Sanitas" Basin flushes out the pipes and keeps them clean.

THE "SANITAS" MANUFACTURING CO.,

BOSTON, MASS.

Branch Offices: 64 Gold Street, New York, N. Y.

229 Walnut Street, Cincinnati, O. 47 to 49 Dearbon Street, Chicago, Ill.

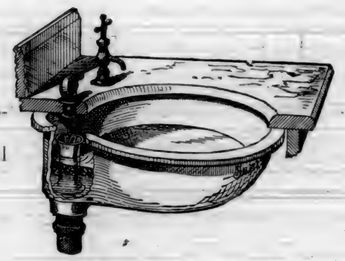
ARNOLD & CO., 40 California Street, San Francisco.

SOLE AGENTS

FOR CALIFORNIA.

Architects, Builders and the Public generally, are invited to call and inspect the same.

THE "SANITAS" WATER-CLOSET.



THE "SANITAS" WASH-BASIN.

McCLELLAN

Anti-Siphon Trap Vent.

SAFEST and MOST-ECONOMICAL

Device for Venting Sewer-Gas Traps.

Can be attached to any Trap at Less than Half the Cost of back-air pipes.

Approved by

ARCHITECTS, MASTER PLUMBERS AND HEALTH AUTHORITIES.

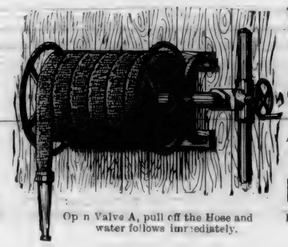
Manufactured by the

DU BOIS MAN'F'G CO.

Manufacturers of

The Celebrated Du Bois Lead Trap.

For Sale by all Jobbers in Plumbers' Supplies, of whom Circulars may be obtained



Open Valve A, pull off the Hose and water follows immediately.

W. T. Y. SCHENCK

MANUFACTURER OF

SCHENCK'S PATENT

"Paragon" Hose Reel,

And Sole Agent for Pacific Coast for the Celebrated "Eureka Mill" Cotton Rubber-Lined

FIRE HOSE

For Mills, Factories, Hotels and Public Buildings, and General Inside Fire Protection.

Also "Eureka," "Paragon," and "Red Cross" brands of Cotton Fire and Garden Hose, Linen Hose, Rubber Hose, Fire Department Suppiles, &c., &c.

Manufacturer of Hose Carts, H. & L. Trucks, and "Red Cord" Square Flax Packing for Elevators, Etc.

222 & 224 MARKET ST., SAN FRANCISCO.

Full-page advertisements inserted among reading matter, fifty per cent extra on above rates.

Specially attractive advertisements, without extra cost, will be set up in the finest style where the advertiser furnishes cuts.

CASH MUST ACCOMPANY ALL ORDERS FOR ADS.

ADVERTISEMENTS ALONE INSERTED THAT REFER TO MATERIALS USED IN THE CONSTRUCTION AND FURNISHING OF HOUSES, AND TO MATTERS AND TRADES BELONGING TO THE BUILDING INTEREST.

NO OTHERS RECEIVED.

PARTICULAR NOTICE.—Each advertising page contains three columns, each of which is about two and a half inches wide. One inch means one inch in depth by two and a half inches in width.

Spaces on Cover and on page preceding reading matter, are subject to special rates.

SAN FRANCISCO, NOV. 15, 1888.

Should Editors Charge for Information?

A lawyer, when asked to plead a cause, demands his fee before he opens his persuasive mouth. You may hang and go to the naughty one before he will give you his legal service gratis. If one desires to know what investments are good and likely to be profitable, the broker who advises him is quite sure to charge a commission for making the purchase. Why, then, should an editor be expected to advocate all sorts of public projects *pro bona publico*? The contractors for improvements make money out of them. Why should they not pay the editors who present their arguments to the public? It is not considered derogatory for the highest lawyer in the land to appear before the city council and advocate the granting of a franchise; but the editor who charges money for doing the same thing is assailed with cries of a "subsidized press." We are not saying that the cry is unjust, but we do ask where the difference is between that which the lawyer is praised for doing and that for which the editor is denounced. The man from whom the lawyer asks a fee proceeds to draw his check; the man from whom the editor asks pay cries "blackmail." Yet both do the selfsame thing. Why is there one code for the Bar and another for the Press?—*Sel.*

San Francisco Chapter American Institute of Architects.

The regular meetings of the Chapter were held on November 2d and 9th, President, G. H. Sanders in the Chair.

Present: Sanders, Cuthbertson, Wolfe, J. E; Laver, C. J. Bestor, Daley, Gash, Pissis, Moore, Percy, Curtis, Whittemore, Wright, Wolfe, G. H.

C. H. Hasty was elected a student member.

Report was received from committee to whom was referred the communication from the New City Hall Commissioners. It was as follows:

To the San Francisco Chapter of the American Institute of Architects:—Your Committee appointed at the last regular meeting to consider the resolutions of the New City Hall Commissioners in reference to a new design for the proposed tower, beg leave to report as follows:

GENTLEMEN:—In accepting the difficult task of reporting on the proposed tower of the New City Hall, it was not expected that the Chapter of Architects would be called upon immediately afterwards to give its opinion on a sketch which purports to be the expression of the ideas suggested by our report.

We believe that we had examined the whole matter thoroughly and that we had covered every point in question. It would not be advisable for us to pass judgment on the sketch submitted, because the problem admits of very many solutions which come into the province of the architect to determine.

We still hold the opinion that it would be better and more practical to erect the tower in the form which seems naturally to be indicated by the circular foundations which are to support it, and although as we have before stated, we admit the possibility of constructing under the existing conditions the square tower to an indefinite height, and notwithstanding we might be disposed to admire it as an engineering feat, we feel, that good architecture is more interested in that which is most appropriate and true, both in intent and construction.

Respectfully submitted,

ALBERT PISSIS,
JAMES E. WOLFE,
W. J. CUTHBERTSON,
JOHN WRIGHT,
Committee.

After a lengthy discussion, the report was unanimously adopted. It was also ordered that a copy of same be sent to City Hall Commissioners signed by the President and Secretary.

The President stated that two weeks ago, a meeting was held by the students to consider the advisability of organizing an association distinct from the Chapter. Said association to be composed entirely of students and draughtsmen. Details were discussed and a plan of operations decided upon. Another meeting will soon be held.

Proposition was received from C. Schulze to become a fellow member.

Acknowledgment of Courtesies Rendered.

We have received from the editor of *Building*, published in New York city, the advance sheets containing the full account of the proceedings of the late meeting of the *American Institute of Architects*. We regret our inability to more than give but a reminder that such has been received. Those of our architects who would be pleased to read the full report, can not do better than to send after a copy of *Building* containing the proceedings of the Institute.

We are contemplating a large increase in the number of pages in this journal in our January issue; then we will be able to give all such reports in full.

We want 500 more subscribers in order to do so. Will you kindly help us with your subscription?

An Extra Edition.

For the past two months we have largely increased the number of our monthly issue. In December we guarantee to print 5,000 extra copies, which will be sent to parties all over the Coast who are interested in building matters.

THE CITY HALL TOWER.

This bone of contention has been hushed for the time being, in the great political strifes and huzzas that have ruled the hour during the past month. The recently prepared plan of circular tower submitted to the Commissioners, was sent to the Chapter of Architects for its judgment thereon. But for like reasons the committee from the Chapter to whom the matter was referred have not hurried up their report, but will likely submit the same before this appears in print. It is to be regretted that this feature of the City Hall should have drifted off into a sort of separate affair from the general construction, to meet the conflicts and antagonisms that have ensued by reason of its semi-isolation. Had the issues all been covered by the original plans, so as not to admit the cavellings and questions that have arisen through it having been made to assume an individual position, it would have been a great relief to the architect, as then his defense would have been impregnable in carrying out just what the original plans indicated. As far as present circular constructions go to establish anything, it is that of a circular tower, and the issues that have caused so much angry discussion and personalities, and such intense annoyance to Mr. Laver, rests in the suggestion of a square tower upon a circular base. Had the square proposition been provided for and prevailed from the foundation and upheld by the original plans, the Chapter of Architects if called upon could then consistently have sustained its erection, leaving the height as the only questionable issue, which, if it had been referred to the Chapter, would likely have been acquiessed in as practically possible, or perhaps recommended as proper and feasible. The architectural effect of the square construction received favorable notice in the first report from the Chapter, and all other things being equal, it is not at all likely that the Chapter would have suggested anything not in harmony with the square tower proposition.

FOUNDATIONS IN INTERIOR TOWNS.

Woodland, Yolo Co., Cal.

Editor California Architect:

It is a very common occurrence in interior towns to see what was intended to be a real good substantial brick building settle and crack after a few years standing, sometimes enough to render it insecure. Of course it must be caused by an insecure foundation. Will the Architect or some of its contributors please answer the following? What would be the best foundation for brick buildings on the alluvial soil of the California valleys, consisting generally of a light sandy loam from, say, five to twelve feet deep, resting on a gravel bed, where water is generally found as soon as the gravel is reached, sometimes before? Where concrete is used in foundations on such a bottom, what are the proper proportions of concrete, sand and coarse gravel? Can a reliable concrete be made by using the gravel as it comes from the bed of a creek ranging all the way from fine sand to gravel stones as large as ducks eggs and continually changing the proportions of coarse to fine? Builder.

The answers to the above are as follows: The principal cause of buildings settling and cracking, both in interior towns and elsewhere is, that the foundations are too limited in spread—*i. e.*—the width of footings are not made broad enough to carry the weight of construction placed upon them. As to how wide they should be, there is no rule that will apply in all cases. The architect or builder must satisfy himself as to the nature and character of the formation of the ground, and determine the necessities of the case by calculation and good judgment. The footings that would be ample in one case, may be entirely insufficient in another. Where the formation is a rock bed, footings of any size is immaterial, as no width of same can add to the permanancy of the natural base. Then as departure from this occurs, the deficiencies in the solidity of the substratas must be provided for by suitable sized footings and foundations. The erection of a brick building upon the waters of the Bay of San Francisco, is possible provided a float of sufficient capacity is provided; hence the possibilities run all the way from the hardest of known formations—rock, to the least resistant—water. The interims between these extremes are so diversified, that no general rule can apply.

It is safe to say that in nearly every case of settlement and cracking, the defect might have been avoided by broader and better foundation work. This proposition is clearly illustrated in numerous foundations in San Francisco, where planking of sufficient extent has been placed on soft mud, twenty to seventy-five or more feet in depth, and but little or no settling occurred; while if there had been lack of spread of foundations, the reverse would have been the case.

As to "what would be the best foundation for brick buildings on alluvial soil, etc., there can be nothing better than brick, provided sufficient spread is observed in the footings, and the "off sets" not made too large. Properly composed concrete is also good, with the above "if." The proportions of cement and gravel used in concrete work varies according to circumstances and the judgment of the architect, from one to six for very good work, and one to eight in cases where stronger work than those proportions will make, are not necessary. The latter is more the rule than the former. While the "gravel from creek beds, ranging all the way from stones as large as ducks eggs to fine sand," may be utilized, the freer from fine sand the better, and the rougher the gravel the better will the work be. Coarse sand and rough gravel, such as broken granite or rock makes by far the stronger concrete.

Another difficulty oftens intervenes, where the conditions restrict the construction so that no footings can be placed beyond the plumb lines of the wall, making it imperative to work the projection all on one side. Sometimes coterminous owners refuse one another the privilege of lapping the lines of their lots with the footings. In everyone of such cases where the ground is not entirely reliable, or there is not counter balancing constructions on the adjoining lot, sinkage and cracking is almost certain.

THE BUNDY RADIATORS.

Notice of Change of Place of Business.

After an occupancy of years in the present location, the agent of the "Bundy Radiator" was compelled to hunt up larger headquarters; and not only was the press of business so great as to compel the change to be made, but it also necessitated the taking of a partner to attend to the numerous orders pouring in from all quarters. For a great many years Mr. C. D. Harvey has been alone fighting his way upward and onward, first with the old Hot Water System of Heating that bears his name, but lately as agent of the Celebrated "Bundy Steam and Hot Water Radiators."

In order to thoroughly introduce the Radiators in every part of the country this side of the Rocky Mountains, Mr. Harvey has associated himself with W. H. H. Graves, and hereafter the firm name will be Harvey & Graves.

They have secured quarters in the store immediately opposite the old place, and hereafter all orders may be sent to No. 29 New Montgomery street, corner Jessie. Being in one corner of the Grand Hotel, and immediately opposite Wells, Fargo & Co.'s new building, the situation could not be improved.

Here the firm will have displayed a magnificent selection of Harvey hot water radiators and boilers, and Bundy's direct steam or hot water radiators, Bundy's Triumph, for steam or hot water, the Bundy Elite, for hot water or steam, and the Bundy corner direct, column direct, circular direct, angle indirect, horizontal indirect, and Climax indirect radiators. Also, the Bundy hot-closet, dining room radiator, the latter a most useful and highly ornamental contrivance for disseminating warmth throughout the dining room, while at the same time affording a very convenient mode of securing an equable degree of heat for meats, vegetables and other food which may be placed within it.

The new firm will be pleased to have all interested to call and examine their manufactures, and will prove to all the decided superiority of their productions.

HARVEY & GRAVES,
29 New Montgomery Street.

Messrs. E. C. Stearns & Co., of Syracuse, N. Y., report a very gratifying increase in their export trade during the past four months, and mention that the outlook for the balance of the year is very favorable.

Among others, they mention recent shipments of the celebrated "Silent" Saw Vises, Wood Clamps, etc., to Glasgow; Bench Drills to Northampton, England, and Aspinwall, Panama, and to the United States of Columbia.

The New Town of Newman and its Building Prospects.

Among the many towns located and laid out by surveys in this State during the past decade, there are few, if any, whose initial prospects have been brighter or more promising than the town of Newman, Stanislaus Co.

Up to April of the present year, the site of the town was a field of growing alfalfa, without the least sign of community life. On the 25th of that month, the first auction sale of lots occurred, and the prices obtained at once established the high favor in which the prospective town was held.

Since then Mr. S. Newman—Sol. Wangenheim & Co.—have erected a brick building 50x115 feet, including the private office construction at the rear. The building is two stories high, besides a splendid cellar 50x100 feet, 9 feet high in the clear. The store is handsomely fitted with shelves, counters, and all the adjuncts necessary for the transaction of a general merchandise business, comprehending all manner of goods, wares, implements, etc., required in all the various departments of field, farm and domestic life. This, the pioneer store of the new town, will compare favorably in external and internal appearances and completeness of appointments, with the finest, outside the commercial cities of the State, and very much surpassing the best in most of the older inland towns, having all the advantages of an assured, established future, and lying upon the main lines of railroad transit.

Messrs. A. Cahen & Son have also about completed a one-story brick store, 50x80 feet, with a fine cellar, for the transaction of a general merchandise business. Although not so large as that of Mr. Newman's, it will hold rank with any similar size structure of like character in the State, and the firm will enter into fearless competition for the trade of the valley.

Besides these, there are some fifty other stores, shops, cottages and dwellings erected, and the busy hands of mechanics are daily employed in the continued erection of others, so that within one year from the first cry of "going"—"going"—"gone," there will be one hundred or more constructions erected upon the alfalfa field of six months ago. In addition to all this, the erection of a fine hotel, a church, schoolhouse and society hall is engrossing general attention, and in all probability will be well under way, if not completed, by the next annual celebration of our nation's anniversary day.

The location of the town has been judiciously selected in the "west side" of the San Joaquin Valley, 3 miles westerly from the old point of interest and business—Hill's Ferry, which is entirely absorbed by the new town—37 miles southeast from Tracy on the main line of the S. P. overland, and 120 miles from San Francisco. At present a branch of the S. P. R. R. terminates at Newman with large depot facilities and with surveys and road bed a long distance beyond this point, looking to the conceded fact that as soon as practical, the iron horse of the S. P. overland will speed its way across the continent through the town of Newman.

Its prestige as the pioneer town of the "West Side," establishes for it a future that cannot be compromised by any competing town that may be laid out on the same line, as ere another move shall have been made in town sites, Newman, with its many natural advantages and resources will have secured a permanency that cannot be easily shaken; while the enterprise of its citizens, the liberal investments made in lots and buildings by far-seeing and intelligent men, will establish it as the metropolis town of the valley, and a principal shipping point for grain, fruits and other products of the soil, and wool, cattle, sheep, hogs, etc., raised in the valley by the thousands.

The present magnificent irrigating canal of seventy miles in length, running down the valley, with others now contemplated nearer the foot hills, and the inexhaustible supply of artesian well water that can be reached at a depth of twenty-five to seventy-five feet everywhere, with possible repetition of flowing wells such as that now supplying the R. R. works, fixes the destinies of this section for water beyond the caprice of light rains and dry seasons.

Another material feature of interest is found in the fact that the large land owners are seriously considering the advisability of dividing up their thousands of acres, and founding "colonies" which has been so successfully done in other parts of the state, which will gather in near proximity to the new town, almost as many families as there are at present individuals within the same compass, so that from any point of view, Newman and its environments are bright with excellent prospects for the near future and for all time.

COLLAPSE IN LUMBER.

The collapse in lumber is instructive as showing the normal evolution of the trust system. When the southern boom led to an enormous increase in the demand for lumber, some eighteen months ago, a number of lumber companies and individuals engaged in the lumber business formed a combination, or as we should say now, a trust, to regulate production and fix a cast-iron schedule of prices. The scheme was at first highly successful. The boom at the south was so vigorous that people seemed to care little what they paid for lumber so long as they got it, and for several months lumber sold on the basis of $22.50 for rough boards. The trust seemed so strong that its promoters actually incorporated it. It was to be a joy forever.

After a time, the demand for land began to fall off, and the inquiry for lumber for building purposes grew less furious. The trust found the demand for its goods becoming slack. Prices were marked down to the parity of $20 for rough boards. As usually happens when markets decline, accusations of cheating began to be bandied among the members of the trust. Quarrels broke out, and so much dissension ensued that, some weeks ago, an application was made to dissolve the corporation. This seems to have been regarded as a signal that every company must take care of itself, and cutting became the order of the day. The trust found itself undersold all round. This went on until ately when the trust accepted the situation, offered cargoes at $14, and, it is said, actually made sales at $12.50. A general *sauve qui pent* ensued.

Members of the trust assure us that the panic is a mere trick, and that when certain jarring elements have been reconciled the old prices will be restored and the compact will be found as ironclad as ever. But this is not the way the thing usually works. There is a law which governs these matters. First, competition, leading to cut-throat wars; then, combination and extortionate prices; then collapse of the combination, resulting from a reduced demand and treachery among the confederates; and then, open competition again, which is regulated by the extinction of the feeblest among the competitors. It works in a circle, and seldom varies from the regular programme.

That California has been injured by the operations of the lumber trust is too plain to need demonstration. It is very difficult to say what is the normal cost of rough lumber in this market. Dealers are going round declaring that $15 is less than the cost of production. But people rarely know how cheaply they can produce till they try. Some of the companies may perhaps be unable to produce lumber for less than $15, but others again, managed with more skill, may make a profit by turning out rough boards at $12.50. At any rate, it will be well for them to see what they can do. The cheaper lumber can be bought the more houses and barns will be built, and the more fences put up. Any combination which tends to increase the cost of building is detrimental to the public interest, and its collapse should be a matter of general congratulation.

Well-Earned Laurels.

For many years the "Garland Sewer Gas Trap" has been before the public. With each succeeding year the confidence of the public has been strengthened as to its true merits, and to-day it is acknowledged as the one in most general use. No better evidence of its efficiency can be had than that contained in the following:

To All Whom it May Concern:—About four years ago I had one of the "Garland Traps" put in my office, where it has been in constant use and has given entire satisfaction. I was greatly annoyed by both sewer gas and back water until I had this trap put in, since which time there has been no trouble whatever. I consider my case a particularly *severe test case* of the *superiority* of this trap, and after using it four years, heartily endorse it as the only good and reliable trap in the market.

Dr. C. O. Dean,
126 Kearny St., S. F.

Many of the leading architects of the city specify these traps to the exclusion of every other make. The Oakland Board of Health give it a strong recommendation.

Remember, the "Garland Trap" is warranted as a perfect preventive of sewer gas.

Gem Cottage No. 1.

THE accompanying illustrations represent the first of a series of cottages designed to meet the increasing popular demand for "Artistic homes" at a moderate outlay of capital.

It shall be my aim in these studies, while keeping in mind the chief *desideratum* sought after by that class of readers of the ARCHITECT whom I seek to aid in the perplexing problem of rearing tasteful homes at a minimum cost, to not lose sight of the fact that with the proper application of those scientific principles upon which rests the art of architecture, viz: strength, utility and beauty, there may be combined a structure both practical inexpensive and graceful in appearance. The manifest appreciation of good design by the great mass of people is both a recognized and gratifying fact among the architectural profession, and no where is their tact and ingenuity more taxed than in the production of a moderate priced dwelling combining all the requisites which their esthetic tastes would dictate.

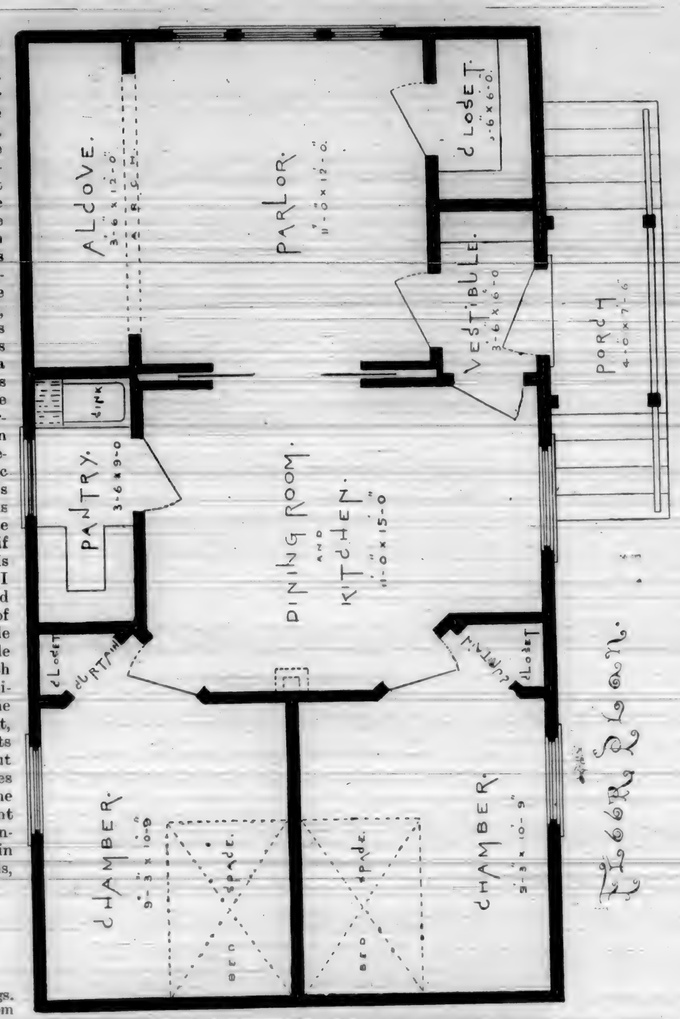
The country is flooded with cheap so-called architectural publications, whose pages are filled with gaudily colored chromoes purporting to be the "Beau Ideal" of architectural loveliness, while combining solid practical construction, but a close scrutiny of general arrangements and proposed manner of construction combined with a very "brief study" of that mysterious "edict," the "specification," from which no deviation must be made to accomplish the "grand whole," cause from over the face of a legitimate limb of the profession a deep blush combined with a smile of pity and derision.

The Gem Cottage No. 1 is designed for a one-story structure to be erected on a narrow city or village lot, being but twenty feet in width, exclusive of veranda. The entrance is placed in its present position that access to the interior may be direct with as little consumption of room as possible. The door is of liberal size with the upper panel glazed with some neat pattern of figured glass to give light to the vestibule, also over which is placed a transom for ventilation. Entrance may be had from the vestibule into both parlor and living room with ample space provided for a hat rack. The parlor is furnished with an abundance of light and ventilation from the triplet window, over which is a designed transom to be in ornamental glass of tasteful pattern and which may be hung to open if so desired.

The alcove may be very prettily draped, wherein may be located the piano or if needful a folding bed perchance the command to be "fruitful and multiply" has been strictly adhered to. If the family be small the folding doors can be pushed completely back and the opening tastefully draped with some inexpensive material which will add a feeling of grace and comfort not otherwise attainable. The main living room is of liberal size and well lighted from a large window, while over each single door in the building has been placed a transom for ventilation and to give symmetry to the whole. Instead of a brick chimney as shown, terra cotta may be substituted which will reduce cost and be quite as good, the same in either case resting on brackets thirty inches below ceiling line. The pantry is provided with ample light and with all necessary shelving under which can be arranged flour chest drawers, etc., as taste would dictate. The sink is located herein that it may be as much secluded from view as possible, however, in the most convenient position withal. The two chambers are each provided with a closet and for the door is substituted drapery, which both economizes space and lends a tasteful appearance. In regard to construction if erected in a cold climate, would advise first to sheath the exterior with

matched material over which place a good quantity of felt paper covering same with first quality lap siding, the bill of quantities however, include only drop siding or more commonly designated "rustic," the usual material employed in California for that purpose. The floor is to be double the first, being of surfaced parallel material, over which lay one of first quality, soft pine, as the rooms will be presumably all carpeted and tacks may be much more easily removed from such material than from the customary pines used for that purpose. I would suggest a layer of abestos paper between the floors, but not the common building paper, from the fact that it soon molds and rots from the water leaking through the cracks if often scrubbed. I would suggest a neat pilaster finish with corner blocks and plinths something after the East-lake style. In the matter of painting, particular good taste should be exercised in the selection of colors, as a vast deal depends on harmony in procuring an artistic and pleasing effect in a building of this character, and three shades with judicious handling could be used to good purpose on the exterior, not forgetting the roof if it be only in the line of economy, as it is a great protection to the shingles. I would suggest that the interior be finished with hard oil in natural wood, be it of proper quality, as it is the most durable finish and may be cleaned with little trouble and will usually harmonize with almost any interior decoration or furniture. In the quality of material, the adage that the best is always the cheapest, is particularly true in reference to paints and oils, as the difference in cost is but slight. The appended bill of quantities will be found ample to complete the building properly, and from the present price of material and labor in San Francisco, this cottage can be completed in first-class style, using only good materials, for not to exceed $1,000.

A. W. PUTNAM.



Bill of Materials.

16 feet of chimney, 4x12 inch flue.
22 8 inch brick piers with 16-inch footings.
40 2x8 inch joist, 20 feet long, also from which will be formed sills.
148 2x4 inch studding, 14 feet long, for exterior and wall plates.
100 2x4 inch studding, 12 feet long, for interior.
30 2x4 inch studding, 24 feet long, for ceiling joist.
36 2x4 inch studding, 16 feet long, for rafters.
1,200 feet of rough lumber for roof boarding.
12,000 shingles. 750 feet surfaced lumber for 1st floor.
900 feet matched flooring.
310 feet beaded ceiling. 1,800 feet rustic.
150 feet lineal 4½ inch crown moulding.
150 feet lineal 4x⅞ inch facia. 150 feet lineal, 2-inch bed moulding.
30 feet lineal, 2½ inch ridge roll.
250 ⅞x12 inch dressed lumber for cornice.
100 feet lineal, ⅞x5 inches, for corner boards.
155 feet lineal, 1¼x8 inches, dressed for water table and door casing.
175 feet lineal, ⅞x5 inches, dressed for lower base and ridge boards.
2 chamfered posts, 4x4 inches, 10 feet long for veranda.
2 chamfered ½ posts, 10 feet long for veranda.
50 feet, 1¼x12 inches, for versnda treads.
35 feet, ⅞x7 inches, for veranda risers.
100 feet lumber for gable and veranda finish.
150 feet lumber for pantry and closet shelving, drawers, etc.
3 window frames, 2 feet 9½ inches by 7 feet 1 inch.
1 window frame, 3 feet 4 inches by 7 feet 1 inch.
1 mullion window frame, 7 feet by 8 feet 5 inches.
280 feet of dressed lumber for above frames.
1 exterior door frame, 2 feet 10 inches by 7 feet, 20-inch transom.
6 interior door frames, 2 feet 8 inches by 7 feet, 16-inch transom.
1 interior sliding door frame, 5 feet 6 inches by 9 feet.
210 feet 1⅛ inch material for above frames.
1 exterior door, 2 feet 10 inches by 7 feet, 1¾ inch, upper panel glazed.
6 interior doors 2 feet 8 inches by 7 feet, 1⅜ inch.
1 pair sliding doors, 2 feet 9 inches by 9 feet, 1¾ inch, all above 6 panels P. G
6 interior transoms, glazed, 21 oz glass, 16x32 inches.
1 exterior transom, glazed, 21 oz glass, 20x34 inches.
3 pairs sash, 1¾ inches, glazed, 21 oz glass, 2 feet 9⅝ inches, by 7 feet 1 inch.
1 pair sash, 1¾ inches, glazed, 21 oz glass, 3 feet 4 inches by 7 feet 1 inch.
1 pair sash, 1¾ inches, glazed, 21 oz glass, 3 feet 4 inches by 6 feet 5 inches.
2 pairs sash, 1¾ inches, glazed, 21 oz glass, 1 foot 2 inches by 6 feet 5 inches.
2 mullion transom sash, glazed, with ornamental glass, 1 foot 2 inches by 1 foot 8 inches.
1 mullion transom sash, glazed, with ornamental glass, 1 foot 8 inches by 3 feet 4 inches.
614 feet readed casing, ⅞x6 inches.
255 feet 10 inch moulded base.
255 feet lineal, quarter round at base.
10 feet seasoned oak for threshold exterior door and drip board capping sink.
54 corner blocks. 42 plinth blocks.
7 pairs Hill's sliding blinds, four fold.
1 enameled steel sink, 16x24 inches. 95 fat shingle gutter.
32 sheets 4-lb sheet lead for capping windows and flashing chimney.
450 lbs nails.
1 mortice lock, night lock attachment exterior door.
6 mortice locks.
7 pair 4½ inch loose pin butts.
Trimmings for sliding doors, flush finger pulls, lock, etc.
1 set Ives' sliding door hangers. 7 pair transom centers.
7 sets Woolensack transom lifts. 7 sash locks, Ives' patent.
14 flush sash lifts. 28 sash weights.
175 feet Silver Lake sash cord.
7 rubber tipped door stops. 2½ dozen coat hooks.
1 spring catch for sink door. 8 flush drawer pulls.
355 yards exterior painting, 445 yards plastering.

Practical Plane and Solid Geometry.

II.

BY ARTHUR SEYMOUR JENNINGS.

Written especially for the California Architect and Building News.

(Copyright.)

THE Sector.—This is an instrument, which although familiar in appearance, is not generally valued for practical use. The general form of the instrument is shown in figure (1) and consists essentially of a rule having marked upon it a number of scales radiating to a common centre. These lines have their uses in the solution of various problems relating to trigonometry. The ordinary draftsman, however, will only have occasion to use two of them, namely those marked respectfully (L) and (POL). The line marked (L) is called the line of lines and is used to determine the length of the fourth proportional to three given lines. The manner in which this is done will be understood on reference to figure (1) which represents the sector having marked upon it the two lines in question. The

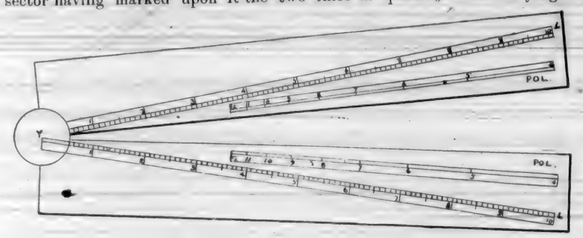


Fig. 1. The Sector.

length of the first line which we will call A is taken in a pair of dividers, and the sector is opened so that the distance from points marked LL is exactly equal to this distance. Now, without altering the sector take the length of the second line (B) in the dividers and measure across from one line to another finding the exact length from any figure on one leg to the same figure on the other. Suppose this to occur at the figure 7. The legs of the

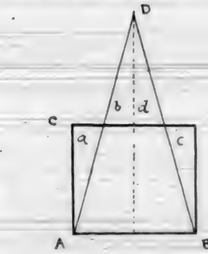

Fig. 4. Srosceles Triangle and Rectangle of Equal Area.

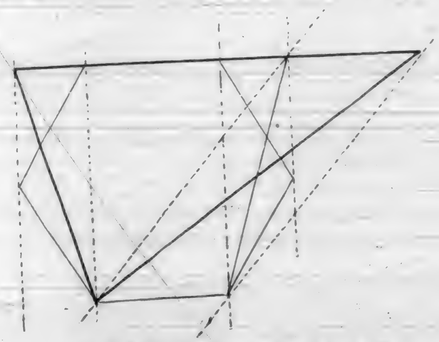

Fig. 3. Hexagon and Triangle of Equal Area.

sector are now altered until the distance between the points LL is equal to the length of the third lines (C). The fourth proportional required is ascertained in the case given by measuring from figures 7 to 7 under the new position of the instrument.

Perhaps a more useful purpose of the sector is in the construction of polygons which were referred to in our last paper. When the circumscribing circle is given the sector is opened until the distance upon the line marked (POL) from the figure 10 to 10 exactly equals the radius and the length of the side of polygon is found by measuring from any figure on one leg to the corresponding figure on the other. The figure must, in every case, correspond with the number of sides in the required polygon. To illustrate the use in this case the octagon in the last paper was drawn, and it will be found that when the distance on the sector from the points 10 to C is equal to the radius of the circumscribed circle, that the length of the line AB is precisely the same as the distance between the points marked 8 and 8 on the sector.

The student having mastered the use of this instrument will do well to learn the solution of problems relating to the construction of triangles and regular polygons from given data.

Areas of Plane Figures.—There are few more important problems in practical geometry than those relating to the areas of plane figures, for not only are they of much service in the carrying out of ordinary work, but upon them depends to a great

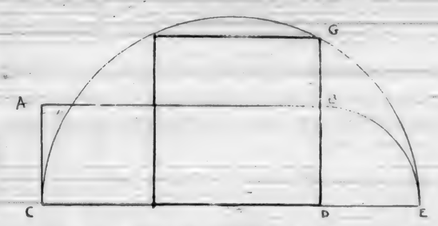

Fig. 7. Square and Rectangle of Equal Area.

extent the solution of many problems of particular interest. We will first consider the construction of different geometrical figures of equal area, thus, for example to make a triangle equal in area to a polygon or a square, to a given rectangle or rhomboid. The outline ABCD figure (2) represents a certain area and it is desired to find a triangle of equal area. By area, of course, is meant superfices, that is so many square inches or feet. The student may appreciate the qualities of area by supposing that the lines ABCD shown in figure (2) confine a number of small shot which are placed within them in such a way that, although they completely cover the area, no one shot rests upon another. It will be seen that if we change the form of the figure and get as a result an equal covering of the space confined by the shot, that the area will be the same. Our immediate object now is to find a triangle of equal area to the outline ABCD. This problem depends for its solution upon the 35th and 36th propositions of Euclid, book (I) which say that parallelograms and triangles upon the same or equal bases and between the same parallels are equal in area. If we draw a line through DB in figure (2) shown dotted, it will cut off from the main outline, the triangle ABD. Now, by the proposition just given, any triangle upon the base BD and between the same parallels will be of equal area. We therefore draw a line through A parallel to BD and extend the line DC to E, drawing a second line back to B which gives us the triangle EBC, equal in area to the four-sided figure ABCD.

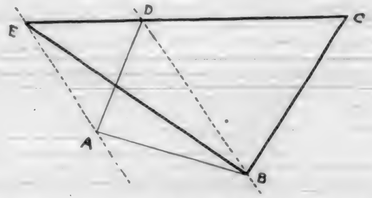

Fig. 2. Reduction of Four-sided Figure to Triangle.

That the areas are equal is proven by the fact that the triangle EBD is equal to the triangle ABD.

We have dwelt upon the solution of this particular problem, not so much because it is very difficult in the case before us, so much as because it is necessary in working out a large number of other problems. By it any figure bounded by right lines may be reduced to a triangle of equal area, and the method is exactly the same as that described, excepting that triangles are cut off

piece by piece, until the outline is reduced to its required form. Figure (3) shows a hexagon, represented in thin lines, reduced to the triangle represented in thick lines by means of the parallels shown dotted.

Having obtained a triangle equal in area to any given figure, we now go a step further and find a rectangle equal to a triangle. This is simple. A line is raised at each end of the base of the triangle and line drawn parallel to the base through a point exactly half way up the perpendicular height of the triangle. The application of this solution is shown in figeres 4, 5 and 6, as applied to isosceles, scalene and a right angle triangle respectively. Referring to figure (4) it will be plain that the rectangle ABCD is equal to the triangle EBD because the triangular space a is equal to b and c is equal to d.

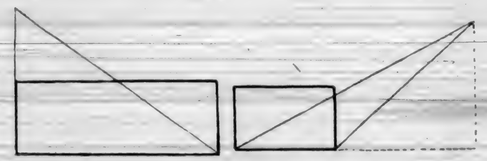

Fig. 6. Rightangle Triangle and Rectangle.

Fig. 5. Scalene Triangle and Rectangle.

To obtain a square equal in area to a rectangle, we proceed as follows.—Draw a rectangle as that shown in figure (7) marked ABCD. Extend the line CD indefinitely. With centre D radius DB describe an acre cutting this line in E. Now bisect the line CE in the point F, and with radius FE describe a semicircle: Extend the line DB until it reaches the arc at G when GD will be one side of the square, equal in area to the rectangle ABCD, and the construction of a square is, of course, simple. We have now shown how any figure bounded by right lines may be reduced in form, first to a triangle, then to a rectangle and then to a square of equal area. In our next paper we will give further problems on this interesting branch of practical geometry.

(To be continued.)

Building in the City of Mexico.

A PAPER was recently read on this subject, before the Washington Chapter of American Institute of Architects, from which we make these interesting extracts:

Picturesque effects in architectural compositions are not much appreciated in so absorbingly picturesque a country as Mexico. Though the ornamentation often partakes of the *bizarre*, the general dispositions in the city work accentuate repose and harmony, and despise little tricks for producing sensational effects.

The building stones of Mexico City, the art, industrial and commercial center of the republic, are of trachytic origin, *i. e.* species of lava composed of vitrious feldspar in the body. All these materials have very little transverse strength, and are mostly used in short pieces. An ordinary window-sill is composed of two or three pieces, and all lintels are formed of straight arches.

The bricks or "ladrillos" are 12x6x4 inches and cost about eighteen dollars per thousand. For whole walls they are very rarely used; face bricks are not seen, and the characteristic brick-architecture does not exist.

Not much is to be said of the wood-work in the better class of houses in Mexico. There is plenty of lumber in the country, but it grows in lumber belts, difficult of access and hundreds of miles distant from each other. Cheap means of communication are not developed, since the entire table-land is deficient in navigable rivers or canals. Even the Rio Grande is navigable for not more than one hundred miles up the coast, and so are the comparatively few other rivers.

The floors of the buildings are laid similar to ours; their roofs are flat, and constructed by counter-ceiling or sheathing the rafters. On the boards a compacted layer of stiff clay, about seven inches thick, is put, and upon this bricks are laid in, and grouted with mortar. The brick pavement is banked up slanting against the side walls, so as to form easily a water-tight joint. This mode of construction would not prove water-tight in cases where the rafters are partly supported by interior partitions of wood, which shrink, compress and hence result in fissures and cracks, such as destroy the rigidity of the heavy covering materials.

In the huge bull-rings and similar structures, sound and strong construction lumber is observed; but whilst ebony, rosewood, mahogany, cedar and ironwood (*lignum vitae*) are important staples for export from the lower country along the coast, a medium class of lumber for interior finish in buildings is evidently scarce. The heavy, molded and carved entrance doors of first-class buildings show very inferior material. Hardwood finish is very rarely applied; fine yellow pine and hard-wood partitions in stores are even imported from New Orleans. In the old houses, including even the National palaces, only the side walls are plastered; for even all flat ceilings muslin is tightly stretched under the floor-joists and carefully decorated, so as not to betray its flimsy origin. This is most likely a tradition which has out-lived the adobe house, with its clay roof, which was liable to leak if not frequently inspected. The arched ceilings of the churches, of course, were always plastered, and in costlier modern houses plastered ceilings are seen also.

Our general contractors are not known in Mexico. There is a class of men called masters. Whoever has any work to do engages the services of a master, and on Saturday he hands to the owner a pay-roll of the mechanics and laborers, bills for material bought, etc., for settlement.

In enterprises of more importance architects are engaged who then employ the master and become responsible for him and his doings.

Those members of our trades-unions who are jealous of our work performed by machinery could, with profit to themselves, observe the workings of a system and country where machines do but exceptionally compete with handwork, and note rates of wages obtained under such circumstances in Mexico City.

Foreman of masons gets $1.25 for a day of nine hours, and works along with his gang.

Stonemasons or bricklayers get 75 cents for a day of nine hours.

Hod-carriers get 44 cents for a day of nine hours.

Laborers get 31 to 37 cents for a day of nine hours.

These wages are paid in silver coin, of which a dollar, or "peso" is worth about 75 cents of our coin, which is based upon a gold standard.

Little activity prevails at present in the erection of new public buildings, since there is still a liberal supply of abandoned deserted and confiscated convents, which are reconstructed for secular purposes, a process in the course of which many odd features have to be improvised from sheer necessity.

The Royal Sliding Door Hanger.

The "Royal," illustrated in this issue, is a new Sliding Door Hanger, just introduced in the market by E. C. Stearns & Co., Syracuse, N. Y. This novel device for hanging doors properly belongs to the class of anti-fraction or rider bar hangers.

Pertaining to the "Royal" are these especially commendable features: The wheels have no flanges which would cut and wear the wood track, but are made with a broad flat face. The axles and rider bar are constructed of round steel. The pins whereon the hanger slides, which permit perpendicular adjustment, are of flat steel, allowing a reduction in width of a casing to a minimum. It is secured by screws to the top edge of the door, which dispenses with any cutting or fitting in order to accommodate the adjusting screw.

The addition of the new "Royal" to the extensive line of hangers hitherto offered by E. C. Stearns & Co. gives a completeness to their variety, which, always being in stock, must prove equal to any and every demand of the trade.

A MODEL FIRE ENGINE HOUSE.

We give in this issue perspective and floor plans of a fire engine house designed by Chas. E. Leeds & Co., architects, of New York City.

It is adapted for many of the small towns and villages throughout the country, and will be found suitable for an engine, hook and ladder, hose or chemical company. The beauty and appropriateness of the design we feel will be appreciated at once by our readers and be adopted as the model fire engine house, for it seems to us that when the cost for building such a structure as shown is taken into consideration, it will be a very difficult matter to design so handsome and complete a building for the purpose intended without increasing the cost very much more than the figures estimated by the architect for the design in question.

The design as shown is for a building 20 feet in width by 40 feet in depth, two stories in height, ground excavated under entire building. The dimensions as given may of course be varied materially to suit individual wants. For instance, there may be a demand for a building to accommodate a hook and ladder truck, the sitting room on first floor in this case could be dispensed with without in any manner affecting any of the other general arrangements. Again, if it was desired to afford accommodations for hook and ladder and engine side by side, the additional width can readily be secured without disturbing any other feature. In some cases the upper floor may have to be left unfinished or it may be necessary to devote the entire floor to sleeping accommodations. The library in that case being used as the officers' quarters, and has a desk and one of the new "America" Mantel Folding Beds; or again, where a steam fire engine is used it may be deemed advisable to devote the rear portion of the first floor to stable purposes. A variety of instances for individual uses will undoubtedly present themselves to our readers, and we might say here that the architects would be glad to correspond with any parties seriously considering the erection of a fire building, and will be pleased to give further information when desired.

When the engine house is to be used for a steam fire engine and it is desired to keep the water hot in the boiler of the engine, the Silsby Combined Engine House and Fire Engine Heater is to be used—with this apparatus the water can be kept hot in the boiler and the house also heated by means of steam heat. There is but one fire to be looked after and it can be placed on the same floor with the engine or in the cellar if preferred. It is automatic in every respect, and any desired pressure can be maintained in the engine boiler, from boiling point up to twenty-five pounds of steam.

The general arrangement as given below has been carefully studied, and the result we can say is a great success. On the first floor is the apparatus room having closets, desk and two wash basins, and in the rear of it a sitting or meeting room connected by sliding doors, cut glass panels with representations of emblems of the fire department. Sitting room to have one of Fuller & Warren Co.'s "Splendid" fire-place heaters connected with registers in the library and parlor. Dumb waiter on this floor to be 4x2, and of Tilman's Anti-Friction pattern.

For houses built in places where a fire alarm telegraph is in use a switch-board is supplied and placed over the desk in the engine room and connected with the electrical apparatus on said board by a Standard underground cable, same as used in the cities of New York, Philadelphia and Washington. Over the desk in this room is placed an Edson Pressure Recording Guage connected with the street water mains.

In front of the building is the hose drying tower, entered by a door from the street, making it unnecessary to drag the wet and dirty hose into the engine house—the hose being raised to the top of the tower by firemen standing in the street. In addition to the large double doors in front is a small door connecting with vestibule, from which there is an entrance to the apparatus room and also to the second story.

The second story consists of a parlor or billiard room, library and bath room, all well lighted. Bath room to be fitted with bath tub. Water closet to be McShane's "Royal" closet with cherry seat and copper lined tank complete. The water closet on first floor to be McShane's "Gem" closet complete with ash paneled copper lined tank. Drainage to consist of a 4 inch drainage system screwed together complete in place, as manufactured by the Durham House Drainage Company of New York. The wrought iron drain to be run four feet outside foundation wall.

Extending above the roof is a bell-tower so arranged as to give out the full tone of the bell when struck. The balcony in front with gable finish above crowned by a flag staff add much to the handsome appearance of the front.

The basement has a kitchen and workshop in the rear and a cellar in front. Kitchen to have a Fuller & Warren Co.'s No. 85 Diamond Range. Two McShane's No. 6 Crown Laundry Tubs, ash top, with painted iron standards and front strips. Workshop to have one of Gunn's tool cabinet work benches made by the Miller's Falls Company.

Chimney to be built as shown, all joints to be well filled. Parts exposed to view to be faced with selected hard brick, chimney to be capped with blue stone in one piece with flue openings cut out.

All timber to be of good sound spruce, first and second tier of floor beams to be 3x8, placed 16 inches from centers. Rafters 2x6, placed 12 inch on centers; sills, posts, plates and ties 4x7; door and window studs of hemlock 3x4; door studs to be doubled; all partitions throughout to be 2x4 hemlock 16 inches on centers. Both tiers of floor beams to be well bridged.

The outside studding after covering with double ply "Sanitary Parchment" to be finished with Northrop & Co.'s sheet iron siding applied direct to studding; inside of wall to be filled with Terra Cotta Lumber, all partitions to be same material covered with Straw Lumber, joints to be covered with 2-inch moulding. All ceilings to be of Northrop & Co.'s sheet iron, as shown and according to details; roof to be covered with Northrop & Co.'s sheet iron roofing.

Floors throughout to be laid with first quality 1 1-8 inch thick mill worked white pine floor plank, not to exceed over 5 inches wide with close joints.

Interior door and window architraves to be 5 inches wide of moulded plaster finish with base and corner blocks. All interior doors to have Hermacite door knobs and escrutcheons.

All windows to trim to floor with moulded panel backs under sills. All windows to be fitted with Willer's sliding blinds of the latest pattern with bronze hardware. Sashes to be operated with Pullman sash balances instead of weights and to be secured by the Timby burglar proof fasteners. Sashes throughout to be 2 inches thick; glass throughout to be first quality American sheet glass. Halls on first and second stories, and library and parlor to be wainscoted with "Lincrusta Walton" as shown and according to details.

Exterior to be painted with H. W. John's Liquid Paint. Interior with H. W. John's Abestos Fire Proof Paint.

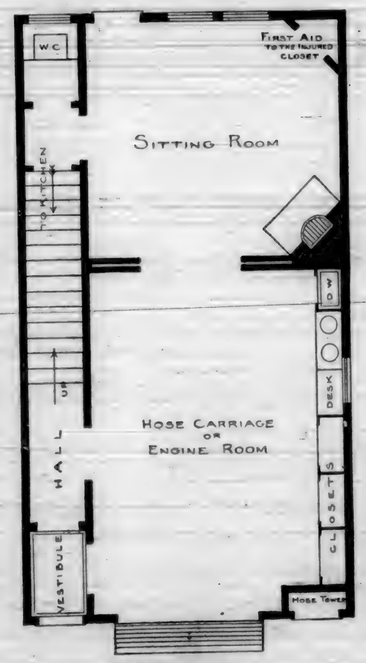
All doors to be double faced, outside double doors to be 2½ inches thick; all others 1½ inch thick; outside double doors to be provided with "Garden City" engine house spring hinges, especially constructed for throwing the doors open.

All doors to have heavy mortise locks of Niles' patent. Sliding doors to be hung on Warner's hangers. Closets to be supplied with Jayne & Crosby's new departure wardrobe hooks.

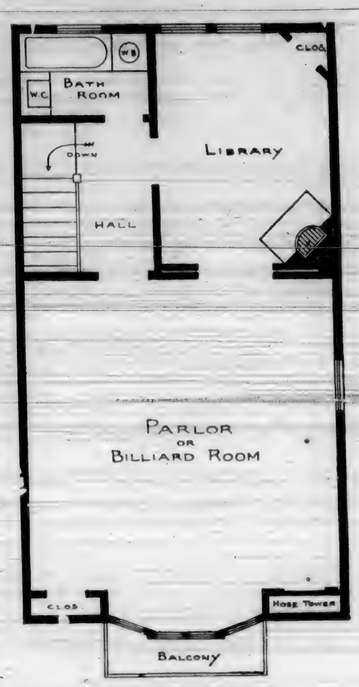
Stairs from first to second floors, with 1¼ stringers and treads, and ⅞ risers, treads to be of yellow pine; stairs to have 3x4 hand rail and 2-inch turn ballusters, all to be of nicely grained ash.

In front of the building, to be used when the large double doors are open, is provided a Bostwick folding gate.

Bell tower to have one of Miller's steel amalgam bells, No. 8, 710 pounds, with tolling attachment and rigged so that it can be rung from the inside of house or from the street.



PLAN OF FIRST FLOOR.



PLAN OF SECOND FLOOR.

Gas fixtures in most prominent places and where mostly used to have the Matchless gas burners, and to be connected with the front door so as to be automatically lighted on opening the same. Mantels in sitting room and library to be E. J. Johnson's emblematical slate mantels.

By the use of the iron sidings, ceiling and roofing and Terra Cotta Lumber in side walls and partitions, a building can be constructed that will not be as liable to take fire from outside sources as the ordinary brick or frame building.

Building complete as shown will cost about two thousand dollars—if without tower two hundred dollars less, and if of only one story about one thousand dollars.

[N. B. These prices are those for which the building can be erected in New York City. They are not applicable to San Francisco. Cost here would be about double those given.

Ed. Architect.]

The Lumbermen of the United States.

In the *Northwestern Lumberman* of October 20th appears a list of those engaged in the manufacture or handling of lumber in the states of Kentucky and West Virginia. The list includes owners and operators of saw, shingle, stave and heading, and planing mills, sash and door factories and box factories; also the names of all wholesale, retail and commission dealers in lumber, timber and logs. By a convenient system of reference marks the above classification is indicated; and also in case of mills and factories the approximate daily capacity, the power used and whether or not dry kiln and logging railways are employed. The *Lumberman*, which is published at Chicago, promises to continue the publication of these valuable lists in regular issues of the paper until inside of a year the round of the United States shall be made. This is a bold and costly undertaking and should be appreciated by all interested in any way in the lumber industry of the country.

In next issue we will present No 2 of the series of Gem Cottages These unique designs are prepared especially for this journal and it is our intention to copyright the same.

ART, AND THE NEW BUILDING ERA.

THE recent material fall in the price of lumber is giving a fresh impulse to building. In the suburban districts and in the country generally wood will be employed in the construction of dwellings and other edifices for a long time to come. It will hold the first place in this respect, because it is a cheaper and more satisfactory material. Nine-tenths of those who build are not concerned so much about permanence as about an immediate improvement. The material can be put upon the ground quickly. The carpenters run up the frame and cover it; the planing-mill men cut out the window and door-frames and the "ornamental" work. The masons make a short job of the foundations, chimneys and such plastering as is required. The man, under pressure, has a house built for him in from sixty to ninety days. He is pleased with this rapidity of execution. In a single week the frame of a house will be set up and covered. If the average citizen in town or country wants a house at all, he wants it very much. He will frequently pay a premium for rapid construction. He may not get the best results. But the immediate want is met and that generally takes the precedence of all considerations of permanence.

Structures less than twenty years old are frequently moved on to cheaper lots in the suburbs. They have had their day, or, rather, have served the temporary purpose of the original owner. The house which fills the blank will be more elaborate. But some day, if it is not burned, the same fate may overtake it. This is one of the few countries of the world where dwellings may be seen every month in this process of transition. The old anti-Revolutionary houses of the Eastern States could not be moved. They had immense oak frames and were anchored with great stone chimneys on foundations planted in the cellars. But in these days, houses travel along some of the streets with chimneys upright and with hardly a fracture of the stuccoed walls.

A better art has been applied to the construction of modern wooden houses. This is especially noted in suburban districts. At points where the lines of the city become obscure and the country begins, rural taste has been applied to house construction. If it is not always the best, it is a great improvement over the dreary box-like structures which for a time prevailed. Just now the tendency is to push the picturesque in suburban construction to extremes. The tameness of uniformity is well broken up. Something of dignity and repose are sacrificed in the numerous angles, gables, facades, porticos and trimmings. There are "fads" in picturesque construction and painting. A few years ago nearly all the new suburban houses in some districts went into half mourning—that is, they were painted in sombre lead color, in which lamp black or some kindred pigment had the first place. This tone suggested grief, sorrow, disappointment, clouds charged with the coming storm. It went out of favor because it was never supported by the canons of good taste. A soft cream color had preceded the half mourning. It harmonized well with the clays found everywhere, and with the creamy tones of much of the sandstone which was being uncovered in many parts of the State. Then came a season of terra cotta reds and pink browns.

"John," said a Quaker to his son, who was sporting a flamingo vest, "what is the color of that waistcoat thou hast on?" "That," said young hopeful, "is a kind of fiery drab." Some of the colors now applied externally to suburban dwellings range from dull terra cotta to "fiery drab." The last extreme is not good. A house should not suggest a volcano or the danger of a sudden burst of flame. Violent or inflammatory colors never suggest repose. There has been one positive gain in art applied to house construction in this; paint applied to interiors has been very much restricted. In many houses of recent construction, not one-eighth of the interior has been touched with a paint-brush. The tones of native woods are superior to anything which can be done in pigments.

But the most striking evidence of the new building era is seen in the stone fronts now given to some of the most costly buildings in the city. Enough has been accomplished in this direction to make it certain that stone is hereafter to be used for such purposes in this city very extensively. These creamy sand-stones abound in many places within fifty to seventy-five miles of the city. The material is easily cut out and worked into all the shapes required by the architect. These sand-stones shade off into rich browns and drabs. There is enough of this material within reasonable distance to build a large city—more than will be required for all building purposes during the next half century. The granite is a little more remote. But it goes well with the new era of construction that there has recently been discovered an unlimited wealth of the best material which has ever entered into the construction of modern cities.

School House Ventilation.

One of the most difficult problems presented to the architect in the erection of school buildings, is the subject of ventilation. To prepare vents for the ingress of pure air and the egress of foul air without creating a draught, and causing an incessant coughing among the scholars, is a problem, the solution of which has caused much study. Happily, the system devised by Mr. P. Abrahamson of this city, remedies the difficulty mentioned. In the Kate and Fillmore streets public school—lately finished—his system has been given a perfect trial. The Board of Education, the architect, teachers, scholars, all are delighted with the successful results. In five other school buildings has the system been introduced and such is its success that the Masonic Halls in Woodland and Napa, the Orphan Asylum at San Rafael and many of our most prominent interior buildings are supplied with the ABRAHAMSON VENTILATOR, and one and all unite in praising its merits as the best known system of ventilation yet introduced.

A Decision of Importance to Owners of Houses.

A few weeks ago Attorneys Nagle & Nagle brought suit in the Superior Court for Olive J. Wickes against Catharine Chenot to abate a water nuisance and to recover damages. Plaintiff is the owner of the house and lot 917 Valencia street, and the defendant owns a house and lot adjoining. The eaves of the latter house project some six inches over plantiff's land and the rain water therefrom was the nuisance complained of.

Judge Wallace filed a decree in the case to-day, ordering the defendant to abate the nuisance and to remove all projections over and upon plaintiff's premises. H. Eichoff, attorney for the defendant, pleaded the statute of limitations, because the action was not sooner brought. Judge Wallace held that the statute of limitations did not apply, for the reason that plaintiff is entitled to undisturbed possession of her property. The defendant was further perpetually enjoined from constructing a roof, gutter, eaves, trough or other projections over or upon plaintiff's land, and to construct her house so that rain water will not flow from the roof upon plaintiff's land.

CITY BUILDING NEWS.

There is no Paper or Journal on the Pacific Coast that pretends to give a Full Report of Building News, *except the*

CALIFORNIA

Architect and Building News.

Army Avenue near Dolores, six one-story frame. Owner and builder, J. C. Weir; cost, $12,000.

Beaver near Noe, two story frame. Owner, F. D. Bouvard; contractor, Hyde; cost, $4,500.

Beaver near Noe, two-story frame. Owner, A. H. Flood; days' work; cost, $5,500.

Baker near Haight, additions. Owner, Mrs. Von Noble; contractor, E. Watts; cost, $1,500.

Capp near 25th, two two-story frame; cost, $4,500.

Capp near 21st, two-story frame. Owner, J. W. Salter; architect, H. Geilfus; contractor, F. Klatt; cost, $3,225; signed, Nov. 1; filed, Nov. 3; limit, 80 days.

Payment, framed, $483; partitioned, $483; brown coat, $483; inside finished, $483; completed, $483; balance, $810, 35 days.

Collingwood near 19th, one-story frame. Owner, Bateman; cost, $1,700.

California, between Laguna and Octavia, two-story frame. Owner, W. E. Brown; contractor, Knight & Littlefield; architect, J. C. Matthews & Co.; cost, $7,994; signed, October 8, 1888; filed, October 11, 1888; limit, February 15, 1889.

1st: 75 per cent. as work progresses; 2d, usual 35 days, balance.

Clay, between Webster and Buchanan, two two-story frame. Owner and builder, Chas. Hinkle; cost, $12,000.

Clay, No. 1213, additions. Cost, $1,000.

Devisdaero and Sutter, two-story frame. Owner, A. Kopankiewig; architect, H. Geilfuss; contractor, Jno. Bruce; cost, $2,228; limit, 65 days; signed, Oct. 12, 1888; filed Oct. 15, 1888.

1st payment, partitions set, $415; 2d, yard work done, $415; 3d, inside finish on, $425; 4th, completed, $425; 5th, usual 35 days, $558.

E. Scott, st. building. Owner, D. Saunderson; architect, R. K. Daley; contractors, Martin & Maguire; cost, $3,450; limit, Jan. 18, 1889; signed, Oct. 15, 1888; filed, Oct. 16, 1888; sureties, J. W. Weason.

1st payment, sheathing done, $862 50; 2d, brown coated, $550; 3d, completed, $862 50; 4th, usual 35 days, $862 50.

Ellis and Jones, painting. Owner, Mrs. A. C. Luhrs; architect, Pissis & Moore; contractor, Lynch & Armstrong; cost, $1,549; limit 130 days; signed, October 18th; filed, October 23d.

1st payment, half done, $600; 2d, completed, $549; 3d, usual 35 days, $400.

Ellis and Jones, plumbing etc. Owner, Mrs. A. E. Luhrs; architect, Pissis and Moore; contractor, Sweeney & Kearns; cost, $2,274; limit, 130 days; signed, October 18th; filed, October 23d.

1st payment, rough pipes in, $900; 2d, completed, $800; 3d, usual 35 days, $574.

Ellis and Jones, carpenter work for residence. Owner, Mrs. A. E. Luhrs; architect, Pissis & Moore; contractor, Moore Bros.; cost, $33,400; limit, 130 days; signed, October 18th; filed, October 23d; sureties, C. F. Holmes, F. Joost; bond, $8,000

1st payment, brick foundation, $4,000; 2d, framed, $5,000; 3d, first plaster on, $5,000; 4th, inside plastered, $5,000; 5th, ready to paint, $5,000; 6th, completed, $1,000; 7th, usual 35 days, $8,400.

Ellis, corner Devisadero, 1½-story additions; owner, Morse & Co.; cost, $800.

Elgin Park near Herrman, two-story frame. Owner, B. Joost; contractor, McCann & Riddell; cost, $4,500.

Fourteenth and Harrison streets, two-story frame. Owner, Henry Meyer; architect, Salfield & Kohlberg; contractor, Fuchs & Bucher; cost, $5,150; signed, October 5th; filed, October 13th; limit, 90 days; sureties, C. Rohrbacher and M. Schawb; amount of bond, $5,000.

1st payment, frame completed $1,500; 2d, when rough coat of mortar is on, $1,200; 3d, when completed, $1,300; 4th, balance usual 35 days, $1,150.

Folsom near Second, grading. Owner, Boyd & Davis; architect, J. M. Curtis; contractor, J. Kelso; cost, $15,500; signed, October 10th; filed, October 11th; limit, February 1st; sureties, John Daly and Abner Doble; amount of bond, $8,000.

1st payment, when half finished, one-fourth; 2d, when three-quarters finished, one-fourth; 3d, when completed, one-fourth; balance, usual 35 days.

Ful on, near Broderick, one-story frame. Owner and builder, J. Elliott; cost, $1,000.

Folsom, corner 26th, improvements. Contractor, J. Haaf; cost, $800.

Fourteenth near Sanchez; two-story frame, Owner, Hannah Maharan; architect, R. H. White; contractor, Rountree Bros.; cost, $4,500.

Fillmore near Pacific, additions. Owner, J. T. Trainer; architects, Percy & Hamilton; days' work; cost, $1,500.

Fulton between Webster and Fillmore, two-story frame. Owner, Mrs. J. F. O'Neil; architect, Thos. Welsh; contractor, C. Laherty; amount, $4,400; surety, Mrs. A. J. Hansen; filed, October 30th; signed, October 29th; limit, 100 days.

Payments: enclosed, $1,100; brown mortar on, $1,100; completed $1,100; $1,100 35 days.

Fourteenth and Sanchez, two-story frame. Owner, Hannah Maharan; architect, R. H. White; contractor, Rountree Bros.; cost, $4,300; limit, 90 days; signed October 24th, filed, October 25th; sureties, F. P. Latson, W. A. Meeker.

1st payment, roofed, $900; 2d, brown coated, $800; 3d, inside primed, $700; 4th, completed, $815; 5th usual 35 days, $1,085.

Fifteenth near Market, additions; cost, $600.

Fourteenth near Market, two-story frame; cost, $600.

Guerrero and Thirteenth, additions. Owner, Marie P. Comte; contractor, I. Wells; cost, $1,350; signed, October 9th; filed, October 11th; limit, November 20th.

1st payment, when roof is completed, $500; 2d, when building is completed, $350; 3d, usual 35 days, $500.

Golden Gate Ave. and Baker, two-story frame. Owner, L. G. Schord; architect, E. E. Henricksen; contractor Moore Bros. cost, $3,700; signed, October 5th, filed, October 11th; limit 70 days; securities, J. W. Fountain, F. Joost; amount of bond, $3,700.

1st payment, roofed, $694; 2d, outside finish on, $694; 3d, sashes hung, $694; 4th, trimmings on, $694; 5th, usual 35 days, $924.

Guerrero, between 17th and 18th, building. Owner, Thos. McNulty; architect, M. J. Welsh; contractors Veitch & McDonald; cost, $4,200; limit 80 days; signed, Oct. 23d; filed, October 25th; sureties, Smith & Kelly, Hare & Co., bond, $4,000.

1st payment, framed, $1,000; 2d, brown coated, $1,000; 3d, completed, $1,000; 4th, usual 35 days, $1,200.

Grand Hotel, artificial stone tiles. Owner, Estate of Wm. Sharon; contractor, P. H. Jackson & Co., $5,341; signed, August 28th; filed, October 22d.

Payment: 75 per cent. as work progresses balance, usual 35 days.

Guerrero, between 17th and 18th, two-story frame. Owner, Thomas McNulty; architect, M. J. Welsh; contractor, Veitch & McDonald; cost, $4,500.

Hickory Avenue and Webster street, two-story frame. Architect, J. T. Kidd; contractor, Kincaid & Thompson; cost, $4,000; limit, 130 days; signed, October 12th; filed, October 16th; sureties, J. F. Kennedy.

1st payment, framed, $750; 2d, ready to plaster, $750; 3d, sashes glazed, $750; 4th, completed, $750; 5th, usual 35 days, $1,000.

Henry, near Castro, one-story frame. Owner, W. White; cost, $1,500.

Hayes near Webster, two-story frame; architect and builder, G. Knopf; cost, $3,500.

Harrison, between 4th and 5th; grading, stone work, etc. Owner, Chas. Harley; architect, Armitage; contractor, Jacob Haaf; cost, $2,375; signed, October 18th; filed, October 25th.

Payments: 75 per cent. as work progresses.

Howard and Washington avenue, painting. Owner, Gesellschaft Teutonia; architect, Geilfuss; contractor, John Quadt; cost, $1,100; limit, 15 days after carpenter work is done; signed, August 16th; filed, October 15th

1st payment, 75 per cent. as work progresses; 2d, balance, usual 35 days.

Howard and 10th, excavation and brick work, etc. Owner, Omnibus Cable Co., architects, Percy & Hamilton; contractor, Wilson Burden; cost, $14,500; limit, 60 days; signed, October 25th; filed, October 27th; sureties, C. A. Warren, Robert Mitchell. bond, $15,000.

Payments: 75 per cent on 1st each month as work progresses; balance, usual 35 days.

Howard between 24th and 25th, two-story and basement. Owner, James and Anne Renwick; architect, John Gash; contractor, Allen McDonald; cost, $3,850; limit, 90 days; signed, October 12th; filed, October 17th; sureties, F. P. Latson, M. O'Hare.

1st payment, boarded, $500; 2d, brown coated, $600; 3d, white coated, $500; 4th, wainscoted, $600; 5th, completed, $687.50; 6th, usual 35 days, $962.50.

Herrman and Elgin Park, four two-story frame. Owner, B. Joost; contractor, McCann & Riddell; cost, $18,000.

Jessie, between 18th and 19th, building. Owner, Wm. Kennedy; architect, M. J. Welsh; contractor, F. Nelson; cost, $1,500; signed, October 10th; filed, October 11th; limit, 65 days; sureties, Jno. Nelson and Wm. C. Hamerton.

1st payment, roofed, $300; 2d, first coat mortar on, $400; 3d, completed, $100; 4th, usual 35 days, $400.

Kearny and Geary, marble and tile work. Owner, M. H. De Young; architect, Burnham & Root; contractor, Wm. Black; cost, $21,700; limit, October 1, 1889; signed, October 24, 1888; filed, October 24, 1888.

Payments: 75 per cent. as work progresses; balance in usual 35 days.

Kearny and Geary, fire roofing. Owner, M. H. De Young; architect, Burnham & Root; contractor, Gladding, McBean & Co; cost, $36,500; limit, 60 days; signed, October 24; filed, October 24.

Payments: 75 per cent. as work progresses; balance, usual 35 days.

Kearny and Geary, plumbing, etc. Owner, M. H. De Young; architect, Burnham & Root; contractor, Duffy Bros; cost, $16,750; limit, 60 days after plastering; signed, October 24th; filed, October 24th.

Payments, 75 per cent. as work progresses on 27th of each month; balance, usual 35 days.

Kearny and Geary, mason work on granite building. Owner, M. H. De Young; architect, Burnham & Root; contractor, John McCarthy; cost, $55,000; limit, 180 days; signed, October 24th; filed, October 24th.

Payment: 75 per cent. as work progresses; balance, usual 35 days.

Kearny and Geary, terra cotta work. Owner, M. H. De Young; architect, Burnham & Root; contractor, Gladding, McBean & Co., cost, $10,500; limit, six days after mason done; signed, October 24; filed, October 24th.

Payments: 75 per cent as work progresses; balance, usual 35 days.

Kentucky, between Solano and Butte, building. Owner, Robert Day; architect, T. J. Welsh; contractor, C. E. Dunshee; cost, $1,500; limit, 45 days; signed, October 16th; filed, October 16th.

1st payment, brown coated, $550; 2d, completed, $550; 3d, usual 35 days, $440.

Liberty and Guerrero, two cottages. Owner, D. W. Parkhurst; architect, A. J. Barnett; contractor, Brennan Bros; amount, $9,100; signed, November 1; filed, Nov. 3d; sureties J. J. McKinnon, F. P. Latson; limit 100 days.

Payments: 75 per cent. as work progresses; balance 35 days.

Laidley and Bartlett, one story frame. Owner, Kate Drachbar; architect, G. H. Miller; contractor, H. Rohling: cost, $1575; signed, October 24th; filed, October 29th; sureties, J. J. McKinnon, F. Joost; limit. 60 days.

Payments. framed $375; brown mortar on, $350; complete, $450; balance, $400 usual 35 days.

Lloyd near Scott, one-story frame. Owner, Michael McGurk; cost, $1,000.

Lyon, corner Geary, one-story additions. Owner, Walsh; contractor, M. J. Eagan; cost, $3,000.

Lily Avenue near Gough, additions; cost, $1,500.

Larkin, between Fulton and Ash avenue; five-story stone and brick building. Owner, Alvinza Hayward; architects, Percy & Hamilton; masons, Richardson & Gale; carpenters, Gray & Stover: plumbers, Duffy Bros.; plasterer, Dunlop; cost, $150,000.

Market, corner 16th, additions to Trinity M. E. Church; cost, $1,000.

Main between Howard and Mission, brick building. Owner, Whyte & DeRome; architect, Pissis & Moore; contractor, E. R. Shain; amount, $12,520; signed, October 25th; filed, November 3d; sureties, J. G. Davis, F. Williams; limit, 80 days.

Payments: foundations in, $1,500; walls to 1st ceiling, $2,500; walls to roof trusses, $2,300; roofed and floored, $2,000; completed, $1,090; balance $3,130, 35 days.

Main and Howard, mason work for foundry. Contractor, J. Wagner; architect, Wm. F. Smith; owner, Marshutz & Cantrell; cost, $5,111; signed, October 15th; filed, October 20th.

Payments: three payments of $1,244; balance in usual 35 days.

Main and Howard, carpenter work. Owner, Marshutz & Cantrell; architect, Wm. F. Smith; contractor, F. W. Kern; cost, $4,530; limit, 60 days; signed, October 15th; filed, October 20th; surety. O. W. Nordwell.

Payments: two equal payments; 25 per cent on or before 35 days.

McAllister and Webster, alterations, etc. Owner, Peter Dean; architect, J. E. Wolfe; contractor, S. Buzzell; cost, $2,578; limit, December 22d; signed, October 15th; filed, October 18th; sureties, Jno. Tuttle; bond, $1,000.

1st payment, underpinned, $600; 2d, roofed, $400; 3d, brown coated, $500; 4th, completed, $433; 5th, usual 35 days, $645.

512 Pine, alterations to roof. Owner, Kong Chong Asssociation; contractor, R. Ringrose; cost, $460; signed, October 10th; filed, October 25th.

1st payment, materials delivered, $300; 2d, completed, $160.

Pine and Octavia streets, plumbing, etc., Owner, S. Wenban; contractor, R. Rice; architect, Pissis & Moore; cost, $2,095; signed, October 5th; filed, October, 11th; limit, 100 days.

1st payment, rough pipes in, $870; 2d, when completed, $700; 3d, usual 35 days, $525.

Pine and Octavia streets, painting. Owner, S. Wenban; contractor, Lynch & Armstrong; architect, Pissis & Moore; cost, $1,117; signed, October, 5th, 1888; filed, October 11th, 1888; limit, 100 days.

1st payment, half done, $400; 2d, completed, $430; 3d, usual, 35 days, $287.

Post near Baker, three one-story frame; Owner, Chris. Buckley; architect, A. Laver; contractor, J. J. Dunn; cost, $8,000.

Sutter, bet. Powell and Mason, barn. Owner, Abbie M. Parrott; architect, Pissis & Moore; contractor, Wm. Langstaff; cost, $5,750; limit, 70 days; signed, October 22d filed, October 26th; sureties, F. H. Rosenbaum; F. P. Latson

1st payment, brick foundation in, $1,000; 2d, framed $1000; 3d, brown coat $1000; 4th, ready to paint, $1000; 5th, completed $300; 6th, usual 35 days, $1,450.

Stevenson, bet. First and Second. Owner, Wm. Sharp; architect, Wm. F. Smith; contractor C. K. Worrell; cost, $5,899; limit, 70 days; signed, October 12th; filed, October 16th; sureties, B. M. and G. McBean.

3 equal payments, $1,474.50; balance on or before 35 days after date.

Sevenson, between First and Second, carpenter work. Owner, Wm. Sharp; architect, Wm. F. Smith; contractor, F. W. Kern; cost, $2,680; limit, 70 days; signed, October 12th; filed, October 16th; sureties O. W. Wordell.

1st payment, 1st floor joists, $1,000; 2d, completed, $1000; 3d, balance, usual 35 days.

Shotwell, between 17th and 18th, two-story frame. Owner, D. Nichols; architect and contractor, Geo. J. Doering; amount, $3,200; signed, October 20th; filed, October 30th.

Payments: framed, $700; roofed, $700; brown mortar on, $700; completed, $700; balance $400, usual 35 days.

Seventeenth between Howard and Mission, one-story frame. Owner, J. J. Cochran; architectand contractor, P. Lynch; amount, $1,747; signed, October 23; filed, November 2d; limit, 70 days.

Payments: one-fourth when framed; one-fourth brown coated; one-fourth completed; one-fourth, 35 days.

Sutter and Buchanan, two flats. Owner, Sarah Sherman; architect, J. H. Littlefield; contractor, Moore Bros; cost, $5,688; limit, March 10th, 1889; signed, October 26th; filed, October 29th; sureties, J. F. Kennedy, F. Joost.

Payments: 37 per cent. as work progresses; 63 per cent. on completion if no liens.

G. V. Daniels has painting contract on above; amount $474. Fritz & Kean has plumbing contract; amount, $678.

Schrader near Page, two two-story frame. Owner, M. Joost; contractor, Hinkle Bros; cost, $7,500.

Sanchez near 25th, two two-story frame. Owner and builder, F. C. Kleebauer; cost, $5,500.

Sanchez, corner 26th, additions; cost, $600.

Sanchez near 23d, additions; cost, $1,600.

Washington and Webster, eight two-story frame. Owner and builder, Chas. Hinkle; cost $50,000.

Sixteenth near Market, additions; cost, $1,500.

Sixteenth near Castro, two-story frame. Owner, W. Carver; contractor, Hyde; cost, $4,500.

COUNTRY BUILDING NEWS.

OAKLAND.

P. J. Nelson has the contract for the erection of a house on Lincoln street, near Campbell for $2,575.

W. H. Weilbye has nearly completed a two-story frame building for J. C. Wills, which will cost $2,300.

W. P. Veitch is building for C. H. P. Meyer a two-story frame house on Tenth street, near Brush.

J. McDonald is having a one-story addition built upon his Oakland residence by J. A. Boynton. The cost will be $1,000.

T. McGauley is building a $1,435 cottage for M. Connolly on Isabella street.

L. Long has the contract for the Centennial Methodist Episcopal Church on Ninth and Chester streets. The contract price is $5,667.

Pierce & Rush are building for T. P. Sheller a residence on Piedmont avenue, near Moss avenue, that will cost $2,445.

Smith & Lake have the contract for the new residence of E. C. Loftus on Magnolia street, near Tenth. The cost will be $3,450.

Adolph Frankee has built on the south side of Elm street, between Telegraph avenue and Grove street, a handsome residence for himself at a cost of about $10,000.

W. W. Camron is erecting for Mrs. Warner a seven room cottage on Caledonia avenue, near Telegraph avenue, at a cost of $4,500.

P. J. Brophy has under-way a cottage on Magnolia street, near Tenth.

A. W. Pattiana & Co. are building a two-story house on McPherson street

P. Wensore has in course of construction two cottages on Tenth street, near Adeline.

Pierce & Rost are putting up for rent ten cottages on Poplar street, near Eighteenth.

John Kizer is erecting for himself a new cottage on Fifth street, between Webster and Harrison streets.

H. Direchson is erecting a cottage on Fortieth and Adeline streets.

Park Fellows has begun the erection of a large two-story house on Webster, near Merrimac street.

W. H. Weilbye has three modern cottages building on West street, near Thirty-ninth street.

EAST OAKLAND.

A. W. Pattiani & Co. have the contract for building for W. Murdock a residence on Seventh avenue near East Fourteenth street, to cost $2,059.

Tooling & Moore are building for S. D. Wright a cottage on Twelfth avenue, near East Fourteenth street, for $4,949. C. Mau is the architect.

J. R. Sheehan is having a residence built in East Oakland. J. A. Eastman is the contractor, and the price without painting or mantles is $1,210. J. J. and T. D. Newsom are the architects.

Mr. Vincent is erecting two cottages for rent on Park avenue, near the cotton mills.

ALAMEDA.

Work has been commenced upon a residence for Charles I. Hermann, on Alameda avenue, between Chestnut and Willow streets. It will be two stories in height. The cost will be about $4,500. J. A. Leonard is the architect.

J. B. Coggswell has contracted to build for Julius Generlich and Charles Clundt four one-story cottages on the north side of Versailles avenue between Morse and Central avenue. Cost, $5,800.

FORT BRAGG.

Chas. A. Page, who has recently returned from a trip through Mendocino county, reports everything booming at Fort Bragg. A lumber mill employing five hundred men will soon be in operation there. New houses are being erected in every direction and the prospects of the town are good.

LIVERMORE.

All the carpenters are very busy at present.

John Beck is improving his property by the addition of a large stable.

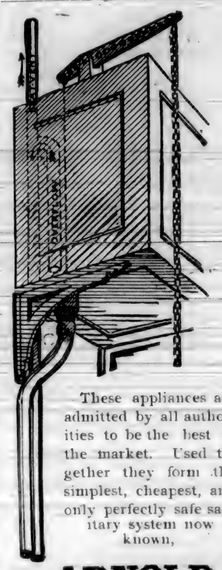
The contract for the erection of Philip Anspacher's new cottage, corner of L street and Cottage avenue, has been let to Captain A. J. Palmer of this place.

BERKELEY.

Professor Rising is having a foundation laid under his house on Alston way.

W. D. Matthews of San Francisco has made preparations to erect, for rental, a small cottage on Sixth street and Bancroft way.

A. H. Broad is at work on plans for a theater which he proposes to build in the town in the near future.



THE CELEBRATED

SANITAS

PLUMBING

APPLIANCES.

"SANITAS" TRAP OPENED.

The Sanitas Trap whether vented or unvented, has shown itself when properly set to be capable of resisting indefinitely, siphonage, back-pressure, and all other adverse influences met with in plumbing.

The "Sanitas" Basin flushes out the pipes and keeps them clean.

These appliances are admitted by all authorities to be the best in the market. Used together they form the simplest, cheapest, and only perfectly safe sanitary system now known,

("SANITAS" BATH-TUB and PANTRY-SINK on same principle as Basin)

THE "SANITAS" MANUFACTURING CO.,

BOSTON, MASS.

Branch Offices: 64 Gold Street, New York, N. Y.

229 Walnut Street, Cincinnati, O. 47 to 49 Dearbon Street, Chicago, Ill.

ARNOLD & CO., 40 California Street, San Francisco.

SOLE AGENTS

FOR CALIFORNIA.

Architects, Builders and the Public generally, are invited to call and inspect the same.

THE "SANITAS" WATER-CLOSET.

THE "SANITAS" WASH-BASIN.

McCLELLAN

Anti-Siphon Trap Vent.

SAFEST and MOST-ECONOMICAL

Device for Venting Sewer-Gas Traps.

Can be attached to any Trap at Less than Half the Cost of back-air pipes.

Approved by

ARCHITECTS, MASTER PLUMBERS AND HEALTH AUTHORITIES.

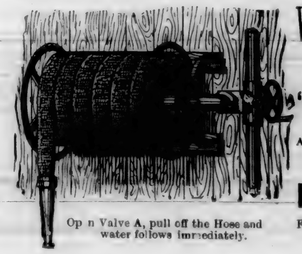
Manufactured by the

DU BOIS MAN'F'G CO.

Manufacturers of

The Celebrated Du Bois Lead Trap.

For Sale by all Jobbers in Plumbers' Supplies, of whom Circulars may be obtained.



W. T. Y. SCHENCK

MANUFACTURER OF

SCHENCK'S PATENT

"Paragon" Hose Reel,

And Sole Agent for Pacific Coast for the Celebrated "Eureka Mill" Cotton Rubber-Lined

FIRE HOSE

Open Valve A, pull off the Hose and water follows immediately.

For Mills, Factories, Hotels and Public Buildings, and General Inside Fire Protection.

Also "Eureka," "Paragon," and "Red Cross" brands of Cotton Fire and Garden Hose, Linen Hose, Rubber Hose, Fire Department Supplies, &c., &c.

Manufacturer of Hose Carts, H. & L. Trucks, and "Red Cord" Square Flax Packing for Elevators, Etc.

Pages on Cover and on page preceding reading matter, are subject to special rates.

SAN FRANCISCO, DEC. 15, 1888.

THE FUTURE OF THIS JOURNRL.

A Great Change to be Effected.

IT is with emotions of greatest pleasure that we make the announcement that from and after the first of January, 1889, this journal, with all its interests, will pass into the hands and under the control of the *San Francisco Architectural Publishing Company*, composed of practicing architects, representing nearly every prominent and influential firm in the city of San Francisco, and a few others identified in the building interests. This is a consummation of pleasing character to its founder and present proprietor, who has long desired to place this monument of his untiring energies, zeal and unceasing efforts in a position to secure its future against all the contingencies and vicissitudes of uncertain individual life, and place it in position, so that its future will be assured, its present enviable standing not only maintained, but increased and enlarged, until it shall become a journal of superior excellence and unlimited influence.

That such is its destiny is rendered certain by the unquestionable representative and influential character and standing of the men who will hereafter guide, direct and control its management. This result is not a mere financial speculation, but the outgrowth of a general conviction on the part of the architects in San Francisco, that a class journal published in the interests of the profession is a necessity upon this coast, and that its place of publication should be in the metropolis city of California. Hitherto the interests have been in individual hands, and many indeed have been the trials and difficulties attending its publication. The currents of jealousy and envy have whirled fiercely around it, and oppositions interposed that have had no foundation in fact. Still it has, without fear or favor in any direction, combatted the elements of discouragements, and pursued the even tenor of its way during its ten years of life, with the hope and expectation that time would bring the gratifying reward of present consummations.

The consolidation of its interests in a joint stock company, in which so many of the leading men of the profession have become identified, will relieve it of all the drawbacks of the past, and place it before its subscription and advertising patrons and the public, as the exponent of views, opinions, theories and principles entertained by the representative class of architects in San Francisco, as all former distinctive individuality will terminate in a management that cannot reasonably be charged with personal business motives in its publication.

Many, instead of one pen and brain will fulminate the contents of its columns, and from the combined intelligence of the many who will hereafter participate in providing its reading matter, its patrons may reasonably anticipate that articles of great interest, worth and merit will from month to month appear, and intellectual reports upon a thousand subjects—architectural, scientific and mechanical, be placed before its readers. Its illustration department will be greatly improved and diversified by original sketches from local practicing architects, draughtsmen and students, and a general knowledge of its passing to a management against which no shadow of personal interest can lie, members of the profession and students in all parts of the state, will most assuredly add to the number of illustrations, representing the localities in which they operate: so that in short space of time this journal will be sought for, both for its intelligent reading contents, and the commendable character of its plates and pictures. The arrangements necessary to effect all this, will, of course, require a little time to perfect, but under the assurances of what is to come, every one in any way interested in architectural building and mechanical sciences generally, and owners of real estate, should at once recognize this new movement, designed as it is, to meet the requirements of the times upon this coast more amply than they have been met, by all those who have not added their name to the subscription list of this journal. No class journal upon the Pacific coast has been more favored than this, as an advertising medium, nor any that has returned better results to its advertising patrons; and this, too, under an exclusive rule of permitting scarcely a single advertisement not specially associated with architecture, building and house furnishing. Hundreds of advertisements of patented things, schemes and devices, have been rejected, although tempting prices for space have been offered, and it is fair to presume that the columns of this journal will always be held exclusive to the producers of, and dealers in materials and products legitimately within the scope special to its character and purposes. Hence it should become the great medium through which sales and purchases of all building materials and house furnishing goods should be sought; and being so, is a strong reason why every one interested in real estate should become *paying*, not *sponging* subscribers—the latter seeking dilligently and perusing attentively each month's issue at the expense of others who pay for what they read. This journal, like all others, has suffered from this cause. Men possessed of large property, while voluntarily complimenting us in our publication work have exposed their meanness and injustice by confessing: "I like your book, and go to my architect's (or friend's) every month to read it." Let this end with the new arrangement. If the journal is worth reading, it is worth paying for, and shame, if not a sense of justice, should deter this class from continuing the habit of appropriating to themselves that which is not theirs by any right of purchase or fairness.

The new management will, from time to time, as the work becomes familiar and better understood, introduce improvements and organize systems and methods that will make the CALIFORNIA ARCHITECT AND BUILDING NEWS equal to any other class journal published in the United States.

IMPORTANT TO OWNERS AND CONTRACTORS.

Building Contracts.

Judge Hunt's Recent Decision.

A decision of interest to building contractors and men furnishing material was lately rendered by Judge Hunt in the case of John R. Kelly vs. S. Daus. The action was by sub-contractors and men furnishing building material to enforce their liens. It appears that Daus contracted with F. C. Adams to erect a dwelling. The work was begun at about 7 o'clock in the morning of August 1st, but the contract for the erection of the building was not filed in the Recorder's office until a little after 11 o'clock of that day. The law provides that contracts of this character, where the amount to be paid exceeds $1,000, must be filed in the Recorder's office before the work is commenced. In this case the contract referred to certain plans and specifications which were made a part thereof. But the plans and specifications were not filed in the Recorder's office with the contract.

Judge Hunt said the Supreme Court recently held that unless the plans and specifications are filed with the contract the law is not complied with, and the sub-contractors and material men may enforce their liens for the amounts due them against the owner of the building, notwithstanding he may have paid the contractor the full amount of the contract price.

Judge Hunt stated that he was constrained to follow this decision of the Supreme Court and would accordingly hold that the owner of the building was liable to the sub-contractors and material men for the amount of their demands. He further held that when either party to the building contract file the same on the day the work is commenced the law is substantially complied with, as the law never regards fractions of a day except where the priority of liens is involved, or questions arise under the Registry law.

Judgment was rendered in favor of plaintiff for $691, although there was but $332 due on the contract.

[Legal text in full of the Supreme Court decision referred to above.]

HOLLAND vs. WILSON. (No. 12,078.)

Supreme Court of California, June 7, 1888.

Mechanics' Liens.—Filing Claim.—Specifications Referred to in Contract.

Under a contract to erect a building "conformable to the drawings and specifications made" the drawings and specifications are a part of the contract, and should be filed under Code Civil Proc., Cal., Section 1183, regarding mechanics, liens, providing that "all such contracts shall be * * * * filed in the office of the County Recorder."

Pleading—Answer—Sufficiency of Averments.

In an answer for work and materials furnished for the erection of a building, where defendant sets up a special contract for its erection according to certain plans and specifications, an averment in the answer as to filing the contract in the Recorder's office, that the said agreement was filed in the office of the County Recorder, as required by Code Civil Proc. Cal., Sec. 1183, is not an averment that the plans and specifications were filed.

In Bank—Appeal from Superior Court, San Diego County; John D. Works, Judge.

This was an action by J. C. Holland against Warren Wilson on the common counts for work and materials furnished by the plaintiff to the defendant. The defendant, in the third paragraph of his answer, set forth a special contract, made a part of the answer, and alleged non-performance thereof by plaintiff, to defendant's damage. The special contract provided, among other things, that the plaintiff should erect the building, conformable to the drawings and specifications made by C. E. Sanger, and signed by the parties, within the time aforesaid, in a good workmanlike and substantial manner, to the satisfaction and under the direction of the said C. E. Sanger, architect, * * * and also shall and will find and provide such good, proper and sufficient materials, of all kinds whatsoever, as shall be proper and sufficient for completing and finishing all the said brick-laying and plastering and other works of said building mentioned in the brick-layer's specifications." Code Civil Proc. Cal., Sec. 1183, regarding the liens of mechanics and others upon real property, provides, as to contracts between the owner of the land and his contractor, that "all such contracts shall be in writing when the amount agreed to be paid thereunder exceeds one thousand dollars, and shall be subscribed by the parties thereto, and shall, before the work is commenced, be filed in the office of the County Recorder of the county, or city and county, where the property is situated, who shall receive one dollar for such filing; otherwise they shall be wholly void, and no recovery shall be had thereon by either party thereto; and in such case the labor done and materials furnished by all persons aforesaid, except the contractor, shall be deemed to have been done and furnished at the personal instance of the owner and they shall have a lien for the value thereof." The answer of defendant regarding the filing alleged "that before the work therein mentioned was commenced, to wit, on or about the 5th day of March, A. D. 1886, the said agreement was filed in the office of the County Recorder of San Diego county, State of California, in the county where the said property is situated." The plaintiff demurred to the third paragraph and the demurrer was sustained. Trial was had with jury waived, and judgment was entered for the plaintiff, from which the defendant appeals.

M. A. Luce, for appellant; Collier & Collier for respondent.

Thornton J.—We think the Court below ruled correctly in sustaining the demurrer to the portion of the answer numbered 3. The "plans and specifications" referred to in the agreement were a part of the contract, and should have been filed in the Recorder's office, under Sec. 1183, Code Civil Proc. The averment as to filing is insufficient in failing to show that the plans and specifications were filed. Judgment affirmed.

We concur—Searls, C. J.; Sharpstein, J.; McFarland, J.; McKinstry, J.; Patterson, J.

Sec. 1183 of the Civil Code referred to in Supreme Court decision:

Section 1. Section one thousand one hundred and eighty-three of the Code of Civil Procedure is hereby amended so as to read as follows:

1183. Mechanics, material men, contractors, sub-contractors, artisans, architects, machinists, builders, miners, and all persons and laborers of every class, performing labor upon or furnishing materials to be used in the construction, alteration, or repair, either in whole or in part, of any building, wharf, bridge, ditch, flume, aqueduct, tunnel, fence, machinery, railroad, wagon road, or other structure, shall have a lien upon the property upon which they have bestowed labor, or furnished materials, for the value of such labor done and materials furnished, whether at the instance of the owner, or of any other person acting by his authority, or under him, as contractor or otherwise; and any person who performs labor upon any mining claim or claims, has a lien upon the same, and the works owned and used by the owners for reducing the ores from such mining claim or claims, for the work or labor done, or materials furnished by each respectively, whether done or furnished at the instance of the owner of the building or other improvement, or his agent; and every contractor, sub-contractor, architect, builder, or other person having charge of any mining, or of the construction, alteration, or repair, either in whole or in part, of any building or other improvement, as aforesaid, shall be held to be the agent of the owner, for purposes of this chapter. In case of a contract for the work between the owner and his contractor, the lien shall extend to the entire contract price, and such contract shall operate as a lien in favor of all persons except the contractor, to the extent of the whole contract price; and after all such liens are satisfied, then as a lien for any balance of the contract price in favor of the contractor. All such contracts shall be in writing, when the amount agreed to be paid thereunder exceeds one thousand dollars, and shall be subscribed by the parties thereto, and shall, before the work is commenced, be filed in the office of the County Recorder of the county, or city and county, where the property is situated, who shall receive one dollar for such filing; otherwise they shall be wholly void, and no recovery shall be had thereon by either party thereto; and in such case, the labor done and materials furnished by all persons aforesaid, except the contractor, shall be deemed to have been done and furnished at the personal instance of the owner, and they shall have a lien for the value thereof.

Sec. 2. Section one thousand one hundred and eighty-four of the Code of Civil Procedure is hereby amended so as to read as follows:

1184. No part of the contract price shall, by the terms of any such contract, be made payable, nor shall the same, or any part thereof, be paid in advance of the commencement of the work; but the contract price shall, by the terms of the contract, be made payable in installments, at specified times, after the commencement of the work, or on the completion of specified portions of the work, or on the completion of the whole work; *provided*, that at least twenty-five per cent of the whole contract price shall be made payable at least thirty-five days after the final completion of the work and contract. No payment made prior to the time when the same is due under the terms and conditions of the contract, shall be valid for the purpose of defeating, diminishing, or discharging any lien in favor of any person, except the contractor, but as to such liens, such payment shall be deemed as if not made, and shall be applicable to such liens, notwithstanding the contractor to whom it was paid may thereafter abandon his contract, or be or become indebted to the owner in any amount, for damages or otherwise, for non-performance of his contract or otherwise. As to all liens, except that of the contractor, the whole contract price shall be payable in money, and shall not be diminished by any prior or subsequent indebtedness, offset, or counter-claim in favor of the owner and against the contractor; no alteration of any such contract shall effect any lien acquired under the provisions of this chapter. All such contract and alterations thereof as do not conform substantially to the provisions of this section shall be wholly void, and no recovery shall be had thereon by either party thereto; and in such case the labor done and materials furnished by all persons, except the contractor, shall be deemed to have been done and furnished at the personal instance of the owner, and they shall have a lien for the value thereof. Any of the persons mentioned in section eleven hundred and eighty-three, except the contractor, may, at any time, give to the owner a written notice that they have performed labor or furnished materials, or both, to the contractor, or other person acting by authority of the owner, or that they have agreed to do so, stating in general terms the kind of labor and materials, and the name of the person to or for whom the same was done or furnished, or both, and the amount in value, as near as may be, of that already done or furnished, or both, and of the whole agreed to be done or furnished, or both. Such notice may be given by delivering the same to the owner personally, or by leaving it at his residence or place of business, with some person in charge; or by delivering it to his architects, or leaving it at their residence or place of business, with some person in charge; or by posting it in a conspicuous place upon the mining claim, building, wharf, ditch, flume, aqueduct, tunnel, fence, machinery, railroad, wagon road, or other structure. No such notice shall be invalid by reason of any defect of form; *provided*, it is sufficient to inform the owner of the substantial matters herein provided for. Upon such notice being given, it shall be the duty of the owner to, and he shall, withhold from his contractor, or from any other person acting under such owner, and to whom by said notice the said labor or materials, or both, have been furnished or agreed to be furnished, all money due or that may become due to such contractor, or other person, or sufficient of such money to answer such claim, and any lien that may be filed therefor, for record, under this chapter, including costs and counsel fees provided for in this chapter, until such notice is by writing withdrawn; and all money paid thereafter by the owner to the contractor, or such other person, while such notice is in force, shall, for the purposes of all liens of all persons, except that of the contractor, be deemed a payment prior to the time the same was due, within the meaning of and subject to the provisions of this section.

SAN FRANCISCO CHAPTER AMERICAN INSTITUTE OF ARCHITECTS.

An Important Meeting.

The Chapter held its regular meeting on Friday evening, Dec. 7th, Vice President W. P. Moore in the Chair.

Present: W. P. Moore, A. Pissis, E. Kollofrath, J. M. Curtis, J. J. Clark, W. J. Cuthbertson, J. E. Wolfe, H. T. Bestor, G. H. Sanders, Seth Babson, John Gash, C. H. Hasty, G. H. Wolfe.

Henry A. Schulze was elected a member as Fellow.

The following communication was received from the Architectural League:

San Francisco, December 1, 1888.

To the Officers and Members of the San Francisco Chapter, American Institute of Architects:

Gentlemen:—At a meeting of the San Francisco Architectural League, held on December 1, 1888, it was resolved "to petition the members of the San Francisco Chapter, American Institute of Architects, acting as principals, to close their offices on Saturday at 3 P. M. that the draughtsmen and students working in their offices, may participate in the classes now being organized for Saturday afternoon by the League," viz: water colors, mathematics and building construction.

Hoping you will consider this petition favorably, we are, gentlemen,

Respectfully yours,

S. W. Hemenway, Secretary. Geo. M. Sanders, President.

J. F. Wieland.
A. Borradaile.
L. D. Drane.
L. S. Stone.
R. M. Turner.
Board of Directors.

An animated discussion ensued in regard to the request made in said communication.

Mr. Cuthbertson offered the following motion:—That a resolution be adopted by this Chapter, that the Architects of the Chapter close their various offices at 3 P. M. in accordance with the communication read. Seconded.

Mr. Babson moved to amend the motion as follows:—That all draughtsmen and students be permitted to leave the various offices of members of the Chapter, at 3 P. M. on Saturday afternoon for the purpose of attending the classes being formed by the Architectural League to give instruction in water colors, mathematics and building construction.

J. E. Wolfe was heartily in favor of the movement provided the students would embrace the opportunity offered to attend the classes and not spend the time in going fishing or other amusements.

To which Mr. Cuthbertson replied that he was as much in favor of, and thought architects were as much entitled to rest as lawyers, even if fishing excursions were organized. If the law was general, architects would take pride in closing at the hour named.

Mr. Sanders said that the opportunity should be given to all to join to attend the classes, or else it would be of little use to start the same. He read articles from the By-Laws about being adopted by the League. (By-Laws will be published in full when adopted. Ed.)

The amendment was then put by the Chair and carried. The original motion as amended was then carried by a decided majority.

A vote of thanks was tendered the retiring Treasurer, J. J. Clark, for the able and courteous manner he attended his duties during the term,

The following communication was received from the "Builders' Association."

San Francisco, December 7, 1888.

To the San Francisco Chapter of the American Institute of Architects.

Gentlemen:—I am requested to ask you to appoint a committee of three to confer with a similar committee from this Association in regard to drafting a memorandum to be filed as a record in the Recorders' office in connection with contracts, etc. Said memorandum to be paid for and printed by this Association.

Hoping to hear from you at an early date in regard to the above,

I remain yours, etc.,

J. W. Maher, Secretary.

On motion the same was referred to a committee consisting of Fellows Babson, Wolfe J. E., and Cuthbertson.

Mr. Bestor thought it would be well for the Chapter to appoint a committee to act with similar committees from the Builders' Association and the Lumbermen's Association and endeavor to obtain needed changes in the Lien Law.

An active discussion was then indulged in regarding the Lien Law. The committee above named was granted power, in addition to their other duties, to bring up the subject of the Lien Law before the committee of the Builders' Association.

A communication was received from M. A. Edwards in regard to the late competition for statuary mentioned in the Lick Trust, etc. The Secretary was instructed to answer the same by quotations from the By-laws.

Several copies of the proceedings of the 21st Convention of the American Institute of Architects were distributed to the members present, the same having been forwarded by A. J. Bloor of that society. Adjourned.

THE COURTS TO DECIDE A MIXED PROBLEM,

Question of Responsibility.

When the First National Bank of San Francisco began the work of constructing its new building on the northwest corner of Bush and Sansome streets, notice was given to A. Avillegra, the owner of the brick building adjoining on the north side, of intention to excavate to the depth of fourteen feet for a foundation for the bank building and for him to secure his building from falling into the excavation. Mr. Avillegra paid no attention to the notice and the bank was compelled, for self-protection, to provide at its own expense against danger from the adjoining building. Lloyd & Wood on behalf of the bank, have instituted suit to recover $1,400 from Avillegra the amount expended to prevent his building from falling. This is a question of interest to contractors and property owners.

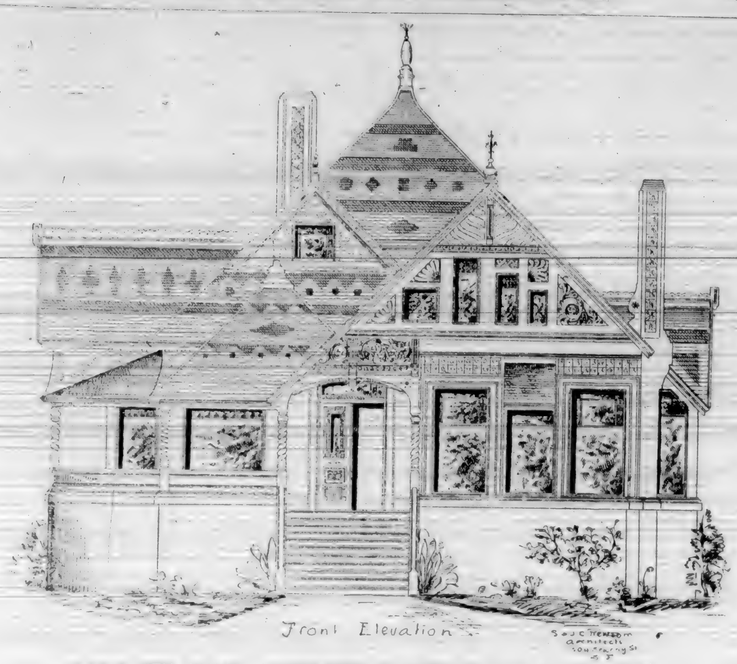
FIRST NATIONAL BANK BUILDING.

Description of the Structure.

The corner-stone of the First National Bank building on the northwest corner of Sansome and Bush streets, was laid on Nov. 20th. The building site is 46 feet 6 inches by 67 feet, corner Sansome and Bush, having on its rear a street 20 feet wide. The building will be six stories in height, in addition to the basement, which is eleven feet high, and will be partly arranged for the purposes of a safe deposit vault. The bank will occupy the first story and will be elegantly fitted up with plate glass and burnished brass, polished and carved mahogany, with tile floors and tasteful fresco decorations.

The five upper stories will be divided into offices and made accessible by an elevator and stairway rising from the Sansome street entrance. The exterior of the building will be constructed of pressed brick and Fresno granite (the lately discovered and beautiful stone from the San Joaquin valley). The basement and principal story will be wholly of this material, and the upper stories are designed with such an admixture of the two materials as to bring out the beauties of each. The first story is arranged with a series of semi-circular arches on short coupled columns, with heavily molded bases and richly carved caps. The entrance is composed of a projecting porch with appropriate insignia, comprising two large bears, an eagle and a boldly carved and inscribed shield.

This building promises to be an architectural ornament to San Francisco. Messrs. Wright & Sanders are the architects.

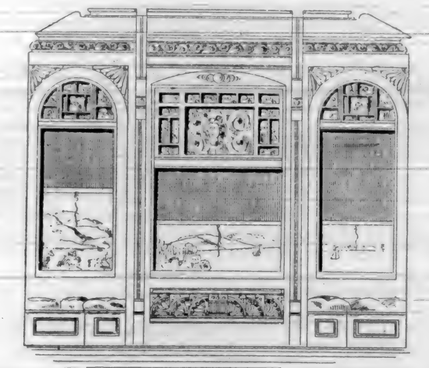


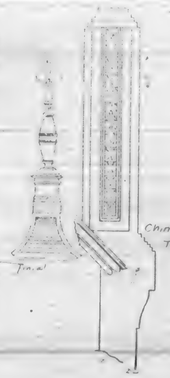
"TIA JUANA"—A PICTURESQUE HOME. (Cost, about $5,000).

The accompanying illustrations were furnished us by the courtesy of Mr. S. Newsom, whose office is in the Phelan Block, this city. The outside appearance well deserves its name of "Picturesque." The plan will be found very complete in its various appointments, some new features being introduced not generally found in a one-story house. The sizes of the rooms are very distinctly marked, so that an extended review of them is not necessary. Price for which same can be erected is in the neighborhood of $5,000.

A GRAND SUCCESS FOR 1889.

The movement in favor of making this journal second to none in the United States has met with the most favorable approbation of members of the architectural profession. **THIRTY-THREE (33) ARCHITECTS HAVE SIGNED FOR SHARES FOR STOCK IN THE COMPANY NOW IN PROCESS OF FORMATION,** and which in the future will control the destinies of the California Architect. The January number, 1889, will be especially interesting and will mark a decided change in the general appearance. **NOW IS THE TIME TO SUBSCRIBE.** Forward $2.00 immediately for one year's subscription. We place our circulation for December, 1889, at **FOUR THOUSAND.** Every effort will be made to reach, if not exceed, that figure. The Library and Reading-room will form an important feature under the new management, and visiting architects are cordially invited to call. Full particulars in January issue of the location of the new offices.





A Reprint from January, 1880.

Believing a well and ably conducted journal, devoted to Architectural, Mechanical, Sanitary, Scientific and other kindred matters and subjects, to be a necessity in this city, the California Architect and Building Review, published by the San Francisco Architectural Publishing Company, supplies a long-existing want on this Coast. We therefore pledge our cordial sympathies personally, and hope that the enterprise will receive kindly recognition and liberal support from all Architects and Builders on the Pacific Coast, and from the public generally.

John A. Remer.

THE NEW REGIME.

"California Architect Publishing Company."

We now definitely announce that about all the stock in this Company is about taken. No announcement has heretofore been made in this Journal that any change has been contemplated. But our old motto, adopted in 1879, has ever been before us—"Upward and Onward."

When the idea was first broached of placing this Journal under the control of a company composed principally of Architects, those consulted were at once convinced of the feasibility of the plan and many were eager to take immediate steps to perfect an organization.

But we "made haste slowly." We thoroughly canvassed the situation and a copy of the following circular was mailed to each Architect in the city and immediate vicinity:

"California Architect Publishing Company."

That the publication of a Journal devoted to the interests of Architects and builders on the Pacific Coast is an important measure, is too self-evident to require the support of argument.

So far, in the history of California, the necessity for such a journal has been met only in the publication of the "California Architect and Building News."

That Journal, however, has hitherto been an individual enterprise, edited and managed by one still practicing the profession of Architect, and therefore has not received that undivided and united support that would flow to a Journal entirely free from all personal and professional entanglements.

In order to establish a Journal which shall be the exponent of the ideas of architects and builders in general, it is proposed to form a

JOINT STOCK COMPANY.

The purpose of the Company being, to purchase the entire plant of the California Architect and Building News, including the good-will, subscription and advertising books, all amounts due on same at time of transfer, all bound volumes and back numbers, electro and stereo plates, all books kept on sale, and all other property or things connected with or used in the publication of said Journal.

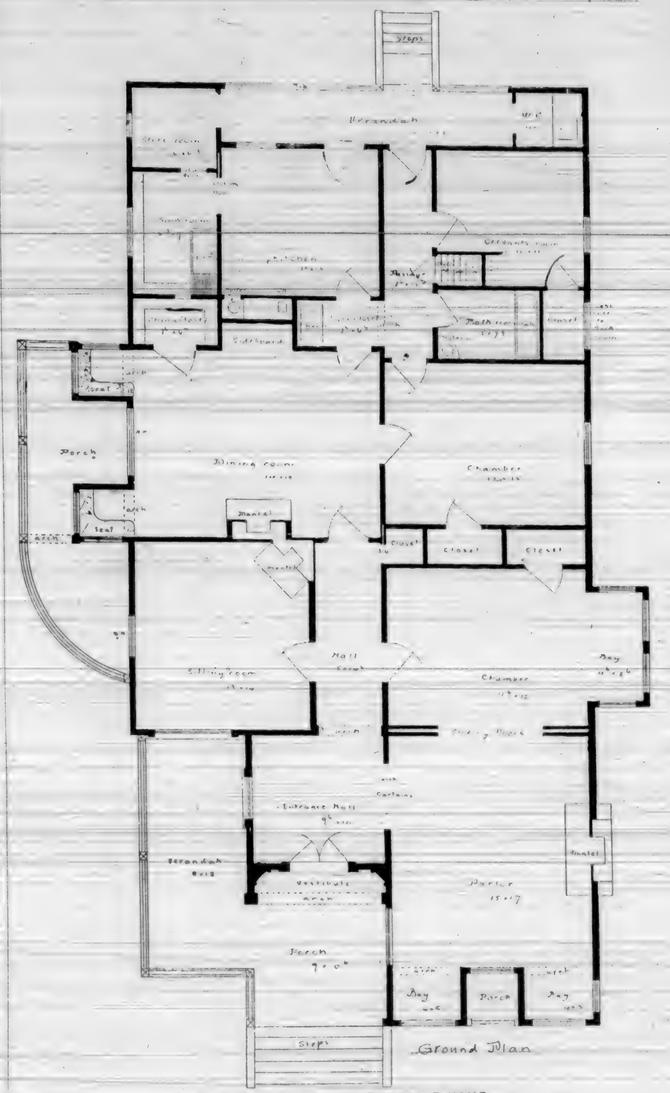
The value of 150 shares will be used to make such purchase, while that of the remaining 50 shares will remain to the credit of the Company as a working capital.

The California Architect is absolutely free from all indebtedness.

When the design of the Company was thoroughly understood, subscriptions at once commenced. Messrs. Pissis & Moore were the first ones to sign with 10 shares. In rapid succession came A. Laver, Wright & Sanders, T. J. Welsh, Curlett & Cuthbertson, J. C. Cebrian, W. Mooser, G. E. Voelkel, R. H. Daley, Chas. Mau, of Oakland, Reid Bros., of San Diego, H. T. Bestor, H. D. Mitchell, M. J. Welsh, S. Hatfield, B. McDougall, J. Gash, C. R. Wilson, R. H. White, E. Kollofrath, Seth Babson, John Newsom, Walter J. Matthews of Oakland, Theo. Lenzen of San Jose.

A few firms directly connected with the architectural interests have also signed for shares.

It will readily be seen that the whole management of the new organization is in the hands of the representative architects of the city and coast.



PLAN OF "TIA JUANA" PICTURESQUE HOME.

DESIGN OF THE NEW COMPANY.

The main design is to create a still more social feeling among the Architects than has heretofore existed; to provide a large, well-furnished room for the use of the "Chapter of Architects;" to have said room so that it can be of practical use to the new organization of students and draughtsmen—the "Architectural League;" to have a complete file of papers, architectural and mechanical, for the use of those visiting the rooms; to found a library for general reference; in short, to advance the interests of the architectural profession generally, and by the instruction received by the students through the classes now formed, to fit them in the future, to be competent to worthily succeed those who are now studying tomake this city the architectural pride of the continent.

A CHAPTER LIBRARY AND READING ROOM.

This has been the first consideration in making a change. Several Eastern firms will send books for the nucleus of a library. Many have been promised by resident architects and others, and it is but reasonable to suppose that by the close of 1889, the library will contain several hundred books.

DESIGN FOR A COUNTRY HOTEL. G. BEHRND, Architect.

Ninth Building and Improvement Annual for Woodland and Yolo County.

Editor of the California Architect and Building News of San Francisco, California:

Dear Sir:—Again we ask for space in your valuable columns to present a modest statement of the year's building and improvement for our city and county. And while it has not been what we wish it had, it presents an improvement over last year.

We will not attempt to discuss the cause or effect but state the facts as we understand them. Lumber has been too high, money too scarce, and the people would not build; having these three factors established we approximate the basis of our annual prosperity in moderate and careful investments.

The amount of capital annually expended naturally divides itself in three classes viz:

Private residences and individual investments report for this year, $232,355.

Stock companies and improvement corporations, $105,500.

Public enterprises including church and school expenditures, $54,500.

Special mention of some the most important included in our city and county list may be of interest to those desiring to know the progress of this locality. Woodland Street Railroad Co., $11,000; Woodland Water Co., $3,000; Woodland Improvement Co., $5,000; Woodland Ice Factory, $27,500; Woodland Woolen Mills Co., $50,000; Yolo Brewery (Improvement) of Woodland Co., $13,500; Yolo Land and Improvement Co. of Woodland, $2,500; six Steam Raisin Drying and Packing Establishments, aggregate value, $22,000; Christian Church of Woodland total investment $20,000; Baptist Church and Parsonage, total expense, $3,000; Hall of Records, $28,500. Private residences and investments too numerous to mention, vary from $1,000 to $15,500. A large majority of the private residences present unmistakable evidence of architectural refinement and wealth. The following summary will substantially set forth the twelve months' enterprise of city and county:

WOODLAND CITY.		SUMMARY FOR 1888.	YOLO COUNTY.	
NO.	VALUE.	DESCRIPTION OF IMPROVEMENTS AND INVESTMENTS.	NO.	VALUE.
33	62,100	Frame Dwellings	13	$ 44,300
12	16,500	Frame Improvements, principally Dwellings	9	10,500
16	13,500	Frame Carriage Houses and Barns	7	5,700
6	35,255	Frame Buildings for Manufacturing Purposes	2	3,500
2	63,000	Brick Buildings for Manufacturing Purposes		
7	13,000	Brick Stores and other Business Places	4	9,500
3	13'000	Frame Steam Raisin Drying Establishment	3	9,000
3	9,000	Improvement Companies Expenditures		
2	23,000	Brick and Frame Churches and Improvements		
1	11,000	Street Rail Road Co., Rail Road Depots	1	4,000
1	3,000	Water Works Co. Irrigating Works	1	2,000
		Frame and Iron Warehouses	2	3,500
2	29,500	Hall of Record and Justice Court Improvements		
1	2,500	Brick Dwellings	2	3,000
1	2,500	Newspapers and Printing Offices		
90	$296,855	Total No. and Value City and County	44	$ 95,500

Woodland and surroundings contributed to the above: Ninety buildings and improvements, valued at $296,855; Yolo County, forty four building, valued at $95,500. We must here mention that the county list is much below the actual amount, not having time to canvass the entire territory. This is conclusive by the excess as shown in the tax list, which is for improvements for 1888, $474,161 more than 1887, or $81,806 more than the whole amount of the above report. Final aggregate for city and county, 134 buildings and improvements, estimated value, $392,355.

While the average for this year for each engagement is $2,928, the next highest average being for 1884, $2,702, it will also be seen by the following statistics that the aggregate amount, $392,355, has only once in nine years been higher; with this encouraging item in view, the most sanguine should be satisfied.

For comparison we present a recapitulation of the annual statistics for the past nine years, from 1880 to 1888 inclusive, presenting the number of buildings, aggregate amount of capital, average value, largest single engagement and number of buildings under course of construction at the close of the year, but included in this list:

Year.	No. of Engagements	Aggregate Value.	Average Value.	Largest Single Engagement.	No. Build'g in constr. l'n at close year.
1880	54	$126,730	$2,346	$28,000	2
1881	59	140,640	2,382	34,580	4
1882	71	169,950	2,393	15,500	1
1883	84	204,519	2,434	52,000	7
1884	132	359,594	2,702	28,000	5
1885	224	606,182	2,461	25,000	11
1886	172	280,595	1,993	22,000	10
1887	92	203,116	2,208	30,000	9
1888	134	392,355	2,928	50,000	14
Total	1,023	$2,483,685	$2,423		

The preceding statement presents the fact that 114 buildings have been the average number erected for the past nine years; average value, $2,423 each; total amount, $2,483,685. Competent judges estimate that the next nine years will more than double the above statement.

The foregoing facts are unmistakable evidence of substantial thrift and prosperity, and it is a noteworthy truth that the better class of all who contemplate building secure first the architect, and take no chances on hap-hazard principles.

The ultimate benefits and reward of any enterprise hinges firmly on the favorable starting; and to end well, it is essential to start on an intelligent foundation. If any person would avail themselves of the noble art of building, let them accept profitable hints and suggestions as set forth in the California Architect and Building News or of those skilled in the business, and secure a presentable exterior appearance with convenient and comfortable interior arrangements, and then let us look carefully at every part and allow only the best to become a part, from the lowest foundation stone to the highest finial top, remembering that every error or defect in material or workmanship will eventually find its corresponding impress on the beauty and solidity of the edifice. As a rule we too often accept the apparent and entirely ignore the real and its most important mechanical adaptations; in this way many splendid appearing buildings are splendid shams, and while we are forced to acknowledge that decorative ornamental construction is no doubt the essence of much that is beautiful and pleasing in architecture, but like other goods things this too may be overdone. Now at this most important point the service of the skilled artisan becomes indispensable; he is required to stand abreast the times, remove obstacles, equalize and adjust harmony, combine mind and matter, vanquish all difficulties, in fact he must always stand the same energetic, ingenious, ambitious and invincible being, whose intellect cannot be confined, and whose energy the whole world is inadequate. No labor wearies his industries; no obstacle arrests his onward career. Over difficulties of land and water, heat and cold, wet and dry, materials of every description, requiring all the combined forces to subdue and utilize, this conquerer moves on steady as the footsteps of time. In what limit of space shall this man of the present age find rest in the completion of his ever improving progress; and how can we determine the ultimate result that marks the desires of the onward march of the architect of the nineteenth century. This query can only be answered by those who enter this busy arena after we have been laid aside and forgotten. Carefully considering all of this, our true object and mission should be to pervade our entire surroundings with a diffusion of useful and industrial arts, desiring to produce unity and magnify individual cleverness, by accumulating knowledge of our own avocation, whereby we may all be better, greater, and wiser, securing a competency worthy of future emulation.

Accept our thanks for many courtesies shown in the columns of the California Architect and Building News during the past year. Trusting you may receive the liberal patronage of the public, which you so well deserve, we remain,

Respectfully yours,

Gilbert & Sons.

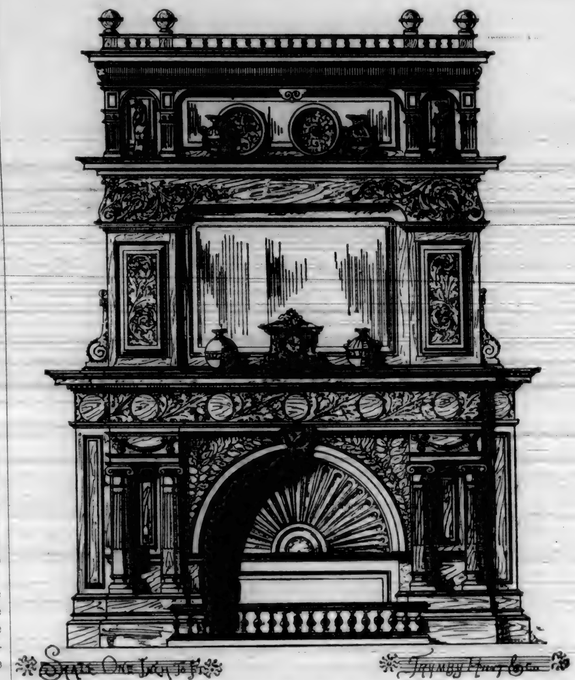
Woodland, Dec. 5, 1888.

Correcting an Error. Wasters vs. Primers.

In our issue of May 15th last, we published a letter from Merchant & Co., manufacturers and importers of the "Camaret" brand of Tin Plates. Unintentionally we made a blunder and we desire to publicly correct the same. In the letter as printed will be found the following:—"but when we assert that *ninety seven* per cent. of the roofers (as far as our own city is concerned) who upon receiving a contract will buy and put on wasters instead of primes, we state only a fact, and the advantage in specifying our brands will readily be seen by those wanting to secure only the best."

Instead of 97 per cent as above, it should be *fifty-seven* per cent. The first intimation of the blunder came from Portland, Or., and on examining original correspondence, we soon discovered that wrong figures had been used. To make sure, we wrote to Merchant & Co., Philadelphia. In their answer they were pleased that the blunder should have been noticed by friends in Oregon and they assure us that 57 per cent. was the figure that should have been used.

We sincerely hope that this correction will be noticed by a large proportion of those who read the original letter as the mistake will naturally cause some to pick to pieces a letter that otherwise contained a large fund of information in regard to one of the best brands of Tin Plate now in the market.



DESIGN FOR A MANTEL.

ARCHITECTURAL LEAGUE.

This interesting branch of the architectural profession has about completed its work of organization, and while its members seem to be deeply interested in its present and future success, there are some who enter upon the work with an enthusiasm and energy that presages results destined to be of inestimable benefit to the young men of San Francisco who have adopted the architectural profession as the sphere in which they propose to develope their talents, and qualify themselves to stand among the active and progressive men of the age, as masters of architecture, as far as mastery can be attained by the human mind during the short limit of human life. It is well and pleasing to every practicing architect who wishes well for the profession, to see the students organizing for mutual benefit. The man who is so far fossilated as not to understand and realize the great fact that there is power and profit in intelligent organization for right and good purposes, is to be pitied. The young gentlemen of the League have the best wishes, and at any time can command the services of any liberal-minded member of the profession in any reasonable way calculated to aid and assist them. Diligent office study and application is of the highest importance, but in this new relationship much will be learned and gained that would be but slowly and tediously acquired by the routine of office experiences. We say to young men, work together in union and true friendship, helping each other, in doing which the helper is benefited and mutual advantages gained.

MR. PERCY'S LECTURE.

On the evening of the 5th inst. Mr. Percy entertained the League and such members of the profession as were present, by a lecture on practical questions in construction. A most profitable hour was thus spent, and it is safe to say that every student present received information upon mechanical propositions that will be of lasting advantage in his future career. The principles of compression, tensile and sheering strains, strength and stresses, and important principles in construction were reviewed at considerable length, and was listened to attentively by the young men present.

The Architectural League is composed of draughtsmen and students connected with the various architects' offices. The officers are as follows: President, Geo. H. Sanders; Vice-President, L. S. Stone; Secretary, S. W. Hemenway; Treasurer, L. D. Deane; Trustees, J. F. Wieland, Aug. Borradaile, R. M. Turner, S. W. Hemenway, L. S. Stone, G. H. Sanders.

No Plans of Buildings Will be Furnished from the Office of this Journal.

We propose to use our best efforts to place before our readers the latest items and examples of architectural beauty as they are exemplified in this city. We do NOT propose, however, to furnish from this office, in any shape, plans or details, except as they are given in these pages, as exponents of the ideas of those contributing the same. Every inquiry received will be immediately handed to the party whose design may have called forth such notice. This rule will be strictly enforced.

Our Book Department for 1889.

We intend next year to keep a large stock of books on hand to meet the wants of architects, students, draughtsmen and mechanics. Great care will be used in their selection, and they will, in every case, be sold at publisher's prices.

A Reading Room for Architects, Students and Draughtsmen.

The new office of this Journal will be fitted up especially with the object of providing a reading room for all those engaged in, or connected with the architectural profession. Complete files will be kept of all the leading architectural and mechanical papers published in the United States, Canada and England, also catalogues, etc., of all firms connected with the building interests. All interested are cordially invited to step in and make themselves at home.

Practical, Plane and Solid Geometry.

III

BY ARTHUR SEYMOUR JENNINGS.

AREAS CONTINUED.

IN a previous paper it was endeavored to show the method by which any figure bounded by right angles might be reduced successively to a triangle, a rectangle and a square of equal area. The relative areas of squares should be thoroughly mastered at this point by the student. It is often required in practice to obtain a square containing a certain number of square inches. When the figure has a square root, as for instance, 4 or 9, all that is required is to set out the side of the

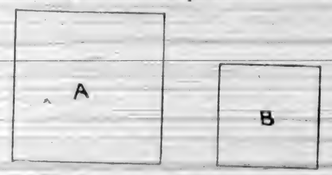


Fig. 1. Illustrating the area of squares.

square equal in length to the square root, 2 and 3 respectively, for, of course, a square of two inch side contains four square inches, and one of three inch side, nine square inches and so on. But where the number is a surd and has no square root the side of square may be obtained geometrically without difficulty. At this point it will be convenient to find one square equal in area

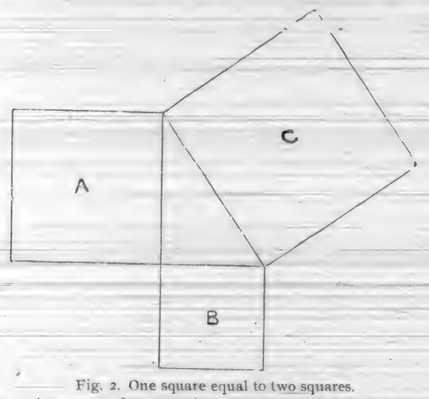

Fig. 2. One square equal to two squares.

to two given ones, for example, we wish to find a square equal in area to the squares A and B Fig. 1. This problem bears directly upon Proposition 47 of the First Book of Euclid. Draw a right angle and upon one side of it set off the side of the square A and upon the other the side of the square B.

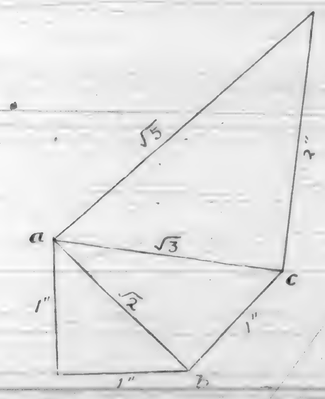

Fig. 3. The geometrical construction of the square root.

Now draw a hypothenuse forming a right angle-triangle. The square erected upon that hypothenuse will be equal in area to the squares upon the two other sides. Referring to Fig. 2 the squares marked A and B respectively which correspond with the squares in Fig. 1 are equal in area to the square marked C.

The practical application of this problem is clear. Supposing it is wished to obtain a square containing five square inches. If the square A be made of two inch side it will contain four inches and if the square B is of one inch side then the square upon the hypothenuse contains an area equal to the two together, viz:—five square inches.

To show geometrically the square root of any surd, say of 2, 3, 5, 6, etc., the same principle is adopted. Taking an inch as the standard unit set out a right angle and upon each side mark off one inch at a and b as shown in Fig. 3. Then the hypothenuse a. b. is the square root of two, or in other words the side of a square containing two square inches. So by setting off a line one inch long at right angles to a. b. at c and drawing another hypothenuse we have the square root of 3. The same means may be used indefinitely. Thus we have the square root of 5 and so on.

Other Useful Problems.

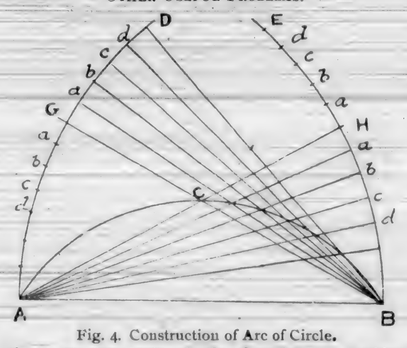

Fig. 4. Construction of Arc of Circle.

In the every day work of the draughtsman problems not infrequently arise which cannot be solved by the ordinary methods. For example, it is often required to set out the arc of a circle, say for the curve of an arch, when the rise is so small that the centre of the circle is practically inaccessible. In such cases the following method will be found to answer the purpose. Let A. B., Fig. 4, represent the span of the required arch, and C the rise. Join A. B. C. forming an isosceles triangle. Now with radius A. B. describe from A B respectively the arcs A. D. and B. E. Extend the lines A. C. and B. C. to meet the arcs at G and H. Now from G and from H set off with the dividers a number of equal divisions in both directions as at a, b, c, d, etc. Draw lines back to A and B respectively and where these

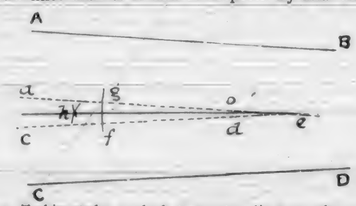

Fig. 5. To bisect the angle between two lines nearly parallel.

lines intersect we have points in the required curve. Notice that the lines above G intersect with those below H. The construction will be clear on careful examination of Fig. 4 and the completion of the curve is effected by drawing by free hand the required curve through the points so obtained. For the sake of clearness the construction of only one-half of the curve has been shown. It will be understood that the method may be employed whenever the three points A B C are not in a straight line.

When two lines are inclined it is a very simple matter to draw a third one to bisect the angle which would be formed if they were produced. When, however, the lines are nearly parallel this cannot be conveniently done, and a different method becomes necessary. Let A. B., C. D., Fig. 5 be two lines nearly parallel, and it be required to draw a third line between them that will bisect the angle. Draw the lines a. b., c. d., (shown dotted) parallel respectively to A B and C D and in any convenient position so that they intersect as in the point e. Now bisect the angle between them by the usual method, viz: from e describe any arc f. g. and from f and g describe two other arcs intersecting at h. A line drawn through h and e will bisect the angle g. e. f. and hence the angle formed by the lines A. B. and C. D. if produced as was required.

(To be continued.)

THE LUMBER INDUSTRY.

Seven Large Merchant Sawmills at Seattle.

Sawing Capacity of More Than Half a Million Feet Per Day——The Leading Item of Local Manufacture.

THE amount of lumber required in a new and rapidly growing city like Seattle is something amazing, and it is only when one takes the trouble to investigate the matter and ascertain the facts, that a due and realizing sense of magnitude of the demand can be arrived at. A reporter of the *Post-Intelligencer* was yesterday detailed to work on this subject and to get these facts and his report is given below. Like everything else pertaining to the progress of this fair city, it will be found very interesting reading.

There are seven sawmills in active operation in Seattle at this time, namely: The Stetson & Post mill, the Commercial, the Oregon Improvement Company's mill, the Hall & Paulson mill, the Western mill, Newell's, and the Lady Washington mill.

STETSON & POST'S MILL.

Is situated at the foot of Commercial street, and together with the sash and door factory and the lumber yard occupies an entire block. Eighty-five men are employed in the sawmill and lumber yard. The daily cut of lumber at the mill is on an average of about 70,000 feet.

In the sash and door factory and planing mill 35 hands are employed, and they work 12½ hours per day, 10 hours being a day's work, and the men are of course, paid accordingly. Their line of manufacture comprises mouldings and casings, all sorts of house furnishing brackets, etc. This firm has orders for the work on several big jobs, such as the Boston Improvement Company's two new buildings on Second and Columbia streets and the Occidental hotel. The business done during the past four months, more especially in the factory far exceeds anything ever done by the firm during any past corresponding period. Last year the mill cut between sixteen and seventeen million feet of lumber, and the total sales amount to $296,516.25. A new boiler and engine have recently been put in, and half a dozen new planers, together with new sash and door machinery, is on the way from the east.

THE COMMERCIAL MILL COMPANY'S PLANT

Is situated on the water front, between Marion and Columbia streets. It comprises a saw and planing mill, sash and door factory and box factory. The number of men employed is 104, of whom 24 work at night in the saw mill. Forty-eight men work in the mill, 28 in the sash and door factory, and four in the box factory. The quantity of lumber cut daily is from 50,000 to 70,000 feet, most of which is for home consumption. The box factory is vainly endeavoring to keep up with the demand for boxes required for crackers, soap, medicine and mineral waters.

THE OREGON IMPROVEMENT COMPANY'S MILL

Is situated on South Sound street, at the Columbia and Puget Sound Railroad Company's wharf. The number of men employed is fifty and the daily cut of lumber runs from 40,000 to 50,000 feet. The mill began operations only about six months ago, and such has been the increase of business that the company have been obliged to keep on increasing their capacity right along. In a month or two they expect to have their sash and door factory in operation. Their lumber is used largely at the company's mines at Newcastle and Franklin; but a very considerable quantity of it, perhaps the most of it, is ordered for building purposes in this city.

THE HALL & PAULSON MILL

At the head of the bay, cuts an average of about 12,000 feet per day. An important part of their company's business is the manufacture of shingles. About fifteen men are employed at the mill.

THE WESTERN MILL

Is at Lake Union, and cuts about 40,000 feet of lumber each day. It is all used in or near Seattle. The number of men employed is about fifty on an average.

The Lake Washington mill, known as Phinney's mill has a capacity of 15,000 to 20,000 feet per day, and like all of the others, its product is chiefly used here at home. Twenty to twenty-five men are on the pay roll.

NEWELL'S MILL,

At South Seattle, employs thirteen men, counting those engaged in getting out the logs. The mill has a daily capacity of 12,000 feet, the daily cut ranging from 5,000 up to the latter figure. In connection with the mill is a chair factory, of small scope at present, but which bids fair to develop into a big business before long. The legs of these are of maple, the rungs of ash. About 100 chairs per month are turned out. They are all shipped to Stockton, California, where seats of rawhide are put into them, and they are sold at a handsome profit. Adjoining the present mill, Mr. Newell has about completed the erection of a larger and better mill, one which will be capable of producing a daily output of 25,000 or 30,000 feet.

THE LUMBER INDUSTRY IN GENERAL.

In addition to these mills, most of which are occupied in supplying Seattle's insatiate demands for lumber, there are several outside mills, situated on the Sound, at distances of three, ten and thirty miles—which are sending lumber to this city. Then the Blackman Brothers, of Snohomish, and a mill at Tumwater ship, about 25,000 feet to this city daily. The Puget Mill Company and the Coleman mill at Cedar Mountain (on the line of the Columbia and Puget Sound railroad) are also shipping lumber to this point every day.

A number of additional mills, new ones, either now in process of erection or soon to be erected, will materially help to solve the present difficulty of obtaining a full and prompt supply of lumber. The Port Blakely mill, situated at Port Blakely, ten miles from this city, across the Sound, was totally destroyed by fire two or three months ago. A new mill with a daily capacity of 40,000 is, and has been for two months past, engaged in cutting lumber for the company's new mill, which, when completed, will be not only the largest mill on Puget Sound, but in the world. The main building will be 101x500 feet in length, and the boiler room about 60x100 feet. The latter will contain two nests of eight boilers each, and will be supplied with the latest and best machinery. The mill will have a daily 10-hour capacity of 250,000 feet, or 400,000 when run night and day, as it certainly will be for some time at least. Another large mill about to be erected at West Seattle, opposite the city, by the Satsop Railroad Company, will have a capacity of 150,000 feet per day.

The Yesler Wood, Coal and Lumber Company will soon have a mill in operation on Union Bay, four miles from the heart of the city. Its capacity will be 60,000 feet per day of ten hours. The machinery has already been ordered, including an engine of 148 horse power which Moran Brothers, of this city, are now building.

THE FREMOMT MILLING COMPANY

Is another new saw mill corporation that will proceed to business forthwith, a site having been obtained and the ground broken on the shore of Lake Union. Its capacity will be identical with that of the new Yesler mill just mentioned.

While on this subject of mills and lumber it is proper to add that there are several furniture factories and planing mills in this city which deserve at least passing mention. The Hall & Paulson Furniture Company is one of these. Their manufactory is at the foot of Commercial street, directly opposite the Stetson & Post Mill. They employ 25 men, and have all they can possibly do supplying orders for all kinds of furniture, bank fittings, saloon fixtures, house finishing, etc. Their goods are chiefly bought by city people, the remainder going to other towns on the Sound.

THE MECHANICS' MILL

Is another of these. It is on Yesler's wharf, near the foot of Mill street. They run a sash and door factory and a planing mill. They also do business as contractors and builders. In the mill proper there are 37 hands employed, and as many more on outside work that they have contracted for. The old mill, which was burned last December, gave employment to but 20 men; now, it will be perceived, they have nearly double that number. They pay from $1,000 to $1,200 per week in wages.

The Lake Union Furniture Company, which occupies the upper story of the Western mill at Lake Union have from 25 to 30 men in their employ at the factory and at their city salesroom. They find a ready market for all their wares.

The Eclipse planing mill is a new concern, started a few weeks ago, at the foot of Commercial street, adjoining Hall & Paulson's mill. They operate with a limited force at present—five men. They will soon, doubtless, be enlarging their premises and increasing their force, too.

The wages paid to the men in these factories varies all the way from $2 and $2.25 per day for helpers to $3.50 to $4 and even $4.50 per day for skilled mechanics.—*Seattle Post Intelligencer.*

PRACTICAL PAPER HANGING.

THE following upon this timely topic is from one of our contemporaries. It says: "The primary essential to commence a job of paper hanging is to have the tools. Any 'Jack' can work with a full set of tools, but it takes a good mechanic to work with poor ones. The best tools are the cheapest in the outcome and are the most satisfactory.

"An eight or ten inch bristle smoothing brush, a six to eight inch paste brush, a fourteen to sixteen inch pair of shears, a paper knife, seam roller, smoothing roller for borders and decorations, a straight-edge, plumb-bob, chalk line, paste pail, size kettle, paper boards, trestles and step ladder, these are the necessary tools for general work, though it is necessary to save time and trouble to have besides these tools a good sized kalsomine brush and a double width putty knife.

The next we need to proceed with is a bucket of paste. Use flour paste, except on very rare occasions when the tints are very delicate. The best patent flour is the most adhesive, and retains its consistency much better than starch.

Take a common patent pail and put in one-half gallon of flour. Stir in enough cold water to mix a flour batter; work out all the lumps thoroughly; have ready three gallons of absolutely boiling water, and stir this until you have enough to cook it. Now pour a little cold water over the top to prevent skinning over until you are ready to use it. You can thin it down at pleasure.

If the paper put on is not a metallic ground put in four or five ounces of alum in the paste. This will prevent its turning sour and hasten drying. Should the paper be metallic, use a little carbolic acid in place of alum, as alum is liable to turn gilt dark.

If the room you are going to paper is a hard finish, and not very badly smoked up, all that is necessary to prepare the walls is to brush them with a broom. Should they be smoked and dirty, it is best to go over them with a weak solution of glue and alum. If the walls have been papered before it is necessary to go over them again with a putty knife and cut the old paper off, pull out all nails, and with some plaster of Paris mixed with paste heal all the bad places.

If the walls have been whitewashed, doctor them with a strong solution of vinegar. Having the walls ready, lay a roll of paper on the boards, and with your straight-edge, which should be six feet long, measure the height to where the border will come and about an inch below the baseboards, and cut the strips off. Match the next strip to the top of the previous one and cut enough strips to cover the room.

To ascertain the number of strips required, take a roll of paper and count the number around the room. Now turn the paper over if you have trimmed it; put the trimmed edges towards you and pull the first over, so that it covers the other strips. This is to prevent the paste from forming on the trimmed edge and making bad work.

Some paper-hangers never trim the paper till after it is pasted. This procedure has some good features and some bad ones, which we will not discuss here. Beginners will find it better to have the paper trimmed beforehand. Commence at one end of the room and hang the slips as nearly perpendicular as you can.

Always brush the paper from the centre down and at either side. If you have wrinkles in the paper pull it off to where the wrinkle is and brush it out from the centre. Run the shears along the paper at the top of baseboards, and cut off nice and even. Never allow the paper to look haggled or uneven around the base, and cut it close down, but not overlapping.

When you come to an opening let the paper overlap, and trim with the paper knife as you work a saw. You will next need short strips, but do not run them beyond the opening unless the piece cut out of the other side will fill up the opposite; rather lap back again to be sure of a perfect match.

When you come to a corner, never lap the paper around it unless the space is very narrow. Fold up the strips at both ends measure the distance with your ruled shears, lay the straight edge on the paper, mark the distance just a little beyond the corner, and cut. In this manner you will always have corners that will be square and stay in position.

Use the same roller, and roll the seams nicely as you go. Cut the border in such lengths as can be easily reached to put on, paste and double up at both ends, so that the lines meet exactly, and cut."

Regarding the Inadequate Remuneration of American Architects.

New York, October 6, 1888.

Sir:—Mr. Henry Rutgers Marshall is quite right in saying, that five per cent. on cost should be considered the minimum for an architect's services. Of course he means a competent architect. I have held that ground for years, and have repeatedly, in court, testified my understanding that the rates recommended by the American Institute of Architects are minimum rates. But if (as Mr. Philbrick says in the same column) only one out of fifty students in the Massachusetts Institute of Technology—or about one a year during the last twenty years—takes or has taken the full architectural course (which may be considered a tolerable equivalent for the old time three years' training in the office of a practitioner) what guarantee has the public that they will get the worth of even the minimum?

Mr. Marshall is also measurably right in saying that the remedy for the evils he deprecates lies in the hands of architics themselves. But what is more important than anything else for ameliorative purposes is that architects throughout the land should present a united front against Philistinism. Every architectural society in the country, large or small, well-known or obscure, has based itself on the Institute schedule. Now let them be co-ordinated on other points and they have the future to themselves.

A. J. Bloor.

Annual Building Summary.

The number of new buildings, and the value of the same, for each month of the present year, is clearly shown in the accompanying table:

FOR FIRST SIX MONTHS.

	No	Frame Buildings Value.	No	Brick Buildings Value.	No	Repairs Value.	Total No	Total Cost.
January	60	$190,200	4	$279,000	13	$29,100	77	$498,300
February	51	186,500	2	258,000	8	18,200	61	462,700
March	36	147,200	1	10,000	8	31,600	45	188,800
April	56	284,950	5	44,300	13	29,100	74	358,350
May	55	269,600	10	331,520	14	37,300	79	638,400
June	72	396,750	9	84,400	20	92,100	101	573,270
Total	330	1,475,200	31	1,007,220	76	237,400	437	2,719,820

FOR SECOND SIX MONTHS.

	No	Frame Buildings Value.	No	Brick Buildings Value.	No	Repairs Value.	Total No	Total Cost.
July	50	305,600	5	410,000	16	$107,400	71	$823,000
August	46	206,000	6	236,000	27	108,300	79	550,300
September	68	424,200	4	97,000	19	37,600	91	424,200
October	47	179,100	6	192,000	10	49,100	63	420,200
November	70	305,400	7	544,000	14	17,000	91	826,400
December	48	203,500	3	90,000	8	12,200	59	305,700
Total	329	1,623,800	31	1,569,000	94	331,600	454	3,349,800

This making a grand total for the year of

659 frame buildings, value	$3,099,000
62 brick buildings, value	2,576,220
170 additions, etc., value	569,000
891 Grand total, value	$6,244,220

COMPARISON.

The number of building engagements, and their value, since 1880, are as follows:

1880—	397 engagements, value	$1,754,435
1881—	533 " "	3,790,732
1882—	785 " "	3,896,212
1883—	803 " "	5,261,689
1884—	1,127 " "	6,202,807
1885—	1,457 " "	7,043,999
1886—	1,148 " "	6,401,669
1887—	1,093 " "	6,605,054
1888—	891 " "	6,244,220

The year 1888 has about closed, and as compared with its predecessor, most certainly is a very gratifying one, as far as building activities are concerned. Since the bonanza year of 1885 the number of new improvements has steadily declined. The value of the buildings, however, has been exceeded by only three years since 1880. This is owing to the several large buildings that have been started in the past few months, among which are the Chronicle Building, the new engine house for the Howard Street road, Hayward's Tenement Building and others.

In general—Business in building circles is fairly active. Mechanics of all kinds are here in abundance. Wages for masons are steady. Carpenters' wages are weak, owing to the great number of men who have come here from the southern part of the State. The price of lumber is about $14 per M rough, with the advantages in favor of buyer. Poor draughtsmen are here in abundance, good ones scarce. Prospects were never better for a large building movement next year.

CITY BUILDING NEWS.

There is no Paper or Journal on the Pacific Coast that pretends to give a Full Report of Building News, *except the*

CALIFORNIA

Architect and Building News.

Alemany near 17th street, two-story frame. Owner, G. Larsen; cost, $1,800.

Bartlett near 25th, additions. Owners, Robinson; cost $500.

Brannan near 5th, two-story frame. Cost, $1,200.

Collingwood near 17th, additions. Cost, $700.

Clay and Laguna, painting; owner, Jno. A. Hooper; architects, J. C. Mathews & Son; contractor, Geo. Eggers; cost, $1,337.90; signed, Nov. 27th; filed, Nov. 30th.

75 per cent as work progresses; balance, 35 days.

Dolores, near 23d, frame building. Owner, Jas. Thorn; architect, R. Warren; contractor, Rich. Mowry; cost, $2,780; signed, Nov. 26, 1888; filed, Nov. 27, 1888; limit, May 1, 1889; surety, J. J. McKinnon; amount of bond, $2,780.

1st payment, when ready for mortar, $1,000; 2d, when trimmings are on, $900; 3d, the usual 35 days.

Eddy and Franklin, residence. Owner, G. Palache; architect, Pissis & Moore; contractor, A. McElroy; cost, $14,695; signed, November 8th; filed, November 23d; limit, 200 days.

1st payment, $1,500; foundations in, $2,000; framed, $2,000; brown coated, $2,000; inside plastered, $2,000; ready to paint, $1,500; completed, $3,605, 35 days.

Eddy and Franklin, plumbing. Owner, G. Palache; architect, Pissis & Moore; contractor, Fritz & Kean; cost, $1,094; signed, November 8th; filed, November 23d.

Herbert & McLeod have the contract for a building for W. H. Martin in this city, to cost $2,457. W. Kirk is the architect.

W. N. Concannon has the contract to erect a cottage for L. Friedman on the corner of Jefferson and Ninth streets in this city. C. Mau is the architect. The contract price is $1,740.

W. T. Veitch has in course of construction a two-story frame cottage for M. Sisson on Myrtle street near Eighteenth. The cost will be $3,000

W. H. Weilbye is erecting three five-room cottages on West street near Thirty-ninth.

V. H. Metcalf is building a $2,500 addition to his residence on the Coll Deane tract.

Four flats, to cost $1,000, are being erected for Paul Lohse, at the corner of Thirteenth and Harrison streets.

J. N. Knowles, of Fifteenth and Jackson streets, will make a $7,000 addition to his residence.

An addition costing $4,000 is being put on the residence of W. H. Harvies on Jackson street near Eighteenth.

Paul Lohse is building a fine residence on Webster street near Eighteenth, which will cost $9,000.

F. A. McFaul, of Joliet, Ill., has purchased 100 feet of land on Delger street, on which he will erect three houses.

Mrs. Blake, of Albion street, has just had completed, at a cost of $4,000, a fine eight-room dwelling. Mr. Weilbye is the contractor.

A. J. Snyder is building a five-room cottage on the south side of Twentieth street, which will cost about $2,000.

A. McFall will build three six-room cottages on Twentieth street, between Telegraph and San Pablo avenues.

A two-story six-room flat will be erected at the corner of Brush and Seventeenth streets, by contractor Weilbye for Mrs. Howard, at a cost of $5,000.

The same lady will also build a seven-room house on Seventeenth, near Brush street, costing $3,000, and will have an eight-room house remodeled to the extent of $1,200.

Mrs. E. S. Goodrich is having a nine-room two-story residence erected on Telegraph avenue, near Hobart street, by W. H. Weilbye.

Contractor Weilbye is erecting on Sutter street, near San Pablo avenue, an eight-room two-story dwelling for Mr. Wills. It will cost $3,000.

BUSY AT WORK.

The location for the Hall of Records presents the most busy appearance of any place in Woodland. About sixteen hands are at work under the direction of Mr. Fulton, foreman. Mr. J. G. Day, contractor of San Francisco, is exercising a general supervision over the work. The foundation is being made strong and solid with concrete, with which the excavations are filled, and which rises about one foot above the ground. The Hall will be one of the most substantial structures in this portion of the state.

A BIG INDUSTRY.

The Extensive Lumber Output of the Various Mills in San Bernardino County.

A reporter of the *Index*, who is always on the alert for items of interest concerning San Bernardino county, had his attention drawn to the immense amount of lumber that is being hauled into town from off the mountains, and determined to ascertain from those who were posted just how many mills were running, and about how many thousand feet have been cut this season. After considerable running around it was ascertained that there were some eight mills in operation, and that their total output this season would aggregate 7,410,000 feet. The following are the mills now in operation, and the number of feet of lumber cut by each of them:

F. L. Talmage	1,060,000
Flemming & Co.	1,400,000
John Hook	1,050,000
Tyler Bros	900,000
Somers	600,000
Van Slyke	1,000,000
Gurney	1,000,000
Mountain Mill	400,000
Total	7,410,000

This is no small output for a county that is known as the banner orange-growing section of the state, and with third bring a great deal of capital into the county. It will also serve to keep the prices down so that almost anybody who so desires can save rent by owning their own homes.

The productions of San Bernardino county have never been half written up nor their extent told, and eastern capital that is now wending its way westward will eagerly grasp all such productions, and it behooves our people to be on hand to show and explain what boundless resources there are in San Bernardino county, and not to make set speeches on the town lot craze, for that business for making a fortune has been exploded.

THE NEW COAST LINE.

About 1,800 Men Hard at Work There.

The Southern Pacific evidently means business on its new coast line and additions are being made daily to the working force engaged in closing up the gap between Templeton and Ellwood. About 1,800 men are now at work and have graded and laid track to seven miles south of Templeton. Five hundred laborers are working on the 4,000 foot tunnels that will have to be encountered to San Luis Obispo, and this piece of work will probably occupy about a year. From San Luis Obispo to Ellwood the Southern Pacific will probably run around the Santa Ynez, but this all means heavy work, and it looks as if it will be about three years before the first train makes the through trip from Los Angeles to San Francisco over the new road.

WINTERS, YOLO CO.,

On August 16th last, more than half of the business portion of town was destroyed by fire. The owners of the burnt district wisely determined to rebuild same with brick structures Brick, however, were a scarce article and proceedings were delayed until they could be made.

C. Koske is having erected a one-story brick building to cost $2,500. J. E. McFall being the contractor. J. H. Fenly & Co. are also putting up a $2,500 brick building, A. Ritchie being the architect and builder. Several other buildings will soon be started.

THE SAN FRANCISCO BRIDGE COMPANY GETS A SMALL CONTRACT IN SAN JOSE.

At the session of the Board of Supervisors last week bids were opened for the construction of a bridge across the Capitancellos creek, on the Almaden road, as follows: C. E. Berry, $1,375; Pacific Bridge Company, $1,095; San Francisco Bridge Company, $943.

The contract was awarded to the latter company and their bond placed at $500.

SAN JOSE.

Mr. Lux is having a house built to cost $1,000 Mr. D. Green is the contractor. Also a barn to cost about $3,200. Mr. Lewis is the contractor, Theo. Lenzen is the architect. Michael Sullivan is having a one-story cottage built in East San Jose, contractor, J. E. Clinton; Architect, J. O. McKee; cost, $2,200; Mrs. H. P. Burt a cottage on Sixth street. A. J. McIlwain, contractor; J. L. Bothwell, architect; cost, $2,600. Mrs. C. J. Martin three-story brick on Second street. J. J. Hill, contractor; Theo. Lenzen, architect; cost, $25,000. James Phelan three-story brick on First street. A. J. McIlwain, contractor; J. Lenzen and Son, architect; cost, $35,000. Mrs. S. L. Winchester is having her house remodeled after plans by J. O. McKee. J. B. Wolfe is the contractor; cost, about $6,000. Mr. S. N. Johnston a two-story dwelling house on Eighth street. Built by day's work. Estimated cost about $5,000; J. O. McKee, architect. Mr. Close a two-story house on Eighth street. Fuller & Lashbrooks, contractors and cost, $3,700. Mrs. Parkinson a two-story cottage on Eighth street. Plans by Newsom; cost about $3,500. Several new houses are in course of erection around town that are being built by contractors who furnish their own plans. The City Hall is gradually nearing completion, and it is an ornament to the town. The Hotel Vendome is not completed as yet and is dragging along slowly. Van Dalsen has a large crew at work on the new asylum buildings, and is pushing the work rapidly.

Yours Truly,

J. L. BOTHWELL.

COUNTRY BUILDING ACTIVITIES.

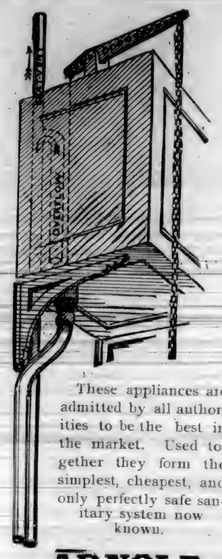
With the exception of the southern part of the State, building activities are generally progressive. From present appearances, the district from Modesto to Fresno promises to be more than usually lively next year. Late advices from San Bernardino, Los Angeles and San Diego represent that the present setback is but temporary, and that next year will witness a renewal of the erection of edifices and dwellings, that gave the southern counties the name in past two years of the most active building section of the United States. Oakland and Alameda exceeded last year in the value of new buildings erected. Sacramento, Stockton and immediate vicinity thereto have reason to be proud of the energy shown by their residents in beautifying the various localities. To Napa and Sonoma Valleys have been added scores of beautiful homes, while wineries and other large buildings have been placed where necessities demanded. North of Marysville the opening of the Oregon Railroad has caused hundreds of new buildings to be added to the various towns along the line. Generally the year has been a good one and promises for the future are especially brilliant.

NORTHERN and SOUTHERN CALIFORNIA.

A residence of thirty-seven years in this state gives us a right to our opinion in regard to dividing this glorious state.

We are for California, one and indivisible, now and forever. Always the grand and matchless State of California.

No North, no South, but one commonwealth, with all acting under a common and general impulse to make California the Mecca of the world.



These appliances are admitted by all authorities to be the best in the market. Used together they form the simplest, cheapest, and only perfectly safe sanitary system now known.

THE CELEBRATED

SANITAS

PLUMBING

APPLIANCES.

("SANITAS" BATH-TUB and PANTRY-SINK on same principle as Basin)

THE "SANITAS" MANUFACTURING CO.,

BOSTON, MASS.

Branch Offices: 64 Gold Street, New York, N. Y.

Full-page advertisements inserted among reading matter, fifty per cent extra on above rates.

Specially attractive advertisements, without extra cost, will be set up in the finest style where the advertiser furnishes cuts.

CASH MUST ACCOMPANY ALL ORDERS FOR ADS.

ADVERTISEMENTS ALONE INSERTED THAT REFER TO MATERIALS USED IN THE CONSTRUCTION AND FURNISHING OF HOUSES, AND TO MATTERS AND TRADES BELONGING TO THE BUILDING INTEREST.

NO OTHERS RECEIVED.

PARTICULAR NOTICE.—Each advertising page contains three columns, each of which is about two and a half inches wide. One inch means one inch in depth by two and a half inches in width.

Spaces on Cover and on page preceding reading matter are subject to special rates.

SAN FRANCISCO, JAN. 15, 1889.

CALIFORNIA ARCHITECT PUBLISHING COMPANY NOW HAS CONTROL OF THIS JOURNAL.

A meeting of the Stockholders of the above named Company was held on January 14, 1889; the following named architects were unanimously elected as Directors of the Company:

ALBERT PISSIS, W. P. MOORE,
H. T. BESTOR, W. J. MATTHEWS,
OLIVER EVERETT, R. H. WHITE,
W. J. CUTHBERTSON.

Articles of Incorporation have been prepared, and as soon as returned from the Secretary of State, permanent officers will be elected and the Company's organization completed.

Rooms have been secured at 408 California St., next to the Bank of California.

Direct all communications in future to the above address, as all subsequent issues will be issued from the new offices.

VALEDICTORY.

In parting from this journal as its original founder and sole proprietor, I feel it due to my many personal friends and a generous public who have so well and nobly assisted me by subscription and advertising patronage, to thank them sincerely and truly for every favor received. In a remarkable degree, this journal has come up to its present enviable position "through great tribulation." Its initiatory issue appearing at a time memorable in the history of the State, when all financial and building interests were demoralized, and a terribly bad condition of things generally prevailing—times when no one but a bold and determined man or a simpleton would have dared to hazard the risks attending the undertaking, as all the conditions, monetary and business, were depressed and confused, and a feeling of uncertainty overhanging and enshrouding every interest of the State.

But with faith and hope that days of prosperity would return, and the shadows disappear, the monthly succeeded the quarterly of 1879, and from then until now, it has not failed to make its monthly appearance regularly.

Up to the birth of this pioneer architectural journal on this coast, there had been none devoted exclusively to the architectural and building interests, and scarce ever before had illustrations and cuts of buildings been seen in journals printed in California, and the number of class journals published in the United States was far less than now, and by no means equal in character and influence with those of the present day: But following the advent of this journal, the number increased rapidly until nearly every city in the Union of any considerable importance, is now represented by a class journal. Many have come to the surface only to perish and disappear after a brief period, under the weight of cumulative difficulties, which must be met in all such undertakings.

The prophets of ten years ago predicted a like result for this journal, and limited its life to a few months, or at farthest one year. But ten years have passed, and still it lives and prospers, and at the end of a full decade, instead of expiring, it reaches out into a larger field of operation, and calls to its sanctum sanctorium a host of competent and energetic men, whose names alone, as interested parties, give assurance that its future will be well sustained, and its influence and usefulness become an indispensable factor in architectural and building matters.

Again, to my numerous friends I return thanks for every favor received, and to those who—perhaps following a common law or instinct of their nature—have indulged in unkind if not vicious expression, charging purposes entirely the opposite of those which induced the founding of this journal, and to the fullest of possibilities, misjudging and misrepresenting the acts and efforts of its proprietor—I have no harsh replies to make, being entirely compensated and satisfied by and with the innumerable kind words and favors received from a host of generous, fair minded and honorable patrons and friends. And now, as with this issue all personal control of this journal on my part merges into one composed of many intelligent and honorable brother architects, and others who will guide its future, I ask that my friends one and all continue their hearty support, and extend to the new management, advertising and subscription support, equal or greater than that which has been so generously and liberally extended to the journal under my personal management during all the years of its existence.

Sincerely to all,

JAMES E. WOLFE.

With this issue we begin the Tenth Volume of this Journal. It is the only one printed this side of the Rocky Mountains in the interest of Architects and Builders.

PLATE 2.—SEE "OUR ILLUSTRATIONS."

CERTAIN architects, in a place which we will not mention, were instructed to make plans and specifications for a house, to cost a certain sum, and to contain accommodations which could not possibly be provided for that sum. As we all know, this method of giving incompatible directions is very popular among clients, who are thereby enabled, whatever the architect may do for them, to resist paying his bill, if they happen to be so inclined, on the ground that he disobeyed some of the instructions, which he was, of course, obliged to do in carrying out the others; and, like the rest of us, the architects in question devoted themselves diligently to finding out what their patron really wanted. This was a house costing considerably more than the proposed sum as they told him. Bids were obtained, the lowest of which was more than the client wished to spend, so he himself took the lowest in hand, and with him modified the drawings and specifications so as to bring the cost of the building within his means. The architects were informed of this agreement, and requested to draw up contracts in accordance with it, which they did. When the outside of the house was done, the contractor notified the owner to send some one to paint it, as the painting was not included in the specifications or in his contract. The owner, as usual, proceeded to the architects, and demanded that as they had forgotten to mention the painting in their specifications, they should pay for it themselves, which they declined to do. As it happened, their side of the case was complicated by the fact that they had inserted a clause at the end of their specifications, reciting that "all work necessary to the complete finish of the building should be done by the contractor without extra charge, whether specially described in the specification or not." The other builders who had estimated on the house told them that under this clause they had included the painting in their estimate, and the contractor told them that he should charge no more for painting the house at the stage where it had already arrived than if he had included it in his original estimate, so, as far as their work was concerned, they could not see how the owner had suffered any damage by the omission. As to the point whether the contractor, under the saving clause in the specification, was bound to do the painting, they took legal advice in the owner's interest, and learned, what architects who depend upon blanket clauses should remember, that such a stipulation is with difficulty applied with special sorts of work not expressly mentioned in the specification, and there was no probability that it could be stretched to cover the painting of a house. Apparently, the owner also took legal advice as to his claim on the architects, for he abandoned it, and paid for the painting himself, as he would unquestionably have been compelled to do if he had been so foolish as to carry the dispute into court. The law is perfectly well settled that the omission of anything from a contract or specification, by an oversight of the architect, renders him liable, at worst, only for the difference between the cost of doing it after the discovery of the omission, and what it would cost to do it if it had been originally included in the specification or contract. In most cases this difference is nothing, and there is, therefore, no damage to be claimed; and even if there should be a real difference, and corresponding damage, the architect would not have to bear it unless the omission showed lack of reasonable care and skill. It should be remembered that the architect does not guarantee that his specifications are either full or accurate. "Heaven forbid," said the Lord Chancellor of England, "that a lawyer should be expected to know all the law," and an architect is no more to be expected to remember every item about a building, in writing his specification, than his counsel is to know all the law. If he makes glaring mistakes, such as architects of good ordinary skill and dilligence would not make he is liable for any damage that his employer may suffer in consequence, but that is the extent of his liability. The idea that an architect gives a guaranty to an indefinite amount with everything that he does or says, however hastily, is much favored by the persons who look on all business transactions as traps, by which weak or unwary people are to be caught and fleeced, but has no sanction in the courts.

ON the contrary, a case recently decided on appeal in England has established the rule that even a quantity-surveyor is not responsible for the correctness of his quantities. In the case in question, a quantity-surveyor was employed to take out the quantities for a certain building, from the plans and specifications, and the tenders for the work were based on these quantities. It is the custom in England for the bidder whose tender is accepted to pay the surveyor's fee, and on the completion of the contract the surveyor, who had not been able to get his money before, brought suit against the contractor for it. The contractor refused to pay, setting up a counter-claim that, on account of the inaccuracy of the quantities, which were less in several instances than the actual amount of work required he was obliged to do more work than he had estimated upon, and had suffered much damage in consequence. There was apparently, reason to suppose that the contractor's claim was well founded, but both the lower court and the court of appeal refused even to listen to the evidence which he offered. They admitted the surveyor's witnesses, to prove that the custom was for the contractor to pay for the quantities, but barred out the counter-claim entirely, on the ground that the law was established that a quantity-surveyor did not guarantee his work, and evidence to prove its inaccuracy could not be admitted. It is true that the English architectural journals comment rather severely on this decision, and quote another, where an owner recovered damages from a surveyor who made his quantities too large, and thereby unduly enhanced the contract price; but the decision shows that if a surveyor, on whose data are based the contractor's figures, is not liable for mistakes in them, it would be preposterous to try to make an architect suffer for not being infallible and omniscient, where no damage could be shown to have resulted from his errors or oversights.—*American Architect.*

Our Illustrations.

Plates 2 and 14 represent new ideas of capitals to be worked in stone.

Plate 3 is self explanatory. This engraving was prepared expressly for this journal, and shows to advantage the skill secured by our modern engravers.

Plate 5. This is a beautiful example of a modern design in street architecture in San Francisco. There are a great many designs of similar character in various parts of the city, but the one shown may be taken as a fair representative of buildings costing about $5,000.

Plates 6 and 7 were furnished us as a fair example of the difference between the "Old Colonial" style and a modern design for country dwellings. This only as far as the exterior is concerned. In either case the interiors are of modern construction.

Plates 8 and 9 represent the plan and elevation of a very conveniently arranged country or suburban dwelling. It was designed by Sam'l Newsom. Sizes of the rooms are very distinctly given, and all the appointments are clearly shown. It can be built for about $6,000.

Plates 4, 10, 11, 12 and 13 were designed expressly for this journal by C. Bryant Schaefer. Plates 10 and 11 will bear special study.

With each succeeding number will be noted a general improvement in the character of our illustrations. We certainly take pride in presenting the present issue, believing that it far excels any preceeding number of any similar class journal published this side of Chicago.

Now is the time to subscribe. Send us $2.00 and we will send you this journal for one year.

THERE is a peculiarity about the building business that is foreign to all other enterprises. San Francisco and the other cities on this coast have been built at a heavy loss to their contracting mechanics, their employers and material men. This condition of circumstances is partly owing to the constant incoming of new men—new contractors, who are bound to make a start in business. "To make a spoon or spoil a horn," having everything to gain and little to lose, they underbid older and more cautious men. There is sometimes an idea among those new comers that our old contractors are fogies, and behind the times, and if the old men can make both ends meet the new hands can certainly get rich at the same prices, as they consider themselves sharper, can figure and manipulate closer, and have greater energy. Thus it is that prices are constantly being cut so that as I remarked at the commencement of this article, the cities have been built up at a loss to the mechanic, etc.

The trouble is in the number of contractors, and the severe competition, in addition to that caused by men not capable of making a correct estimate, or of successfully conducting the works after they secure the job

A great source of trouble, and that which to a large extent makes the other difficulties possible is that great protector of the mechanics and material men—the Mechanics' Lien law, which gives the impecunious contractor the right to use the credit or property of the owner as security to his employees and material men. As the law requires that claims for labor and material must be paid out of the money coming to the contractor before any outsider can attach or secure any of said money for any other debts of the contractor. This enables inexperienced men without credit or other capital to enter the building market in competition with those having ample experience, credit and money, to the great injury of the latter. It is hardly possible to select five men from the building business, to make an estimate on the cost of a building without at least one making a mistake that will bring his estimate away below the others, and so low that he will fail to make a profit. Of course when the contractor loses the owner gains, provided he does not, at the same time, secure a series of law suits, and be obliged at the end to pay out more than if he had accepted one of the other bids. In nine cases out of ten, the owner, who is taking estimates, will insist in having those of one or two contractors, who have been recommended to him as low bidders, trusting to luck to get through without trouble, or considering themselves secure if the low bidder will give a bond signed by John Smith or some other person whose property is as easily identified as the above name. If the lien law did not apply to any other than the original contractor, the principal part of the difficulties in connection with the building trades would soon cease, as only those having money of their own or good credit would be in competition with each other, and would be careful to have enough for their work to avoid loss. All creditors would have the right to attach money due to contractors for debts due on other works, as well as on the works then under contract. This would place contractors on the same footing as merchants, and those who had secured good reputation for ability, reliability and honesty would be able to secure reasonable profits on their work. There would be less than one half the competition between contractors that there is now.

There is no good reason why intelligent, skillful and solvent contractors should not make a profit of from eight to ten per cent on their contracts.

Now, is there any reason why owners should not be willing to pay such prices as will give a profit on works done for them?

The main trouble originates in the unfair advantage taken of the Mechanics' Lien law, that great protector of the workingman.

Yours truly, Boreas.

That 28-Story Building.

A few months ago we called attention to a 28-story building, designed by a Minneapolis architect. Inference was made that a style peculiar to himself was intended by the party referred to. At last accounts, the architect has backed squarely and completly down, and if report be true, has intimated that the plan was meant only for illustrative purposes. He seems however to have complete confidence in the practibility of such a building, but so far has not been able to induce capitalists to invest in the scheme. But few architects have succeeded in obtaining as much free advertising as the one referred to, and we doubt if it has been of much advantage to increase the number of his clients.

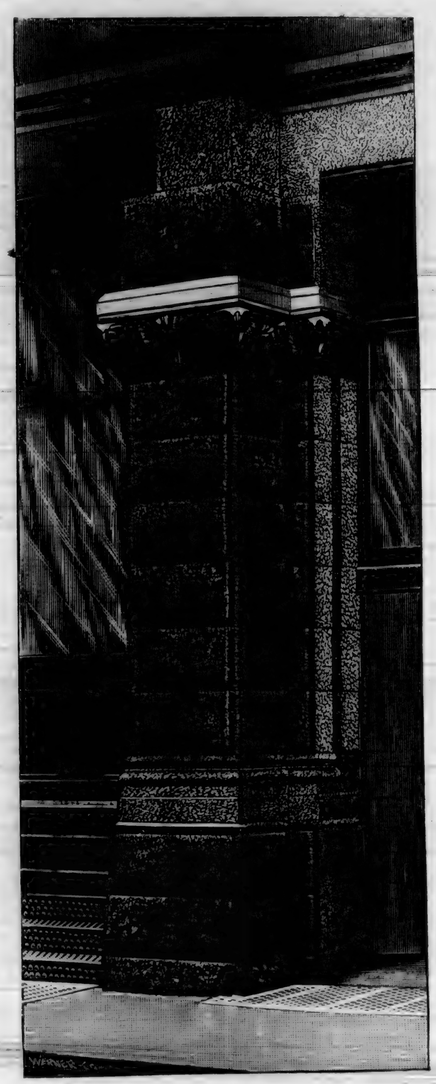

PLATE 3.—SEE "OUR ILLUSTRATIONS."

The difference between building in America and in some of the older parts of the world is illustrated by an item that is at present making the rounds of the English papers. Some 16 years since a town-house waa built at Rochdale, at a cost of $150,000. Recently the town council have discovered that the building at present requires thorough re-roofing and other expensive repairs. Such occurrences as this in America, at least in many portions of this country, would pass almost without notice being accepted as the natural order of affairs, but on the other side of the water it seems things are different. One of the aldermen, on the occasion named, took the opportunity to denounce the contractors of the building, stating that they had scamped the work in every possible way, and measures by which they might be punished were seriously considered. The item in question concludes that it is monstrous that a town-hall which was erected at so great an expense should require repairs after only 16 years.

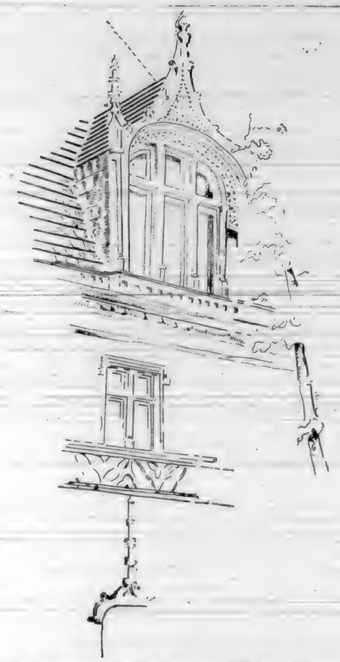

PLATE 4—SEE "OUR ILLUSTRATIONS."

AS THE NORTHWESTERN "LUMBERMAN" VIEWS THE SUBJECT.

The Future of Oregon Lumber.

AN Oregon paper points out in a timely manner the opportunities now before the lumber manufacturers and dealers of that state. Until the development of enlarged demand from eastern sources of consumption, Oregon labored under disadvantages, and does still, but there is a prospect that her lumbermen will be able to hold their own in the future.

Outside of the demand noted, Oregon, for a long time, had little but a local market for her lumber product. California, and especially San Francisco, secured nearly all the domestic and foreign trade on account of the situation and generally superior advantages. The combination by coast lumbermen aided them in making the most of their opportunities. Nearly all the Oregon lumber which went to supply an export demand was handled by California dealers under a sort of sufferance, so it is said. Actual competition would scarcely be permitted. It is claimed also that Oregon lumber has been purposely maligned to prevent its coming extensively to the front. It has been given out that Columbia river lumber—a distinction applying to all the product from Astoria to Portland—was of inferior quality, yet, according to the allegations, the California dealers would fill orders with it for Puget Sound lumber.

But Oregon's natural field of traffic lies to the east, and with respect to that she may be quite independent of California or the sound, unless the railroads see fit to discriminate unfairly in making rates. There is no doubt as good timber growing in Oregon as in Washington, and there is much virgin forest in the state. It is believed that the Oregon lumbermen will be able to hold the trade they have worked up with the east against all competition. A market has been found for Oregon fir, commonly known as pine, at Denver, Salt Lake, Omaha and other important points, and to a limited extent, in Chicago.

The greater demand is for heavy timber for railroad and structural purposes. Its strength is its cardinal virtue as a light wood. Although it bears some resemblance to white pine, is does not correspond to it, or equal it, in certain respects, but it adapted to heavy dimension and wide lumber. Oregon cedar shingles are also in demand.

One thing in favor of an increase in the demand for Oregon or other coast lumber is the fact that the decrease of white pine stumpage and its upward tendency point to a rise in the price of the lumber manufactured from it, while the extension of manufacturing operations on the coast, the building of larger and better equipped mills, logging roads, etc., would tend to cheapen rather than to enhance the price of lumber there produced; and as the trade with the east advances into greater importance to the railroads as a means of revenue they are certain to adapt rates to the emergency in a manner to develop the valued traffic.

One mill at Portland is now running night and day on eastern orders, and various others have been kept busy. The timber resources of Oregon are approximately inexhaustible. No one can conjecture how many billion feet of untouched stumpage the state contains, hence the lumber industry there has a long lease upon an existence which, it is hoped, will be prosperous. The Oregon manufacturers, it may be observed, will do well to study the situation and profit by the lessons learned in other timber regions where lumbermen have injured their profits and opportunities by over production and unwise moves of one kind and another.

LOOSE SCREWS.

BY UNCLE PETER.

ONE of the correspondents in the October number of *The Wood Worker* says "when you hear a planing mill owner say our planing machines do not pay their way, you may be sure there is a screw loose somewhere." Now I know this is true and it is generally not much trouble to find which screw it is, if they only look for it in the right place, and when they do find it the best way is to either tighten it up, and then if it don't hold put another in its place that will hold.

I once went into the office of a certain mill and the proprietor said to me the same thing. He said he did not know just what the trouble was; he thought there must be a screw loose somewhere as there was something broke down about half of the time, and between stoppages and repair bills the profits of the mill were all eaten up, besides he did not get out half the work that he ought to. He said he wished I would look it over and see if I could find out what the trouble was. I knew the mill was nearly new and that the machinery was nearly all first-class when it was put in, and there was no good reason why it should not turn out just as much good work as any mill.

The mill was located about a quarter of a mile from the office, and as the proprietor only went over twice a day the whole management was left to the foreman. In the afternoon about four o'clock I went to the mill, and after marching through shavings nearly up to my knees, I came up to a machine standing still, while the young man who had charge of it was grinding a set of knives upon a grindstone that was neither round, oval or three-square. I asked him why he didn't turn off his grindstone. He said he didn't have time. I then inquired for the foreman. He said he guessed I would find him over across the way in the saloon, as that was where he generally hung out "when he ain't here." I went over to the saloon and found him sitting at a table with a glass of beer in front of him, and judging from his appearance I concluded that the cares and anxieties of the planing mill across the street did not weigh very heavily upon his mind.

He went over to the mill with me and complained about this thing and that, and according to his notion there was nothing right in the whole mill. I begun to think so too, but not from the same causes that he laid it to. The tool room was enough to make a man sick to look at, broken knives, banged-up cutterheads and such stuff was scattered in all directions. I thought to myself that a beer saloon, no matter how well it was conducted, was a mighty poor place to run a planing mill.

In the morning I called on the proprietor again at his office. I learned that he was in the habit of going to the mill at nine o'clock in the morning and three in the afternoon, and spending about half an hour each time. When he asked me if I had found out what the matter was I told him I thought I had, but would rather he would find it out himself if he choose to do so. I suggested to him that he go over at his regular time in the morning, and then go back again in a couple of hours, and he would find where the screw was loose without my telling him. He said he would do so and I left. I found out afterwards that he did not only find out which screw was loose, but that he replaced it with one that would hold without any help from a screw-driver, and although it took considerable money to put the machinery in good running order, it is kept so now, and every man attends to his own part of the work, and the mill is now making money.—*Wood-Worker*

A Model Kitchen.

It is possible nowadays, says an authority, by spending money lavishly, so to build a kitchen that the most ingenious of servants cannot keep it otherwise than clean. One need not waste upon her unappreciative soul the costly tiles with which one lines the bath room; but may substitute for them the glazed bricks that are as highly polished, and that will make the floor, the chimney, the walls, if desired, and even the ceiling, as easy to clean as a breakfast plate. Once built, no whitewasher and no painter would be needed for such a room, no smoke need cling to its walls for an instant, and no odor of cooking would be perceptible in it, even if it were used for generations. And the temperature of such a room need not reach the great height unavoidable with plastered walls, which permit the warmth of the chimney to be perceptible through their surface, and thus both the good health and good temper of the cook would be maintained. As for coloring such a kitchen may be precisely what one pleases, for the bricks are made in all hues, and they may be laid in patterns or in wide surfaces of one tint from floor to ceiling. Lastly, as such a room would be fireproof, a sliding or swinging iron door would so isolate it that no kerosene-quickened fire and no careless upsetting of lard could bring destruction to the room itself of which a little water would not clear it.

Lumber buyer to inspector—"Is this car of lumber of uniform length and thickness?"—Inspector—"I can answer as regards length, but cannot as to thickness."—Lumber buyer—What about the lengths?—Inspector to buyer—"Uniform, sir at one end."

Trap Seal Protection.

Paterson, N. J., October 25th.

To the Editor.—As you have invited further discussion of the very important subject of trap seal protection, I beg leave to submit the results of my experience and observation in that direction. The experiments submitted by your correspondent (Mr. Putnam) in your issue of September 1, demonstrate that an S trap of ordinary depth of seal, if vented to the roof, will, when not used, lose its seal by evaporation in from nine to eleven days, and that a similar trap, unvented but open at both ends, as is the case in practice, will lose not exceeding one-thirty-second to one-sixteenth of an inch in ten days. Accepting these data to be correct, the conclusion is inevitable that venting to the roof is indeed a most untrustworthy practice.

But these experiments equally demonstrate that if the conditions of an invented trap as regards evaporation can be maintained, and at the same time the seal of the trap be protected against siphonage, then the simple S trap of easy curves and uniform calibre is incomparably better than any other. Siphonage can only be prevented in this form of trap by the free admission of air on the sewer side of the seal whenever a partial vacuum is formed in the pipe. This is now sought to be secured by back vent-pipes to the roof, but with disastrous results to the seal on the trap, by evaporation when not in use. But if the admission of air is limited by an automatic device, to the requisites to prevent siphonage, then, during periods of disuse the conditions would be identical with those of an unvented trap, so far as evaporation is concerned. Hence an ordinary S trap vented by such a device, would not lose its seal by evaporation, when not used, in less than from eight to sixteen months, if Mr. Putnam's observations are founded on correct data.

The want of such an appliance has long been recognized, and numerous attempts have been made to produce a device that would successfully meet this requirement. One of the first of these that came to public notice, operated by means of a hinged valve, with depending edges which dipped into a shallow channel of water, while others relied upon the accuracy of mechanical closures of various forms, but alike failed of success.

The latest appliance devised for this purpose, "the McClellan anti-siphon trap vent" is now too well-known to require description, and, unlike its predecessors, has proved a practical success. It performs all the useful purposes sought to be secured by back-vent pipes, and avoids the evils their use entails. It also obviates any apparent necessity for resorting to the so-called non-siphoning traps, all of which acquire their non-siphoning qualities at the cost of cleanliness, since all such traps have greatly enlarged cavities, which gradually fill up with decomposing filth.

I have, during the past two and a half years, specified this vent in many houses in this city and vicinity, and always with entire satisfaction to myself and patrons. Respectfully,

M. Houman.

Bent Wood.

We have all seen the beautiful Austrian bent wood chairs and furniture, which owe their popularity, perhaps, as much to their charming design as to their strength and durability; and n ost of have had some curiousity to know how they were made. The *Revue Industrielle* explains the matter, at least so far as the processes could be observed at the industrial exhibition at Buda-Pesth. Within a few years the methods of treating the wood have been improved, and the application of the material much extended; carriage wheels, for instance, having their rims made of a single piece of ash or oak, bent to a circle, with great advantage in point of strength and cheapness over those made with fellies sawed in small sections out of straight pieces of wood. The material to be bent is, for furniture, usually red beech, which grows very abundantly in the Hungarian forests. The timber is sawed into strips one and one-half to two inches square, according to the work for which it is intended, and then in a lathe into smooth, round rods. These rods are placed in an air-tight case, where they are exposed for fifteen minutes to the action of superheated steam. They are then so soft and pliable as to be easily bent by hand, and are in this condition fitted to iron patterns, well-secured, and left to dry. The drying takes from two to eight days, according to the size of the piece. When it is complete, the wood is detached from the pattern and is ready to be joined with other pieces, varnished, polished, and sent out in the shape of finished furniture.

The Owner's Acceptance of a Building.

December 21, 1888.

To the Editors of the American Architect:—

I would like to have some information in regard to taking possession of a building. A contractor had plans drawn for a private schoolhouse, with residence, and took the contract. It being in another town, he put there a foreman to attend to it, and build in accordance to plans and specifications (the other party had also a set of plans), the party representing the owner sent from time to time parties to inspect building, making changes, the owner calling there also several times, also making changes. The local builders made complaints to the owner, but on examination they were not verified: the owner made no complaints during the work.

Finally the owner was notified by contractor that the building was completed, and to call and accept it. The owner called, moved in, and did not object, and lives in the building. I understand three-fourths of contract has been paid, but he refuses to pay any more. I am called in as an expert, but I am under the impression that after having been there himself, and having had other parties there to inspect work, and taking the keys without any objection, that he formally accepted the work and has to pay balance due to contractor. After having taken possession, he made all kinds of changes, without notifying contractor, and wants me to charge it to contractor's account.

By letting me know the customary rules, or referring me to similar cases, you will confer upon me a great favor.

I am yours respectfully, Subscriber.

[The law is well settled that the owner does not accept a building by taking the keys and living in it, nor does he thereby waive in the slightest degree his right to have the contract fulfilled to the letter before he pays the contractor. His visits to the building while in progress do not alter the contract, or put him under any obligation to accept work not in accordance with it; and if he orders changes at those visits, he only makes himself liable to pay a reasonable price for them, if they increase the actual cost of doing the work. Whether, after moving into the house, he can have changes made by other parties without notifying the original contractor, and charge them to the contractor's account, is a different matter. If the changes are altogether outside the contract, he is, of course, not entitled to make the contractor pay for them. If they were necessary in order to bring the building into conformity with the contract, he ought to have notified the contractor that they were required, and have given him reasonable opportunity for making them himself, before employing other persons to make them; and it has been held abroad that where this notice was not given the contractor was not liable for any part of the expense. Aside from legal technicalities, however, it would probably be fair to both parties to have the contractor pay what it would have cost him to make the work conform to the contract, as nearly as can be estimated, and let the owner pay whatever it actually costs beyond this.—*Eds. American Architect.*]

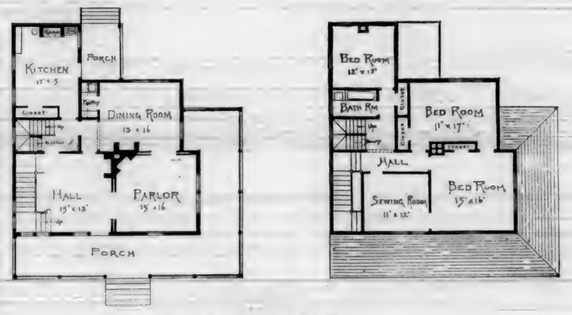

PLATE 7.—A COUNTRY HOME.
See "Our Illustrations."

Wasted Energy.

It is a fact pretty well known that a very liberal percentage of the total inventive genius of the country is expended in inventing things not needed, nor likely to be needed. Before going about inventing something it is wise to use diligence in the direction of finding out whether there is likely to be a demand for it. Mere ingenuity to devise, unless well balanced, is quite likely to go astray. When some mechanical arrangement is found in use—some old-time affair that readily shows inherent defects in some of its operations—before spending much time in arranging to supplant it, it is wise to consider all the reasons why it has remained in use. Perhaps a little time spent in reflection and study may save a good deal of time and money. If the arrangement referred to is something in common use, the probabilities are that a good many men have seen its defects, and puzzled themselves over replacing it, hence it is not wise to believe that the first thing thought of is going to accomplish the purpose. The very thing looked upon as a defect may have an important bearing in permitting the accomplishment of some other end, and may be one of the inevitable imperfections submitted to in preference to a more important defect.—*American Machinist.*

"We often see two young men start out in life with apparent equal advantages; one makes a success and the other a failure. A perfect index of the cause, and usually the cause itself, is that one thinks of his work and the other of his wages." We find this in an exchange. There is lots of truth in it.

New Publications.

Notes on the Art of House Planning. By C. Francis Osborne, Architect, Assistant Professor of Architecture in the Cornell University. Cloth. Published by William T. Comstock. Price $1.

This little work will be found to be of great value to draughtsmen. It embodies a portion of the notes used by the author with his class in architecture at Cornell. The author, finding that they had apparently encouraged the cultivation of a field practically untouched as to detail, issued the notes in book form as a stimulus to the younger generation of architects to embody in their work the principles of good planning. The introductory chapter deals with the general subject of planning, which is described as the act of so shaping and disposing the various interior divisions of a building that it shall best serve the use of the occupants for whom it is designed. In this book only the simplest elements are set forth, as to extend the investigation of the subject would tend to defeat the purpose of the author. Illustrations are freely employed throughout the pages and greatly assist the reader in grasping the author's ideas. The author tells how to proceed in laying out the plans for a house, dwells upon the skeleton or outline and presents a chapter upon the entrance, which he considers as composed of three parts, the porch, vestibule and the entrance hall. Chapters are also presented devoted to the dining-room, drawing-room and parlor, library, kitchen, billiard-room, and bed-room floor.

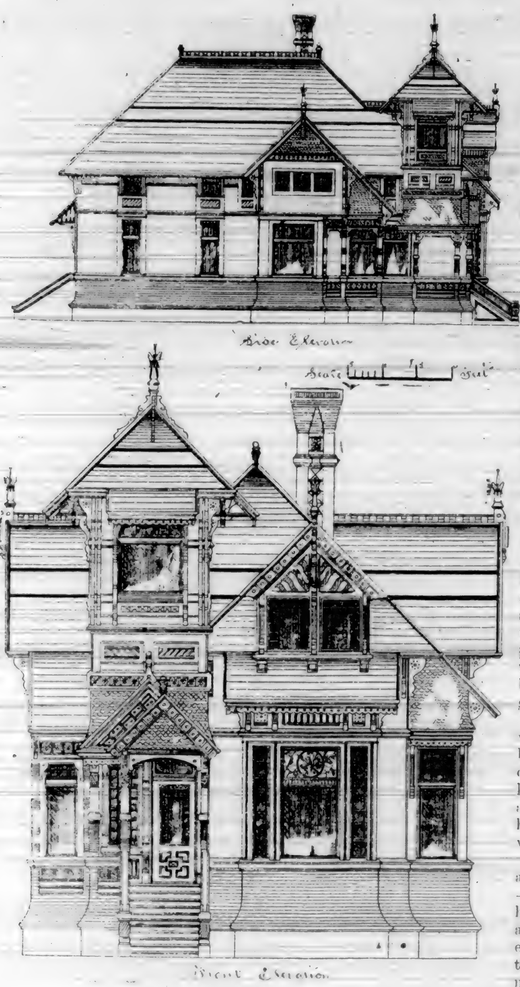

PLATE 8.—"ALHAMBRA COTTAGE."
See "Our Illustrations."

Building Activity in Jerusalem.

Jerusalem, writes a correspondent resident in that city, is steadily increasing in size, building operations being actively carried on in spite of the circumstance that most of the town is situated on barren rock, and has neither commerce nor industry to boast of. Everywhere and continually new buildings are springing up, whilst new parks, public institutions and churches are improving formerly desolate spots. New large dwelling houses are constantly being built by wealthy Jews, but the barrack-like, one-storied appearance of these structures is far from adding to the beauty of the city. The Rothschilds are building a new hospital on the Hill of God's Peace, and close by an Armenian Church is in course of erection. The Russians, too, are busy building—as for instance, a consulate, a church a hospital, and residence for their pilgrims. Close to this hospital, a handsome residence for German pilgrims has just been finished. On the Olive Mountain the Russians have also built a look-out tower, whence a splendid view is obtained of the neighboring country. Some Greeks are building cafes and bazaars, and Armenian shops.

Intermediate Numbers of the California Architect.

It will be the study of the new management to make this Journal so complete in its various appointments, that it will be sought after by every one connected with the building interests. If sufficient encouragement is received, we will issue Intermediate Numbers, giving a complete list of building operations all over the Coast. This can only be done by the support of those interested. In order to make it a success, additional subscribers and advertisers must be secured. Those noticing this article who are willing to forward the movement will please correspond with the Manager at the office of this journal.

Durable Damp-Courses.

THE matter of the durability of damp-courses was investigated last month in one of the courts of the London suburbs, through the prosecution of a builder, at the instance of the Wanstead Local Board on the information of Mr. J. T. Bressey, its surveyor, "for that he, on November 9, was in High street, Wanstead, erecting a new building, 'the wall thereof being without a proper damp course of sheet-lead, asphalt or slates laid in cement or other durable material, impervious to moisture,' contrary to the by-laws of the Local Board and contrary to the statute in such case made and provided."

It appeared in the testimony that the defendant had used Anderson's asphaltic felt, which, according to the statement of Professor A. H. Allen, President of the Society of Public Analysts, contained 54 per cent. of coal-tar oil, 28 per cent. of fibre and 18 per cent. of sand. Each grain of sand was unalterably durable, but he would only treat the sand used here as an accessory. Practically, there was two-thirds of pitch to one-third of fibre, and in use the fibre prevented spreading of the pitch. This material had been specified to be used by the architect on account of its flexibility. He used it for one reason—because of the possibility of settlements, which could not be guaranteed against.

Mr. Bressey, the surveyor, said, that within his experience, walls with a damp-course did occasionally subside; they were liable to a slight settlement. In his district slates were used for damp courses, two layers of slate in cement. There was first a layer of cement, then slates, a layer of cement, then slates, and another layer of cement sandwiched in fact. If a wall subsided he acknowledged the slates would crack at that particular place, while Anderson's substance was pliable.

Professor Allen caused some amusement by his statement that, as to the durability of the felt, "he could only speak by analogy—that he had not lived long enough to be able to testify as to how long it would last. It was principally composed of pitch, and the Egyptian mummies were preserved in pitch." In cross-examination, he, however, admitted that the pitch used for the Egyptian mummies was not an artificial pitch; it was a natural asphalte. He said Watts' "Dictionary of Chemistry" was an admirable compilation, but its definition of asphalt did not fit in with his asphaltic felt. That referred to natural asphalt.

The case was dismissed, but without costs against the Local Board, as the Bench thought it had acted in perfectly good faith. The surveyor of the Local Board does not appear to have had the experience of the Metropolitan Board of Works in mind as they endorse the use of a bitumen damp-course, consisting of heavy burlap or bagging impregnated and coated with bitumen (natural asphalt without any admixture of coal-tar), which has the merit of yielding, without cracking, in case of settlements, which often occur where the foundations are built on different conditions of subsoil.—Building.

To know the resistance which a piece of timber offers to any force tending to change its form, is one of the most important species of knowledge that a carpenter has to acquire.

Cracks in floors, around the skirting board or other parts of a room, may be neatly and permanently filled by thoroughly soaking newspapers in paste made of one pound of flour, three quarts of water and a tablespoonful of alum, thoroughly boiled and mixed. The mixture will be about as thick as putty, and should be forced in the cracks with a bent knife or other handy tool. When dry, it will be harder than the boards.

Building by Contract.

WE frequently hear complaints made by parties having houses built by contract that the work is poorly done, that it is not executed according to the specifications, etc., etc. The complainant says that the builder has cheated him, not only in the quality of the materials employed, but in the manner in which the work was done. Too often this is true, and the grumbler has good cause for his fault finding. But there are usually two sides to a question, and we will give the builder a chance to defend himself before we condemn him altogether.

He will probably argue that he must live, that competition is sharp, that he is anxious to secure the job, and therefore gave a low figure, which would barely bring him the wages of an ordinary workman, leaving himself no margin for incidentals, unforseen accidents or expenses. He will plead in his defense that he was unfortunate in being obliged to buy his lumber at its highest price, and various other causes have conspired to place him in an embarrassing position. His only remedy lay in either "skinning" the proprietor or going on and completing the building at a loss. He thought of his family, consisting of a wife and several small children, and decided in favor of the "skinning" process. It was not honorable, perhaps, but would it be "honorable" to let his family suffer for the necessaries of life? Much can be said on both sides of this question. There are many honorable contractors who fulfill their obligations to the letter whether they make or lose by the operation. There are many people who are bound to find fault in any case, and would grumble and pick flaws in the work even if the builder had done a first-class job and found himself several hundred dollars short as a reward therefor.

There is, perhaps, one man in a hundred who would put his hand in his pocket and reimburse the builder when he was convinced that he had lost money in his house or building. It is barely possible that there is one such man in a hundred who possesses such a sense of justice, and has a conscience and a heart. But as a rule the proprietor who finds that he has saved money at the expense of his builder considers it a reason for self-congratulation, and does not concern himself to "put himself in his place," or to waste any sympathy upon him or his family.

We would suggest that those who find the contract system unsatisfactory go back to the more primitive method of day's work and have their work done by the day. The usual custom in day's work is for the master builder to charge a certain sum for himself and so much for each man employed on the building a certain percentage of which goes into the builder's pocket and constitutes his profits. Another plan has recently been tried which has proved a success, and seems to be more satisfactory to all parties concerned. This plan allows good wages for the builder and men employed upon the building, and the builder receives in addition a percentage on all material used, which secures to him a fair and sure profit. He can work, therefore, with a good heart and a full stomach, and has no motive for doing poor work or cheating his employer in any way. It seems to us that for the cheaper class of buildings, at least, this method of doing business offers a reliable and sure preventive against all the evils, resulting from the contract system.—*Architectural Era.*

The Uses of the Trade Paper.

The uses of a technical paper to the mechanic are multifarious. It affords him access to current news of interest in his trade, keeping him well informed respecting the latest improvements in machines and processes; it puts old things in a new dress, presenting the familiar facts under such various aspects as to stimulate his thoughts with the surprise of discovering that there should be so much that he never dreamed of in what he supposed he knew all about; it explains the why and wherefore of doing this, that and t'other in his daily workshop practice, and thus, unconsciously to himself, trains him to the habit of investigation, which is the most valuable service of all. It is this discipline of the mind, derived from the habit of thinking and investigating, that fits the reading mechanic to take the lead of his fellow workmen. It is the reading workman who makes the inventor, and to this class, whose mental training is largely obtained from the technical journals., that we owe much of the progress in the mechanic arts.—*The Manufacturer and Builder.*

PLATE 9.—PLAN OF "ALHAMBRA COTTAGE."

Brick Supply.

The number of brick on hand for early building operations is small, with an active demand, and prices higher than they have been within the past year.

The brick-making facilities of the State have been largely increased over those of five years ago, but still the stock carried over to meet the early trade is light, and the market is likely to be "close run" for those of good quality before the spring supply of new bricks can be got to market.

The brick manufacturers will, of course, be stimulated by the excellent outlook, to get to work at the earliest practical moment, and fire up their kilns with as little delay as possible, to meet the demand in prospect, which undoubtedly will be equal to the supply, however large.

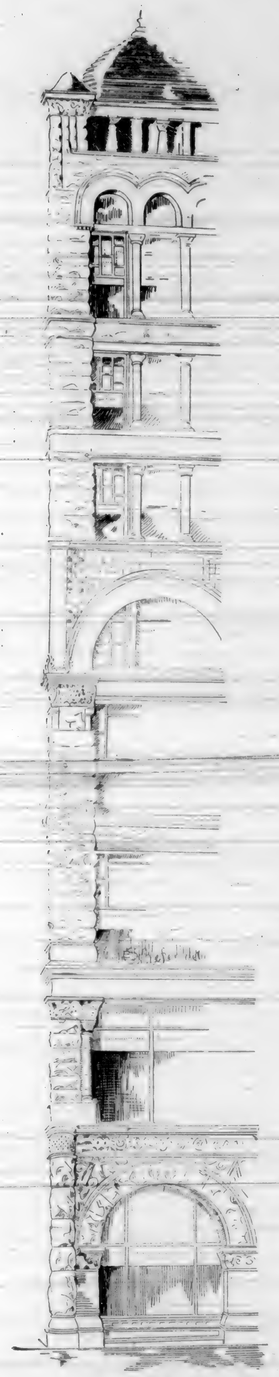

PLATE 10.
SEE OUR ILLUSTRATIONS.

This is the Only Journal Published on the Pacific Coast in the Interests of Architects and Builders.

When this Journal was started in 1879, a rule was made as follows: Advertisements alone inserted that refer to materials used in the construction and furnishing of houses, and to matters and trades belonging to the building interest. No others received." This rule has generally been strictly observed, and only advertisements of the character mentioned will be accepted. Our rates are as low as any other class Journal printed in the country—that is, of equal circulation We respectfully solicit your patronage, and, at all times, we are ready to do what we can to assist those who may advertise in this Journal.

Our Summary of Building News.

For the present year, we have made extra arrangements for procuring building news from all portions of the State. Architects from every part of the Coast, have sent us letters, containing assurances of good will, and welcoming the grand change made in the management of this Journal. They feel now, that they have a means of communicating their ideas of building improvements to the public generally, and they willingly will do their part to make this department of the California Architect, a grand success.

Our New Head-Quarters.

After an occupancy of ten years in the set of offices to which all our patrons have addressed us during the history of this Journal, increasing business has compelled us to secure more commodious rooms. A better location could not be found than the one we have selected. Situated on California street, next to the Bank of California, they are in the very heart of our commercial, insurance and banking interests.

We have secured a suite of four rooms, abundantly supplied with light, and having the advantage of the sun's rays in every room. The first two rooms—in size, 15 feet 6 inches by 36 feet will be used as an office and reading room. It is also intended for the use of the Chapter of Architects, and will be peculiarly fitted for holding the Architectural High Jinks on a Saturday afternoon. In fact, that was one of the reasons for securing such spacious rooms as ample accommodations are found for the "Social Tea" of the entire Profession on Saturday afternoons, after the fashion of those held in New York, Boston, etc.

Two rooms, 16x34 feet will be used by the "Architectural League." This is an association formed of draughtsmen and students connected with the various architects' offices. By a vote of the "Chapter of Architects," all draughtsmen and students are allowed to leave their offices at 3 P. M. on Saturday afternoon for the purpose of attending the instruction classes under the direction of G. H. Sanders and Albert Pissis.

It will be seen that the entire Architectural Associations of this city are thus congregated in the one set of offices. The prominent feature of the whole project is to establish a

READING ROOM AND LIBRARY,

Which shall be always open to those engaged in the architectural profession, including architects, draughtsmen, students, etc.

VISITORS ARE ALWAYS WELCOME.

Visitors from the country will receive a hearty welcome. It will take a few weeks to furnish offices in the manner intended, and to arrange our files of papers, periodicals, etc., but we will make you feel at home should you favor us with a call.

Architectural Reading Rooms.

In connection with this office, will be found an elegantly appointed reading room. Files of the following named will be always on hand: "American Architect and Building News, "American Builder," "Architectural Era," "American Machinist," "Builder and Woodworker," "Brick, Tile and Metal Review," "Building," "Carpentry and Building," "Clay Worker," "Canadian Architect," "Hydraulic and Sanitary Plumber," "Inland Architect" "Lumber World," "Manufacturer and Builder," "Northwestern Lumberman," "National Builder," "Sanitary Engineer," "Scientific American," "Sanitary News," "Painter's Magazine," "Western Architect," and a great many others. These rooms are open to all who may favor us with a call. We will be pleased at all times to be favored with a visit from those interested in building matters.

San Francisco Chapter, A. I. A.

The regular monthly meeting of the Chapter was held on January 4th, Vice-President W. P. Moore in the chair.

Further time was granted to the Committee appointed to confer with a Committee from the Builder's Association in reference to a form of "Memoranda of Contract" to be filed in the Recorder's office.

Resignation of A. Laver was received. Referred to the President and Vice President for consideration.

PLATE 11.—A STUDY IN THE "OLD COLONIAL" STYLE.
See "Our Illustrations."
Sketch prepared for this Journal by C. Bryant Schaefer.

Hints to Mechanics.

FIND out everything about your business that you can. Read, if you can, all the building papers and books on architecture, the building trades and all kindred subjects. Study, and think over what you read.

A good carpenter should have a fair theoretical knowledge of stone masonry, brick-laying, plastering, plumbing, gas-fitting, tinning, painting and slating.

The more he knows of these subjects the more he is worth to his employer and to himself.

The reason is obvious.

System in doing work holds the same relation to good workmanship that "cleanliness does to godliness"—therefore, whatever you do, use some system in doing it.

In hanging doors or sashes, have one regular rule for doing the work.

Be sure the rule is a good one, then stick to it.

If you have the control, see that all doors in each story are the same size, or as many as possible.

Much time and labor may be saved by attention to these small matters.

For example, in hanging a number of doors which are of the same size, the time expended upon measuring the correct position of the hinges may be saved in a very simple manner, which is as follows: Take a lath and mark upon it top and bottom, the exact position where the hinges should come; drive in at these marks sharp pointed brads, and you have a gauge which may be used in hanging all doors of the same size. In using it all that is necessary is to place it against the edge of the door with the top of the lath on the level with the top of the door, give it a sharp tap of the hand, when the brads will mark the exact position of the hinges. The same gauge lath may be used in marking out the position of the hinges of the style of the door frame, excepting that a nail should be driven in the bottom of it, so that there may be sufficient room left at the bottom to allow for the proper play of the door; the use of a gauge lath in the case referred to, is an example of its use. It is of equal utility in hanging many other pieces, such for instance, as inside and outside blinds, shutters, etc.—*Building.*

Building.

THE object of bridging floors is not only to prevent the joists overturning, but it is principally to distribute the weight resting directly on joists immediately supporting it, thus considerably stiffening the floor as a whole. The pieces of timber of which the bridging is composed may, and do, act either as ties or struts, according to the manner in which the load is centered; and in case of a moving load, as of a person passing over the floor, will act alternately as ties and struts in gradual succession. The strutting being placed obliquely to the joist, the strain is practically neither that of a direct tie nor of a direct strut; that is neither simple compression nor simple tension in either case, but is in both modified by a cross strain. There is some tendency of the joists to turn over, which augments the cross strain, so that of the three strains, the cross strain is of most importance.

Now, it is a very well known rule that the strength of a beam or piece of timber subjected to a cross strain is directly as its breadth and as the square of its depth; and it will be obvious therefore, that the system of placing the bridging with its greatest size vertically, is the proper one and is a good deal stronger than the system usually employed. In the first system, the bridging is reversed alternately, so that the pieces may butt against the joists at points directly opposite one another, which tends to further strengthen and stiffen the floor.—*National Builder.*

An attractive catalogue is a handsome addition to a library. To an architect, manufacturer's catalogues are a necessity. We have just received a beautifully illustrated work, from the well-known house of Henry Huber & Co., of 81 Beekman street, New York, containing over 200 pages of engravings, illustrating wash basins, water closets, urinals, hoppers and everything else pertaining to the plumbing trade. Architects or plumbers who have not received a copy should address as above.

Always keep a can of varnish well corked, but airing it for fifteen minutes before using. When a can is first opened it is a good plan to leave the cork out over night.

PLATE 12—SEE "OUR ILLUSTRATIONS."

Applicable to San Francisco.

A St. Louis boss plasterer, who has grown gray in the service, in speaking of present day methods of contract letting by the lowest bidder system, said that mistakes in figuring accounted for most of the financial miseries of building mechanics. Said he:

"As a class we are not collegiate graduates, and can handle men and materials much better than a problem in algebra or even the simpler mathematical calculations which seem of late years to be the great essential to our success. No wonder builders without strong backing go to the wall with their hands full of work, and that the mechanic's lien has become a very natural consequence of the errors, misunderstanding and complications which the present system of bidding creates. We are asked to figure on the plastering work of buildings every day, and it would sometimes puzzle a Philadelphia lawyer to get at the true cost of work. The mechanic estimates after his own fashion, and often comes out of the contract poorer than when he began. No wonder so many are tempted to do slipshod work when the owner obtains much more than he pays for. The same is true of all the mechanical trades connected with building, and the liability to make error generally accounts for at least half the difference between the highest and lowest bidder. Sometimes it is the error of the former, sometimes of the latter. One builder in this city, noted for the care and closeness of his estimates, once forgot a little item which cost him nearly $5,000. He had cause to remember it afterwards. The instance serves to show why the quality of work in these days has deteriorated, as some allege.

"Before the war plastering work was taken by the square yard. The architect of course knew the surface to be covered, and could make almost an exact calculation as to cost. He employed a competent man who had the incentive to do good work, knowing that he was sure of a living price. There was not the risk of making errors that distinguishes the present system. It is now a free-for-all race, and the one in first gets left financially in a very large proportion of cases."

A French exchange gives us a new plan for deadening floors without loading the planks. Fill the empty parts between the joiner works with liquid lime thickened with chloride of zinc. This will prevent noise, fire, vermin, and the house will be rendered healthy. Workmen using this preparation should wear guarded spectacles, and wash their hands well after the work is completed.

PRACTICAL HINTS TO CARPENTERS.

BY OWEN B. MAGINNIS.

ONE of the most important and too often neglected things in setting jambs, is to block behind the jambs for the screws of the hinges. In rebated jambs this blocking is indispensable; so measure down about 6 inches from the head and 9 inches from the floor, and nail in a 4-inch pine block on the stud, behind the jambs, to secure the screws. Builders should watch sub-contractors in this small matter, as the screws pull out when they have no thickness to hold to.

If the casing have a beaded or moulded edge without corner blocks, the top corners should be mitred with a mitre jack made in the following manner:—Take a piece of 1¼ inch stuff an inch or so wider than the width of the casing, about 2 feet 6 inches long, nail a *fence* or piece of ⅝-inch strip on both edges, rising above the surface the thickness of the casing. Now take a bevel, set it exactly, *not nearly*, but exactly, to an angle of 45 degrees, or from 3 to 5 inches on the steel square, (reverse the bevel to see if the angle be true) and mark two reverse mitres across the edge of the ⅝ strips, and the surface of the bottom or wide piece and over one edge the edge which has the short corners of the bevels. Saw deep enough into the wide piece on this marked edge, to cut through the bead or moulding on the casing, when it is placed between the fences against the one which is sawn into. After putting the casing in its place and marking the top corner with a knife, the casing is placed against the fence with the mark exactly at the saw cut, and having the saw outside the mark, so as to slightly leave it on the stuff—the mitre can be readily and instantly sawn without using a bevel or a templace, which are inaccurate and unmechanical. The bottom end must fit tightly down on the upper end of the case block; if not then the end must be scribed to the block with the compasses before mitreing.

All casings ought to be level across the face, so that when a straight edge is placed across the opening, it will touch all their surfaces. The head should also be straight with the stiles, and all the mitres and joints tight and well nailed. All mouldings and back bands can be mitred and nailed on when the above is done, and the mitres will come tight.

In setting back window jambs, or on those window frames which have outside blinds with a panel back below the sill, the following is the best way to proceed: First, cut with a chisel on a straight line, the groove (where it stops against the sides) out of the frame casing, both top and bottom, on both right and left casing, and clean all the mortar and dirt out of the plowing. Now take the short rebated jamb for the head, and getting upon a high horse, place it with its rebated tongue on the head groove, and mark exactly, with a sharp knife, the inside corner on the left and right hand groove. Square these marks over the face and lay out a dado ⅜ wide towards each end. Dado this laying out ⅜ deep. Next take the right and left jamb and square one end of each in pairs. Lay out a tongue ⅜ wide from these square ends and ⅜ thick, gauged from the faces. Cut these tongues out and run a rebate—plane shaving of the back side of the tongues of the head jamb and sides, and take an arris of the face side. This will let the tongue go easily into the grooves in the frame. Next, nail the head on the sides, keeping the front edges flush, and break off the over length of tongue on the head piece. Set the tongues of the jambs in the frame grooves, and drive the jambs in till they sound solid. Use a block, so as not to bruise the edge in driving. When they are in solid, mark the groove at the sill, and see if the jambs are not too wide for the plaster; if they are, the over wood must be sawn or planed off until they come flush with the plaster. Take the jambs down when this is done, and lay out a ⅜ dado from the groove mark. This dado is to receive the foot-head. Then take the foot-head, cut it to the length of the dados of the head, and allow ⅜ for a tongue on each end. Work these tongues on ⅜ deep, and nip the foot-head to the width of the jambs. Ease the tongue as well as the jambs, and nail the head side and foot-head together afterwards, set them up in their place, and when they are driven home, toe-nail them into the casing.—*Canadian Architect.*

To clean paint off windows, dissolve some soda in very hot water and wash them with it using a soft flannel. It will entirely remove the paint.

LIVING UP TO SPECIFICATIONS.

FOR several years past we have been urging upon the roofers the advantage of better roofing material and more accurate roofing specifications. It has been largely due to *The Metal Worker* that guaranteed roofing plates have been brought into the market, and it is also to be credited to our efforts that certain plates have been stamped with brand and gauge mark in order to make guarantees effective. Our voice has also been heard to a greater or less extent in urging architects to be definite in their descriptions of the kind of material that is to be employed in their roofs. We have at least helped to make it possible for them to specify good plates and to know that they obtain what they specify. In all respects we have thrown our influence in favor of the best materials, the best workmanship and the best roofs. In this we have helped the tin-roofing trade out of the hole in which it was struggling some time since and put it upon solid ground again.

With the advent of guaranteed plates tin roofers have found themselves held down by specifications which are difficult to avoid, and to comply with which leaves them no chance for anything else than an honest profit. It is not strange, therefore, that we hear in various parts of the country of efforts being made by those who are not content with legitimate profits to have specifications changed. We hear of tinners making strenuous efforts to have one other plate substituted for the one that is specified by the architect, going so far in some cases as to pledge their own reputation as practical men that the second plate is quite as good as the first, if not superior to it, and asserting that a better roof will result from such a substitution than from allowing the architect to have his own way. The object of this, of course, is to make a profit, for no one would go quite so far from disinterested motives. Now, at this time we do not propose to enter into the merits of such pleas for substitution, nor the qualities of the different plates that may be employed; occasionally architects may make mistakes, but for the most part they know what they are doing. What we want to talk about is the bad policy of substitution, for we believe it a suicidal policy, one that is ruinous to the business. Whatever may be the chance profit to be got out of a job in which a change of plates is made, the interests of the roofer in the long run are upon the side of having good plates specified and the specifications strictly adhered to. Changes beget changes, and the habit once established there is no stopping it. Therefore we caution all roofers who desire to see their trade prosperous in the best sense of the word, and who are anxious to give their clients the best possible roofs, to take the stand that specifications must be adhered to, regardless. Do not attempt to change a specification after it is made, but rather spend your strength with the architect to have the specification at the outset prepared according to your judgment in a way to secure the very best roof.

The short-sighted policy of having specifications changed, in order to secure a profit in the plates at the expense of the roof, must be manifest to any one upon a moment's consideration. It is a game that two or more can play at as well as one. If Brown, for example, objects to the specifications branded "A" and desires to substitute plate branded "B," he must remember that Smith, his competitor, by the very fact of his success in obtaining changes, has a strong argument to plead for the substitution of plates branded "C," or "D," or "E," and so it goes on, every change making it surer that the roof will be poorer. Are any of the roofers among our readers forgetful of the condition of the roofing trade a few years since, when decent roofing plates were not in the market and when good tin roofs could not be had, no matter what price was offered for them? Have they forgotten the demoralized condition of the tin-roofing trade growing out of the large use of wildcat brands, and plates, even with makers' brands upon them, that were so flimsy and so ill adapted to the purpose as to amount practically to no roof at all? Have they forgotten the time when the roofs were a reproach and a by-word, and when no one would have a tin roof who had any respect for himself or the building to which it was to be applied? Such things existed only a few years since over a large portion of the country, and the change for the better, which has taken place in the interval, has been brought about simply by making definite specifications possible—specifications which cannot be easily avoided, by dishonest competitors. Therefore, we say again it is to the interest of all honest roofers to see that specifications are lived up to and not allowed to be broken down by substitutions even in those cases where the substitutions are advantageous. Never mind how irksome the contract may be, follow the specifications literally when the job comes to you, and insist that the specification is also literally followed when the job goes to your competitor. If the idea of changes in specifications is once allowed to become dominant in the trade, the last safeguard in the tin-roofing business will be taken away and the trade will reach a condition ten times worse than that from which it was rescued only a few years ago.—*Metal Roofer.*

PLATE 13.—SEE "OUR ILLUSTRATIONS."

Law Affecting Architects.

A person following the occupation of forming plans, drawings and specifications for building purposes, representing himself as an architect, is presumed in law, not only as being such, but to be learned in the profession.

If there is any obscurity in the drawings and specifications, the contractor should apply to the architect for directions to be liable for the consequences.

There is no fixed rule in as to compensation of architects in the United States.

The architect's contract does not survive to his representative. So, if there is a contract to complete certain work for a certain sum, the representative of a deceased architect cannot recover for the part performance.

In competitions it should always be made clearly understood that the drawings, etc., are subject to approval, for otherwise, the party receiving them will be liable for their value whether used or not.

An architect has not the right to substitute another person in his stead.

If the architect fraudulently or capriciously refuses to give proper certificates when required, the builder may maintain an action for specific performance against the architect for damages. —*The Law of Building.*

Salt in Glue. Carpenters have found a special use for salt. In heating glue the addition of salt to the water in the outer kettle raises the boiling point, and thus keeps the glue in the inner kettle at a higher temperature.

PLATE 14.—SEE "OUR ILLUSTRATIONS."

Byrkit's Patent Sheathing Lath.

WHEN a man begins to raise up a family, one of the things most talked about in the family circle is the desire to own a "home," in which is pictured out happiness and comfort the two most important things in life. A lot in a desirable location is selected, and the consultations and advice of architects and builders are sought after, and with the assistance of friends the plan of the house is decided upon, and the home commences to grow. The work is pushed forward rapidly, and the architecture, both outside and inside, is pleasing to the eye, and new features are added and improvements in various things are put into the house: but one of the most important things remains just the same that it has for the last fifty years, and that is the way the house is lathed and plastered. The family move into their new house, which they think is a perfect model of elegance and convenience, and they commence to get settled and live as only those can who have a "home of their own." About this time the house begins to settle, the corners open, the walls crack all up, and they find it impossible to keep warm, or heat the house as it should be, without keeping the stoves or furnace red hot, and even then the cold is penetrating every crevice, making the "home" anything but pleasant. They begin to wonder what is the matter, and why their house is in this condition, for they have expended from five to ten thousand dollars in its construction. The whole secret can be easily explained. They had used the common lath, which adds very little warmth to a house; when, if they had used Byrkit's Sheathing Lath, it would have been very different. It makes every building stronger and warmer, and ties it together so the house can't possibly open or the walls crack so as to loosen the mortar when it settles. The house can be heated and made comfortable with a saving of at least ten per cent in fuel. If this is so, then why is it not an advantage for every one who builds a "home" to use Byrkit's Sheathing Lath? It is always well to remember that there has been improvements in the art of building in every other branch but lathing and plastering.

John F. Byxbee, 104 Market street, is the agent in this city for the lath referred to; samples may be seen in his office and any information will be cheerfully furnished.

The Teredo.

AN article in the *Atlanta Constitution* upon the teredo, the salt water borer, which honeycombs ship timber, piles or any wooden structures exposed to its attacks, is full of interest. Its habitat, it is stated, was originally in the tropic seas, but it was readily carried in the timber of vessels into North American or European waters. It will bore through a piece of timber until it becomes a mere shell and collapses under the weight it supports. A peculiarity of the teredo is that it bores and feeds itself with what is regarded as its foot, while at the opposite end it has two heads. It is difficult to understand where this seemingly frail creature gets its astonishing power. While the interior of the timber is filled with perforations running with the length and intersecting each other in various ways, no holes appear upon the circumference except very small ones, while those inside are from one-fourth to five-eighths of an inch in diameter. The question naturally arises, how does the teredo get in, and does it ever make its exit? The explanation is that when young and small the borers fasten themselves to a round and generally new pile by means of a suction apparatus in their heads, and bore inwardly with the foot until only the head remains outside. Then they fasten themselves to the very edge and bore and grow. Entering at an aperture of the diameter of a darning needle, they work away until they fill a channel an inch across. The worm usually reaches a length of from one to three feet, but is said to attain a diameter of two inches and a length of fifteen feet on the Pacific Coast, although so far as is known its only food is the sawdust it makes. It is told that instead of crawling inward and onward as their burrowings lengthen, the borers simply grow in due proportion, the head remaining in its place. Their size thus increased, and the log once consumed and broken off, they fall a prey to the fish. The teredo lives and dies with his log. It never attacks floating timber, but a ship riding at anchor with her timbers unprotected by metal sheathings is easy prey, and soon destroyed. Wharves are often sunk by the destruction of supporting timbers by the teredo. The good it accomplishes is by boring into and disentegrating sunken wrecks, timbers and other obstructions in harbors, dangerous to navigation. So far the most successful defence against the teredo is the creosoting treatment for timber.

Bound Volumes of this Journal.

Bound volumes of 1888 are already very scarce. It was only by a careful canvass among our subscribers that we succeeded in obtaining enough of missing numbers to enable us to put together in a bound volume, the complete numbers of the year. We have but Twenty left. These will be disposed of to those who may favor us with an an order, at the rate of $2.50 each volume.

We also have a few volumes remaining of previous years. These will be mailed to any address upon the receipt of $2.50 each year, from and including 1888.

Notice of Removal of Office.

This journal, with all its appurtenances, has removed to the spacious and elegant rooms, No. 408 California street, next to the bank of California.

In this and succeeding issues we intend to devote considerable space to information in connection with buildings from every portion of the coast.

Only reliable news will be found in this column. Our custom has been for the past ten years, to furnish only data which could be relied upon. We will not publish rumors of "THIS AND THAT IS GOING ON" unless we are reasonably assured that such is truly the case. In all cases we will file our authority for any statements made in this column. No doubt mistakes will sometimes occur, but these we intend to be a rare exception to our rule of reliable news.

We desire the co-operation of country editors and mechanics to this department of this journal. By spreading the news of building engagement in your part of the country, you enhance the value of your section by proclaiming it a go-ahead community.

Architects should also notify us of "plans to figure on;" we do not charge anything for the insertion of such notices. Remember this journal is in the TENTH YEAR of its existence, and is the only journal published this side of the Rocky Mountains in the interest of Architects, Contractors and Material Men, and the only one endorsed by the San Francisco Chapter of Architects.

CITY BUILDING NEWS.

Broadway, near Van Ness avenue, two-story additions, cost $2,000.

Bonita, near Polk, additions. Cost, $600.

Bush, between Kearny and Montgomery, alterations to theater building; architect, F. E. Wilcox; contractor, Ingerson & Gore; cost, $10,000.

Broadway, near Taylor, two-story frame. Owner, Josephine Ream; contractor, G. M. Salsbury; cost, $2,500.

Bryant and 4th, stables. Owner, Spring Valley Water Co.; architect, Clinton Day; contractor, Robert Higgins and C. L. Lods; cost, $17,000; signed, December, 6th, 1888; filed, December 11, 1888; limit, 120 days.
Payments: floored, masonry to second story, $4,000; ready for roof timbers, $5,000; completed, $3,500; $5,000, 35 days.

Bush, between Montgomery and Kearny, alterations to Bush Street Theater. Owner, M. B. Leavitt; architect, Fred E. Wilcox; contractor, Ingerson & Gore; cost, $4,800; signed, Jan. 2, 1889; filed, Jan. 3, 1889; limit, Jan. 26, 1889.
Payments, $3,200; completed, $1,600, 35 days.
Total cost of improvements will be about $10,000.

Broadway and Taylor, building. Owner, Josephine Recum; contractor, Geo. M. Salsbury; cost, $2,300; signed, Dec. 12, 1888; filed, Dec. 20; limit, 90 days.
Payments, $575, framed; $575, enclosed; $575, rough plastered; $575, completed.

Church, near 23d, additions; cost, $1,000.

Commercial and Davis, building. Owner, Armour Packing Co.; architect, Chas. I. Havens; contractor, J. Haaf; cost, $4,000; sureties, Geo. Goodman and T. W. Kipinger; signed, Dec. 18, 1888; filed, Dec. 20; limit, 40 days.
Payments, $1,000, first story joists on; $1,000, roof rafters on; $1,000, completed; $1,000.

Eighteenth, corner Clara, two-story frame; Owner, A. Wagner; contractor, A. Disher; cost, $2,700.

Fiberl, near Polk, additions. Cost, $800.

Fillmore and Waller, additions. Owner-Mr. Meade; contractor, Zwierlein; cost, $2,000.

Fifteenth, near Castro, cottage. Owner, Sophronia W. Bunker; architect, Wm. F. Smith; contractor, W. N. Concanon; cost, $2,273; sureties, Franklin P. Bull, Wm. H. Judd; signed, Dec. 28, 1888; filed, Jan. 4, 1889; limit, 90 days.
Payments, $568 25, framed; $568 25, brown coated; $568 25, completed; $568 25, 35 days.

Fillmore and Kate, three-story frame. Owner, Wm Lageman and wife; architect, H. Geilfuss; contractor, F. Klatt; cost, $6,200; sureties, C. Dix, $2,000; signed, Dec. 8, 1888; filed, Dec. 18, 1888.
Payments, $775, framed; $775, roofed; $775, partitions set; $775, brown coated; $775, inside finish on; $775, completed; $1,550, 35 days.

Front and Sacramento, alterations. Owner, Mrs. A. E. Luhrs; architect, Pissis & Moore; contractor, Cal. Art. Stone Co.; cost, $1,450; signed, December 6th; filed, December 12th.
Payments: completed, $1,085; $365, 35 days.

Front and Sacramento, alterations, etc. Owner, Mrs. A. E. Luhrs; architect, Pissis & Moore; contractor, Riley and Loane; cost, $1,513.50; limit, 30 days; signed, December 6th; filed, December 10th.
Payments: completed, $1,100; $413.50, 35 days.

Grove and Laguna, two-story frame. Owner, J. T. Fitzhenry; architect, M. J. Welsh; contractor, R. Parker; cost, $3,300; signed, Jan. 2, 1889; filed, Jan. 5, 1889; limit, 80 days.
Payments, $825, framed; $825, brown coated; $825, completed; $825, 35 days.

Guerrero and 15th, two-story frame. Owner Arthur P. and Chas. S. Booth; contractor J. H. Thom Wohrden; cost, $3,750; limit, 80 days; signed, Dec. 10, 1888; filed, Dec. 10, 1888.
Payments, $950, roof boarded; $900, sashes hung, etc.; $950, painted; $950, 35 days.

Golden Gate Avenue, between Lyon and Lott, to build complete. Owner, Steven D. Chincovich; architect, H. D. Mitchell; contractor, Thos. H. Corcoran; cost, $2,800; sureties, C. Carpy and C. V. Hartmann; signed, Nov. 22, 1888; file l, Dec. 26, 1888.
Payments, $700, basement completed; $700, enclosed and all frames set; $700, inside completed; $700, 35 days.

Howard, between 22d and 23d, additions. Cost, $2,500.

Haight and Webster, three-story frame. Owner, Mrs. J. Twohey; architect, A. J. Barnett; contractor, McCann & Riddell; cost, $6,500; sureties, Fabian Joost; signed, Jan. 2, 1889; filed, Jan. 5, 1889; limit, four months.
Payments, $1,200, roof boards on; $1,200, brown coated; $1,200, outside finish on; $1,275, completed; $1,625, 35 days.

Harrison between 25th and 26th, one-story frame. Owner, C. Neilsen; architect, M. J. Welsh; contractor, J. T. O'Brien; cost, $1,700; sureties, Daniel Kearny; H. J. McMurray, $1,700; signed, December 4th, 1888; filed, December 12th, 1888; limit, 75 days.
Payments: roofed, $400; brown coated, $400; completed, $400; $500, 35 days.

Howard, No. 1626, alterations, additions, etc. Owner, J. Foeningsen; architects, John & Zimmerman; contractor, B. Pfarrar; cost, $2,000; signed, Nov. 24, 1888; filed, Dec. 28, 1888; limit, Feb. 15, 1889.
Payments, $500, enclosed; $500, rough mortared; $500, accepted; balance, 35 days.

Hayes, Fell, Scott and Devisadero streets, one single, one double house and one stable. Owner, John Cooney; architect, John J. Clark; contractor, John G. Adams; cost, $11,248; sureties, S. H. Harmon and Behrend Joost, $10,000; signed, Dec. 22, 1888; filed, Dec. 22, 1888; limit, 125 days.
Payments, $2,500, stable completed and frame work done; $2,500, brown coated; $3,000, finished; completed, $3,248.

Jackson and Broderick, frame dwelling. Owner, Geo. Wise; architect, Townsend & Wyneken; contractor, M. C. Lynch; cost, $3,012; signed, Dec. 24, 1888; filed, Dec. 24, 1888; limit, April 1, 1889.
Payments, $753, roof boarded; $753, brown mortared; $753, inside trimmed; balance, 35 days.

Larkin, corner Filbert, two-story frame. Owner, Mrs. Labbee; contractors, J. R. Chapman & Sons; cost $4,000.

Larkin, near Greenwich, one-story frame. Owner, Mrs. M. Loveland; contractor, M. Shea; cost, $2,500.

Lyon and Grove, building. Owner, Mary Whelan; architect, John J. Clark; contractor, D. Chisholm; cost, $3,950; sureties, F. Joost, $3,000; signed, Dec. 17, 1888; filed, Dec. 21, 1888; limit, 90 days.
Payments, $850, framed; $850, brown mortared; $850, inside finish complete; $1,400, 35 days.

Market and Guerrero, two-story frame. Owner, J. Harrington; contractor, J. Phinn; cost, $5,000.

Mission, between 4th and 5th, brick building. Owner, F. W. Zehtuss; architects, Pissis & Moore; contractor, E. R. Shain; cost, $9,020; sureties, J. Y. Davis, H. Remillard; signed, Nov. 30, 1888; filed, Dec. 26, 1888; limit 70 days.
Payments, $1,700, brickwork is ready for first floor joists; $1,700, brick work is ready for third-floor joists; $1,700, brick work is ready for roof timber; $1,600, completed; $2,320, 35 days.

Nineteenth and Santa Clara avenue, two-story dwelling. Owner, Adam Wagner; architect, Adam Wagner; contractor, August Disher; cost, $2,400; sureties, Patrick Gorman and H. B. Schindler; signed, Dec. 4, 1888; filed, Dec. 10, 1888; limit, 90 days.
Payments, $500, roofed; $600, brown coated; $700, completed; $600, 35 days.

Noe and Ridley, one-story frame. Owner, Kelly; contractor, G. Dorning; cost, $1,200.

New City Hall, additions, etc., to New City Hall. Work preparatory to erecting two new wings. Architect, A. Laver; contractor, Antonelli; cost, $46,000.

Octavia, near Vallejo, four frame buildings. Owner and builder, W. F. Lewis. Total cost, $25,000.

Oak and Clayton street, one-story frame. Owner, William J. Wisler; architect, John T. Kidd; contractor, Geo. R. Lang; cost, $2,650; signed, Nov. 10, 1888; filed, Dec. 29, 1888; limit, 190 days.
Payments, $993 50, partitions set and lathed; $993 50, completed; $663, 35 days.

Oak and Broderick, excavating, etc. Owner, Omnibus Cable Co.; architects, Percy and Hamilton; contractor, C. A. Warren; cost, $9,025; sureties, Peter Crichton, R. Remillard; signed, Dec. 6, 1888; filed, Dec. 11, 1888; limit, 50 days.
Payments, 75 per cent as work progresses; balance 35 days.

Pierce, between Eddy and Ellis, improvements. Owner, J. D. O'Benck; cost, $2,000.

Pine and Steiner, additions; cost, $500.

Pacific and Steiner, two-story frame. Owner, John J. Wells; architect, Chas. I. Havens, contractor, John G. Adams; cost, $9,100; sureties, E. N. Harman and F. Joost; signed, Dec. 1, 1888; filed, Dec. 17; limit, 100 days.
Payments, $1,650, framed; $1,650, brown coated; $1,650, hard finished; $1,670, completed; $2,500, 35 days.

Page and Buchanan, building. Owner, P. B. Cornwall; architect, Clinton Day; contractor, R. P. Hurlbut; cost, $13,900; signed, December 8th; filed, December 11th; limit, June 1, 1889.
Payments: ready to shingle, $2,900; 1st mortar on, $2,500; plastered, $2,515; completed, $2,500; $3,385, 35 days.

Post and Kearny, iron work. Owner, James Stanton; architect, H. Geilfus; contractor, P. H. Jackson & Co.; cost, $2,070; signed, Dec. 8, 1888; filed, Jan. 2, 1889.
Payments, 75 per cent of value of work performed as work progresses; balance, 25 per cent, 35 days.

Post and Kearny, elevator. Owner, Roos Bros.; architect, Henry Geilfuss; contractor, A. J. McNicoll & Co.; cost, $2,500; limit, Feb. 20, 1889.
Payments, $1,250, completed; $1,250, 35 days

Page and Octavia, two-story frame. Owner, Mary Humphrey; architect, John T. Kidd; contractors, Kincaid & Thompson; cost, $4,735; signed, Nov. 21, 1888; filed, Dec. 29, 1888; limit, 110 days.
Payments, $887, ready for roof boards; $887, partitions set; $440, brown coated; $440, trimmed; $457, completed; $1,624, 35 days.

Sanchez and Hancock, one-story frame. Contractors, T. Elam, R. Miller; cost, $2,195; limit, 75 days.
Payments, $540, framed; $540, brown coated; , completed; $575, 35 days.

Post and Kearny, brick, carpenter work and alterations. Owner, James Stanton; architect, Henry Geilfuss; contractor, Wm. Commary; cost, $2,822; signed, Dec. 8, 1888; filed, Jan 2, 1889.

Payments, 75 per cent of the estimated value of work performed as work progresses; balance, 25 per cent, to be paid, 35 days.

Shrader and Haight, two-story building. Owner, Andrew Weber; architects, John & Zimmerman; contractor, Jacob Klein; cost, $3,800; signed, Dec. 15, 1888; filed, Jan. 2, 1889; limit, April 15, 1889.
Payments, $500, framed; $800, partitions set; $800, outside finish on; $700, accepted; $1,000, 35 days.

Sutter, No. 919 (in rear) two-story frame. Owner, Laurence Koebelin; contractor, F. W. Kern; cost, $3,240; sureties, F. Joost & O. Warderell; signed, Jan. 2, 1889; filed, Jan. 4, 1889; limit, 90 days.
Payments, $800, roofed; $800, brown coated; $800, ready to paint; $840, 35 days.

St. John and 13th, one-story frame. Owner, Dennis O'Leary; architect, James H. Humphrey; contractor, T. R. Bassett; cost, $1,125; sureties, Thos. Learned, $500; limit, March 1, 1889.
Payments, $281 25, enclosed; $281 25, brown coated; $281 25, completed; $281 25, 35 days.

Sutter, between Powell and Mason, Art. stone carriage way. Owner, Abby M. Parrott; architects, Pissis & Moore; contractor, Geo. Goodman; cost, $1,991; signed, Dec. 12, 1888; filled, Dec. 20, 1888; limit, 30 days.
Payments, $691, work half done; $800, completed; $500, 35 days.

Sutter and Lyon, two-story frame. Owner, Uriah Wallace; architect, S. Hatfield; contractor, A. A. Willis; cost, $2,740; sureties, B. Joost; signed, December 7th, 1888; filed, December 12th, 1888; limit, 90 days.
Payments: roofed, $600; brown coated, $485; plastered, $485; completed, $485; $685, 35 days.

Sutter and Powell, raise and move. Owner, Thos. D. Dennigan; architect, R. H. Daley; contractor, Wm. T. Commary; cost, $14,574; signed, December 11th; filed, December 12th; limit, May 1st, 1889.
Payments: moved, $500; graded, $800; brick work half done, $1,300; brick work done, $1,400; framed, $2,476; brown coated, $2,476; white coated, $989; completed, $989; $3,644, 36 days.

Second and Folsom, brick building. Owner, Boyd & Davis; architect, J. M. Curtis; contractor, Chas. C. Terrill; cost, $67,000; sureties, B. Joost and J. Kennedy, $25,000; signed, December 10th; filed, December 11th.
Payments: 75 per cent as work progresses; balance, 35 days.

Sanchez and Hancock, one-story frame. Owner, R. Miller; contractor, R. Elam; cost, $2,200.

Seventeenth, near Noe, one-story frame. Owner, G. Weber; cost, $2,000.

Twenty-Fourth and Shotwell, frame building. Owner, Val. Meinberger; architect, S. Hatfield; contractor, Thos. A. Moar; cost, $4,050; signed, Dec. 20, 1888; filed, Dec. 22, 1888; limit, 110 days.
Payments, $800 50, roof boarded; $745, brown coated; $745, outside finished, except lower story; $745, completed; $1,012 50, 35 days.

Union, between Steiner and Pierce, one-story building. Owner, C. H. Waterman; architect, Wm. Mooser; contractor, Geo. H. Walker; cost, $2,650; signed, Dec. 17, 1888; filed, Dec. 19th; limit, March 1, 1889.
Payments, $850, framed; $850, brown coated; $950 completed.

Van Ness, corner Clay, additions to St. Luke's church; architects, Curlett & Cuthbertson; cost, $1,500.

Vallejo, near Van Ness, two-story frame. Owner, J. McDonald; architect, J. Chadwick; contractor, T. Evans; cost, $5,000.

Vallejo, near Union, two-story frame. Owner and builder, Con. Murphy; cost, $6,000.

Vallejo, near Van Ness, additional story. Owner, H. Evans; contractor, Chadwick; cost, $3,000.

Van Ness Avenue and Pacific street, alterations. Owner, Amelia W. Coffin; architect, John T. Kidd; contractor, Bateman & Bros.; cost, $5,515; sureties, A. D. Moore and H. C. Smith; signed, Dec. 20, 1888; filed, Jan. 5, 1889; limit, 125 days.
Payments, $1,000, framed; $1,025, sashes in, and glazed; $1,000, white coated; $1,100, ready to paint; $1,390, 35 days.

Webster and Waller, two-story frame. Owner, James Williamson; architect, A. J. Barnett; contractor, Kincaid & Thompson; cost, $4,289; sureties, Frank P. Latson, $2,500; signed, Dec. 14, 1888; filed, Dec. 17, 1888; limit, 75 days.
Payments, $600, roof boards on; $1,100, brown coated; $1,214, completed; $1,075, 35 days.

Waller and Steiner, four flats. Owner, Alex. Thain, et al; architects, Donovan & Williams; contractor, Jos. Donovan, et al; cost, $5,855; signed, Dec. 14, 1888; filed, Jan. 2, 1889; limit, April 30, 1889.
Payments, $1,200, framed; $1,200, brown mortar on; $1,200, standing finish on; $1,200, completed; $1,050, 35 days.

Washington, between Laguna and Buchanan, two-story dwelling. Owner, F. Du B. Green; architect, J. C. Mathews & Son; contractors, Knight & Littlefield; cost, $5,337; signed, Nov. 20, 1888; filed, Dec. 29, 1888; limit, April 15, 1889.
Payments, 75 per cent of value of work performed and material used, to be paid from time to time as work progresses; balance, 25 per cent, 35 days after completion.

1 Page,	40 00	110 00	200 00	350 00

Full-page advertisements inserted among reading matter, fifty per cent extra on above rates.

Specially attractive advertisements, without extra cost, will be set up in the finest style where the advertiser furnishes cuts.

CASH MUST ACCOMPANY ALL ORDERS FOR ADS.

ADVERTISEMENTS ALONE INSERTED THAT REFER TO MATERIALS USED IN THE CONSTRUCTION AND FURNISHING OF HOUSES, AND TO MATTERS AND TRADES BELONGING TO THE BUILDING INTEREST.

NO OTHERS RECEIVED.

PARTICULAR NOTICE.—Each advertising page contains three columns, each of which is about two and a half inches wide. One inch means one inch in depth by two and a half inches in width.

Spaces on Cover and on page preceding reading matter are subject to special rates.

SAN FRANCISCO, FEB. 15, 1889.

CALIFORNIA ARCHITECT PUBLISHING COMPANY NOW HAS CONTROL OF THIS JOURNAL.

Articles of Incorporation of the above named Company have been received from the Secretary of State, and as soon as the By-Laws are prepared permanent officers will be elected.

Following are the Trustees named in the Incorporation papers to hold office for the first year:

ALBERT PISSIS, W. P. MOORE,
H. T. BESTOR, W. G. MATTHEWS,
OLIVER EVERETT, R. H. WHITE,
W. J. CUTHBERTSON.

Mr. Seth Babson has been intrusted with the duty of preparing the By-Laws.

Permanent rooms have been engaged at No. 408 California street, next to the Bank of California.

Direct all communications in future to the above address, as all business connected with the journal will be there transacted.

Secretary's office hours, 9 A. M. to 4 P. M.

NEW HEADQUARTERS.

Meeting of the San Francisco Chapter of Architects.

FOR the first time in the history of the State, those representing the Architectural Profession can lay the claim of possessing one of the neatest meeting rooms in the country. On the evening of February 1st the initial gathering was held. Many of those present were in the rooms for the first time, and uttered words of praise at the taste displayed in the selection of the carpets, chandeliers, chairs, etc. The main office is 16x36 feet in size, amply provided with light, and being on the sunny side of the street is warm enough without the necessity of keeping up a fire all day. In the rear of the main office are two large rooms, having conveniences of sun, light and water. A better location could not have been selected.

All Architects are invited to call and examine our rooms. Those from the country are cordially welcome.

S. F. CHAPTER, A. I. A.

The following members were present: G. H. Sanders, W. P. Moore, O. Everett, H. T. Bestor, J. E. Wolfe, Seth Babson, R. H. Daley, John Wright, W. H. Cuthbertson, J. M. Curtis, C. O. Laver, C. H. Hasty, J. Gash, G. H. Wolfe.

President G. H. Sanders occupied the Chair.

Report was received from the Committee appointed to confer with a like Committee from the Builders' Association, to prepare a proper form for a *Memorandum of Contract* to be filed in Recorder's office.

The Chairman, Seth Babson, presented proof copies of the form as prepared, to each member of the Chapter. Following is the document in full:

Memorandum of a Contract,

Made in writing, and executed and subscribed by the parties, at the City and County of San Francisco, the.....day of..... 18

FIRST.—The names of all the parties to said contract are .....who is designated therein as the Owner, and..... who is designated therein as the Contractor.

SECOND.—The property to be affected by said contract is situated in the City and County of San Francisco, State of California and is particularly described as follows, to wit: Commencing at a point on the .....line of.....street, distant .....feet.....from the.....of..... street, thence..... to the point of commencement.

THIRD.—The general character of the work to be done under said contract is as follows, to wit: The said..... as Contractor, agrees with the said..... as Owner, to furnish the necessary labor and materials, including tools, implements and appliances required in the execution of ..... in a workmanlike manner, in conformity with the plans, drawings and specifications for the same, made by.....the authorized architect employed by the owner, and which are signed by the parties hereto, and are to be kept and remain in the office of said architect, subject to the inspection of the parties hereto and others concerned in said erection.

FOURTH.—The total amount to be paid under said contract is the sum of.....Dollars, in U. S. Gold Coin, which sum is to be paid to the said contractor by the said owner in partial payments.

FIFTH.—The amounts of all partial payments, together with the times when such payments shall be due and payable, are as follows, to wit:.....

After a discussion, indulged in by all present, the form was unanimously endorsed by the Chapter.

A Committee of two—Wright and Daley—were appointed by the Chapter, to confer with the California Architectural Publishing Co., for the purpose of engaging the offices under control of the latter, as a permanent meeting room for the Chapter.

SKETCH OF AN OLD HOME.

Draughtsmen and Students.

Please Notice—It is our intention, in the near future, to issue an edition of the California Architect solely in the interests of draughtsmen and students. All the illustrations will be prepared by them and as far as possible all articles or communications will have their endorsement.

To do so, however, the parties mentioned should at once take hold of the matter in earnest and endeavor to show their friends and the public generally, the great improvement they have made in their studies.

Increasing Building Activities in the City.

No more conclusive and satisfactory proof as to the growth and prosperity of San Francisco, and the increase of its population could be desired than the fact that during each successive year of the present decade, thousands of houses for private residences and tenement purposes have been erected, and still the demand keeps pace with the supply. Within the last five years, especially, the building activities have been great, and at times many entertained and express the idea that "the thing is being overdone," and some even hesitate to improve their real estate, fearing a collapse, or the possession of houses without tenants. But the sequel proves that all such prognostication and fears were unsubstantially based, and that instead of a surplus of vacant houses, there are but few unoccupied, and those seeking desirable residences have to hunt long and diligently to find them—all of which goes to prove that San Francisco is boldly marching on in the race for city greatness, with every probability that ere the present century ends, her registers in every line of prosperity will be enviable in the highest degree; and with the limitations and disadvantages of issolation from the vast eastern centers of commercial and business life considered, her standing among the great and progressive cities of the continent will bear honorable comparison with but very few of those specially favored as to location and surroundings leading.

ARCHITECTS GENERALLY BUSY.

In further proof of all this, and that the present equals any period in the past in brilliant prospects, is the fact that the architects in San Francisco, with scarce an exception, are full of work, and every draughtsman worthy the name employed, so that the architectural forces in the city are at their best, preparing plans for early commencement, which also means that contractors and mechanics are destined to have their hands full at an early day, with the further probability that during the season the supply of skilled labor will be inadequate to the demand, and that the rates of wages will rule high, particularly in special departments. In this respect San Francisco is at a disadvantage, as compared with cities beyond the Rocky Mountains, where exegencies in the labor mart can easily be met by supplies from neighboring cities of a few hours' or days' ride by cars, at slight cost. But the barrier of two or three thousand miles' distance, and the earnings of a half month for fares across the continent, is not so easily overcome, and is likely, as it has done in seasons past, to render it impossible for contractors to fill up with qualified help. And this difficulty is more formidable, from the further fact that in Oakland, San Jose, Los Angeles, and the cities and towns of the state, generally, a similar degree of building activities prevail, so that from no quarter can increase of the working forces be expected.

LARGE BUILDINGS.

Present prospects are by no means confined to residence property, but extend to brick and stone structures, many of them of pretentous magnitude, and all of them requiring a large force of workmen.

In addition to those commenced, the *Chronicle* building, perhaps leading in cost and number of stories, the Bank building, corner of Bush and Sansome streets, the several fine structures under way on Market street, and in other parts of the city, there are a number of others contemplated, for which plans are made, or being made, which will require many millions of brick, and thousands of tons of stone and iron in their construction.

All this means more than employment for those who perform the work of construction, as the materials used in building will require the labor of other thousands to produce and manufacture into desired forms and shapes, and the employment of large capital in the various productions.

The iron from its ores, the wood from the trees of the forests, the bricks from the clay, the rock from its everlasting bed, the paint, glass, tin, lime, cement, the silver, trap, nickel and all other classes of material require busy hands to make them ready for building purposes. So that activity in building operations means prosperity in a thousand directions, and general prosperity in the counties in which they exist, following the direct line of involvements, and beyond these is the other essental fact, that by the successes and prosperities in life, the money with which to build is acquired; and the fact that so many building improvements are in progress or contemplated, is evidence that the people of this state, in a large measure, have been and are successful in their financial operations, the proof of which is clearly set up by the extensive activities prevailing throughout this city and state.

But, it may be asked, is this condition of things likely to continue? From all the evidences in sight, and all reasonable deductions, there can be but one answer—yes. With the steady increase in population that has been going on, and the fact that the results noticed are altogether the outgrowth of a solid, regular business condition of things, unaffected to any extent by stock or other bubble inflations, gives reasonable assurance that there is and will be permanency in the advances this city and state is now making, and that future years will prove the most sanguine expectations of the present well founded.

Thanks Will be Extended for a Prompt Settlement of Accounts.

All our patrons who are in arrears will kindly oblige by immediately forwarding the amount due. We promise the Architect will far surpass its previous appearance. In order to continue improvements, the subscriptions due should be immediately paid. Remember change of offices to 408 California street, next to Bank of California.

Architects are complaining of scarcity of good draughtsmen. When the boom broke in Los Angeles and vicinity, scores of draughtsmen were thrown out of employment. They naturally came to this city. Those who really possessed the proper qualifications secured situations. But many were totally incompetent and have wandered from place to place, condemning in the meanwhile, the inability of our architects to recognize their superior talent. Time has thinned out of the ranks of these would be architectural foreman, they, for the greater part, having taken up some other occupation. Competent draughtsmen can generally find employment at good wages, and only those thoroughly qualified should think of making a home in this city.

To drive rats and mice away from a building, make a strong solution of oxalic acid and soak newspapers in it until they are in a pulpy condition; cram this into the holes through which the rats or mice pass, and they will get such sore mouths and feet that they will give the holes a wide berth.

PISSIS & MOORE, Architects

A Supreme Court Decision of Great Interest to Contractors.

IN BANK.

[Filed December 8, 1888.]

RENTON, HOLMES & Co. vs. GEORGE MONNIER. } No. 11,344.

It appears from the record in this case that on the 14th day of April, 1882, the defendant entered into a written contract with one Valentine H. Harding, to construct for him a building on Howard street, in the city of San Francisco, for the sum of $8,957, to be paid in installments as the work progressed, and the first payment of $1,000 to be made when the frame was up to the second-story floor, including the second-story floor joists and frame of sidewalk.

It was provided that the building should be constructed "according and conformable to the drawings and specifications made by William Mooser, architect," and "in a good workmanlike and substantial manner, to the satisfaction and under the direction of the said William Mooser, the duly authorized architect, to be testified by a writing or certificate" under his hand.

The payments were to be made by defendant to Harding, his executors, administrators, or assigns, "provided that in each case a certificate be obtained and signed by the said William Mooser, architect, that said works have been done in the most substantial and faithful workmanlike manner, to the approval and full satisfaction of said architect."

On the 15th of April, 1882, Harding assigned to the plaintiffs the several payments to be made to him under the contract, by a written assignment which directed the architect to deliver to plaintiffs the certificates, and directed the defendant to pay to plaintiffs the several payments as they should fall due.

The contractor commenced his work and the first payment of $1,000 became due on the 29th of April, 1882. On that day the architect gave his certificate to Harding, and thedefendant paid him the $1,000, and subsequently refused to again pay the money to the plaintiffs.

The plaintiffs claimed that defendant had notice of the assignment and wrongfully paid the $1,000 to Harding, and they brought this action to recover the same.

The case was tried by a jury and the verdict and judgment were in favor of defendant. The plaintiffs moved for a new trial, which was denied, and then appealed from the judgment and order.

The principal question is: Did the defendant have notice of the assignment before he paid the money? If he did, the ptaintiffs were entitled to recover, and if not, they could not maintain their action.

It was proved that notice of the assignment was given to the architect on or about the 21st of April, and it is claimed for the appellants that this was constructive notice to the defendant and conclusively settled the question. Whether this claim is well founded or not depenes upon the extent and character of the architect's agency. The rule is well settled "that notice to an agent of facts arising from or connected with the subject matter of the agency, is constructive notice to the principal, when the notice comes to the agent while he is concerned for the principal and in the conrse of the very transaction." (Bierce vs. Red Bluff Hotel Co., 31 Cal , 165). But notice to an agent of facts not arising from or connected with the subject matter of his agency is not notice to the principal, unless actually communicated to him.

Agencies are general or special, and an agent has such authority as the principal, actually or ostensibly, confers upon him. (Civil Code, Sec. 2,315). In this case it is not claimed that the architect had any other authority than that expressly conferred upon him by the written contract for the construction of the building. That authority was: *First*—To see that the building was constructed according to the drawings and specifications in a good, workmanlike and substantial manner, and to testify in writing to that effect. *Second*—As the work progressed and payments became due, to sign and issue certificates that the work had been done in the most substantial and faithful workmanlike manner, to his approval and full satisfaction. *Third*—To decide any dispute which might arise respecting the true construction or meaning of the drawings or specifications.

The foregoing are all the powers delegated to the architect, and as to these powers the plaintiffs were fully advised.

The defendant reserved to himself the duty of making the payments, and it was a matter that in no way concerned the architect when or to whom the payments should be made. This being so, we are unable to see how it can be satd that the assignment was a fact "arising from or connected wrth the subject matter of the agency"; and in our opinion the instruction, requested by the defendant upon this subject, stated the law correctly and was properly given to the jury.

It was claimed by the plaintiffs at the trial that defendant had actual notice of the assignment before he paid the money, and in support of this claim one Bibb was called as a witness, and testified that he was the agent of plaintiffs, and that on the 25th of April he went to the defendant's saloon and exhibited and read to him the written assignment. On the other hand, it was claimed by defendant that no notice of the assignment was given or attempted to be given to him until the first day of May; and in support of this claim defendant was called as a witness, and testified that at the time he paid the money to Harding, neither Bibb nor any one else had informed him that the payments had been assigned, and that Bibb did not call upon him and exhibit the written assignment until the first day of May; that when Bibb called he exhibited a paper and asked witness to sign it, and he declined to do so; that he was a Frenchman and did not read or write English or understand what the paper meant, and so informed Bibb at the time; that he asked Bibb to come back when his clerk was in, and Bibb then went away.

At the conclusion of the testimony the Court, at the request of plaintiffs, instructed the jury that if the defendant had notice of the assignment to plaintiffs before or at the time he paid the $1,000 to Harding, then the verdict should be in their favor; and that a verbal notice of the assignment was all the law required. Afterwards an instruction reading as follows was given for defendant: "The defendant in this action is not liable to plaintiffs, if you find from the evidence that, at the time he paid the said sum of $1,000, involved in this action, to Valentine H. Harding, he had no notice that said Harding had assigned such payment to the plaintiffs. And notice given, in order to be effectual should be sufficient, precise and complete enough to put the defendant fully on his guard as to the fact of such assignment, and he should have understood it."

It is added for appellants that the last part of this instruction was misleading and erroneous, because it, in effect, told the jury that notice of the assignment would be ineffectual unless the defendant *understood* it, and it was sufficient to put him *fully* on his guard, thereby withdrawing from the jury the full consideration of the evidence upon the issues on which they were to pass. And in support of this position council cite Perkins vs. Eckert (55 Cal., 404.)

But it should be observed that each party to a lawsuit is entitled to have the law given to the jury, which is applicable to this theory of the case, and the testimony of his own witnesses. The Court acted upon this rule, and gave to the jury all of the instructions asked by the plaintiffs. The defendant's theory was that no notice of the assignment was given or attempted to be given to him until after he paid the money to Harding, and there being a sharp conflict of the evidence upon this question, that if notice was given it was ineffectual, because he did not understand it or know what it meant. Now, whether notice was given or not, and if given, whether defendant understood it, and it was sufficient to put him on his guard, or in the language of the code, to put a prudent man upon inquiry (Civil Code, Sec. 19), were questions of fact for the jury, and the instruction was evidently given to meet the defendant's theory of the case. Possibly the part of the instruction complained of might have been more happily written; but the question is, was it applicable to the facts proved by defendant, and did it state correct propositions of law.

Suppose a similar notice should be given to one who neither reads, writes, speaks nor understands the English language, would the notice be effectual and an instruction like that given here be erroneous? Evidently not. And yet we fail to see how the fact that defendant understood and spoke the English language to a limited extent can make any difference. If he did not understand what was read or said to him by the plaintiff's agent, and so informed the agent at the time, then the latter should have left with him a copy of the assignment, or should have returned for further explanation when the defendant's clerk was in. The case of Perkins vs. Eckert, *supra*, is not in point. In that case the question was whether a bill of sale was an absolute one, or was given as security, and an instruction was given which, in effect, told the jury that if plaintiffs understood it to be taken as security, and the defendants did not so understand it, they must find it to be an absolute sale. The instruction was held by this Court to be erroneous because it "withdrew from the jury the full consideration of the evidence upon the issue on which they were to pass."

In our opinion, under all the circumstances shown, the instruction stated the law correctly and was properly given to the jury.

When C. S. Holmes, one of the plaintiffs, was upon the witness-stand, counsel for defendant asked him, "What was the object and purpose of this assignment to you?" The question was objected to on the ground that it was immaterial and irrelevant, and that the terms of a written instrument could not be varied by parol testimony. Counsel for defendant replied that they did not wish to vary the terms of the instrument, but to show all the facts and circumstances surrounding the transaction. The Court then overruled the objection, and the witness answered that the contractor was a stranger to him and that he had procured bondsmen for him and did not want the money to go into his hands; that the assignment was made to secure his firm as against the bond and everything pertaining to the construction of the building. And he added that his firm advanced to Harding $165, before he received payment of the $1000, and that Harding repaid the money on the 2d of May. We see no error in the ruling. A contract may be explained by reference to the circumstances under which it was made (Civil Code, Sec. 1,647), and the testimony had some tendency to show that plaintiffs had such confidence in Harding that they may not have attempted to give notice of the assignment to defendant until the time named by him.

There is nothing in the next point made that the Court erred in permitting defendant's counsel to show that Harding borrowed money from the plaintiffs and repaid it. Holmes testified to the borrowing and repayment of the money without being asked to do so, and without objection from either side.

If it was error to admit in evidence the letter written by Holmes to Harding on the 16th of May, 1882, in reference to the disposition of all moneys which might come into plaintiff's hands under the assignment, the error was cured by instruction No. 3, which was given to the jury at the request of the plaintiffs.

The last point made by appellants is that the Court erred in allowing counsel for defendant to read in evidence the deposition of Valentine H. Harding, because there was no sufficient showing that he was out of the jurisdiction of the Court. The showing that Harding was out of the State probably might have been made somewhat fuller and more conclusive, but we think it sufficient to admit his deposition.

After carefully going over the whole record we find nothing calling for a reversal of the judgment, and therefore advise that the judgment and order denying a new trial be affirmed.

BELCHER, C. C.

We concur:
FOOTE, C.,
LAYNE, C.

BY THE COURT.

For the reasons given in the foregoing opinion the judgment and order denying a new trial are affirmed.

THE second design in the series of "Gem Cottages," which the accompanying cut illustrates, is, although somewhat larger, similar in appearance to that of number one. The general proportions are retained that it may conform to the same conditions and also in the line of economy; as a departure from the square or oblong to that of an irregular outline necessitates the forming of hips and valleys, hence a p oportionate increase in cost. Cottage No. 2 has all the requisites necessary to a complete moderate-priced home, including bath-room, grate in parlor, etc.

The principal entrance is into a hall of liberal size, from which access can be had into four of the six rooms comprising the main compartments and supplied with an abundance of light and ventilation by a large transom over the door, whose upper panel will be glazed with some neat pattern of figured frosted glass.

The parlor has ample room proportionate to a dwelling of this character and provided with ample light through the triplet windows, the smaller ones being designed with a transom over to be glazed in ornamented glass. The mantel may be of slate in imitation of marble, or if extreme economy be studied some tasteful pattern in cast iron could be substituted.

The bath-room, although somewhat unusually located, need be in no way objectional in that regard if the plumbing is of good quality and the room rightly kept, and both should have proper attention in those matters under all circumstances. This room should be wainscotted five feet high, finishing with a neat cap.

The chambers are both well provided with light and ventilation, each having a closet making them desirable rooms.

The dining-room is of liberal size with ample light furnished by the mullion window and can be, if so desired, provided with a china closet by substituting the cupboard in kitchen, where shown with doors opening on a counter shelf in dining-room three feet from floor, under which drawers for linen can be arranged. The kitchen is a desirable room with door at rear leading to back yard. The sink will rest on turned legs, leaving the space beneath open, which will allow the same to be kept clean and wholesome, rather than being cased up as usual, affording a receptacle for filth as is too often the case.

The pantry should be provided with not less than five rows of shelves, under which can be arranged flour chests, cupboards for kitchen utensils, etc. In the matter of construction the building should rest on brick piers extending into the ground below frost. The floors should be doubled, the first being of surfaced material over which lay one of matched soft pine, blind nailed, excepting in kitchen which should be of thoroughly seasoned Oregon pine, dressed smooth after laying and kept well oiled.

In a cold climate to assure warmth, would suggest a layer of asbestos paper between the floors; however, in no case the common building paper, as the leaking of water through the cracks produces a continuous damp floor and soon mould and rot away.

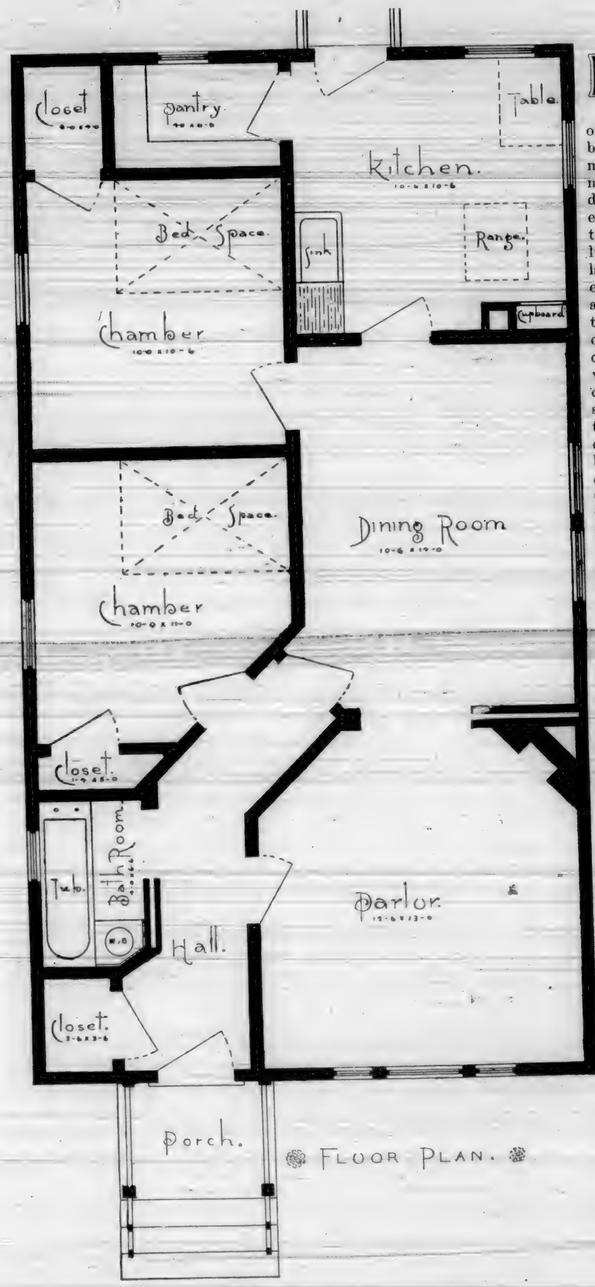
The kitchen should be wainscotted three feet high and over sink five feet to protect the plaster. The brick work for kitchen chimney should start thirty inches below ceiling line, resting on a solid bearing furnished by the uprights forming the side of cupboard. The brick work for mantel should start at a point below frost, resting on a footing of ample size, as suggested by the nature of the soil, and terminate four feet above floor line, the brest being formed by furring with studding to ceiling, care being taken to allow a space of at least two inches between the wood work and brick to guard against the possibility of fire. The interior should be finished in some of the modern styles of pilaster finish with a neat pattern of corner and plinth blocks. Transoms should be provided over all chamber, hall and outside doors to insure good ventilation, excepting however, the small sliding door into the bath room. Willler's sliding blinds are a good substitute for the common inside blind and much to be preferred; however, the English Venetian blind in the writer's opinion is still better.

The exterior, including roof, should be painted with at least two coats best lead and oil in two colors using only first-class material, as it is by far the cheapest. In reference to the interior would recommend a natural wood finish in hard oil, as it is the most durable, easily cleaned and no more expensive than a good job of painting. The cottage can be completed in a modern manner, using only the best materials and workmanship, at present prices in San Francisco, for a sum not to exceed $1800.

A. W. PUTNAM.

Draughtsmen and Students

Should bear in mind that we will soon issue an edition solely in their interests. Inform us at once if it is your intention to contribute either an article or a sketch.



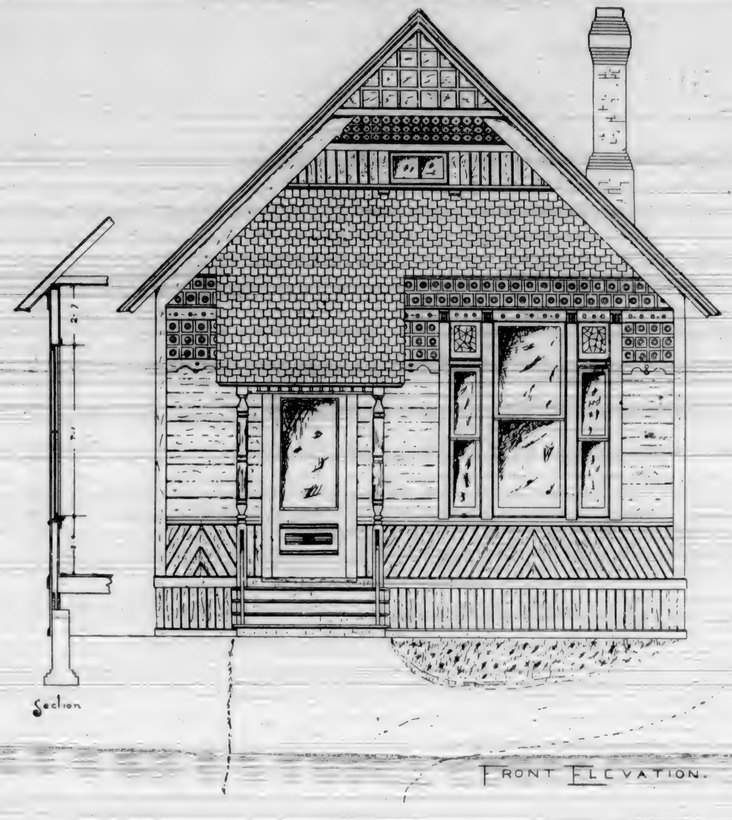
FLOOR PLAN.

EXPENSES OF ARCHITECTS.

FROM an article entitled "Are we Just to Our Architects," from the January *Century*, we quote as follows: "A doctor may manage a very large practice with a "plant" consisting of a small office, a brougham, a single assistant and a boy to open his door. A lawyer's outlay need not be much greater. But what are an architect's needs? It may seem very simple work to the public merely to design a building on paper, and 'merely' to supervise its erection by contractors who 'do all the real work.' But to design a building means to prepare, not only the little sketches and plans a client sees, but very many large scale drawings, requiring much time for their elaboration, and not only artistic reflection, but long and complicated mathematical and pecuniary calculations too. And to supervise construction means frequent and extended visits from the architect or some competent assistant. All this implies very large and well-lighted and very expensive offices, a numerous corps of assistants, some of whom must be men of great skill and long experience, and constant journeys, often to very distant spots. Every one knows the immense commissions Mr. Richardson received; but who remembers that he had more than a score of artists in his employ and took monthly journeys to Washington and Chicago? All architects must bear such burdens, but they fall much more heavily upon the American than the foreign practitioner. Rents are enormously high with us; the intense competition of Europe sends an established architect pupils who are willing to pay large premiums, while here salaries must be given from the start and must rapidly increase if good men are to be retained; and there is of course no comparison between the cost of journeys in France or England and those in our wide-spread territory. There are other facts which make an artist's task much harder here than in Europe and which tend to perpetuate the public feeling of distrust, but we merely wish at this moment to lay stress upon the fact that even the largest commissions on the most expensive class of buildings bring him a reward so disproportionate to that secured by an equal amount and quality of labor in other professions, that he may rank himself with the clergymen as among the least well-paid of our professional men."

A New Padlock.—Among the novelties put on the English market is a new padlock called the swivel, the object of which is to simplify the operation of locking. The swivel is reversible, so that the shackle can be opened from either side. A further advantage in the new lock is that owing to there being no open space by the shackle, moisture is effectually excluded. Another English manufacturer is putting up sash cord in boxes, which have an opening in front, through which the end of the cord passes. This system is referred to as largely adopted by other English manufacturers, and is said to be far preferable to the old method of doing up goods in hanks.

Probably the oldest timber in the world which has been subjected to the use of man is that found in the ancient temple of Egypt, in connection with some work which is known to be at least 4,000 years old. This, the only wood used in the construction of the temple is in the form of ties, holding the end of one stone to another. When two blocks were laid in place an excavation about an inch deep was made in each block, in which a tie shaped like an hour glass was driven, it is therefore, very difficult to force any stone from its position. The ties appear to have been of the timarisk or Shittim wood, of which the Ark was constructed.



FRONT ELEVATION.

The Relationship of Architecture to the Arts and Crafts.

THE arts and crafts in this country suffer, at the moment, from over-much professional jurisdiction; the public taste is being formed to accept the productions of a few self-constituted "masters" as the highest efforts of high art; the craftsman as a rule is well paid; and a fair day's skillful work for a fair day's adequate pay is what should be, without any question whatever, demanded and insisted upon.

As regards these professors, every credit must be given them for their honest endeavors in art education, but we absolutely deny that either an artist or a craftsman can be turned out of their schools fitted for the work at the office, the studio, or the building The requisite knowledge for the practice of the Arts and Crafts must be obtained after leaving the schools.

As regards the decorative arts, some of these professors appear to think that it is only necessary for them and a chosen few to meet in a room and declare themselves to be "Masters in the Arts," and thenceforth they are Masters.. In visiting their work I am not to criticize, I am to fall down and worship the golden image which they have set up. Who is Mr. Professor, that he claims an exclusive right in forming opinions on decorations and drawings? He may be, from his own point of view, a very great and distinguished artist—we will assume that he is—all we can say is that we are ignorant of the fact; and he may rest assured that if he were to write a thousand volumes and paint a thousand advertisements proclaiming himself a master whose opinions on art are not to be questioned, the effect upon educated men would be *nil*. When such a one had seen, analyzed, and thought over his works, he should say that they were good, bad, or indifferent, according to the lights of himself, not of those of Mr. Professor. Architects do not profess to be able to execute terra cottas, or to paint ceilings and vases; they do not claim the power to paint an easel picture better than a professional artist, nor to model a figure better than a sculptor; but they do claim the right to form their own opinions on questions relating to the fine arts without the benefit of a consultation with any decorative artist. To be sure the architect will find quite enough to do as regards the building proper, and the consideration and control of the high art accessories, without attempting himself to absolutely draw with his own hand, color with his own brush, and model with his own fingers those high art accessories. The architect's position is to design his building with beauty and build with truth—he is to lay down and apportion the parts to receive the designs of the sculptor, the painter, and the decorator—he is to review those designs, and to be able to pronounce upon them with wisdom and ability—he is to be, as it were, in consultation at all times with those artists, so as to produce that grand whole, that complete conception which is in his mind, and in his alone, but which is quite impossible that he can produce without the aid of specialists he is bound to consult and to work with. There is not, or ever will be, so much spare time left to the real architect that he can afford to fritter it away in silly drawings for silly women—let him leave table covers and curtains to those who know a great deal more about them and the proper designing of them; don't let us have too much of this taking Village Smith by the hand, and telling him that he is another Huntingdon Shaw, only he doesn't know it. Don't let us have too many grotesques and label them angels; but let us, on the contrary, while supporting in every way original talent and real art, crush this everlasting and sickening cry of—"We are a few superior artists; we are far, far removed from the common herd, and, although you may not think so, we really are great masters; for have we not ourselves declared it?"—William Woodward, A. R. I. B. A.

Cast iron weighs per cubic inch, .2603 pounds: u
bers, one-fourth of a pound to the cubic inch.

Inadequency of Architects Compensation.

THE inadequency of the compensation received by architects for making plans, specifications, etc., for dwelling houses, and supervising the work, furnishes a fruitful theme for consideration. People do not, as a general thing, appreciate the amount of labor required in the preparation and completion of a set of plans, specifications, details, etc., for an ordinary dwelling house. The reason of this is found in the fact that most people have little or no means of knowing the inside history of the preliminary work which has to be done and the time which has to be spent before the real work of preparing plans can be fairly begun. Even those who build are usually so absorbed in the interest and pleasure of building that they do not stop to consider how much they are receiving for the small sum usually charged for the architect's services.

Perhaps, therefore, a simple outline sketch, showing the manner in which a dwelling house, costing anywhere from five to ten thousand dollars, is generally evolved, from the first step to its completion and acceptance by the owner, may assist the layman to understand what it actually cost the architect in time and labor to prepare and supervise such a set of plans, specifications, etc.

This picture will be drawn from the architect,s point of view, and will therefore present a side little known to the public.

The client enters the office of the architect, full to overflowing of that all-absorbing topic—housebuilding, and, after the brief civilities of the day are over, informs him that he contemplates building a house for himself and family, and would like to talk about plans. He then usually produces a diagram showing the number and approximate arrangement of the rooms he would like, and proceeds to inform the architect what he wants, what he don't want, and how he wants it done. As soon as the client pauses for a moment, to catch his breath, the architect asks the question which has been trembling on his lips for the last half hour—"how much money are you willing to put into your house?" Almost invariably the client's reply to this simple question demonstrates the fact that what he wants and what he is willing to pay for do not agree, and the architect's first duty is to convince him of the fact. After an hour or two the interview terminates with a promise by the architect to make preliminary sketches and to guarantee satisfaction to the client. This latter promise is not always easily fulfilled, for sometimes a client proves difficult to please, but usually he is reasonable, and the architect succeeds, in time, in designing something which suits his client exactly. But he has merely found out what he really wants, and must now proceed to embody the same in the plans and specifications. Much time has already been spent in this preliminary work; perhaps half a dozen different sketches have been made, the client has visited the architect ten or a dozen times, sometimes bringing his wife and several other members of his family, and occasionally monopolizing a whole morning of the architect's valuable time, while important letters lay piled upon his desk requiring his personal attention, and requesting an immediate response, and several builders and contractors waited impatiently in another room for an interview regarding work already under contract or about to be let. By the time the house is completed some forty or more detail drawings may have been made, besides fifteen or twenty scale drawings and about forty visits made to the premises to see that the work was being executed according to the plans and specifications.

But this is not all; every office should have duplicate drawings for the purpose of reference. The plumber and the furnace man must have duplicates of such portions of the plans as relate to their respective departments, and if the work is let out in several separate contracts each contractor requires a duplicate for his own personal information. The architect is the first one to do any work on the house and the last one with whom the owner settles. The house may be six months or a year in building. In the meantime there are running expenses of the office to be paid, such as rent, draughtsmen's salaries, drawing materials, etc., to say nothing of incidentals.

Thus it will be seen that taking a five-thousand dollar dwelling house at the schedula price of five per cent., the architect is very inadequately paid for his services. In fact no architect can pay expenses on dwelling house work alone even at five per cent., but when he is compelled to take such work at three per cent., as many are, he finds to his sorrow that it is a losing business. But as the grocer keeps sugar to accommodate his customers, even though he sometimes loses money on it, so the architect must do dwelling house work, even though he does it at a loss, depending on the heavy jobs he may chance to get to help balance his exchequer.—*Architectural Era.*

The foregoing remarks from the *Architectural Era* represent fairly the circumstances under which architects prepare plan, and the manner in which they are remunerated. Many architects in this city do not receive the *true value* of their servicess owing to the limit of professional charges being placed at five per cent. Take, for instance, the case of an owner who is erecting a fine dwelling with all modern conveniences, at the extreme westerly limit of the Pacific Hights. The cost thereof may be in the neighborhood of $8000. The architect's commission is $400. Compare the work outlined in the article above with the amount noted. Add the forty or more trips to the locality mentioned, and what profit does the architect have for his time and talents. The hints given should be carefully noted by owners, and they should take pride in seeing that those who studied long and earnestly to make plans for a comfortable home, should be remunerated in a manner befitting their professional calling.

Pay Day and Welcome.

Subscribers to this Journal should bear in mind that the annual pay time of a large number of subscriptions has rolled around, and is now due and payable. All are earnestly requested to call at once and settle arrearages, and renew for 1889, and thus express such

A HEARTY WELCOME

To the new management as will assure it of undivided support from the members of the architectural profession, and every contractor, builder, material man, and of all classes and callings, engaged in works connected with building construction. Owners of property, those engaged in house furnishing, furniture, carpets or in any way identified or interested in housework should give both advertising and subscription support, as more than ever, this journal will become the great channel through which all important reliable business information and facts will flow.

Under a New Management.

This journal is now under the control of the "Architect Publishing Company." All accounts due are payable to the company, at their new offices, 408 California street, rooms 14, 15, 16 and 17.

All who intend to build a home for themselves should fully realize the importance of first knowing just what can be done with a given amount of money, in the building, furnishing and beautifying their buildings and grounds, so that when the whole is finished, they can truly say it is simply complete.

It has been found that steel mixed with twenty-four per cent of manganese becomes non-magnetic.

"Soaking" in the fire causes steel to become "dry" and brittle, and does it very great injury.

CHEAP LUMBER AND BUILDING.

WE took occasion, in a late issue, to allude to the rivalry that is being waged between our manufacturers of lumber and the damaging effect it is having on that interest, deprecating the same as tending to a useless waste of our own timber resources, besides being otherwise lacking in business sense. From the consequent cheapness of lumber there is resulting, however, some benefits to the community at large, albeit at the expense of the lumbermen themselves. The cheapness of this article has greatly stimulated building and other improvements involving a large use of lumber.

There is said to be in this city a greater number of dwelling-houses in course of erection at this time than ever before, the same being true of many other towns in the State, both interior and coastwise, except, perhaps, in the southern tier of counties, where the building "boom" has somewhat abated.

Aside from the houses being built, an unusually large number of contracts have been entered into for the erection of others to be put up during the coming spring and summer. Many business places, some of them large and costly structures, are also being built both here and elsewhere, their erection being prompted, in part at least, by the same consideration. Cheap lumber is not therefore, one of those ill winds that blows nobody any good.

It may in the end even work to the advantage of the lumbermen themselves, the impetus so given to building creating such a demand for their, product as will, through the depletion of stocks, force up the price of that commodity.

It is surprising the effect that a drop of a few dollars per thousand in the cost of lumber has on the owners of real estate, causing them everywhere to be seized with a desire for improving their property. The cost of labor and other materials may remain as high as ever, and even be advanced, yet this is all lost sight of in view of the lessened cost of this one article.

While the lumber question is one of moment with all real estate owners, it undoubtedly weighs most with small holders, the owners of only two or three lots, or perhaps merely a homestead, on which they make haste to build when the cost of this one item drops a little below the ordinary standard. That this view of the situation is correct is obvious from the improvements going on in the outskirts of the city of San Francisco. Visiting that quarter of the city we see hundreds of small houses being built, the most of them evidently intended for occupancy by the owners. But beside this class of tenements, which are apt to be widely scattered, there are others put up in long rows designed for rent, the possessions of larger real estate proprietors.

One going into the Western Addition, and seeing there so many houses being built, gets the impression that this suburb is forging ahead at a specially rapid rate. If he visit the southern part of the town, he is in like manner led away with the idea that this section is meeting with an abnormal growth. Out along the old Mission and the old San Bruno roads building enterprise is undergoing a wonderful expansion, as well as along both sides of the Potrero, lying off in that direction. Even up the sides and over the tops of the high hills occupying the southwestern part of the city, improvements are creeping, showing that these less desirable localities are already in request, with the prospect of becoming densely populated in the near future.

By reason of this large consumption of lumber, it is to be hoped that the manufacturers of that article will, through improved prices, find some compensation for the meagre returns they are now realizing from the products of their business.

The above from *Wood and Iron*, of this city, expresses the true state of the lumber market. We take pleasure in printing the article, as it coincides with many of the ideas advanced by the California Architect. *"It is surprising the effect that a drop of a few dollars per thousand in the cost of lumber has upon the owners of real estate."* Friend Everett, we cordially agree with you and beg to welcome you to our fold. Time over and again have we advanced that same proposition, and the same number of times have we been combatted, Friend Everett, taking the stand that a few dollars per thousand, more or less, did not or would not affect the price of building. It is not only the price of the rough lumber used, but the mill men make a vast difference on their bids, owing to the high value of surfaced lumber. This journal has always taken the stand that $22.50 was too high for lumber, while $12 or $13 per M, was a ruinously low figure. We believe that $18 is a fair price to consumers and manufacturers, and an earnest endeavor should be made to maintain the price of lumber at that figure.

FULL OF PROMISE.

The years since 1880 have been periods of gratifying and increasing prosperities in California, in all departments of building, commercial and business enterprises, checked only for a limited time by an occasional "dry season;"—some portions of the State "booming" to the utmost extent of possibilities, stimulated by every art and device known to those handling and manipulating property interests, while San Francisco and other cities, towns and sections have glided along in the even tenor of their ways, stimulated, growing and prospering alone upon the solid merits of the realities within their respective boundaries.

Such has been the state of facts particularly in the building interests. The building statistics from time to time appearing in this journal show the approximate, but not the ultimate, amount of investments, as often as the sum of contracts decided upon the commencement of operations, and upon which such statistics are based, are considerably increased before completion, by extras which in some cases amount to a considerable percentage on the sum of original contracts.

But viewing prospective results for current year from present datas the generally expressed prediction is that 1889 will be one of the exceptionally good years in this State. Everybody who can control their finances to that end, expresses the determination to build, and ere the summer months roll around, every building operative from architect to sewer-layer will have ample employment, with the very certain probability that the supply of labor in many of the departments, especially skilled mechanics, will be short of the demand. Hence, advance in the rates of wages in some lines may reasonably be anticipated, and those who commence later in the season may expect to pay higher prices than those who at the present time have their plans prepared and in the market for bids. Notwithstanding the large number of tenement houses erected each succeeding year, there are few desirable habitations to rent, and as fast as new ones are completed tenants are found to occupy them, thus evidencing the fact that those who have property to improve, and money to invest, run no risk in planting their surplus or available coin in building improvements, particularly at the present low price of lumber materials.

Plate Glass Making.—This is now an extensive industry in this country. The principal works are at New Albany, Indiana, where 1,500,000 square feet is made annually. Nearly as much is made at St. Louis, Mo., and a works at Pittsburg, Pa., turns out 360,000 square feet each year. The total is 3,000,000 square feet, or 568 acres of plate glass ground true and polished. No enormous plates, such as were exhibited at the Centennial exposition by French makers have been produced and are not required. Plate glass of unusual dimensions is a luxury, and posses no merit or advantage corresponding to its great cost. The value increases as the square of the area.

The manufacturers of perforated seats have combined. Their object can be seen through.

Testing Foundations.

ANY resistance of the soil to pressure or great loads is generally left to be determined by experience. In the erection of the weighty and lofty structures on the Champ de Mars in Paris, in connection with the forthcoming exhibition, experiments have been conducted with this object in view for the purpose of determining the size of foundations. The method adopted was to level a large surface of ground and place four rectangular blocks of cast iron, 1 foot, 8 inches square, so disposed as to form the corners of a square, the distance apart being 11 feet, 8 inches from center to center. These blocks were bridged by girders of T irons, and these were then loaded with the same until a total weight of 143,923 pounds was reached, when a settlement occurred. The pressure on the ground was 7.311 tons per square foot. During the night the settlement was increased about three-quarters of an inch. The load was increased next day to 209,776 pounds, when some of the corner blocks had sunk out of sight, leaving the girders on the surface of the soil. It was found by these experiments that the soil was capable of resisting a load equivalent to 5.43 tons per square foot. When the load reached 7.31 tons, settlement took place, and the ground was incapable of supporting a load of 8.14 tons per square foot. In heavy structures a weight of 8 tons per square foot is not unusual; several chimneys at Birmingham and St. Rollox, at Glasgow, exceed this amount of stress. St. Peter's at Rome bears a weight under the dome of nearly 15 tons per square foot, and it is estimated that the piers carrying the dome of St. Paul's, London, bear a weight per foot at the base of 17.705 tons per square foot. The very inadequate data furnished in books makes it necessary for the architect and engineer to make experiments when any heavy or lofty structure has to be supported. How many of the central towers and spires of our cathedrals have failed it would be impossible to say, though the examples of Chichester and Ely ought to be warnings. —*London Building News.*

State Rights For Sale.

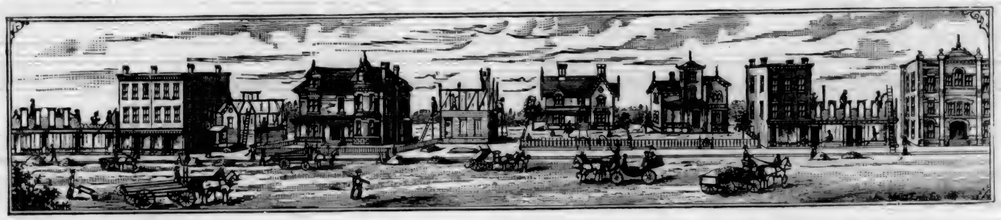
State rights, or the entire Pacific Slope, for sale, at bottom prices, of the best and most effective weather strips. Patent February 4, 1888. Excel all others for preventing air, dirt, water or snow from entering houses at the sides, top and bottom of doors and windows. No rattling of windows. No rubber or felt to loosen its elastic, but life-lasting symmetry in shape, with concave and convex interlock forming close joints. For prices, circulars and samples, address with stamp, E. P. Burcaw & Co., Hazelton, Pa.

Draughtsman's Situation Wanted.

Situation as draughtsman in an architect's office, by a young man about twenty-one years of age, who has served his time at the carpenter's trade, and has a good knowledge of framework construction. Has had no actual experience in office work, but can make plans, elevations and ordinary working drawings. Can also draw in plain perspective, and has a general idea of detailing. Wages not so much of an object as a good place, with a chance to work up. Can give references as to character and habits.

Address, this office.

In planning a large edifice particular attention must be paid to the situation of the stairs, so as to give the most convenient and easy access to the several rooms.



CITY BUILDING NEWS.

Broadway and Scott, two-story frame. Owner, A. Bouvier; architect, F. Wilcox; contractor, R. Smilie; cost, $5,500.

Buchanan, near Union, two-story stable; cost, $600.

Broadway and Scott, two-story and basement frame. Owner, Alfred Bouvier; architect, Fred. E. Wilcox; contractor, Robert Smilie; amount, $4,242; limit, 120 days; filed, January 17; signed, December 11. Payments, $1,200 framed; $1,200 plastered; $781.50 completed; $1,060.50 35 days.

Bartlett and 22d. Owner, F. L. Turpin; architect, Geo. A. Bordwell; contractor, R. P. Waddell; amount, $3,912; limit, June 1; filed, Jan. 23; signed, Jan. 21. Payments, $590, framed; $590, brown coated; $590, white coated; $597, completed; $790, 35 days after.

Bush, between Kearney and Dupont, stone work. Owner, Kate M. MacDonough; architects, J. M. Wood; contractor, O. E. Brady; amount, $14,500; limit, 60 days; filed, Jan. 22; signed, Nov. 8, 1888. Payment, 75 per cent work done, etc., on first Tuesday of each month; balance, 35 days after completion.

Brannan, near First. Owners, Warehouse Land and Improvement Co.; architects, Schulze & Meeker; contractors, Gray Bros., Artificial Stone Co.; amount, $2,472; sureties, C. A. Warren and F. S. S. Buckingham, $900; limit, 30 days. Pavement of one story and basement of warehouse, $618; 11,735 square feet are laid; $618, 23,470 square feet are laid; $618, completed; $618, 35 days.

Church, between Twenth-third and Twenty-fourth, carpentering. Owner, Frank Girot; architects, Schulze & Meeker; contractor, Jacob Klein; amount, $4,812.50; sureties, C. S. Holmes and F. Joost, $1,600; limit, 90 days; filed, Jan. 30; signed, Jan. 26. Payments, $608.50, framed; $1,000, partition studs up; $1,000, white coated; $1,000 completed; $1,204, 35 days.

Chestnut, near Larkin, improvements; cost, $500.

Central Ave., near California, two-story frame. Owner, Mr. Green; contractor, F. Weineohl; cost, $4,500.

Caroline, near Howard, two-story frame. Owner and builder, Chas. Warren; cost, $1,200.

Derisadero and Pacific, dwelling. Owner, A. D. Moore; architect, Clinton Day; contractor, Peter Crichton; amount, $14,200; limit, June 1; filed, Jan. 7; signed, Dec. 29. Payments, $4,000, ready to paint; $4,000, stairs and ready to paint; $2,650, completed; $3,500, 35 days.

Ellis, near Broderick, one-story frame. Owner, Mr. Green; contractor, Deane; cost, $2,000.

Eddy, near Boderick, two-story frame. Owner, Mr. Fortjee; contractors, Wheeler & Burdick; cost, $4,500.

Eighth, between Market and Mission. Owner, Manning; cost, $2,500.

Fifteenth and Noe, two-story frame. Owner, Robt. Acton; architect, R. H. White; contractors, Rountree Bros.; amount, $4,325; sureties, J. F. Kennedy and L. B. Doe; limit, 90 days; filed, Feb. 2; signed, Jan. 31. Payments, $900, roof boards on; $800, rough mortared; $700, finished up; $825, completed; $1,100, 35 days.

Frederick, near Second, additions; cost, $1,000.

Fourteenth, near Howard, two-story frame. Owner, L. Dumas; architect, J. Behrens; cost, $3,500.

Fourteenth Ave., between N street and Railroad avenue, one-story frame and basement building. Owner, Christian Hoerner; architect, D. Dodge; contractor, J. P. Rines; amount, $1,200; filed, Jan. 22; signed, Dec. 27, 1888. Payments, $250, framed; $250, covered; $300, brown mortared; $400, 10 days.

Gough, between Vallejo and Green, two-story frame. Owner, Annie Cassell; architect, W. H. Wharff; cost, $4,500.

Green, between Gough and Octavia, 2 two-story frames Owner, architect and builder; cost, $6,000.

Geary, near Gough, one-story frame. Owner, Crandall.

Geary, No. 428, moving and alterations. Owner, John Michel; architects, John & Zimmermann; contractors, Schutt & Krecker; amount, $3,995; limit, April 1; filed, January 17, signed, January 17th. Payments, $1,100 sidewalk walls completed; $995 brown mortared; $900 accepted; balance, 35 days.

Harrison and Fourth, two-story frame; 4 flats. Owner, F. E. Hesthall; architect, Geo. E. Voelkel, contractor John McKay; amount $5,100; sureties, Frank P. Latson and J. F. Kennedy, $5,000; limit, 3 months; filed, January 17; signed, January 7. Payments, $500 enclosed; $825 first coat plastering on; $1,300 second coat plastering on; $1,200 accepted; $1,275 35 days.

Henry between Sanchez and Noe, one-story frame. Owner, Winifred Ford; architect, J. C. Brown; contractor, J. C. Brown; amount, $1,250; sureties, Jno. O. Doane; filed, January 10; signed, January 8. Payments, $400 roof boards on; $500 plumbing done; $350 completed.

Howard, corner Fourteenth, one-story additions. Owner, L. Dumas; cost, $2,000.

Henry, between Sanchez and Noe, one-story frame. Owner, Mrs. G. W. Ford; contractor, J. C. Brown; cost, $1,500.

Howard, between Seventh and Eighth; frame. Owner, Thos. Brannan; architect, Wm. Mooser; contractor, C. A. Laherty; amount, $6,400; sureties, ehrend Joost and, John Rogers; limit, 100 days; filed, Jan. 29; signed, 25. Payments, 75 per cent as work progresses; balance, 25 per cent, 35 days after completion, receipted bills being produced.

Jackson and Devisadero, dwelling; owner, Annie M. Healy; architect, T. J. Welsh; contractor, James W. Smith; amount, $3,455; limit, three months; filed, Jan. 9; signed, Jan. 7. Payments, $800, framed; $800, brown coated; $900, finished; balance, 35 days.

Julian Ave., near 15th, additions; cost, $600.

Jackson and Buchannan, two-story frame. Owner, R. C. Foute; architect, Geo. A. Bordwell; contractor, R. P. Waddell; amount, $3,495; limit, May 1; filed, Jan. 31; signed, Jan. 29. Payments, $870, rustic on; $880, plastered; $870, completed; $875, 35 days.

Kearny and Geary, build vaults. Owner, M. H. de Young; architects, Burnham & Root; contractors, Wilshire Safe & Scale Co.; amount, $3,600; limit, Oct. 1. filed, Jan. 7; signed, Jan. 5. Payments, 75 per cent of labor and material to be paid for at end of each month, and balance, 25 per cent, 36 days after completion.

Kearny and Geary, painting and glazing. Owner, M. H. de Young; architects, Burnham & Root; contractor, H. J. Milligan; amount, $13,622.50; limit, 10 days after carpenter work is done; filed, Jan. 7; signed, Oct. 15. Payments, 75 per cent, to be paid in amounts proportionate to work done; balance, 25 per cent 36 days after completion and acceptance.

Kearney and Geary, brown sandstone. Owner, M. H. de Young; architects, Burnham & Root; contractors, McLellan, McGowan & Butler; amount, $14,500; limit, March 22, 1889; filed, Jan. 22; signed, Dec. 22, 1888. 75 per cent to be paid monthly, according to work done; balance, 25 per cent, 36 days after completion.

Kearny and Geary, plastering. Owner, M. H. de Young; architects, Burnham & Root; contractors, Boland Bros.; amount, $6,995; limit, 60 days; filed, Jan. 22; signed, Oct. 9, 1888. NO OTHERS RECEIVED.

PARTICULAR NOTICE.—Each advertising page contains three columns, each of which is about two and a half inches wide. One inch means one inch in depth by two and a half inches in width.

Spaces on Cover and on page preceding reading matter are subject to special rates.

SAN FRANCISCO, MARCH 15, 1889.

San Francisco Chapter, American Institute of Architects.

Since the Chapter secured rooms under their own control, the meetings have been better attended than at any previous time in its history. At the first gathering held in the new quarters, there were seventeen members present; at the last one held on March 1, after the regular business was disposed of, the members indulged in an all around conversation that was greatly enjoyed by those present.

Chas. Mau, of Oakland, was unanimously elected a member as Fellow.

Messrs. Babson, Daley and Cuthbertson were appointed a committee to revise the By Laws and present the same to the Chapter for consideration.

The following resolution was adopted. That it is the sense of this meeting that a prize be offered for the best design for a book case, for the use of the Chapter.

Under the new Regime.

The stockholders of the ARCHITECTURAL PUBLISHING COMPANY met last Tuesday and formally adopted the By-Laws previously presented for their consideration. The election of Directors immediately followed and the following were declared elected for the first year:

W. P. MOORE. W. J. CUTHBERTSON.
E. J. MOLERA. A. PISSIS.
S. BABSON. H. T. BESTOR.
O. EVERETT.

Subsequently the Directors met and elected the following named as officers:

PRESIDENT, - - - - W. P. MOORE.
VICE-PRESIDENT, - - - W. J. CUTHBERTSON.
TREASURER, - - - - S. BABSON.
SECRETARY, - - - - O. EVERETT.

For the present, the business management will remain the same as usual. All the officers elected are well known in the architectural profession and their names guarantee that the CALIFORNIA ARCHITECT will show a decided improvement in every department, over those of previous issues.

The success of the Journal since moving into their new quarters, has been somewhat remarkable. Scores of new names have been added to our subscription lists. The advertising pages tell their own story. Our illustrations are far superior to those we have hitherto presented. The paper used in printing was imported solely for our own use. Our offices are beautifully furnished. List of exchanges include all the prominent ones in the U. S. The reading room will be supplied with all the latest works on architecture and kindred sciences. All our friends are invited to call and examine the new Architectural Headquarters in the building, 408 California street, next to the Bank of California.

Premium for a Design for Book Case.

At the last meeting of the Chapter of Architects, it was decided to offer a premium for the best design for a book case for the new rooms of the Chapter. The prizes will be announced in our next issue.

Draughtsmen and Students Edition.

We would like to hear from more of our students in architects' offices in the country. Those in the city have expressed a great willingness to do all they can towards presenting an edition that will justly represent the progress made by them since adopting their profession. We want the country well represented. The edition will be solely in the interests of draughtsmen and students.

The Hibernia Bank Competition.

Architects generally are satisfied with the awards made in the Hibernia Bank competition. Architects from different sections of the east entered the competition. A large number of our local talent prepared plans for same. The result is as follows:

First premium, Pissis & Moore. These gentlemen prepare all plans, have the superintendency of the buildings, etc.

Second Premium, $1,000 awarded to Schmidt & Shea.

Third premium, $500 awarded to T. J. Welsh.

One noticeable feature in the competition should be mentioned, viz. the generalgood feeling that prevailde among the contestants. There was no sign of jealousy shown. The fact that Eastern firms were preparing plans, only stirred our own architects to greater exertions, and had the prizes been won by our friends on the other side of the Rockies, they would have received hearty congratulations from their professional brethren in this city.

The building contemplated will be one of the finest in the city, and, when fully completed, will not have cost much less than $400,000.

Filing and Abstracting Contracts.

Between the legal requirement that all building contracts in excess of $1,000 shall be filed with the County Recorder to insure their validity and force, and the stealing thereof from the official files, there is but little difference in a moral aspect of the case. Both are wrongful acts, and neither is defensible by the logic of reason, right or justice.

When, a short time since, it became known that one or more—and how many more has not been made known—of contracts, filed in compliance with the requirements of a form of lien law found upon the statute book of this State, had been carried away without permission—*i. e.*, stolen from the office of the County Recorder—the question became general as to the reasons why they were taken, and the motives that influenced the theft. The *special* reasons and motives that actuated in each case are the secret of the stealer alone; but it is very transparent that the motives were dishonest and corrupt, and the purpose in view to gain some point of advantage not possible under the rightful order of things, and which could be secured only by the removal and virtual destruction of the legal, written testimony; or a spirit of malice and spite toward one or both of the parties to the contract missing might have led some one to pocket the papers, not for any pecuniary advantage to the party, but with the intent to make trouble between others. Very many additional possible and probable suggestions might be added, but they are immaterial as to the facts of the case.

But the affair serves to illustrate one of the numerous beauties of the lien law in this State, which requires that *only building contracts*, when in excess of $1,000, shall be filed in the County Recorder's office to save them from being "*wholly void*"—a proposition as devoid of reason and fair dealing as it is of merit and soundness. Still, such is the law on the statute books, although both State and National constitution declare that no law shall ever be passed by any State Legislature "impairing the obligations of contract." But the law making Solons of Californians who aided in formulating and passing the present lien law, among its numerous other unjust and oppressive provisions, injected the filing idea as a mild but decidedly effective means of nullifying constitutional restrictions upon the points in issue, beside which its supreme *special* character renders it unconstitutional and void.

Quarterly Summary of Building Operations.

But once, since records have been kept, has the summary for the present first quarter of the year been exceeded in value, and then only by the bonanza year of 1885. The comparison stands for the first quarter of each year, as per table:

Year.	Engagements.	Value.
1885	288	$2,069,261
1886	252	1,359,532
1887	191	1,209,100
1888	173	1,049,800
1889	238	1,874,600

For the present quarter the summary shows:

Month.	Brick.	Value.	Frame.	Value.	Alterations.	Value.	Total.	Value.
January	4	$131,000	64	$420,200	16	$93,500	84	$ 420,200
February	9.	832,000	49	218,600	13	26,900	71	1,077,500
March	4	63,000	69	287,000	10	26,900	83	376,900
Totals	17	$1,026,000	182	$925,800	39	$147,300	238	$1,874,600

In above we have allowed $450,000 as the cost of the new *Chronicle* building. The numerous large buildings to be erected will make the summary of this year equal to or surpass that of 1885. The Academy of Science building, the Hibernia Bank, the Parrott building, the Olympic Club edifice, etc., are all costly buildings, the value of the four mentioned being well on to one and a half millions of dollars.

Owners are to be congratulated on the present prices of building materials. Several of the leading lumbermen have assured us that the large prices asked last year for lumber will not be reached this year. They seem determined to have a market in San Francisco, irrespective of any country demands.

On the whole, prospects never looked better for an active season than they do at present.

IRON SHUTTERS AND FIRES.

FIRE and water calls attention again to the discussion which has been going on in the newspapers about the value of iron shutters in protecting buildings from the effects of conflagrations outside of them, and makes some very timely remarks on the subject. The history of the curious case in New York, where a building considered nearly fireproof was destroyed, with its contents, because the firemen found it for a long time impossible to open the iron shutters, or break through the brick roof, so as to throw water on the blazing goods inside, has been copied into nearly all the daily journals in this country, and many foreign ones, and, with their usual celerity in reasoning from the smallest possible number of facts, the newspaper theorists have decided that buildings would be better off without any shutters at all, and there is some danger that they may persuade owners of store property in some cases to refuse to use them. It ought to be needless to say that this would be a grave misfortune, and the underwriters' associations should be on their guard against the dissemination of such notions. Of course, the real object of shutters is to keep fire on the outside from entering a building, and they accomplish this object a hundred times for every time that they prevent firemen from reaching a blaze inside the building so protected. Moreover, there is no necessity for fastening iron shutters in such a way as to keep firemen from opening them from the outside. In New York where burglars are more dreaded than fire, as there is no insurance against their ravages, outside shutters are usually firmly secured on the inside, but in Chicago, if we are not mistaken, it is the rule to arrange the shutters so that all of them can be opened from the outside, and in many places one window in each story is protected by shutters so arranged. One of the best shutters we have seen is a patented one, which fastens on the inside, with a latch hooking over a bar, in the usual way, but has on the outside a plate, connected with a small lever passing through the shutter, by which the latch can be lifted. The plate protects the small opening through which the lever passes, and is so arranged that by directing a powerful stream of water upon it, from a fire engine or hydrant, the lever is moved, lifting the latch, and allowing the shutters to swing open, which they do under the pressure of light springs. A shutter of this sort is as safe against fire as anything that can be made, yet it can be opened in a moment from the street by the firemen without requiring ladders, which can hardly be used if a fire is raging on the opposite side of the street, or after the flames have burst out of the lower windows of the building to be dealt with.

Draughtsmen and Students' Edition.

We have received a fine collection of drawings from a student in the Livermore Valley, and they will appear in the edition which we will present, illustrating the progress of our draughtsmen and students. We hope to have at least, the studies of young men from twenty-five different offices. On our part, we will take extra care in having the cuts (illustrating the drawings) of a superior character. Please send word to this office in regard to your furnishing drawings.

Our Illustrations.

The engraving on page thirty-three represents an elevation of a tall building similar in design to many of those being erected in the East.

"Precita" and "Tiburon" were kindly furnished us by Mr. S. Newsom, architect, of this city.

By the first of April, it is now officially reported, that wonderful creation the Eiffel Tower at Paris will have reached its full height and been entirely completed. At present it stands 825 feet high and weighs 7800 tons, and there remain but 800 tons to be added. The committee has selected three different models of lifts. Two lifts will go up to the first platform, two others to the second, and another lift will move between the second and the third platform in a vertical line. The whole trip up will take five minutes, and the cages will be able to take up 750 persons an hour to enjoy the novel and magnificent panorama spread before them from a height of close to 1,000 feet. The building of this novel structure was a tremendous undertaking; it remains to be seen whether or not it will, as has been predicted by some, turn out simply a costly curiosity of a day.

A Man in the Kitchen.

NO man worthy of the name, permits his wife, or any woman in the house, to perform the heavy drudgery of carrying coal and wood, caring for furnaces and stoves, moving stoves or heavy furniture, beating carpets, and so on. But this not need not be the limit of a man's usefulness about the house. There is no good reason why a man should not be able to broil a steak, boil or bake potatoes, cook an egg, make coffee or tea, and prepare other articles of food should an emergency arise to make it desirable (and such emergencies do often arise); and do it, too, without turning the kitchen and dining-room topsy-turvy in the operation. Some men can, and do, accomplish such work, and even make biscuits, griddle cakes, and the like. A woman whose husband is in the habit of "taking hold" when needed in housework, has been heard to say that she would rather have him to depend on in case of indisposition, or other emergency, than any girl that could be hired. He does not interfere when there is no cause for it, but he saves labor for his wife and expense for himself, and he is not at all ashamed of doing it, nor afraid to undertake it. No man need be; rather any man should be ashamed of unwillingness, and should regret inability to perform any ordinary household task on occasion.—*Good Housekeeping.*

Preliminary Announcement—Mechanics' Institute Fair.

The Board of Trustees of the Mechanics' Institute announce that the Twenty-fourth Industrial Exposition will open at the Pavilion on Larkin street on Tuesday, August 27th, 1889, and close Saturday evening, October 5th, 1889, and respectfully solicit contributions in every Department of Invention, Industry, Art, and the natural resources of this Coast.

Medals of gold, silver and bronze, with an elegant engraved diploma, will be awarded to such articles as may be found to merit special distinction, and competent jurors will be appointed to examine and report on the same, unless the owner shall, at the time of their reception give notice that they are for exhibition only.

The Department of Machinery will be enlarged and specially prepared for machinery in motion, for which ample steam and power will be furnished, including water.

By the easy approaches to the building, heavy goods can be conveniently handled, while all contributions can be quickly and inexpensively placed.

The Art Department will be specially attractive in oil and water color paintings, black and white, sculpture and photography.

A Musical Programme will be rendered each afternoon and evening by an orchestra of fifty eminent performers.

At night the building will be brilliantly illuminated with gas and electricity, and at all times everything possible will be done by the management for the comfort and convenience of visitors.

Inventors of new machinery or appliances will find this a rare opportunity to bring their improvements before the public for approval or sale.

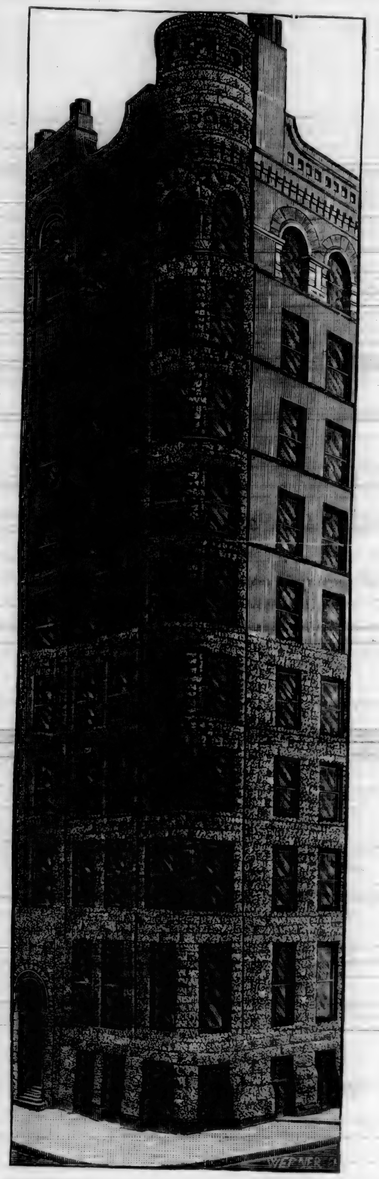
The value and advantages of these Fairs of the Mechanics' Institute to the Community and State is now unquestioned, as they disseminate information, and bring to the eyes and judgment of visitors the advancement, superiority and variety of the manufactures and products produced here.

A vast influx of desirable immigration may be expected to this State in the near future, owing to the great efforts lately made to illustrate our natural advantages, and the eyes and hearts of thousands of our fellow men eastward are longing for the west, and when they arrive, naturally go to these Expositions to examine for themselves what has been done and judge what may be accomplished.

You are earnestly requested to give the matter attention, as the managers greatly desire an exhibit from you this year. Aside from direct personal benefit, any one who places or exhibits specimens of his or her handiwork, does something that tends to establish an enlightened and prosperous population, extend practical knowledge, excite emulation, and add something to the greatness of the State, and benefit to the community.

A carefully revised Premium List is being prepared, and, with the Rules and Regulations, will be ready for distribution at an early day.

Any desired information will be promptly sent or given on application to the Assistant Secretary, No. 31 Post street



In our January issue we inadvertently made use of a wrong word in our description of the cuts presented. Only a word, and yet it caused quite a misunderstanding. We said, "the cuts were *designed* by C. Bryant Schaefer. We should have said *sketched* instead of *designed*. Plate 11, illustrating the "Old Colonial Style" was prepared by Mr. Schaefer expressly for the California Architect. The others, for which credit is given to the gentleman named, should have read—sketched from the originals for presentation in this Journal. We are exceedingly sorry for the blunder made, and cheerfully, as far as in our power, release the gentleman named from any complicity in the matter. It was solely and wholly our own fault.

"TIBURON." Front Elevation of a One Story Cottage.

Present State of the Lumber Trade.

Building in the city is more than fairly active for this season of the year. As a rule, activities in the building line in the various counties of the State are in a forward condition. While the erection of buildings in the southern part of the State received a severe set back last year, we are pleased to note there is a partial recovery and many new engagements are being made.

The price of lumber has been raised and we now quote rough pine $16 per M; 1x6 flooring $28 per M; 1x4 flooring $30 per M; rustic No. 1, $35 per M; surfaced, No. 1, $30; rough redwood $18 per M.

The above rates are none too high. This journal has always advocated the price of $18 per M, as being a just and equitable one to mill men and those who use their manufactures. Even this price may be subject to a small advance during the very busy parts of the year, when wages are abnormally high in all branches of trade.

But we will enter our protest against the unusual high standard of rates adopted last year being again enacted the present season. Should another boom strike any portion of the State, and the residents thereof desire an unusual quantity of lumber in an unusual short time, we are perfectly willing that they be permitted to pay for such unusual quantity. As the demand, however, in this city is a steady one, we think prices ought to correspond, and we see of no reason why the prices of lumber should vary to any considerable extent from those quoted above.

Ventilation of Public Buildings.

The question of ventilation has always been a serious one with architects. No matter how cold it may be, a proper amount of fresh air is absolutely necessary. The colder it is, the more fires it is necessary to have, and the more demand is made on the oxygen in the air in the room. So in a school house; hundreds of little bodies must have air to breathe, and yet must not have that air introduced in such a manner as to cause sneezing fits, colds in the heads, and all those little ills that come to those who sit in a draught. ABRAHAMSON'S VENTILATORS are the one thing needfull to remedy the above defect. By their use, one can sit in a room, and no matter how loud the winds may howl, can breathe all the fresh air necessary, with no danger of catching cold. Try them in one window and you would soon order your whole house to be thoroughly equipped with them throughout.

New Plans Adopted.

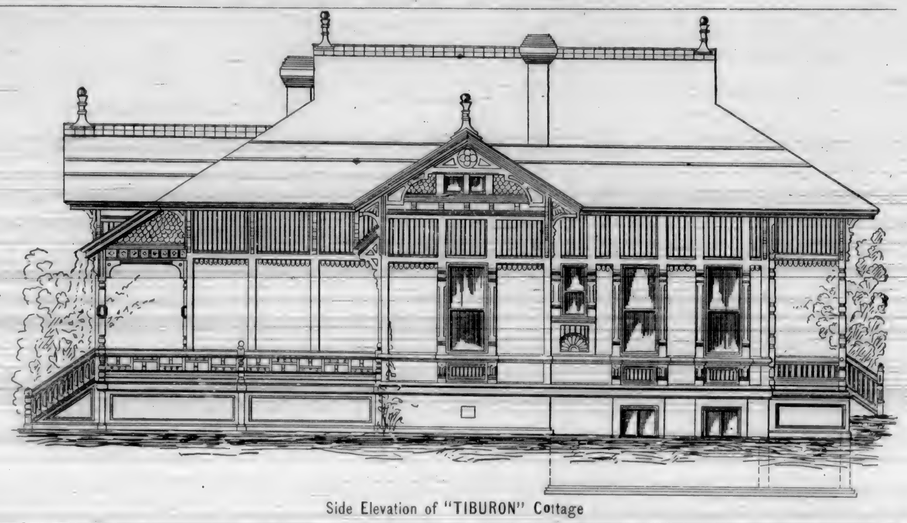
The Trustees of the Lick Baths have accepted plans for a building prepared by architects Wright & Sanders to be erected on the lot corner of Howard and Tenth streets. This lot is 113 x220, and cost $38,000.

The new building will cover a portion of the lot, having a frontage of seventy-six feet and a depth of 220 feet, leaving the remainder of the lot for the present unoccupied. The designs show a one-story stone building, with a dividing hall near the Howard street end of the lot. In the rear of the building there will be a high tank tower, and still further to the rear of the lot an engine-house and chimney. There will at present be only tub baths, the idea being at a later period to build a plunge bath on the remaining portion of the lot. On the right and left of the wide entrance, waiting rooms are to be provided, and behind them the baths. The remaining length of the hall between the two sets of baths will be divided into laundry and drying rooms, as well as a kitchen and apartment for attendants. The new structure will be perfectly fire-proof, the bath-tub walls being built of cement bricks, and the floors tiled throughout.

Admission of Air to Rooms.

AIR should be introduced and removed at those parts of the room where it would not cause a sensible draught. Air flowing against the body at, or even somewhat above the temperature of the air of the room will cause an inconvenient draft, from the fact that, as it removes the moisture of the body, it causes evaporation or a sensation of cold. Air should never, as a rule, be introduced at or close to the floor level. The opening would be liable to be fouled with sweepings and dirt. The air unless very much above the temperature of the air of the room, would produce a sensation of cold to the feet. It may be regarded as an axiom in ventilating and warming that the feet should be kept warm and the head kept cool.

The orifices at which air is admitted should be above the level of the heads of persons occupying the room. The current of inflowing air should be directed toward the ceiling, and should either be as much subdivided as possible by means of numerous orifices, or be admitted through conical openings, with the smaller opening toward the outer air and the larger openings toward the room, by which means the air of the entering current is very rapidly dispersed. Air admitted near the ceiling very soon ceases to exist as a distinct current, and will be found at a very short distance from the inlet to have mingled with the general mass of the air, and to have attained the temperature of the room, partly owing to the larger mass of air in the room with which the inflowing current mingles, partly to the action of gravity in cases where the inflowing air is colder than the air in the room.



Side Elevation of "TIBURON" Cottage

The Lumber Dealers' Exchange.

In 1881, the California Lumber Exchange was organized by the Retailers of lumber in San Francisco. Its fortunes were varied, as the lumber trade has varied in the years past, and when the fall in prices last fall startled the whole community the California Lumber Exchange disbanded, and became a thing of the past. But the dealers in lumber did not despair, and in October last the Lumber Dealers' Exchange was organized, and the following firms became members: Blyth & Trott, Mission and Spear streets; Kennedy & Shaw Lumber Co., 840 Fourth street; Christienson & Lord, 24 Tenth street; Doe, Chas. F. & Co., Spear and Howard street; Engle & Son, Fillmore street wharf; Humboldt Lumber & Mill Co., 727 Bryant street; Hooper, C. A. & Co., Fourth and Channel streets; Hill & Co., 237 Berry street; Harris & Jones, 838 Bryant street; Kruse, J. H., Mission and Shotwell streets; Kentfield, J. & Co., 318 Stuart; Kelly, Hare & Co., Eleventh and Railroad avenue; Lewis & Swift, 215 Spear street; Little & Knowles Lumber Co., Mission and Main streets; C. E. Pillsbury, 2735 Mission street; Morrison, G. H., 575 Brannan street; Preston & McKinnon, Pier No. 5, Steuart street; S. H. Harmon Lumber Co., 316 Steuart street; Pattridge R. K., 128 Steuart street; Starbird & Goldstone, 101 Market street; Simpson Lumber Co., 48 Market street; Smith, G. F. & Co., Pier No. 9, Steuart street; San Francisco Lumber Co., Pier No. 12, Steuart street; Wesson, J. W., Pier No. 19, Steuart street; Asmussen Geo., 2813 Mission street; Slade S. E. & Co., Pier No. 14. Steuart street. At their first meeting, Col. W. C. Little was elected President; R. K. Pattridge Vice-President; J. J. McKinnon, Treasurer, and F. E. Preble, Secretary.

This association consists of the largest and most extensive dealers on the coast and the capital represented extends into the millions.

Brick Residences Should be Painted.

Statistics show that people live longer in brick houses than in stone, and that wooden houses are the healthiest. This suggests the idea of using paint on masonry. An authority states that a hundred years ago it was fashionable to paint brick buildings white, and many charming old structures remain to attest the value of the coat of paint in preserving the masonry, and its pleasant, homelike effect is a foil to the vines and shrubs with which even city houses are now commonly adorned. If it should prove, as might be easilyascertained, that the painted brick houses preserve their inhabitants more effectually from sickness and premature death than the unpainted ones, it would be worth while to revive the ancient fashion, and with our greater resources in the way of materials and ideas, exterior coloring might become as important an accessory to the architecture of the twentieth century as it was to that of the twelfth or thirteenth.

"PRECITA." Front and Side Elevation of Suburban Cottage.

Photography in the Draughting Room.

H. T. Bestor.

No. 1.

THE time is not far distant when every well appointed architectural draughting room will have a full apparatus and facilities for the reproduction of drawings by the aid of photography.

Some of the processes in use are comparatively inexpensive and easily worked; the more complicated formulas being more economical than the old method of tracing.

Singular as it may seem, the first attempts to utilize the action of light in the formation of pictures was for the purpose of making copies of line drawings and writings.

It was not long before the possibilities of the art had become so extended that the experimentalists of that period diverged into two main lines or branches, each with a definite object in view.

One set of experimentalists followed the original course, and endeavored to perfect the methods for the reproduction of drawings, more especially for the purposes of the engraver and etcher.

The result being that almost every class of engraving has profited by the use of the art.

The other branch of experimentalists worked with the desire to produce and fix the pictures from nature with all the gradations of light and shade, and to print the same, retaining the delicate half lights and shades.

That this was also successful may be seen in portraiture and views.

The "blue print" and some other process for making duplicate drawings, lay dormant for thirty or more years and then resumed.

In certain instances where processes were declared of no practical utility, they have been improved upon and made practical.

In some of the methods in use, the operator can procure paper already prepared, which is very convenient, but it is often useful to know how to prepare it when required.

Some of the processes tried during the earlier periods of the art as curiosities, are now being revised and experimented with by capable persons, and one in particular, the platinum, may be the process of the future.

Nearly all photographic formulas and instructions are based upon the supposition that the reader has already attained to some knowledge of the supject.

The object of these articles will be for the instruction of those who do not know. Even at the risk of being tedious the various manipulations and modifications required for office work will be described in detail.

Not a ray of sunlight can fall without modifying the structure and properties of the substances exposed to its action, and under certain conditions appears to impart to bodies some power by which they more readily enter into chemical combination with others.

Surfaces prepared in a manner to hasten their mutual reactions under the influence of light are termed sensitive or sensitized.

The science and art of photography deals with such changes for the production of pictures.

Such being the case, we will first consider the light, its quality and intensity being of the utmost importance.

The theory of optics will be considered only in relation to the subject before us.

The theory is that the blue or violet, and of the spectrum has the most intense actinic influence, a red or even a yellow light being used to light the "dark room," with the introduction of bromide, sensitive surfaces it was found that the yellow did not sufficiently retrain the actinic rays, and red lights were substituted for the yellow. Recently surfaces have been prepared, which are senstive to the influence of both yellow and red rays, as red light does not afford the necessary protection, the question remains unanswered, how to light the dark room?

Heat hastens chemical action, therefore, it is not improbable that the red or heat rays assist in the chemical reactions under the influence of light.

Some have advised that the printing should be done under blue glass—no particular advantage appears by so doing.

For camera work and for printing, where the more delicate half lights and shades are to be brought out, the light may be graded to suit the work in hand.

For most printing from line drawings, a full strong sunlight is best, and in all cases the rays of light should strike the glass penpendicular to its face.

When the drawing is made upon paper, the light will work under the lines and mar the effect, more especially when the light falls obliquely upon the glass.

For blue prints, the best effects are produced by strong, direct sunlight, when the drawing is made upon paper unprepared. Indirect light is unreliable, when the drawing is on linen, or on paper made very translucent; an indirect light, as from the sky in an atea may give fair results.

When such conditions exist, or when any combination of circumstances interfere with the direct rays of the sun, a series of experiments should be made, noting the time of day, appearance of the sky, whether clear or cloudy, how the light appears upon any surface which may reflect upon the work, noting at the same time the material upon which the drawing is made.

These experiments should be noted in a small book kept for the purpose, and hanging against the wall near the printing window.

In experiments to ascertain the proper time of exposure for printing, the following method will be found useful:

Take strips of the different materials used for the drawings, and make a few lines upon the face with the same ink as is used for the drawing; put these strips in the printing frame properly, set to strips of sensitive paper as used; expose in whatever light available, say, five minutes, then cover a portion of each strip with a heavy cardboard; expose five minutes longer, then slide the cardboard so as to cover another portion; continue these partial exposures till half an hour or so has passed; then remove from the frame, wash and fix.

It will be seen at once, what exposure to make, under existing circumstances.

If the chloro bromide process is worked, diffused light is to be preferred; in fact, it requires a few seconds only by gaslight.

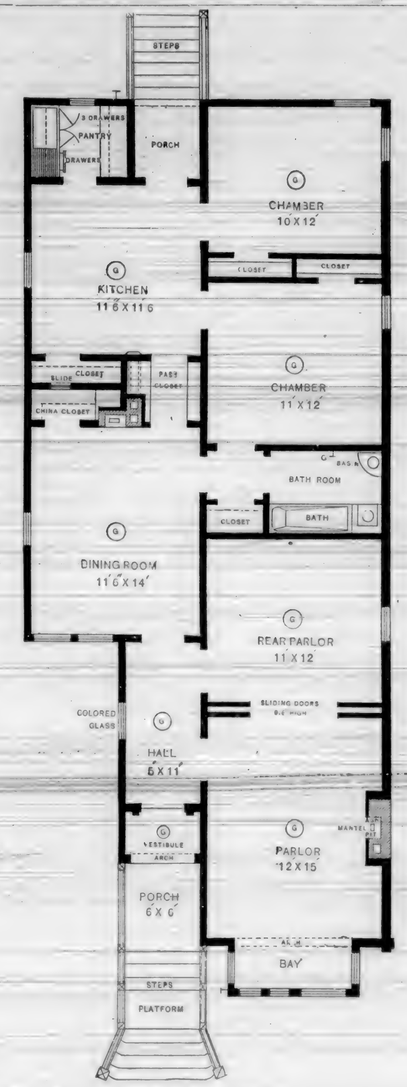
It will be seen by the foregoing remarks, that whatever the conditions may be as regards light, some process can be worked even with gas or candle light.

Architecture as a Profession.

ONLY eagles and reptiles can attain to very high places, was the epigram of the witty Frenchwoman who in her day was also confronted with the idea contained in the saying, "There is plenty of room at the top." This, says the *Building Budget*, is perhaps the most grimly oracular remark ever uttered and misunderstood by the young, in whose bright lexicon there is no such word as fail, and has undoubtedly caused more heart breakings over misapplied lives than can be even approximately estimated. All professions are crowded with men, who dazzled by the prizes of wealth and fame, gained sometimes at a sacrifice of everything that makes life enjoyable, still struggle blindly on, though every one but themselves can see that they are forever doomed to disappointment. The only profession, if it may be so called, in which a man at once realizes his unfitness is that of the prize fighter. In this country there is one frequent cause of failure, viz., the short time which is requisite for a man to obtain a smattering of law, medicine, architecture, etc., so that a young man is everything by turns and nothing long, and after spending considerable good material, say for an architect, and just as he is really becoming of some use, thinks that the law or medicine is his forte or else thinks himself capable of setting up as a full-fledged architect, to the damage of the profession in general.

A youth wishing to become an architect in England has first to find a vacancy for an articled pupil in the office of some first-class architect, to whom his parents and guardians pay a premium, sometimes as high as five thousand dollars, and agree that the boy shall do all that may be considered as lawfully pertaining to the business of an architect, at the command of his employer, for the space of five years, frequently without any compensation whatever, excepting the use of the library, etc., found in all the important offices. During this time he has to support and clothe himself in the manner becoming a professional man, and accustom himself to doing whatever he is told without question. Knowing that at the end of his term he will have invested five of the most valuable years of his life, as well as several thousand dollars, he is naturally impelled to be diligent and to profit all he can by what he sees, hears, and reads—knowing that, if he does not, he will never reimburse himself for his outlay, and also that he cannot enter any other profession except at an equal expense of time and money, and that after a few years he will be considered to old to begin anything. This system has its advantages as well as its disadvantages. One advantage is that it renders a parent very careful to find out as far as possible if the bent of the boy is well defined, otherwise, at the end of the time, it will be so much thrown away.

The disadvantage is that an idle pupil who does not care to improve his opportunities goes away at the end of his apprenticeship, and throws, to a certain extent, discredit upon the office where he was supposed to have studied. English architects have become so impressed with this fact that many of them openly advocate the entire abolition of articled pupils, and prefer the encouragement of technical schools, where the old motto over the college door will be strictly enforced, "Learn or depart." America, in this respect, as in many others, has the advantage of profiting by the experience of the old world, and, never having adopted the articled clerk system, now that it has proved unsatisfactory after years of trial, can, untrammeled by tradition, bend her attention to fostering those very technical schools which she already possesses, and which are advocated as a remedy for the evils of the older system by those who were once its strongest supporters.



Plan of "PRECITA."

Hints to Mechanics.

In hanging a number of doors which are of the same size, the time expended upon measuring the correct position of the hinges may be saved in a very simple manner, which is as follows: Take a lath and mark upon the top and bottom, the exact position where the hinges should come; drive in at these marks sharp pointed brads, and you have a guage which may oe used in hanging all doors of the same size. In using it all that is necessary is to place it against the edge of the door with the top of the lathe on the level with the top of the door, give it a sharp tap of the hand, when the brads will mark the exact position of the hinges. The same guage lath may be used in marking out the position of the hinges of the style of the door frame, excepting that a nail should be driven in the bottom of it, so that there may be sufficient room left at the bottom to allow proper play of the door; the use of a guage lath in the case referred to, is an example of its use. It is of equal utility in hanging many other pieces, such for instance, as inside and outside blinds, shutters, etc.

Highly Interesting.

"A Tin Roof" is the title of a little book just issued by Messrs. Merchant & Co., 517 Arch street, Philadelphia. The purpose of the publication is to supply to builders, architects and the general public some exact information as to the best methods of constructing a tin roof and as to the right materials to be used to secure satisfactory and permanent results. We especially recommend the book, which is intended for gratuitous distribution, to mill owners. They are very apt to entrust the matter of roofing wholly to builders and they usually know really very little about the character of the tin used or the excellence or defectiveness of the job. This pamphlet will help them to protect their interests. It is very explicit, perfectly comprehensible, and we think wholly trustworthy. It is quite profusely illustrated and the cuts indicate processes of applying tin roofing which insure excellence.

Why Two Saws That Are Alike do not Always Run Alike.

BY "SUPERINTENDENT."

TAKE two saws from the same maker that are alike in size, gauge, speed, feed and hammering, and running in the same kind of timber. One saw works well when often the other will not work at all. They, being alike, should certainly run near enough alike that neither should be condemned. What can be the trouble? To take the theory of some saw makers, we cannot get out of the trouble, they claiming that no two saws can be made to run alike, same size, etc. We take it for granted that they allow us the discrimination, or the assertion would not be made; so where we find that two saws do not run alike, there is a vast difference in the saws somewhere. When we take into consideration temper, teeth, etc., we find often why two saws made to run alike do not. We hear a great deal said about more teeth, theories being set forth claiming the more teeth the saw has, the more feed it can stand, and make better lumber. To show how a great many are thus deceived when certain conditions are not considered. I know of a man who has a good mill, making good lumber, running on four-inch feed in pine. This idea of teeth struck him and he concluded to increase his capacity by adding more teeth. He made four allowance in his estimation of how much more he could cut, and so he cut this allowance in half. He was running fifty teeth in his saw, but concluded to order ninety teeth. He ordered of the same saw maker, and the saw came, hammered to speed. It was tried. It would'nt go straight. Several trials were made, but the saw heated so badly on the rim that it was impossible to run it. So it was sent back to the saw maker and he could'nt tell why the saw did not go. The trouble was the saw had too many teeth, and the feed (four-inch) was not sufficient for each tooth to cut a chip but cut, or rather scraped the dust so fine that it escaped on each side of the throat of the teeth, and binding between saw and board, heated the saw. If the saw could have had the feed increased to eight inches it would have worked well. Both saws were alike. One run well; the other would not run at all. But, says one, they were not alike, one having forty teeth more than the other. We will then take them of the same number of teeth, speed, feed, gauge, timber, etc., hammered alike, and yet, one saw will run well and the other will not, one being of a milder temper than the other. The mild temper is soon condemned, the higher temper running well. The trouble is this: The mild temper expands more from centrifugal force, and from the start it is weaker on the rim and soon lets down; the higher temper remaining more firm, has slightly changed in its adjustment. The other is laid aside or sent back to the saw maker. The mill man is impressed that saw making is a kind of guess work, and that occasionally they make a good one. I am not claiming the high temper to be the best of the two.

When certain things are taken into consideration, the milder temper might have suited him best; speed might have been high enough to crack the higher temper, then the milder temper would have been the best saw. Two saws can be made to run exactly alike even when there is a slight difference in the temper. There are saw makers that claim to make saws to run alike, and so they do.

This little difference in temper is considered something, and the saw is hammered a little more open, and when a man jumps up twice as many teeth on the same saw, the saw maker notifies him that the saw will not work satisfactorily and explains why; and if a saw is sent to him he does not blame the saw maker if it does not go right.

There can be a little more deviation to this teeth business when a man is sawing soft timber, but in hard wood the teeth are confined to a limit.—*W. W. Mechanic.*

An American machinist, who went to Japan to put up some machinery, says that the Japanese are excellent workmen and only too faithful copyist. One of them made a pully pattern from a drawing; and to make sure of having it a solid pulley the draftsman made a waved line over the center line in the drawing, to indicate, of course, that it was erased. What does the Japanese workman do but make a special saw to cut the pulley in two parts, exactly as indicated by the waved line!

The Relation of Owners and Builders to Plumbing.

A. D. KEARNS, a St. Louis plumber, has addressed some very sound remarks to one of the city papers, which will make good reading outside of St. Louis, and we take the liberty of reproducing them:

"In order to bring before the public some of the evils that are present at all times with us, it often becomes necessary to open up matters of a personal nature, and ill feelings arise in consequence; yet, the opinion of all, individually and collectively, to a generous, democratic mind, should not encounter this biased feeling, where the object to be attained is for the good of the public, and for the advancement of the city's interests. Although it is a fact that one of the greatest sources of danger from our house drains is by bad workmanship, yet, too often is our worthy plumber censured and condemned for bad work when the real cause of the trouble is found in badly-constructed appliances and poorly-made pipes, which are forced into the market by unscrupulous dealers and jobbers.

"The allied interests of the dealer and plumber have of late years affected a wonderful combination throughout the United States, and so carefully are the lines drawn that this 'combine' works very advantageously for the people in many ways. Still, competition, sharp and unscrupulous, has been the means of forcing strict honesty out of the market, and we find miserable substitutes for what once were reliable and perfect appliance. It is to the use of such goods that our poorer people owe so much misery and sorrow.

"That the manufactnrers of such goods are not wholly to blame for the deplorable state of such things can be argued from the fact that our wealthy capitalists and our builders, in the endeavor to cheapen their work, often neglect the needs of the plumbing system, put more money into embellishments that 'catch' the eye of the ignorant.

"This same cause of complaint can be charged to many of our best architects, and too often it has been said of our noble homes that 'they are beautiful sepulchres.' Why this condition of things should go on is a question of serious importance to us all. To whom is the blame due?

"The public need homes. Knowing this, capitalists, in the hope of gain erect these homes. Should not these wealthy speculators be responsible for the construction of the houses they build? It would appear so.

"The difference in the cost of a good system of plumbing, with safe, reliable appliances and materials is not very greatly in excess of a like system with poor fixtures and poor piping. The work of the plumber is precisely the same. In the end the poorer materials will cost far more than the good ones, for repairs are always necessary, while a perfect system, with good care, will last as long as the house of which it is a part.

"The remedy, then, of our trouble lies with the owners and builders of our homes, and it becomes their duty and is to their benefit to make our houses what they should be—safe, secure, and clean in so far as they are able. In return for money spent in a good, safe plumbing system, it is not extravagant to say such good results will come by reason of our healthier, happy homes, that the time is not far off when cheap, miserable, filth-retaining appliances, now so generally used, will be discarded.

"Our capitalists, householders and our builders should take all possible precautions and care with the house drain. The material for piping should be extra heavy cast-iron piping, free from defects such as sand-holes or improper casting. The whole piping system should be carefully tested by the hydraulic or water test, and inspected carefully in every part to note the minature leaks that sometimes escape notice. The appliances such as closets, basins, etc., should be of earthenware, and free from all concealed and filth collecting parts. Each fixture should have a trap which should be self-cleaning and non-siphonable. All outlets from sink, basin or closets should be so constructed that the waste-pipe be filled "full bore" while in operation in order to insure thorough flushing. The entire system must be simple, well at top and bottom, and when all the fixtures have been attached the peppermint test will show the merits or demerits of the joints.

"Thus, with conscientious builders and careful plumbers the house-drainage system will soon prove a more profitable investment to the householder and owner, and in return for the money spent will come clean, well-ventilated and happy homes not only to the poor and lowly, but to the rich and prosperous, who now suffer like the poor from old and wretched appliances."

THE "WILLER" SLIDING BLINDS.

THE "Willer" Sliding Blinds, manufactured by William Willer, Milwaukee, Wis., have been in the market but a few years, but in that short period they have become so generally known amongst architects, builders, and the building public in general, that a detailed description of them here is unnecessary. The catalogue shows some 20 different classes or 20 distinctly different ways of arranging these blinds in the windows. For illustration we select Class E, this class being universally used for buildings of medium cost, on account of its simple construction and moderate price. This class consists of three separate sections of blinds, covering the entire window, and running in a guideway containing three grooves, one for each section of blind, all within the space of the window-opening, no pockets being employed at the bottom or top of the window.

Class E. Three Sections to the Window. No Pockets.

The other classes in the cat alogue show windows fitted with blinds of two, four and six sections, without pockets and with pockets at either the bottom, top or both ends of the window.

The "Willer" Blinds have rolling slats of a new construction throughout all sections, or in as many divisions of the blinds as may be desired; the springs are of the latest pattern, and the only springs adapted to hold the blinds in place. The blinds are handsomely trimmed with full sets of hardware, finger-plates, drop-handles and lifts, in Berlin or Genuine Bronze. Each set of blinds is finished complete, varnished, rubbed and polished as desired, and when fitted to the window is ready for use.

The "Willer" Blinds on account of their superior quality and merit, and their adaptability to windows of every description, have been selected in preference to all others and accorded the first rank in all parts of the country. They are now being placed in the residence of the widow of the late Emil Schandein, Vice-President of the Philip Best Brewing Co., of Milwaukee, erected at a cost of over $300,000. Mr. Schandein had examined all forms of Inside Blinds, and had given these the preference over all the others.

A public school house in Denver, Col., has lately been fitted with these blinds, the total order for the purpose amounting to nearly $6,000.

Exact Reproduction of the Willer Exhibit at Cincinnati, 1888, taken from a Photograph.

As a further attest to the superior quality of these blinds over all others, the firm has been awarded the Bronze Medal at the late Centennial Exposition, held in Cincinnati, July to November, 1888. This Bronze Medal is the *highest* and the *only* award, made to any exhibitor of Sliding Blinds, and although there were others on exhibition, none of these has received any award, diploma or medal whatever. In their report the jury said: "awarded on account of excellent workmanship," etc. We print herewith an illustration of the Willer exhibit at the above Exposition, taken from a photograph; also a fac simile of the medal.

The firm employ a force of 150 men, of whom 110 are employed exclusively in the manufacture of these blinds. Their sales of their blinds for 1888 amount to over $100,000. The blinds are in use in all parts of the country, from Maine to California and Manitoba to Texas. Over $10,000 worth have been sold in Canada alone.

The firm will send their No. 8 Catalogue of 1888, free of charge to any architect or builder, etc., upon application.

They have now in press their new catalogue of 1889–1890, which will be issued about May, 1889, and from an advance description we have received from the same, it will be the most artistic and complete catalogue of its kind in the country.

They also make a specialty of fine stair work, of which line they will issue a separate catalogue in the spring.

Mr. Willer is introducing these blinds all over the Pacific Coast, and hundreds of owners can testify to their merits. Mr. G. H. Van Houten has the agency for Oregon; A. W. Young that of Sacramento and northern cities of California; S. E. Baur in Seattle, W. T.; D. D. McDougall in Spokane Falls, W. T. For the present all information for this City can be obtained at the office of this Journal.

Does it Pay to Own a Home?

A GREAT many people go on year after year renting a house in which to live and bring up their families. They move from place to place as the whim siezes them, and of real home life in its best sense, they know nothing. They do not stay long enough in any house to "take root." There are none of the hallowed associations about their domiciles which hang about the "old homestead," and so they go through life, wandering from house to house, and never finding a home until they reach that narrow house which becomes their final resting place.

Ask such a man as this why he does not buy a place and settle down, and he will reply, "Oh, it dosen't pay to own a house in the city." And no amount of persuasion can induce him to change his views. He urges the bugbear of taxes and insurance as a reason for not investing in a home, seemingly oblivious of the fact that his landlord has to pay all these expenses from his rental and still make a comfortable profit.

If the housekeeper would only look into the matter a little more closely, he would quickly ascertain that the only true economy lay in owning his own home. Aside from all the associations connected with the home, it is a money making proposition for a man of family to own his roof-tree.

The average business man who lives in a good locality must pay anywhere from $50 to $100 a month rent for a comfortable house. Say that he pays $75 a month. That means an outlay of $900 a year, or 10 per cent. on an investment of $9,000. Every one who rents knows very well that few homes built for renting cost more than half that sum. In the course of ten years the renter will have paid out $9,000 and have nothing to show for it but a pile of landlord's receipts. In twenty years (and many a man in this city has stood a drain of this size for longer than that,) he will have paid out over $18,000, with nothing to show for it. And that by no means represents the whole truth. The man, who ten years ago, undertook to buy a house and lot in a good locality worth at that time $9,000, finds himself to-day, with a property rising, worth from two to four times as much.

The man who exercises common prudence in purchasing a home in San Francisco will not only save the amount which he would have paid out for rent, but in the course of ten years his property will have increased in value by at least as much more.

In the meantime the expense for repairs, taxes and insurance will not possibly have been in the aggregate as much as one-fourth of the amount that would have been paid for rentals.

The home buyer thus, aside from mere considerations of sentiment (which are not to be overlooked by any means,) will find that in buying a home he not only does a really economical thing, but puts himself in a position to reap a large profit where otherwise there would have been a total loss.

The experience of home buyers in San Francisco abundantly bears out this assertion.

Loggers' Fare in the Woods.

The first requisite necessary to obtain all the work from men of which they are capable, when working in the woods, is to provide an abundance of well cooked food. Second: to provide ample and comfortable sleeping accommodations. Without these two necessities, no man can do a full day's work satisfactory either to himself or his employee. When a man eats a hearty breakfast after a night's restful sleep, he enters upon his day's duties feeling fresh and satisfied, and is ambitious to do his share. Having performed all that is required of him during working hours, he naturally feels like having a rest. By giving the sleeping quarters a home-like appearance, furnishing late papers and magazines, providing a large stove by which the house can be kept warm, many of the visits to the tavern by the cross-roads will be dispensed with. Men who work must have recreation, and when it is provided for in the camp, the small expense attending the same will be more than returned by the extra work done by the men.

We do not think that in any part of the country, men in logging camps are better provided for than they are on this Coast. Manufacturers of lumber vie with each other in having their camp called the model camp. In fact, some of them induce their men to build their own houses near the scene of their daily labor. A school teacher attends to the education of the children. Religious services are held weekly. A doctor is located near by, whose services are gratiously given to those who work in the camp, the "boss" paying him a stated monthly salary so as to have a physician always near.

All in all, the men who work in the woods on the Pacific Coast are as well fed and as comfortably housed as any working at the same occupation in any part of the globe.

Our Reading Room.

One and all are perfectly welcome to our reading room. We will be pleased to have you call and look over our exchanges. Rooms open from 9 A. M. to 4 P. M.

Our Exchanges.

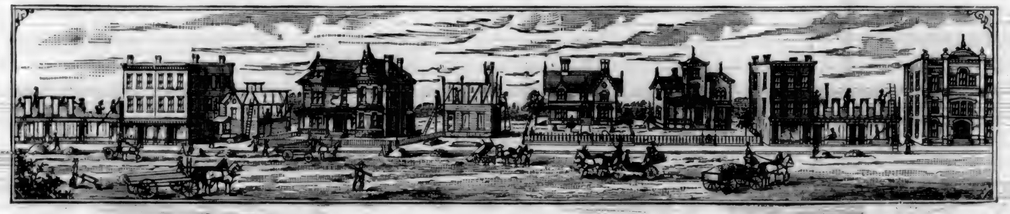
We have added to our office a laige Exchange rack, to which any one, whether they subscribe or not, can have free access. We will be pleased to have you call, as the office is open from 9 A. M. till 4 P. M.

Manufacturer and Builder.—This Journal is printed at 83 Nassau street, New York; it is one of the best of its character published. Lately, many new improvements have been made. The new design for the title page is very attractive, We have published many articles taken from its columns, and have always been pleased to credit the Journal from which they were taken.

Brother Gerard, we wish you success, and only hope that soon a ton of paper will be necessary for each issue.

The Art Age.—The February number of this Journal presents a pen and ink supplement, entitled: "An Autumn Morning" by Bruce Crane. In addition, there are many designs given of buildings, notably that of the Grolier Club, Chas. W. Romeyn & Co., Architects. The price is but $2.50 per year.

Canadian Architect.—Our friends across the line are determined not to be outdone, and so present a Journal as well edited and illustratrd as many of those in the United States. We heartily congratulate the editor on the greatly improved appearance of his Journal.



CITY BUILDING NEWS.

Bay and Mason, three-story frame. Owner, Henry Wreden; architect, Henry Geilfuss; contractor, F. Klatt; amount, $6,930; signed, February 9; filed, Februarv 14. Payments: Framed, $860; roofed, $860; partitions set, $860; brown coated, $860; white coated, $860; completed, $860; $1,770, 35 days.

Bartlett, near Twenty-Third, repairs. Owner, Hannah Armstrong; architect, M. J. Welsh; contractor, F. Sullivan; cost, $4,350; signed, Feb. 27; filed, Feb. 27; limit, 70 days; $1,087,50 framed; $1,087,50 brown mortar; $1,087,50 finished; $1,087,50, 35 days.

Bluxome between Eourth and Fifth carpenter work for two-story brick warehouse. Owner, Mrs. M. F. S. Searles; architects, Schulze & Meeker; contractor, Thomas H. Day; cost, $7,560; signed, Jan. 28; filed, Feb. 7; sureties, C. S. Holmes and C. Hanson; $2,500 limit; April 15, 1889; $2,000 gallery joists and second story joists are in position; $2,116 roof is on and tinned; $1,548 completed; $1,890, 35 days.

Bluxome between Fourth and Fifth, brick and iron work. Owner, Mrs. M. F. S. Searles; architects, Schulze & Meeker; contractor, Edwin R. Shain; cost, $5,999; signed, Jan. 28; filed, Feb. 7; sureties, P. Degan and W. C. Dougherty $2,000; limit May 1, 1889; $1,772 brick done to underside of second story joists, $1,128 brick done to underside of ceiling, $1,599 completed, $1,500, 35 days.

Bush and Sansome, plumbing; Owner, First National Bank; architect, Wright & Sanders; contractor, Fritz & Kean; amount, $5,050; signed, January 30, filed, February 14, limit, May 30, 1889. Payments: Installments on first day of each month to value of 75 per cent; balance, 35 days.

Bush street, Nos. 224 and 226, additions. Owner, estate, C. D. O'Sullivan; architects, Chas. J. I. Devlin; amount, $1,845; signed, Feb. 19; filed, Feb. 21; limit, 30 days; 75 per cent. as work progresses; balance, 25 per cent. when completed.

Buchanan, near Turk, two-story frame; Owner, C. Whelton; architect, M. J. Welsh, contractor, R. Parker; cost, $3,500; signed. March 1; filed March 1; limit 70 days; $875 framed; $875 brown coated; $875 finished; $875, 35 days.

Bartlett near Twenty-First, two-story frame, Owner, J. W. Williams; architect, M. J. Welsh; contractor, M. C. Lynch; cost $3,775; signed, Feb. 20; filed, Feb. 23; limit, 65 days; framed. $943.75; brown coated, $943,75; completed, $943.75; 35 days.

Castro corner Nineteenth, addition. Owner, George Dawson; contractor, M. Sherman; cost, $2,500.

Collingwood and Seventeenth, two two-story frames. Owner, Mr. Gimble; contractor, B. Dryer; cost $6,000.

Collingwood between Eighteennth and Nineteenth, four one-story frames. Owner, Mr. Schrieber; contractors, Spellman & Son; cost, $4,000.

California and Octavia, carpenter work. Owner, Clinton Jones; architect, J. H. Littlefield; contractor, R. P. Hurlbut; amount, $21,500; signed, February 5; filed, February 13; sureties, F. Joost and J. F. Kennedy; limit, June 25, 1889. Payments: 75 per cent. from time to time as work progresses; balance, 25 per cent. in 35 days.

California and Octavia, painting. Owner, Clinton Jones; architect, J. H. Littlefield; contractor, James Larsen, amount, $1,635; signed, February 5; filed, February 13; surety G. Ammerup; limit, without delay. Payments: 75 per cent as work progresses; balance, 25 per cent in 36 days.

California and Octavia, plumbing etc. Owner, Clinton Jones; architeet, J. H Littlefield; contractor, Fritz & Kean; amount, $2,360; signed, February 5; filed, February 13; sureties, Wm. Little; limit, without delay. Payments: Sewerage completed, $885; completed, $885, $590, 36 days.

California and Gough, two-story building. Owner, Daniel Meyer; architect, Jacob Lenzen & Son; contractor, Peter Crichton; amount, $19,800; sureties, C. S. Holmes and C. Hanson, $5,000; filed, February 5; signed, January 31; limit, six months. Payments: First story and joists are on, $3,000; framed, $3,000; roof completed, $3,000; brown coated, $3,000; completed, $3,000; $4,800, 35 days.

Capp, near Twenty-Fourth, one-story building. Owner, Marie S. C. Hundt; architect, S. G. Worden; contractor, S. G. Worden; amount, $1,660; signed, Feb. 9; filed, Feb. 16; $160 chimneys built; $400 floors; laid $400 completed, $400 35 days.

California and Octavia, excavations and brick work of six dwellings. Owner, Clinton Jones; architect, J. H. Littlefield; contractor, James O'Sullivan; amount, $2,675; signed, January 5; filed, February 13; sureties John Hammond; limit, without delay. Payments: 75 per cent. from time to time as work progresses; balance, 25 per cent, 36 days.

Devisadero, near Ridley, two story frame. Owner, H. E. F. Williams; architect, M. J. Welsh; contractor, A. J. Ahren; amount, $3,808; signed, Feb. 20; filed, Feb. 21; limit, 90 days; $952 framed; $952 brown coated; $952 completed; $952 35 days.

Devisadero, near Ridley, two-story frame. Owner, H. E. F. Williams; architect, M. J; Welsh; contractor, A. J. Ahern; cost, $3,880. signed, Feb. 20; filed, Feb. 28; sureties, W. A. Meeker, $1,000; limit 90 days; $970 framed; $970 brown mortar; $970 finished; $970, 35 days.

Elgin Park, near Ridley, two-story and basement frame. Owner, Wm. Becker; architect, Bernard Dreyer; cost, $3,300; signed, March 2; filed, March 2, limit, June 1, 1889; framed, $825; brown mortar, $825; white mortar; $825, 35 days.

Ellis street, No. 321, without delay, plastering. Owner, Wm. Wolfe; architects, Salfield & Kohlberg; contractors, C. C. Morehouse; amount, $1,175; signed, Feb. 6; filed, Feb. 11; sureties, John T. Grant, $1,175; $500 brown coated; $375 completed; $300 35 days.

Eight and Clementina. Owner, Leopold Jusic and wife; architect, O. E. White; contractor, O. E. White; cost, $4,459; signed, Feb. 4; filed, Feb. 7; sureties, Chas. F. and Frank P. Doe $2,000; limit 60 days; $1,000 enclosed; $1,344 brown coated; $1,000 completed; $1,115, 35 days.

Eighteenth, near Dolores, two-story building. Owner, Michl. Kane; architect, Chas. J. Devlin; contractor, A. A. Willis; cost, $4,340, signed, Feb. 21; filed, Feb. 25; sureties, C. S. Holmes and Behrend Joost; $3,000 limit, 90 days; $600 framed; $600 roofed; $640 brown coated; $500 plastered; $700 ready to paint; $215 completed; $1,085, 35 days.

Eureka near Eighteenth, one-story frame. Julius Haug; contractor, August Discher; amount, $1,500; signed, February 15; filed February 21; limit, 90 days. Payments: Framed, $375; first coat of plaster on, $375; completed, $375; $375, 35 days.

Ellis, No. 321, without delay. excavations. Owner, Wm. Wolfe; architects, Salfield & Kohlberg; contractor, Patrick Fitzsimmons; amount, $695; signed, February 8; filed, February 13. Payments: Foundations in, $300; completed $395.

Ellis, No. 321, carpenter work. Owner, Wm. Wolfe; architects, Salfield & Kohlberg; contractor, Henry Rohling; amount, $6,450; signed, February 8; filed, February 13; sureties, J. J. McKinnon and F. Joost; limit, 90 days. Payments: Framed, $700; roofed, $1,200; inside finish on $1,100; completed, $1,830; $1,620, 35 days.

Ellis street, No. 321, plumbing, etc. Owner, Wm. Wolfe; architects, Salfield & Kohlberg; contractors, L. Ickelheimer & Bros; amount, $1,175; signed, Feb. 9; filed, Feb. 13: limit, without delay; $400 rough work done; $475 completed; $300 35 days.

Fulton and Scott, building. Owner, W. Westerfeld; architect, H. Geilfuss; contractors, Schmitt & Krecker; cost, $9,985; signed, Feb. 25; filed, Feb. 26; $1,250 framed; $1,250 roofed; $1,250 partitions set; $1,250 outside finish is on; $1,250 inside finish is on; $1,235 completed; $2,500, 35 days.

Fifteenth, near Church, one-story frame. Owner, Wm. Nicol; architect, H. T. Bestor; contractor, Wm. J. Peters; amount, $1,800; signed, Feb. 15; filed, Feb. 15; $300 rustic on; $300 brown coated; $400 glass and sash on; $350 completed; $450, 35 days.

Folsom, between Tenth and Eleventh, three-story frame. Owner, Cal. Medical College Building Association; architect, John J. Clark; contractor, R. O. Chandler; cost, $11,995; signed, Feb 9; filed, March 1; limit, 120 days; $2,375 framed; $2,375 partitions set; $2,370 inside finish is complete; $4,875, 35 days.

Filbert near Powell, frame building. Owner, Carlo Casassa; architect, Wm. Mooser; contractor, G. Damkroeger; amount, $4,100; signed, Feb. 8; filed, Feb. 11; sureties, Herman Mattern and W. J. Trott; limit, 90 days; 75 per cent. as work progresses; balance, 25 per cent., 35 days after.

Geary and Kearny, May 28, 1889. Constructional iron work. Owner, M. H. DeYoung; architects, Burnham & Root; contractors, Dearborn, Foundry Co; amount, $63,000; signed Nov. 26; filed, Feb. 11; sureties, Christopher & Ed. Christy; 75 per cent. payable up to completion of work in proportional payments the 25th of each month, according to amount of work done.

Golden Gate Avenue and Lyon street, frame dwelling. Owner, R. L. Conn; architect, S. Hatfield; contractors, Farnum & Thornton; cost, $2,400; signed, Feb. 6; filed, Feb. 9; limit, 81 days; $550 roof boarded; $415 brown coated; $415 windows in; $420 finished; $600, 35 days.
